Sanitary Engineer

Plumber and Steamfitter of Canada

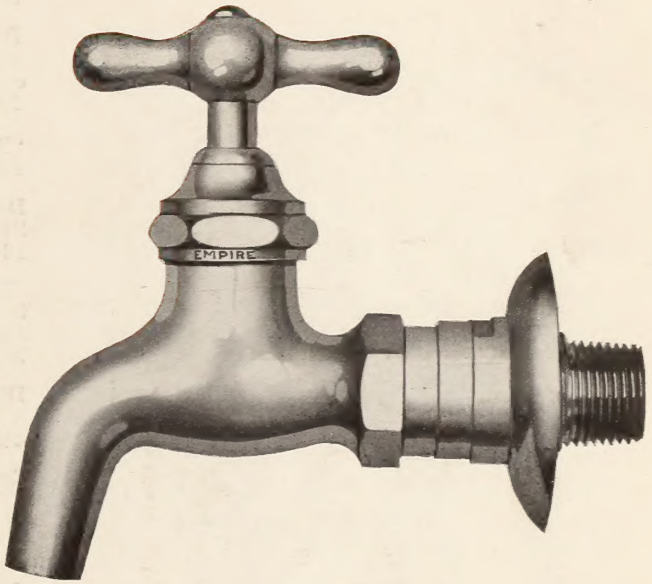
Vol. XVI. PUBLICATION OFFICE, TORONTO, JANUARY 1, 1922 No. 1

Another New Empire Product

The "Emco"

Adjustable

Box Flange Bibb



This new bibb replaces our old style fixture that displayed unsightly threads.

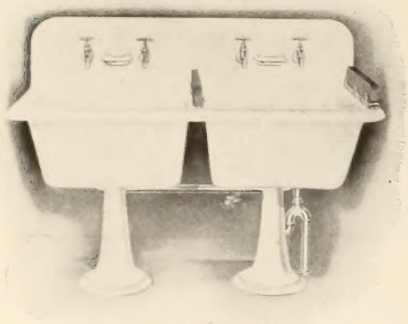
It is adjustable to the space between the sink and the connection back of it. The flange is made with an extra long threaded shoulder which covers the threads on the shank of the bibb preserving its attractive appearance.

Specify your needs—We guarantee prompt delivery and thorough satisfaction.

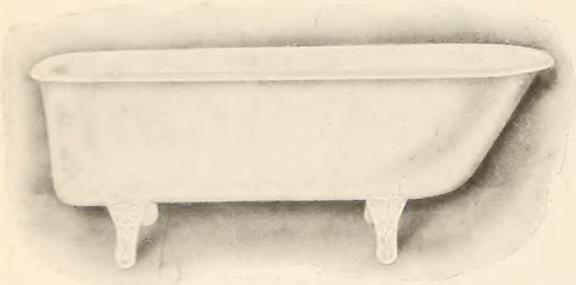
"All troubles are gone when 'Emco' goes on."

Empire Brass Manufacturing Co., Limited

London and Toronto, Canada



Porcelain Enameled 2-Section Laundry Tubs



"Maple Leaf" Porcelain Enameled Bath

Porcelain Enameled One-Piece Lavatory

Beaver Brand
Porcelain Plumbing Enamel Fixtures

"Beaver" Porcelain Enameled 2-Section Laundry Tub with roll rim, cast in one piece, with separate enameled recessed back, on painted iron legs. Complete with wringer holder, N.P. soap dish, plugs and stoppers, painted exterior.

Dimensions—Length over all, 49½ inches; height from floor to top of tub, 31 inches; height from floor to top of back, 43 inches; front to back outside, 25½ inches; front to back inside, 21 inches; depth inside, 14½ inches.

"Beaver" Porcelain Enameled Bath with 3-inch roll rim, for Bell supply and waste fittings, painted exterior.

Dimensions—Width over rim, 29¼ inches; inside width, 23 inches; height to top of rim, 21¾ inches; inside depth, 16 inches.

"Beaver" Porcelain Enameled One-Piece Lavatory is illustrated above with apron, oval-shaped basin with rear outlet. Patent overflow and chain stay, on concealed brackets.

Dimensions—Size of lavatory, 16 x 20 inches; basin, 10 x 14 inches; height of back, 8½ inches; depth of apron, 4¼ inches.

Roughing in measurements—Centre to centre of supplies, 11½ inches; centre of outlet to wall, 6¼ inches; centre of supplies to wall, 3½ inches.

Make 1922
A Canadian Vitreous Year

Why should huge quantities of closets, tanks and lavatories be imported into Canada every year, when CANADIAN SOLID VITREOUS fixtures are procurable through any recognized jobber from Halifax to Vancouver?

Canadian Solid Vitreous is an all-clay ware—burned twice.

It has a live-white lustrous glaze surface—clean and sanitary.

Not only is the glazed surface of this ware vitreous, however—the body itself is vitreous, being blended from very finely ground clays and rocks, moulded with infinite care and fired under extreme heat.

Each piece is built in a substantial weight, its inherent strength ensuring a life-time of service; its permanent hard white surface—as easily cleaned as a china plate—ensuring the same spotless appearance after years of use; its vitreous make-up ensuring absolute freedom from the contamination of dangerous acids or germs which many wares are liable to absorb.

A range of several hundred patterns gives a selection to suit almost any individual taste.

The low cost of Canadian Solid Vitreous ware is the final argument in favor of its exclusive use.

THE "LAKESIDE"

A syphon jet closet of unusual merit; modelled on lines of dignified simplicity, yet substantially massive in both design and weight. It has a strong syphonic action, large water area and deep seal.

The illustration shows this closet with extended front lip and raised rear vent features; we can furnish it also with raised front lip, integral seat, cutout back, side supply, local vent and many combinations of these.

THE "BELLEMEADE"

No material has yet been discovered for the manufacture of closet tanks which for a moment can compare with Canadian Solid Vitreous ware.

The tank is one solid piece, glazed inside as well as out; is absolutely non-absorbent; there are no seams or joints to open up; no lining to corrode or leak; no paint nor varnish to discolor or wear off; no material to warp or split.

Made in two sizes—the smaller for use with any washdown type of closet—the larger for syphon jets.

Sales Handled Exclusively Through Recognized Jobbing Houses

IF

The public only knew as much about the benefits of domestic sanitation as you and I do,

IF

They realized how much more important it was for their own sakes to have homes properly equipped from a plumbing standpoint than to possess costly non-essentials.

IF

Every woman could be as proud of her bathroom as of her living room; if every house owner was familiar with the material he should insist on when replacing his antiquated conveniences.

Then the plumbing business would indeed be one soft snap.

But he must show them. Let's tell him when we see them—and take every opportunity of displaying our goods suitably in our place of business.

Canadian Brass Company Limited

Galt Toronto

The Spencer
—and a Better Year
In 1922

Hot Water—10 sizes
600 to 3600 sq. ft.

One reason for the ever increasing sale of the Spencer is the fact that the Spencer burns even the No. 1 Buckwheat coal. Each owner positively saves from THREE to FIVE DOLLARS on every ton of coal used. Naturally all users are enthusiastic boosters. Boosts from users mean sure sales—are you getting your share?

There is a Spencer for every need. Thousands have been in operation, in all types and sizes of buildings, in all parts of North America.

The Spencer will mean a bigger business for you in 1922. Nowadays every home owner is interested in economy of fuel. For that ability of the Spencer to burn the cheaper grades of coal as well as the more expensive is now a wonderful sales factor.

Do You Read These Advertisements?

Every advertisement in this magazine is worth reading. It is the product of some concern that is using a modern piece of selling machinery— technical paper advertising—to present most effectively to you the leading features of its line.

These advertisers are making it easier for you to buy intelligently with the least waste of your time and theirs. They realize that a sales force can not replace this service at equal cost. They know that advertising is good business, for the manufacturer who does not advertise cannot save the cost of advertising. Consistent advertisers are progressive merchandisers. They are saving your money and their own; and it pays to do business with them.

Don't miss your opportunities. These advertisements are interesting. Some are distinctly instructive, and a glance through them every month will keep you posted on the latest developments in Sanitary Engineer.

Stimulating Plumbing Trade in 1922

While Outlook is Good For Considerable House Building Early in the Year There is Yet Much Replacement and Renewal Business in Plumbing and Heating Lines to be Done—Prices Reduced Approximately 30 Per Cent. During 1921

DISCUSSING business conditions and the outlook for 1922 in the plumbing and heating industry, a number of interesting opinions and helpful suggestions have been conveyed to Sanitary Engineer by various manufacturers and wholesalers.

Pointing out that the future is exactly what we make it, G. E. Fisher, Manager Canadian Brass Co., Ltd., Galt, Ont., states:

"We do not think any forecast that we might make as to the possibilities of the plumbing business in 1922 would correct the absence of activity in this particular line. It has always been our belief that the future is not a guess or a gamble, it is exactly what we make it and if those interested in the sale and installation of sanitary ware and appliances were to start from January 1st to do their share to market the product with which they have associated themselves, there would be no complaint as to 'dull' business. The absence of new building or the lack of industrial developments is not altogether responsible for a lesser number of plumbing installations. The real field exists in the established houses, factories and public institutions, but it is regrettable to say that the trade (and we mean ourselves and jobbers) has seriously failed to develop this market.

A Fruitful Field

"In the first three months, if experience tells us anything, it is bound to be reasonably quiet and everybody will be content to sit down and wait for the so-called building boom in the spring. These three months are an opportunity to the plumbing trade to make business by replacements, renewals and additions to existing plumbing installations, and suggestions should be made to the trade, the jobber and the manufacturer that they forget for a period at least the far distant future and put in some hard work and long hours developing some immediate business from the field above referred to."

Another Western Ontario manufacturer of plumbing goods states:—

"We submit that it is difficult to predict what is likely to transpire in 1922. Our records indicate that to date the volume of business with which we have been favored this year up to the end of November represents between 70% and 80% of the volume for the same period in 1920, which is most significant when considered in conjunction with the fact that in January, 1921, our prices had been reduced approximately 30%.

"The year 1922 should show renewed activity particularly in the building of homes. Statistical information assembled from different sources indicates that the index number applying to a number of commodities has advanced within the past two months, which cannot, however, be accepted as indicative of the general trend. We don't anticipate further reductions on the lines we offer; on the contrary, advances in specific items may be necessary. Reports indicate that commissions for public buildings, hotels, hospitals, schools, etc., in large volume have been placed with architects which will provide considerable activity to all interested lines."

Sheet Production at Low Ebb

Discussing the sheet outlook for the first quarter, 1922, A. T. Enlow, President Dominion Sheet Metal Corporation, Hamilton, Ont., stated that at the present time production of sheets, black and galvanized, is at a low ebb not only in Canada but in the United States as well. This bears out common practice in curtailing operations during the holidays and for inventory and repair purposes.

"Sheets have a habit of coming back strongly," continued Mr. Enlow, "and sometimes unexpectedly, but they will naturally have only a corresponding degree of activity in relation to the general prosperity in other lines of business and particularly manufacturing.

"The United States mills stabilized prices in the early fall and did quite a large volume of business and at prices which were an advance over those previously ruling, the same tendency being observed in Canada.

"There has been a reduction in freight rates in Canada but none in the United States applying to general commodities and a very vigorous effort is being made in the line of a freight rate reduction there which, if successful, will mean somewhat reduced prices on all iron and steel products.

"The steel industry, which at first was somewhat slow in deflating, has in the end deflated to a very marked extent, second only to that of farm products, and has now reached the stage where any further reduction in prices must be based upon reduction in freight rates.

"Stocks, both galvanized and black sheets, throughout Canada are quite low and it is presumed that buyers will continue the same policy until a definite trend occurs in the market and this will probably develop in the first few weeks of the New Year and until that time 'easy is the word.'

"It will be well to bear in mind, however, that any changes which may occur in prices, either up or down, will be relatively small as compared with the fluctuation during the past two or three years."

(Continued on Page 11)

Market Developments During 1921 Establish Big Decline in Prices

Current Quotations on Sanitary and Plumbing Supplies Now Compare Favorably With Pre-War Levels and Also Prevailing Price Standards in Other Lines of Trade—Production Costs Handicap Further Recessions With Raw Material Prices Recording a Fair Ratio of Liquidation—Quotations on Range Boilers Drop 42 Per Cent. During Year—Optimistic Tone Prevails—Future Outlook.

AN UNUSUAL degree of market developments during the past year resulted in the establishment of substantially lower price levels on a large percentage of steam-fitting and sanitary supplies.

Practically all lines of plumbing materials have recorded substantial price reductions. Changes in the current markets have been many and varied, with announcements of recessions in quotations on plumbing and steam-fitting materials having followed one another in rapid succession throughout each succeeding month.

In reviewing the market developments during 1921, it can readily be seen that there has undoubtedly occurred a larger ratio of price changes in sanitary and similar supplies, than in any other similar period in the history of the trade.

Recessions on the majority of commodities have been evident from time to time, and while some minor changes were of a slight upward nature, such developments were mainly of short duration with consequent temporary effects. The general tendency has been in the downward direction, with some lines registering substantial declines. Other supplies did not immediately record such drastic revisions, but periodical changes have placed the average market price on a much lower level.

How Prevailing Prices Compare

Both manufacturers and distributors have issued many price revisions during recent months, with the result that present prices on the majority of plumbing and steam-fitting fixtures compare favorably with pre-war levels. The process of liquidation in such supplies has been reluctantly accepted in some instances, while other cases are on record where attempts were made to dispose of stocks of high priced materials prior to announcing easier quotations. In a few markets, reductions were withheld until the actual disposal of goods produced when raw material costs were at their height was assured. On the whole, however, existing levels indicate a large proportion of price concessions which will undoubtedly stand very favorable comparison with current price standards in other branches of trade.

One especially strong feature of the current price trend in sanitary markets is found in the fact that the major portion of the revisions referred to occurred during the last five or six months; in other words, after the season's anticipated requirements had been contracted for.

Cost Levels a Handicap

It is generally admitted that present production costs still remain considerably above 1914 standards by reason of the existing higher freight rates and the still inflated wage scales prevalent in some quarters. These primary factors which enter into operating and distributing expenses, tend to prevent prices on finished products from further receding at the present time. Under such circumstances, future declines are expected to be based upon such recessions as may appear from time to time in the primary markets, with such basic elements forming the contributory causes. Therefore, it is pointed out that concessions are not generally anticipated on the same scale that has been evident in recent months, but that minor changes may appear in the future, especially on certain products. On the average, a moderate share of liquidation has already been established, and further steps in this direction are dependent upon the swing of the price pendulum in raw materials and similar costs.

Raw Materials Lead Recession

Manufactured articles in general have been reduced in comparison with basic commodities, but on the other hand, raw materials have undoubtedly registered the largest percentage of price reduction, and have rightly taken the lead in this respect. Bar iron and steel represent basic commodities which have paved the way in the matter of price readjustment during the past year. Corrugated sheets, and both black and galvanized sheets are also considerably below the price levels of January, 1921. Many other semi-finished products record big recessions and now well compare with 1914 standards, among these being copper and brass sheets, ingot metals, scrap materials, and similar goods.

These conditions should tend toward a more substantial market during the ensuing year, with encouraging prospects for general business expansion in future months. With price concessions on a more or less generous scale having become generally recognized, a more extensive program of building activities is expected to be instituted in 1922. Improvement in this direction was to some extent handicapped throughout the summer of 1921, but with costs of plumbing and sanitary fixtures now on much lower levels, and with similar steps being taken in other phases of building costs, the looked for volume of trade in construction work has undoubtedly better opportunities of materializing.

As an example of the actual extent of price reduction during 1921, quota-

TRIALS AND TRIBULATIONS OF THE POOR PLUMBER

Grimsby, Ont.—"Jimmy" Wray has a little rubber stamp that he uses on his bill heads. This stamp is just a reminder of the fact that he needs money to carry on the business and reads, "If you were me, and I were you, what would you expect me to do with this account?" One of his last month's statements elicited this gem of poetry, written across the face of the "argument":

"If you were me and I were you
I'd cuss you out and then a few;
I'd send a dunner every day,
And do my best to make you pay,
I'd put you in the calaboose,
Starve you awhile and turn you loose;
Then if you didn't come across,
I'd write you off my book as loss.
But have you ever noticed this:
Just when your efforts seem amiss,
Some how or other I make the grade?
And Lo! that damned account is paid.
Receipts I get signed 'Jimmy Wray,'
We live to trade another day.
All jokes aside; I've done my best:
Now may the gods attend the rest."

James Wray is going to get a copyright on the poem and use it in his advertising matter.

tions on range boilers offer a representative average. The level on the 30-gallon standard size was quoted at $15 each on January 1, 1921. This price has continually dropped throughout the year until prevailing quotations are in the neighborhood of $8.75. This reduction on these products, therefore, has been approximately 42 per cent. While a true and accurate comparison can only be achieved by compiling a list of a varied line of commodities, yet illustrations chosen at random—such as in this case—supply concrete price arguments for the merchant. While the percentage of decrease noted in the range boiler market might be considerably higher than the average ratio of decline in other lines of finished products, yet there are undoubtedly a number of other goods showing just such similar recessions. These factors can be readily ascertained by referring to the repeated efforts to reach easier levels having been recorded in the various market reports contained in Sanitary Engineer.

A more optimistic note and cheerful sentiment generally is usually found underlying the present markets, and this factor is noted in spite of the current dull period. A general survey of the situation, therefore, provides a useful attribute in planning for healthy trade activity in the ensuing year, or when taking into consideration the probabilities of future busness expansion and commercial development in general.

Together with this article there also appears a condensed table of prices on a few general lines. The list depicts the costs of pre-war days, the high levels attained in recent years, and also the present prices. A most marked degree of recession from the pinnacle of a few months previous is noted therein, and it is worthy of record that the major portion of such reductions have materialized during 1921.

Prices At A Glance

	Unit	August, 1914	High level	Present price
Brass sheets	lb.	$0.26	$ 0.60	$ 0.24
Range boilers (30-gal. std.)	each	5.00	15.00	8.75
Bar iron (base)	cwt.	2.05	5.15	2.90
Bar steel (base)	cwt.	2.25	5.30	3.00
Ingot tin	lb.	0.30	1.30	0.39
Ingot copper	lb.	0.14½	0.35	0.18
Ingot lead	lb.	0.05¼	0.13	0.06¾
Ingot spelter	lb.	0.05½	0.23	0.07¼
Antimony	lb.	0.08½	0.40	0.09
Aluminum	lb.	0.19	0.66	0.27
Bar solder (strictly)	lb.	0.27	0.60	0.24½
Black sheets (28 ga.)	cwt.	2.70	10.50	4.50
Corrugated sheets (28 ga.)	cwt.	4.00	12.00	6.50
Galv. pipe (1 in.)	100 ft.	6.03	17.77	11.05
Lead pipe	lb.	0.07½	0.19	0.12
Plumbers' oakum	cwt.	3.50	10.00	7.00

THE above list is self-explanatory and supplies in a clear-cut and comprehensive manner the information which many merchants have been seeking. The various lines mentioned in this table are generally indicative of the average price standards which have prevailed in plumbing and steam-fitting supplies during the past eight years. Therefore the comparison is representative of other sanitary goods and fixtures, which, although not listed individually in the above table, will be generally found inclusive in the percentages of rise and fall.

Taking the quotations which prevailed at the outbreak of the war, and applying to this column the index figure of 100, is the generally accepted method of correctly estimating the ratio of increase and decline. On this basis of computation it is seen that prices on the average reached the high mark of 297, or an increase of 197 per cent. Figuring the current price level on the same principle indicates that quotations are now only 68 per cent. above the 1914 standard, the average prevailing cost being 168. This comparative rise and fall can be more easily ascertained when the proportion is ranged in the following form:

Aug., 1914	High level	Present
100	297	168

This illustration shows that prices have receded from the high levels recorded during the war and post-war periods to an extent represented by the figure 129. In other words, in order to put the present quotations back to the pinnacles attained during recent years, it would be necessary to increase to-day's prices on the various commodities listed above by 129 per cent. The fact that the prevailing prices are only approximately 68 per cent. higher than the August, 1914, levels, provides another illustration of just to what extent prices on plumbing goods have actually receded. This proportion of decline is also one that will undoubtedly compare very favorably with similar price trends in other lines of trade, or basic industries generally.

MONTREAL ENJOYS GOOD BUILDING YEAR

Montreal.—According to figures obtained from the city building department, Montreal has enjoyed a good building year in 1921, operations showing a substantial increase compared with one year ago. The total value of construction work so far this year amounts to $21,275,779, of which $18,523,429 represents new work, and $2,752,350 repairs to buildings.

Included in these figures is the $5,000,000 estimate for the new Mount Royal Hotel, and if this amount be deducted from the total, it would leave . balance of $16,000,000, which is about $2,000,000 more than the building records for last year show.

The year's work is of interest as regards buildings the statistics show that permits issued for the construction of $2.659 dwelling houses valued at $5,909,175; for 100 stores at $642.425; 1 theatre and 1 annex at $137,000; 37 warehouses at $855,200; 13 factories at $285.200; 6 churches and temples at $377,250; 6 schools at $1,370,948; 20 ice-houses at $87,450; 1 hotel at $5,000,000; 3 hospitals at $720.000; 1 brewery at $119,000; 10 office buildings at $1,515.897; 42 stables at $45,250; 803 sheds at $162,460 and 344 garages at $674,374.

Stimulating Plumbing Trade

(Continued from Page 9)

Discussing the business situation with Adam Taylor, sec.-treas. Taylor-Forbes Co., Ltd., Guelph, Ont., it was stated that the great problem before us at the moment is to get orders, as cutting of prices does not seem to increase them.

"We have been reducing prices ever since January, 1921, and all lines are down to rock bottom, based on cost of labor and raw material, and some lines are selling at actual cost and below to enable us to meet American competition," said Mr. Taylor.

"Freight rates are high, of course, and it will help some when they are reduced, particularly on heavy material such as pig iron. The freight distributed over all items does not amount to much.

"We don't know what effect a lower exchange will have. We will be able to report after such an event happens. We would only be guessing to predict.

"One thing we know is that stocks of general lines are very low. We receive rush orders and the jobber expects us to ship the same day—a thing that is almost impossible where so many lines are manufactured, and to order only."

Waits for the Budget

C. F. Stevens, Secretary Empire Brass Mfg. Co., Ltd., London, Ont. hesitates to make any prediction concerning business conditions in the plumbing and heating industry until after the budget is announced. "This, we think," says Mr. Stevens, "will have the greatest effect on business conditions."

The "Marking Act" as it Now Stands

Collectors Advised to Use Reasonable Discretion in Enforcement of New Regulations—Name and Address of Manufacturer Now Sufficient Without Marking "Made in ———"—Containers Imported to Contain Canadian Goods for Export Don't Need Marking

A NUMBER of important changes have been made in the Marking Act, which was outlined in its original form as affecting plumbing lines in a previous issue of Sanitary Engineer. The changes remove many of the most serious objections which have been outlined by manufacturers, importers and wholesalers. The amended sections of the Act will be outlined herewith, giving the new ruling in black type.

In sending out the amendments, Collectors of Customs and Excise have been advised to use reasonable discretion in the enforcement of the regulations so as not to cause undue annoyance or irritation to importers.

The first amendment is to Section 13 which formerly provided that the name of a city, province, state, department or other division of a country of origin was not in compliance with the Act, that the words, "Made in....." were to be used, followed with the name of the country. This section has been cancelled and the substituted section reads:—

"The name of a manufacturer or his trade-mark accompanied by the name of the country or a place in a province, state or other division of a country where the goods have been manufactured or produced will be accepted as sufficient indication of country of origin."

Further exemptions are added to section 10, which provided that where articles themselves are incapable of being marked without injury and are imported in bands, wrappers or containers, or on cores or spools, such bands, wrappers, containers, cores or spools shall be marked to indicate country of origin. To this section have now been amended the words:

"Unless such articles are of a class or kind not made or produced in Canada in which case no marking is required."

Section 11 dealing with imported containers or wrappers intended to be filled with or used upon domestic products is cancelled and the following substituted:

"Imported containers, labels or wrappers intended to be filled with or used upon domestic products are to be marked as required by the act, but in order to avoid the possibility of origin other than Canadian being imputed to domestic products sold in such imported containers, labels or wrappers because of the marking of the latter, the words 'container' 'label' or 'wrapper,' together with the indication of the country of origin required by the regulations, shall be used. It will not constitute a non-compliance with the Act, however, so as to involve the levying of the additional duty, if the words, 'container,' 'label,' or 'wrapper,' as provided in the preceding paragraph, be not used in the marking of the goods imported, but before the release from Customs this additional marking will require to be done. Provided that the containers imported to contain Canadian Produce and exported may be admitted without being marked with the country of origin, conditional on the importer certifying on the face of entry for consumption that such containers are for use in the preparation of goods for exportation."

Section 18 of the regulations specified metallic goods not intended for sale to the consumer in the condition imported, crude rubber, crude clay, hides and skins, raw furs, corkwood unmanufactured, marble and stone in the rough, broom corn and bristles, fibre, rags, partly manufactured materials, completely manufactured parts for incorporation into articles of Canadian manufacture, repair parts, etc. as not being required to be marked. This has been amended to read as follows:—

"The following goods will not be required to be marked with the indication of country of origin: Goods in a crude, raw or rough state, or goods which are not intended for sale to the consumer in the condition imported, but which are merely for use in the manufacture, construction or repair of articles in Canada. This does not apply, however, to goods elsewhere specifically provided for in these regulations. Provided that on every entry at Customs of goods as described in this section a statement shall be placed by the importer certifying to facts sufficient to classify the importation within the provisions of this section."

Section 12 providing that name of country of origin must be in English or French is cancelled.

Section 17, subsections c and e, dealing with the marking of watch movements are both cancelled.

"The statute requires that the country of origin be indicated in the marking. Hence the words 'made', 'produced' or 'grown' may be used in the marking to suit circumstances."

Marking Act Changes in Brief

Name of manufacturer and address now sufficient instead of "Made in ———."

Where articles themselves cannot be marked without injury to the wrapper, container, etc., they must be marked only where similar goods are made in Canada—if not also made in Canada, imports don't need marking.

Containers imported to be filled with Canadian produce for export don't need mark of country on label but importer must certify.

All goods in crude, raw or rough state exempted unless specifically mentioned, where formerly only metallic goods, crude rubber, clay, hides, skins, raw furs, corkwood, marble, stone in rough, broom corn and bristles, fibre, rags were exempted.

Partly manufactured goods still exempt.

English or French of name marked on goods cancelled. Can now be any mark indicating country of origin.

Watch movement regulation cancelled re specifically marking "Made in ———" and parts don't need separate marking.

CITY WILL INSTALL SANITARY DEVICES ON INSTALLMENT PLAN

Peterboro.—At the recommendation of the Board of Health the city will install sanitary arrangements and a sink in several houses whose owners, the Board said, were not financially able to undertake the work, but could meet the cost by annual payments over a period of years.

The suggestion of the Board that the city levy the cost of installing at an interest rate of 6 per cent. in equal annual payments, not to exceed five years, in the same manner as municipal taxes, through the tax collector, was adopted.

At the meeting of the Property Committee of the City Council the recommendation was adopted and the plumbing inspector instructed to prepare plans and specifications for the work.

STRATFORD WATERWORKS APPROVED

Stratford—The City Council, at its final meeting, cleaned up a variety of last minute business including a by-law totalling $75,000 for improvements to waterworks.

Plumbers Need Confidence Of Public

Increasing Tendency to Unjustly Class Plumbing and Heating Contractors as "Robbers" Must Be Offset by Giving Public More Insight Into Operation of Contracting Business

ON A GREAT many occasions recently there have been appearing in daily newspapers the usual unjustified complaints concerning the plumbing and heating contractor's charges. It is possible that this industry has been singled out as a fitting subject for complaint, in these days of economy, because of the lack of information concerning it. Anyone acquainted with the expenses of a modern plumbing and heating shop and the equipment used, would hesitate before classing contractors as "robbers," so it therefore behooves those engaged in this industry to give as wide publicity as possible to the costs of this business which form the basis of the charges made for various work. The following information compiled by the National Trade Extension Bureau of the U. S. is designed to meet this difficulty and the plan might be adopted to advantage by contractors.

Under the heading, "Is Your Plumber a Robber?" the bureau has prepared an advertisement which contractors can, with little expense, by pooling their interests, run in their local newspapers to the advantage of all concerned. This advertisement will educate the public to understand the meaning of that mysterious word, "Overhead."

The public generally is under the impression that plumbing and heating dealers are soulless profiteers; that they charge excessive prices for labor; that they make enormous profits. We know this is not true, but the buying public will not know it until it is educated to know. If nothing is done to give the public the truth, people will go on believing the old hoary-headed jokes about the rich and robbing plumbers.

It is a business fact, that before a profit can be made on any transaction, it must provide for and pay the overhead cost of doing business. Therefore, the advertisement gives in the following detail the average fixed charge, or operating cost, for one year in a shop doing a volume of business of $25,000:

Misc. Office Expense (Sundries)	$ 25
Local License Fee	5
Telephone and Telegraph	125
Light, Heat, Power and Water	60
Stationery, Printing and Postage	85
Trade Papers, Business Magazines	5
Traveling Expense (Conventions, Soliciting, Buying)	125
Office Salaries (Owner)	1,800
Bookkeeper, Typist, etc.	1,400
Auto Expense (Supt. and Owner's Business Cars)	400
Truck or Wagon Expense (Including driver, where charges are made for such service per trip)	406
Depreciation of Wagons, Autos and Trucks	200
Insurance (On Horses or Truck, where charges are made for such services per trip)	15
Advertising and Donations	325
Dues (Associated Plumbers and Steam Fitters)	50
Dues (Chamber of Commerce or other Civic Body)	25
Interest on Owner's Capital	155
Interest on Borrowed Money	105
Legal Expense	15
Taxes (City, State and County)	70
Miscellaneous Store Expense	12
Allowances and Bad Accounts	125
Non-Productive Labor (Labor not chargeable)	25
Fire Insurance	19
Liability Insurance	184
Business Insurance	125
Rent (Shop and Warehouse, Garage and Yard)	600
Depreciation (Stock, Equipment and Buildings)	100
Damaged Material	12
Tools (Repairs and Depreciation)	50
Workman's Compensation Insurance (Based on Journeyman at $9.00 per day)	122
Miscellaneous Shop Expense	13
Total of Fixed Charge or Operating Cost	$ 6,783

Statement of Distribution of $25,000 Year's Volume.

Cost of Labor and Material	$15,944
Overhead (Fixed Charge or Operating Cost)	6,783
Total Cost of Doing Business	$22,727
Net Profit	2,273
Total	$25,000

As to the oft-repeated statement that plumbing and heating dealers charge excessive prices for labor, the Bureau suggests that the advertisement carry the following figures. The blank spaces should be filled in with the exact rate of wages paid in the town where the advertisement is used:

The average wage rate paid to journeymen plumbers during the last year has been ?..... per hour.

The ruling rate for resale to the customer for this labor service has been ?..... per hour.

Under present business conditions, the Plumbing and Heating Dealer actually loses money on this $..... labor when he resells it at $..... per hour, unless material in quantity is sold along with the labor, because of the fact that overhead cost of doing business must be provided for.

This is clearly proved by the following simple example, based upon the business facts and figures for a shop doing a volume of $25,000 worth of business per year with an overhead of $6,783.

Example.

Assume that the first six months of the year is gone, and that no work requiring material remains to be done:

There still remains to be provided for one-half of the year's overhead or $3,390.

This overhead is a fixed charge, and under the conditions as stated must be paid out of the proceeds of labor only:

A shop doing no more than $25,000 annual volume of business could not possibly work more than an average of three journeymen:

There remains of the year only 150 working days of eight hours each, or 1,200 hours:

Three men working 1,200 hours is 3,600 hours of wages. 3,600 hours, at $..... per hour, cost $..... for wages alone. $..... wages, plus $3,390 overhead, equals $.....

Dividing $..... by 3,600 hours, it is found that each of these hours of labor service must be resold for $..... before actual cost of doing business is covered.

$..... per hour, for labor service alone, loses for the Plumbing and Heating Dealer ..... cents on every hour sold, unless material is also sold in quantity to take up this heavy overhead.

According to the foregoing figures it will be seen that the proprietor, after allowing himself a salary less than the amount he pays his journeymen, has a net profit on a total year's business of $2,273, or only a net 10 per cent. on the actual cost of his service.

Any man who knows anything about business knows that a net profit of 10 per cent. is not profiteering. In fact, 10 per cent. on a volume of business aggregating $25,000 is a very modest profit.

Self-Corrosion of Cast Iron Pipes

Discussion on Disintegration of Concrete in Alkali Soils Brings Out Result of Extensive Experiments Made With a View to Obtaining More Definite Information on Destruction of Cast Iron Water Mains, Particularly in Western Provinces

Reproduced in Sanitary Engineer by courtesy of W. Nelson Smith, M.E.I.C., Consulting Electrical Engineer Winnipeg Electric Railway Co.

(Continued from last issue)

This single instance of the observed difference in the moisture of soils on gas pipes and water pipes respectively, confirms a statement made to the writer by the Manager of the Gas Department of the Winnipeg Electric Railway Company that soil around gas pipes is generally dryer than around water pipes, this being presumably due to the generally average higher temperature of illuminating gas, above the average temperature of city water. This single discovery above reported may need further confirmation, but it certainly points to the probability, that the reason why the gas pipes in the City of Winnipeg have so far not been damaged by corrosion to any extent in comparison with water pipes, is because of less moisture in the soil immediately surrounding the gas pipes. Both sets of pipes are about the same age, and the joints are made in the same way, with lead, and both are equally exposed to stray current.

Complete Soil Analyses

It was deemed desirable to have complete analyses made af a number of typical soil samples collected from representative areas in the Winnipeg district. The water soluble content was first determined and later the total analysis, on the basis of the hydrochloric acid soluble constituents as recommended by the Bureau of Soils at Washington and the Dominion Department of Agriculture at Ottawa.

It was noted that 5 samples showed from nearly 1% to 1 1-3% of water soluble salts out of the total weight of the soil. At the places where 5 samples were taken corrosion of water pipes had been particularly severe, with the exception of the Jubilee and Pembina sample which was discovered by accident and analyzed because of the very large crystal aggregates discovered, which are of calcium and magnesium sulphate.

Electric Battery Effect of a Cel' Consisting of Two Cast Iron Electrodes In Contact With Two Different Soils

Two cells were so constructed as to provide two pieces of cast iron not in contact with each other, but both in contact with moist soils, the anode being in contact with limy silt and the cathode in contact with a clay soil, both soils being kept moist. One of these cells had an initial e.m.f. of 2.1 millivolts and the other 9.2 millivolts, which latter became 7.6 millivolts when filled with distilled water. Within the first three hours No. 1 rose 10 millivolts and No. 2 rose 40 millivolts. In about 3 days No. 1 had reached 14 millivolts, and No. 2, 63 millivots, which were reduced respectively to 12 and to 48 millivolts after adding more water. The voltages varied for two months, alternately rising and falling. At the end of about two months, the cells having stood an open circuit, and without any addition of water, the polarity showed a reversal in both cells. Upon adding water once more, No. 1 recovered its original polarity and voltage, but No. 2 increased its negative polarity to 64 millivolts negative, while No. 1 went as high as 66 millivolts positive.

These results show that soils of Winnipeg and vicinity when in contact with iron, can of themselves set up an appreciable e.m.f. like that of a primary battery, amply sufficient to decompose the iron.

In Connection With The Corrosion of The Cast Iron Water Mains at Selkirk and Transcona

The soil around the pipe was a limy clay silt, and though it was not as heavily charged with soluble salts as the Winnipeg soils, crystals of calcium sulphate were found in the soil adjacent to the pipe. There were many limestone pebbles in the soil, more or less decomposed.

The tarry covering of the pipe was peeling off and gave no protection. The corrosion was widespread, but more pronounced on the flanges of the bells which, in one instance, could be whittled of ¼ inch on the edge of the flange. The softening was in patches. At one spot where a limestone pebble was in contact with the pipe the deepest pitting was observed, the pipe being softened about ¼ in. deep. The soft areas on the pipe were marked by patches of rust, on removing which, the iron could be dug into with a knife blade. The pipe had been in the ground about 8 years. It is located about 1¼ miles west of the northern extremity of the trolley line that runs to Winnipeg, the nearest sub-station being about 5¼ miles south of Selkirk. The town water works of Selkirk are not connected to the Hospital water pipe system, being fully ½ mile distant. The Hospital water main is in the form of a closed rectangular loop encircling the main building, and this corrosion was observed on that part of the loop that was furthest from the electric railway. As the corrosion was general over the 100 feet or so of pipe that was uncovered, a stray current must have been flowing into and out of the pipe at the same place, at the same time, and from the same source 1¼ miles distant through the earth, in order to be held responsible for this corrosion. Such gymnastics on the part of electric currents have not to our knowledge been proved to be theoretically possible by any of the authorities on electricity.

A delicate galvanometer has failed to show any trace of stray current.

Besides the corrosion at Selkirk, we also found well advanced corrosion on a 12-inch water main at the C. P. R. yard at North Transcona, 2¾ miles in an air line from the nearest electric railway track.

Corrosion was also found on a pipe at the stock yards in St. Boniface, half a mile outside the area of electric railway operations.

The products of corrosion are quite similar to those found in the pits in the Winnipeg mains and the flanges of the bells were attacked in the same manner as in Winnipeg and as in other localities, even in Europe, from which reports have been received of similar corrosion that was attributed to soil action in the absence of even a suspicion of stray current.

Soil Action on Lead and Copper

Lead and copper are also affected by self-corrosion in these same soils, but our researches have not continued long enough to submit much information. A lead water service pipe in the Selkirk Mental Hospital grounds was found to be corroded and the evidence of decayed manure in the original backfilling of the pipe trench led us to suspect that nitrates may have hastened corrosion, the other soil salts being much the same as in the case of the corroded cast iron pipe.

To briefly review one experiment, a small new lead plate was buried in contact with a clay soil and some black surface soil in a sealed glass container, with plenty of moisture present, and when removed at the end of 4½ months was found to be pitted with little cavities about as big as pin heads, which were filled with white pellets of crystallized lead sulphate. No heat was applied during the experiment.

A copper ground plate buried below the basement floor of the Manitoba Government Telephone Exchange in St.

Boniface corroded in 18 months or less after installation. We were given to understand by the telephone people that it would not be possible for any stray current to be leaking out into the earth from the telephone system through this ground plate.We subsequently immersed some thin sheets of copper in neutral solutions of the alkaline salts, above chemical attack within 24 hours, by the formation of insoluble greenish compounds of copper.

Corroboration From Other Places

The United States Bureau of Standards has done some work on the self-corrosion of iron in soils, and published the results, but the publicity was limited and is now out of print. It has been so heavily over-shadowed by the studies of the Bureau in stray current electrolysis and its mitigation, that most experts are still considering soil corrosion more in the light of an occasional accident, than as a natural condition that could prevail over a wide region.

In St. Paul and Minneapolis, considerable soil corrosion has been found. It was reported by Mr. E. H. Scofield, Power Engineer of the Twin City Rapid Transit Company in 1914. The sulphate bearing soils are not common in that locality, but there are frequent peat formations where the soil is acid and other areas carry a high content of nitrate and magnesium chloride. The acid soils pit the iron clean through. Where limy clay is found the pitting is graphitic, as in Winnipeg. There is less corrosion in the sandy soils of St. Paul than in the peat and clay of Minneapolis.

Mr Scofield has a piece of 4 inch cast iron water main that was in the ground at Pierre, South Dakota, from 1891 to 1911, which was corroded through with spongy graphite pitting, although there never was an electric railway in that town. The corroded material on analysis was found to be of the same character as that taken from the Winnipeg mains, even to the sulphide. In the course of the Minneapolis investigation a potential difference as high as 400 millivolts was found between metal electrodes buried in two different soils in the same cell.

At Brandon, Manitoba, a 6 inch cast iron water pipe was corroded through near the C. P. R. station before the electric railway was ever built.

Mr. A. S. Dawson, M.E.I.C., of Calgary, has reported the failure of steel reinforcement in a concrete pipe in a locality where no stray current was possible

Mr. P. D. Mellon, of Calgary, has reported the corrosion of steel pipe and malleable iron fittings in moist alkaline soil at Claresholm, Alberta, 50 miles from Lethbridge and 75 miles from Calgary, in a natural gas pipe line connecting these two cities, which have the nearest electric railways to the point of corrosion.

Mr. R. A. Brown, General Superintendent of the electric Railway and Lighting System in Calgary, has reported that cases of pipe corrosion happened in that city before the electric railway was started.

Mr. Brunlees, Superintendent of the Municipal Electric Railway in Edmonton, has recently reported the corrosion of pipes in alkaline soil in that city, in areas that could not have been affected by stray railway current.

A steel pipe line at Rochester, New York, some 28 miles long, suffered severely from self-corrosion where it lay in wet clay soils or in swamp water. This case has been reported upon most exhaustively and is doubtless familiar to most engineers in charge of large water systems. A report upon it by Mr. John F. Skinner, Principal Assistant Engineer of the City of Rochester contains, as Appendix "A," a most remarkable paper on the electro-chemical corrosion of the steel conduit, by Mr. Richard H. Gaines, Chemist of the Board of Water Supply of New York City. This report was read as a paper to the American Electro-Chemical Society in 1908, and contains the best presentation of the soil corrosion of iron and steel, for the benefit of engineers who are not electro-chemists, that could possibly be desired, and it should be carefully read by every engineer who is responsible for the construction or maintenance of iron or steel pipes in a wet clay soil containing soluble salts.

The more rapid corrosion of steel, than of either cast or wrought iron, is attributed by some authorities to the presence of manganese which has a higher solution pressure than iron, and probably dissolves first.

At Portland, Oregon a similar steel conduit, where laid in wet clay was badly corroded, but where it lay in the sand bottom of a river, it remained in good condition.

(Continued on page 24)

Seven Points in Showroom Question

DEALING further with the controversy which has been carried on in recent issues of Sanitary Engineer as result of the suggestion made by a wholesaler to confine showrooms to plumbing wholesalers, a letter comes from a plumber in an Ontario town as follows:—

"If I understand your article, the wholesaler wants to have everything his own way and have our customers here in the country go to the city and buy plumbing supplies and have them shipped here. Then all the plumber gets out of it is wages and still he has his overhead expenses on his premises to pay just the same. From what I can see the supply house wants to make over double the profit and the plumber gets nothing, for there is too much of what is going on now for our own good."

(Signed) Trying to get along.

Discussing the subject with Sanitary Engineer, a Toronto master plumber outlines seven points which, he claims, form the basis of this question. On these points the question should be decided, according to his opinion. These seven points are as follows:

First—Is the percentage of cost of the present wholesale showroom in ratio to the volume of sales from that showroom a lesser one than the percentage ratio in the case of the showroom of the individual plumbing operator?

Second—Is sight not considered as the most important of the five senses in selling and therefore would not one hundred small showrooms both spread and enlarge the volume of business over five larger showrooms or as the article can be understood to mean, one gigantic showroom?

Third—By what manner or means would the smaller towns be able to make use of this one showroom idea, which because of its size would only be located in the larger cities or largest city?

Fourth—Granted that smaller communities had to visit these large centres to view plumbing fixtures, would we not be throwing the gate wide open for departmental and mail order competition?

Fifth—Name some other lines of endeavor or merchandising wherein the central, eggs in one basket, idea, has proven better for the general elevation of the industry and the volume of sales than the sales of the product through a great number of displays or sales forces.

Sixth—As all plumbing work is done under a code of laws in this province it must be admitted that the ultimate man in the evolution of plumbing into the hands of the public must be the plumber. How can you justify his good intentions to give service on a product on which he has no monetary connections?

Seventh—How in future will the supply interests recognize future claims of the plumbers for consequential damages?

Outlook for 1922

THE end of the year is inventory time when every thoughtful business man makes a summary of what he has done in the year which has just passed. As we enter upon the year 1922, a vast field of potential business in plumbing and heating lines becomes apparent, and much actual trade will be available for the operator who makes his plans to use every influence at his command during the year for the development of every possible dollar's worth of business.

Prospects for considerable building are brighter now than they were a year ago. The past year has been one of liquidation in all lines of business. During 1921 plumbing goods have declined in price approximately 30% and yet some manufacturers report business for that year only about 70 to 80% of the volume done in 1920. Building stagnation has been with us for some years and the figures quoted therefore must indicate that aggressiveness on the part of operators combined with easier financial conditions in 1920 were the factors responsible for bigger business in 1920 than in the year just passed. With this in view it also becomes plain that more aggressiveness on the part of those engaged in all branches of the industry will result in more replacement business in 1922 irrespective of whether or not the expected building boom materializes. There are valuable opportunities at hand to develop business and there is no reason why business should be slack. The situation is largely what those engaged in the industry, make it. By this is meant not only the master and journeymen operators, but wholesalers, manufacturers, salesmen, etc. Every one must do his part, and it should be a general New Year's resolution to bend every effort to the popularizing of adequate plumbing and heating equipment in all buildings.

Prospects For Building

ACTION OF THE Builders' Exchange of Toronto in securing an agreement with the building trades for a reduction of ten cents an hour should be followed by similar action on the part of the building trades throughout Canada in order that building activity may be stimulated. It would appear as though the prediction of the manufacturers and supply firms made at the meeting in Toronto in the early Fall is coming true and that the workmen would sooner or later be forced by the need of work to play their part in lowering costs to stimulate building. Though there has recently been some increase in prices of certain building materials, in most cases revisions have been downward and this combined with lower wages should help revive activity.

One firm which supplies steel for building construction work advised Sanitary Engineer this week that bookings for Spring trade are much ahead of last year and that considerable building construction is expected to commence early next year. Similar optimistic reports are forthcoming in connection with anticipated house construction and a considerable reopening of business in building circles should be possible early next year.

The Marking Act

ONE OF THE last acts of the Meighen Administration has been the amending of the "Marking Act" which in its original form has been causing endless anxiety on the part of foreign manufacturers whose goods are marketed in Canada. The incoming government would probably have taken some steps to adjust this legislation but the action on the part of the old Government, belated as it is, is none the less welcome.

The Act as amended will be found elsewhere in this issue. It is evident from a reading of these comments that the Act as it now stands is much more acceptable to the trade than was the original form. Many lines of sanitary goods, which now bear the manufacturer's name and address, will not need to be changed as was the requirement of the former Act calling for the words, "Made in——" to be placed on each article. The latter requirement is still made by the Act in force in the United States.

If, as is claimed, the regulation governing marking of imports is to give more protection to domestic products, it is difficult to see why the law was not more particularly applied. Taking tools for instance, the Canadian manufacturer produces only about one-third of the range of tools required by the average mechanic, yet full protection on the whole range is given, to the detriment of young mechanics requiring these tools.

Had the original provision calling for the words "Made in ——" been upheld in the Canadian Act, large quantities of various lines of plumbing fixtures, made up for this market would have either been sent elsewhere or attempt made to re-stamp them, with great danger to their quality as even a slight blur is enough to class them as "seconds."

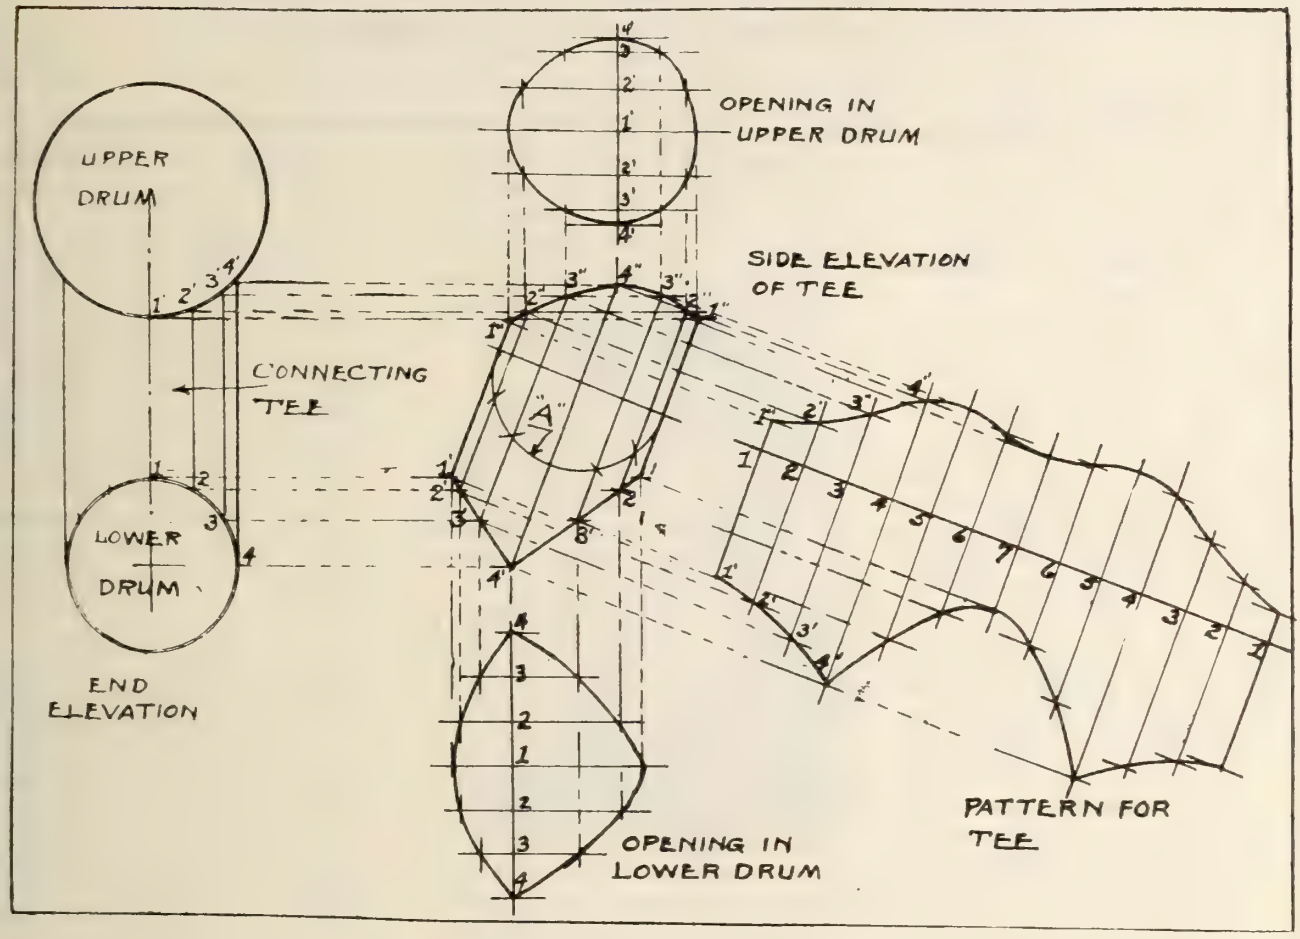
It is doubtful if the Act as amended will have the required effect in plainly indicating on certain goods the country of origin, when some sentiment is known to exist against such goods. It would be simple for one European manufacturer to make goods without a mark on them and then ship them to another country where an agent might place his name on the goods. In such case the true country of origin would not be indicated. This could not happen on goods coming through the U.S. because the Act of that country makes it necessary to mark the country in which the goods are made, but it might be done on goods shipped to Canada direct from other countries except the U. S.

When put into practice some minor questions such as these will undoubtedly crop up for solution, but it is to be hoped now that collectors have been allowed to use some discretion that many of the trivial points which are often raised by union officials who wish to be authoritative will be eliminated, and everyone co-operate to have the Act administered with as little difficulty as possible.

THE value of the price argument has been enhanced throughout the period of liquidation. The ratio of decline in the cost of sanitary fixtures and materials is contained elsewhere in this issue, but one of the most potent comparisons available to the merchant is found in the prevailing transportation rates and also the cost of living levels. Plumbing and steamfitting supplies have registered substantial reductions during the past twelve months.

Tees for Heavy Smoke-Pipe Work

By O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Mo.



IN heavy smokepipe work, tees are often made as shown in this drawing to connect different drums. In this case the upper drum is of a larger diameter, while the lower drum is of a smaller diameter and corresponds with the diameter tee.

In the side elevation we see this tee is placed on an incline, so that developed miters must be projected.

First draw the end elevation describing the upper drum from the center line and also describe the lower drum. Divide a quarter circle of the lower drum in equal parts and erect a line until they intersect the upper drum as in points 1'-2'-3'-4'.

Now from each of these intersections in both drums, extend lines to the right in a convenient distance. Then draw the slant line of connecting tee 4'-4' and describe the section "A" square with this line. Divide it in equal parts and then from each point in this section project lines parallel with the miter line 4'-4".

Where these lines from "A" intersect those horizontal lines from the upper drum and the lower drum, we sketch a miter line through those intersections.

This enables us to trace the upper miter line as 1"-2"-3"-4", etc., and the lower miter line as 1'-2'-3', etc. This completes the working drawing and enables us to set out the pattern.

To set out the pattern for the tee, draw a line at right angles to the side elevation as 1-1 and on this line set off the girth from section "A."

Draw stretchout lines through each of these points and then from each intersection in the top and lower miter line, square out points until they intersect lines in stretchout of corresponding number. Trace a line through these intersections and you have the pattern for the tee.

To set out the pattern for the lower opening in drum, we pick the spaces as 1-2-3-4 from the lower drum and set it off as 4-4. Then we develop it by the lines shown.

For the upper drum we pick the spaces as 1'-2'-3'-4' of end elevation, and set them as 4'-4' above side elevation. Then by projecting lines as shown the intersections for the outline are developed and the curb can be traced as shown.

When these tees are made out of 10 or 12 gauge iron, it is best to treat the working drawing on the neutral line. This neutral line represents the center of the sheet of steel. As number 10 gauge is an ⅛ inch thick and if the connecting tee was to be 12 inches in diameter on the inside, then you would have to make your working drawing 12-⅛ inch in diameter. This is the only way you can account for the thickness in such work. Flanges must be allowed extra on the pattern for tee if the connecting tee is to be riveted, but if the tee is to be welded, then the raw edge as here shown is all that is needed.

NICKEL CO. EXECUTIVE RESIGNS

The announcement is made of the resignation of executives of the International Nickel Company of Canada, namely, A. D. Miles, president, G. E. Sylvester, assistant to the president, and W. M. Bennett, treasurer. The resignations have not been accepted as yet, and until the board of the parent company in New York meets the local organization will be managed from the New York office. While the demoralized condition of the nickel market and the clouded prospects created by disarmament proposals are given as reasons for present complications it is suggested that possibly other reasons will be discovered in due course. The Sudbury plant was closed down several months ago.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

FIRE LOSS

Montreal.—W. H. Williams, plumber, suffered fire loss.

WINDSOR PLUMBERS IN BASEBALL LEAGUE

Windsor, Ont.—The plumbers and steamfitters of Windsor will have a team in the indoor baseball league this season.

NEW WATER SUPPLY FOR DEVON TOWN

Fredericton, N. B.—The town of Devon this week used Heron Lake water from the town mains for the first time. Gale Bros., of St. John, contractors on the water extension, completed their work recently, and last week the new water supply was piped into the town. It was in the pipes for several days before being admitted to the reservoir and from them into the distribution system.

CLAY PRODUCTS ASSOCIATION WILL CONVENE IN TORONTO ON FEBRUARY 7-9, 1922

The annual convention of the Canadian National Clay Products Association will be held at the Prince George Hotel, Toronto, on February 7, 8 and 9, 1922. Arrangements have been made for the following papers: Field Tile in Canadian Agriculture by F. L. Ferguson of the Ontario Agricultural College, Guelph; Making and Marketing Drain Tile, by H. H. Hallatt of the Tilbury Brick and Tile Co., Tilbury; National Importance of the Clay Products Industries, by A. G. Dalzell, consulting engineer of the Vitrified Clay Pipe Publicity Bureau, Toronto; Industrial Safety, by R. B. Morley, secretary of the Industrial Accident Prevention Association, Toronto; Tunnel Kilns, by George Booth, of the Booth Brick & Lumber Co, Islington, Ont.; Handling Clay with Conveyors, by William Burgess of the Don Valley Brick Works, Todmorden, Ont.; Coal for Kiln Burning, by E. C. Hanson, consulting engineer, Toronto. The International Business Machines Co., Toronto, will give a paper on time and cost recording and a demonstration of the Hollerith tabulating and sorting machines operated by electricity. It is expected that Theodore Randall, secretary of the National Brick Manufacturers' Association and vice-president of the same association will be present. The annual banquet will be held February 8.

The president of the C.N.C.P.A. is Ryland H. New of the Hamilton and Toronto Sewer Pipe Co., Hamilton. The secretary is G. C. Keith, 51 Wellington St. West, Toronto.

WESTERN ONTARIO NEWS

James Gerard of Essex, Ont., wants prices on plumbing, hot air heating and electrical work for new $4,000 residence.

The Hunt Plumbing Co. of London, Ont. was awarded plumbing and heating contract for new stores being erected by R. H. Smith.

The Union Natural Gas Co. of Chatham, Ont., contemplates drilling additional wells in Dover and Tilbury Townships.

The ratepayers of Windsor, Ont., will vote on a by-law at the January elections to provide $23,000 for a new comfort station.

R. D. Purdy, 31 Langarth St., London, Ont. wants prices on hot air heating, plumbing and electrical work for new $3,600 residence.

G. R. Blanchard, 489 English St., London, Ont., wants prices on hot air heating, plumbing and electrical work in connection with new $4,500 residence.

The council at Amherstburg, Ont. wants prices on water mains and fire hydrants to be placed for protection of the new high school. Mayor Park is chairman of the committee.

The Wright Teale Co. of London, Ont., was awarded the contract for putting in ten new bath rooms and hot and cold water in the upper story of the Hotel Belvidere.

W. J. McGuire was awarded the heating, plumbing and ventilating contracts at $44,500 in connection with the new county jail to be erected at Sandwich, Ont.

The engagement is announced of Miss Edna Helena Partridge, eldest daughter of Mr. and Mrs. Thomas L. Partridge, London, Ont., to Frederick S. Barkley, of Leamington, Ont. formerly of London. The wedding will take place in January.

Architect W. G. Murray, Dominion Bank Building, London, wants prices immediately on hot air heating, plumbing and electrical work in connection with fitting up of apartments and offices for R. E. Butler of Woodstock, Ont. Estimated outlay $12,000.

City Engineer Harry Brazier, London, Ont. will call for tenders shortly for approximately 200 tons of iron castings for manhole covers and gulley grates and for all sizes of sewer pipe from 6 inch to 27 inch in connection with new sewers costing $400,000 to be laid in 1922.

The Wright Teale Co., of London, Ont. was awarded contract for installation of new plumbing in the Knollwood Presbyterian church.

Jack Williams was awarded the heating contract and Williams and Roberts the plumbing for new $4,500 residence for F. C. Kilbourne at London, Ont.

L. E. Carrothers, Board of Education architect, at London, Ont., has been instructed to prepare plans for a new eight room public school. Steam heating system will be installed.

The Utilities Commissioners, London, Ont., E. V. Buchanan, general manager, will want prices shortly on 4 and 6 inch water mains for extensions that are contemplated.

INCORPORATION

Beeby Range Co., Ltd., has been incorporated in Canada with capital of $500,000 and head office in Brockville, Ont., to manufacture and deal in stoves, furnaces and all kinds of heating apparatus. The incorporators are headed by J. H. Beeby, stove manufacturer.

STOCKS ARE FAIRLY LOW

Stock taking, plumbers state, will find them with the lowest stocks they have ever carried in many lines. Wholesalers are looking for considerable replacement buying. Operators are unanimously of the opinion that the outlook for business in 1922 is good.

BIG WATERWORKS EXTENSION FOR KITCHENER

Kitchener, Ont.—The Kitchener Water Commission has received from the Ontario Railway Board the latter's permission to proceed with the large capital expenditures planned upon extension and improvement of the local water system.

Some weeks ago, the provincial board of health endorsed the scheme. It will involve an expenditure of at least $185,000 and when completed will give Kitchener a water supply for industrial, domestic and fire protection purposes that will be ample for many years to come. One of the first things to be undertaken will be the construction of a conduit line connecting all mains with the Strange street section and linking up the eight producing wells, having a daily flow of one million five hundred thousand gallons.

A pump house will be erected on the Strange street property to house the new pumping machinery to be purchased and installed at a cost of some $60,000. A million gallon reservoir will be constructed, thus doubling the reserve supply of water.

NEW WATERWORKS DAM STANDS TEST

St. Thomas, Ont.—The new dam of the waterworks department in this city, storing 18,000,000 gallons of water in Kettle Creek one mile above the city, stood its first real test since its construction with flying colors, when the creek became a raging torrent as the result of the rain which fell almost steadily for 36 hours.

DELAY IN SHIPMENT HOLDS BACK FILTER PLANT

Peterboro—Owing to a delay in the delivery of material it is not likely that the city's filteration plant will be ready for operation before January 15. Waterworks Superintendent R. E. Dobbin announced that there has been an unexpected delay in shipment of some of the machinery and equipment, and, because of this delay, the contractors have taken now a month more than their contract time. The plant was to have been in operation by December 1.

WILL LAY SEWERS IN WINTER

Montreal—According to a report which the Director of Public Works has submitted to the Executive Committee at the City Hall, funds have already been voted for new water mains, which may be laid this winter at an estimated outlay of $170,000. In the same report the administrators of the city are informed that sewers also might be laid in twenty street sections, at the expense of interested proprietors, for the estimated amount of $455,000.

The Director of Public Works declared that in conformity with instructions regarding work on sewers, subways, and other public improvements which might be executed by his department during the course of the winter, he had transmitted a list of such improvements which would cost about 15 per cent. more than if done during the summer season.

INCREASED COST OF SEWERS

The enormous increase in the cost of improvements is shown in the different estimates made upon the construction of a sewer in a Toronto street. Notices sent out in February, 1917, estimated the cost of the work at $210,890. In March of this year another estimate was sent out on the same work, in which the total cost was placed at $55,200, an increase of about 175 per cent.

The Works Department in explanation state that, in 1917 the estimated cost of material for the job was $3,000 and in 1921 it was $14,000. The cost of destroying the pavement on the street and relaying it in 1917 was estimated at $6,000, as against $10,000 this year. Labor was paid 33 1-3 cents per hour in 1917 and now receives 60 cents per hour. In addition to this, the overhead expenses in connection with the job have increased 15 per cent. since 1917. The Works Department figures its overhead expenses, without allowance for any unforeseen circumstances, to be 28.6 per cent.

JAMES SMART PLANT APPOINT TORONTO REPRESENTATIVE

The James Smart plant of the Canada Foundries & Forgings, Limited, Brockville, have announced the appointment of Tim. W. Rogers as their representative for Toronto and Western Ontario. Mr. Rogers has had a wide and varied experience in the metal trades and previous to this appointment was associated with Drummond, McCall & Company, Limited. The Smart Plant proposes to open an office in the city of Toronto the first of the year.

T. W. ROGERS

Appointed representative for Toronto and Western Ontario for the James Smart plant, Canada Foundries and Forgings Ltd., Brockville, Ontario.

MEN TEMPORARILY BLINDED WHEN ALKALI BACK-FIRED

Alfred H. McCarnan, and George Bigley, are in St. Michael's Hospital, suffering from injuries to the eyes and head, sustained in an explosion of alkali they were using to clear a clogged pipe on the premises of the Huron and Erie Mortgage Corporation, 14-16 King Street East, Toronto, recently. The two men are temporarily blinded and suffering terribly.

McCarnan is a plumber employed by the F. R. Maxwell Company, Limited, and Bigley is caretake of the Huron and Erie Building. The alkali, a strong solution, backfired into their faces as they were bending over the pipe.

OSHAWA COUNCIL SHOWS CONFIDENCE

Oshawa, Ont.—The town council seems to feel that better times are ahead. It has decided to submit to the people on January 2 a by-law to spend $70,000 on the construction of a trunk sewer in the west end of the town. A few weeks ago the council refused to take any action in the matter because of the cost and the uncertainty of the times. If the by-law carries work on the sewer will commence immediately.

The west end sewer has been promised by nearly every Council for the last ten or twelve years, but for some reason or another nothing definite was ever done.

URGE SEWERAGE SYSTEM

The population of York Township, Ont., has increased from 44,300, in 1920 to 55,000, according to the annual report of the township Board of Health. Building has also been on the increase.

The report states that 3,181 building permits have been issued since Jan. 1, of which number 2,055 were for small cottages. The estimate on the total value of building was set at $8,000,000.

The report very strongly set forth the need of a drainage and sewerage system throughout the township. It stated that the introduction of a water system in the eastern part had greatly helped the situation. Plans suggested by the engineer for a sewerage system which would be independent of that of the city of Toronto were recommended to be again taken up.

Smiths Falls, Ont.

Sewer costing $18,000 is being constructed by Town by day labor. J. A. Lewis, Engr.

Catalogues and Booklets

SCOVILL'S "TUBE FACTS"

An interesting booklet recently issued by the Scovill Manufacturing Co., of Waterbury, Connecticut, U.S.A., supplies a quantity of distinguishing facts regarding brass tubing, and the book is rightly termed "Tube Facts."

The introduction points out that it is one thing to talk quality of goods, and another thing to prove it. Brass tubing, not containing any attributes of beauty such as color, texture, design or style, is therefore forced to rely upon what is under the surface to serve as vital points in structure, usefulness and quality. This probing is done with a microscope, and the difference between one tube and another can then be distinguished. The book has many illustrations of this nature depicting sections of tubing under various conditions. There are also a number of photographs of the Scovill works, showing mill interiors, methods of operation, and plant equipment. Some of the points touched upon are: the tube mill; the laboratory, applying metallagraphy to the manufacture of metal products; why condensor tubes fail; how seamless tubes are made; treatise on copper tubing, and other sections.

Meeting of Montreal Master Plumbers

H. Lavigueur Elected President—Association in Excellent Financial Position—Will Again Enter Builders' Curling Bonspiel

MONTREAL.—A highly satisfactory financial standing, and favorable progress in organization work during the past twelve months, were revealed at the annual meeting of the Montreal Master Plumbers' Association, held in the Builders Exchange, with D. A. Bethune presiding.

The secretary submitted the annual financial statement which showed a favorable balance of $70.78 on the year's current account, and on the capital account, assets amounting to $1163.68. John Watson, convenor of the audit committee congratulated the association on the good shape in which the finances

H. LAVIGUEUR

Master plumber, Montreal, who was elected to the presidency of the Montreal Master Plumbers' Association succeeding D. A. Bethune, at the annual meeting.

were, but urged that steps should be taken to arrange that a considerable amount now standing in the capital account be transferred to the year's current account. Upon the motion of Jas. Ballantyne, seconded by W. J. Barber, it was unanimously resolved that the statement be adopted.

Nominations

J. E. Walsh, for the nominating committee, proposed the following nominations for the respective offices of the Association in the ensuing year:

President—H. Lavigueur.

1st Vice-Pres.—Geo. Delaney.

2nd Vice-Pres.—Jos. A. Francoeur.

Past President and representative director to the Board of Builders' Exchange—D. A. Bethune.

Chairman of Hygiene Committee—A. Charette.

Chairman of Arbitration Committee—R J. McCauley.

Chairman of Legislation Committee—A. Noel.

Chairman of Apprenticeship Committee—P. C. Ogilvy.

Chairman of Price List Committee—W. U. Hughes

Audit Committee—Jno. A. Gordon, Jos. Belisle and O. Caron.

Trustees—J. E. Hardy, Jno. Colford and W. G. Borland.

Honorary Secretary—Jno. Watson.

Executive Secretary—David K. Trotter.

When moved by Jas. Buchanan, seconded by Jas. Griffin, it was unanimously resolved that above slate be the officers for 1922.

D. A. Bethune, on retiring from the chair, thanked the members for the support they had given him during his two terms of office, and hoped that an even greater measure of support would be given the new president, Mr. Lavigueur.

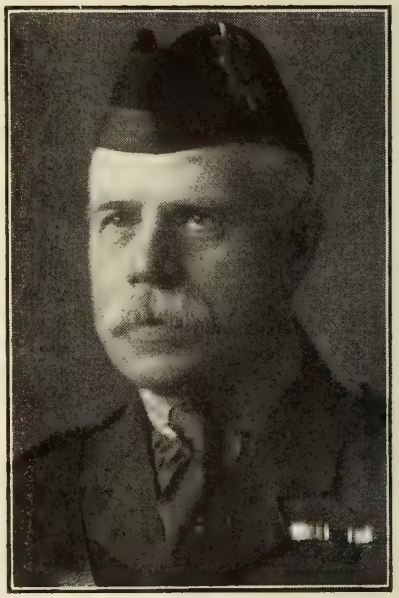
Honor Retiring President

Jas. Ballantyne, in proposing a vote of thanks to the retiring president and officers, recalled that during Mr. Bethune's terms of office, there had developed a strike among a number of their mechanics in a certain section, but by excellent organization work they had come through the difficulties. Through the wise generalship of president Bethune, and sturdy co-operation of the other officers, the members generally had been able to carry on their work with a minimum amount of dislocation to the trade and public.

H. Lavigueur, on taking the chair, thanked the members for the honor they had conferred upon him, and which had been entirely unsought by him. He was confident that during 1922 he would have the whole-hearted support of the Association.

To Enter Builders' Curling Bonspiel

The favorite pastime of the Montreal plumbers was not overlooked at the meeting. With the season now at hand, and a representative gathering present, the opportunity of laying plans for th season's curling was taken. The meeting agreed to leave all arrangements for the annual curling bonspiel in the hands of John Watson, while D. A. Bethune agreed to make all arrangements so that two rinks of plumbers at least should be entered in the Annual Builders' Curling Bonspiel.



D. A. BETHUNE

Who has retired from the presidency of the Montreal Master Plumbers' Association after two terms of office.

The executive secretary, D. K. Trotter, was presented with a bonus as a token of appreciation for his excellent services during the past year, to which he suitably replied.

SHOWER BATHS IN OFFICES

Winfield R. Sheehan, who is now the business executive head of the Fox film organization, New York, has started a fad among executives who work at top speed that threatens to put a crimp in the New York luncheon business.

Sheehan recently installed a shower bath in the spacious offices. Instead of dashing out and gulping down a luncheon he takes a refreshing shower and is full of vim for the remainder of the day's grind.

Down in Wall Street plumbers are now installing shower baths in the offices of eight big financiers.

THE TIN PLATE MARKET

Vancouver, B. C.—Rumors are abroad here that lower adjustments on tinplate and manufactures thereof and other lines produced in Britain will be announced shortly after the New Year. Tinplate has heretofore been imported from Pittsburgh on a freight all rail rate of $31.70 per ton. The new water rate from the Old Country is $10 per ton and it is on this account, coupled with the saving on American exchange that will permit a reduction. To meet the water competition a rail rate of $20 has been announced but this will still keep the American product out of this market, it is stated.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred to and Studied

CHAPTER VII

(Continued from last issue)

FILTRATION

FIRSTLY, under this heading, we will consider the easiest, cheapest and most natural filter for the purification of sewage, namely, land treatment.

The land produces a quick purification of sewage by a process of oxidation which requires the presence of a plentiful supply of air. This necessitates dividing the filtration area up into different parts so that the sewage can be diverted onto the different parts as the case requires, otherwise, if the land was continuously soaked in sewage there would be little chance for oxidation to take place, then the final purification of sewage would cease and the ground become "sewage sick."

The millions of tiny bacteria existing in the upper layers of the soil (and these only exist and thrive well with a plentiful supply of light and air) attack and feed upon the organic matter, usually in colloidal suspension in the clarified tank effluent, and convert same into harmless compounds which can be discharged into any running stream in a well-purified state free from any smell or harmful germs. This nitrifying action only takes place with the aid of aerobic bacteria and it is absolutely essential that the land under treatment should be intermittently treated always allowing a periodical rest between each treatment so as to ensure the bacterial microbes being supplied with air and light.

Should the area of land required for filtration purposes not be available, in order to provide the rest required or should the filtration area ground be water logged or become "sewage sick," then steps should be immediately taken to carefully and well underdrain the land as explained later in this chapter, with proper tile drains, for it must always be kept in mind that the tank effluent comes onto the land through the tile drains entirely without oxygen, and that its reduction by aerobic bacteria depends entirely upon the supply of air and porosity of the surrounding soil. So that the drains should not be buried too far in the soil but kept as near the surface as possible and the selection of your filtration area should be in open porous soil whenever possible.

The automatic discharging chamber with syphon provides for discharging the sewage intermittently, this providing the interval of rest required by the soil.

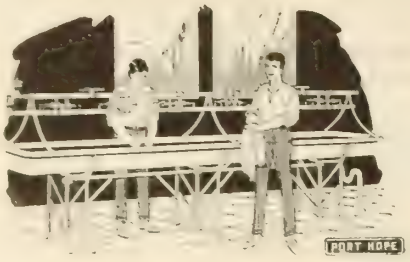
Sewage has been successfully treated on land direct without any tank treatment whatever, but this requires a much larger area than is generally at the disposal of private houses — the solids in a short time clog the top surface of the soil unless the area is rested for a considerable period to allow the bacteria to split up the solids the area soon becomes sewage sick and purification ceases and it is always advisable to pass the sewage through some form of tank treatment, then if same is allowed to flow freely over the filtration land area to slowly percolate into the soil at the same time being purified by the oxidization process.

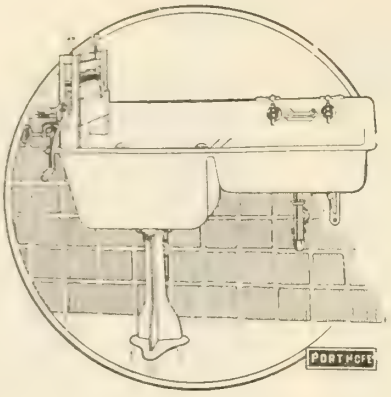
This methhod of filtration is termed "Broad irrigation" and is adopted in many English towns and cities where land is plentiful for sewage purposes and the nature of the soil is suited for filtering purposes. The land is generally worked by a sewage farmer who grows, with success, cereals, roots, grass, etc. for the local market. In most cases the land is well underdrained and rested periodically.

The soil should be a light loamy soil five feet deep, the sewage applied evenly in thin layers so that it can absorb the oxygen from the air and gradually sink into the soil where the ammonia compounds are chemically changed into harmless nitrates and the purified effluent then passes into the land drains which discharge through an inspection manhole into the stream.

Soils of a clay-like nature should be well under-drained and always kept moist, otherwise cracks appear through the action of the sun and the sewage gains direct access to the sub-soil drains without undergoing the least purification.

(Continued in Next Issue)





1921

1922

1923?

The past is past—the future is all-important. "Ring out the old, Ring in the new" could well be applied to businesses today. Conditions demand that all non-essentials be discarded. On a foundation of proven methods and merits must be built a new structure, strong enough to withstand conditions as they are—and will be; not as they were.

One Selling Talk a Day In 1922

Many thousands of homes in Canada, hundreds in our own cities; and scores in our own neighborhoods require new plumbing conveniences—now.

Even one honest sales effort per day in 1922, on the part of every master plumber would result in a very gratifying volume of sales for the year.

Selling was not easy in 1921—it will not be easy in 1922. Therefore the effort must be honest—it must be real.

But the bare merits of the service offered, the quality of modern fixtures, and present price levels, should dispel to a great extent reluctance to making expenditures at this time. For what better selling points could any salesman want than the plumber has in the telling of his story:—the picture of added comfort; how a glistening snow-white bath room is a never failing source of pride—how visitors are welcomed—not repelled; why efficient home sanitation not only safeguards health but actually saves lives.

Reduced Prices Are Stimulating Building

Fourteen Thousand New Buildings This Year as Against 11,000 Last Year—Expect Big Year in 1922.

LONDON, Ont.—A number of decidedly interesting features in connection with the building situation were discussed here this week at the annual convention of the Mason Contractors' Association of the United States and Canada. Prices of materials, prices demanded by labor, freight rates, the apprentice problem and the general outlook were among the leading questions discussed. The opinion was general that reduced prices of materials are having a stimulating effect on building and this year will see 14,000 new buildings constructed as against only 11,000 last year. It was pointed out that there is every prospect, that 1922 will make new records in construction work. There is no doubt of the very large amount of work held over owing to the general public having the view that both labor costs and materials costs must come down. Various speakers gave figures showing how material costs have been steadily coming down. The report of Secretary McGarvey regarding investigations into labor costs in fifty-one cities was not so encouraging. In some places he said the men have seen the wisdom of accepting lower wages in an effort to restore normal business. In many others however, they have flatly refused to accept any reductions with the result that only 72 per cent of them had secured employment.

In this connection it was pointed out to Sanitary Engineer by several delegates that had the mechanics been willing to accept even a ten per cent cut in wages, contractors would have been enabled to put in figures on prospective work that would have insured it going ahead. In this way the men would have been money in pocket at the end of the season, would have lost no time at all, and indirectly would have benefited other industries by creating a demand for the materials required. Many of them it is believed are now seeing the mistake that was made and it is expected that next year's building program will be greatly helped by a more reasonable attitude on the part of the men in various trades.

The opinion was general that lower freight rates will also help greatly in getting business back on a normal basis again.

The apprentice problem is so serious at the present time that Vice-President Thomas Preece estimates that at least 10,000 more bricklayers are required all over the country. There is a serious shortage of apprentices in the plumbing and heating business. In the building trades a careful survey showed that 800 contractors have among them only twenty apprentices.

In connection with the building situation for 1922 it was pointed out to Sanitary Engineer that all over the Dominion there is an acute shortage of homes. This is especially the case in connection with small houses suitable for workingmen to buy or rent. In many industrial centres such houses are now at a premium. Delegates agreed that there is a big field in this situation for profitable business, and also in home building generally, and inquiries that are being made among the contractors indicate that a large number of people who are tired of paying high rents for homes that are not suited to their requirements are planning to build. The crux of the situation according to several delegates centres around labor, and if the men in the building trades are willing to work for reasonable rates they are confident that 1922 will see all past records for building broken.

SELF-CORROSION OF CAST IRON PIPES

(Continued from page 15)

The most remarkable confirmation of our work was disclosed by the translation of an article by P. Medinger describing the corrosion of cast iron water pipes at the Town of Esch, in the Grand Duchy of Luxemburg, in Europe, published in Berlin in 1918.* Here the pipes were laid in a soil heavily charged with calcium sulphate, and the condition of the pipe and the corrosion products were identical with what we have found in Winnipeg and vicinity. Direct action of stray currents or of free acids were in this Luxembourg case known to be entirely absent. Mr. Medinger's researches extended over two years and are a valuable contribution to electrochemical literature. They confirm the fact that the self-corrosion of cast iron pipe is inevitable under conditions as we find them in the Red River valley, without any assistance from stray current.

Preventive Treatment

As this research only covers the beginning of the subject, there has not been time to explore any commercially possible methods of inhibiting corrosion. Chemical methods might be attractive if they are practicable. Evidently there is as wide a field for chemical research for the protection of metals as for that of concrete.

Treatment of pipes with tar and similar paints or dips has proved generally futile. The engineers of the Rochester Waterworks have recommended two coats of certain special "Detroit Graphite" paints covered by a third coat of so-called "Trus-Con Special" paint, for protection of an additional steel conduit, in the light of the experience they have had in protecting their earlier conduits. If it really protects steel, it might also protect cast iron. The specifications for the paint and its application are exceedingly rigid.

A method that we believe would probably lengthen the life of cast iron pipe in a wet salty clay soil, without depending on a thin layer of paint, is to backfill the pipe trench with quartz sand or washed gravel, which, though it cannot prevent access of salt solutions, will probably cause salt solutions to be less concentrated by the time they reach the pipe and will allow atmospheric oxygen to form a thin coating of rust. Some authorities believe this to retard the rapidity of the solution of iron, which is thought to be more rapid when atmospheric oxygen is sealed off from a pipe by a jacket of wet clay.

Mr. E. L. C. Forster, Chemist on the staff of the Dominion Health Board, has advised us that a very small alloy of aluminum with cast iron prevented the formation of microscopic shrinkage cracks on the surface of cast iron. This was formerly a trade secret, but was made public during the war for the benefit of makers of munitions and is now said to be public property. It would seem that the absence of minute surface cracks might render the silicious coating of cast iron pipe more impervious to salt solutions. Any method of casting pipe which could produce a flawless coating of silicate outside of the iron, that would resemble a jacket of enamel, would certainly prevent or retard iron from going into solution.

A steel conduit at New Bedford, Massachusetts, where it passed through two miles of peaty swamp, was backfilled with gravel and suffered no trouble from corrosion up to the time it was examined after having been in use for 10 years.

It seems to be a fact that although the soils of many sections in the Western United States carry a large content of alkaline salts, these soils are so generally porous as not to hold water in contact with buried pipes, and there have been no conspicuous cases of corrosion under such circumstances in that part of the country. Everything seems to point to the desirability of imbedding buried pipes in sand or gravel whenever possible.†

The foregoing are the only expedients that we can offer at the moment, but we trust they may prove suggestive to members of the profession who are especially interested.

In conclusion we desire to point out that the foregoing memoranda are not intended to convey the impression that stray current corrosion does not happen in any moist soil, where the pipes are actually found to be electrically positive to other buried conductors connected with a railway power station bus bar; but we think we have demonstrated that where there is no stray current possible or where stray current may be flowing into a pipe and not out of it, a wet clay soil charged with alkaline salts must inevitably and automatically corrode a cast iron pipe.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

THE NEW YEAR markets commence with additional price recessions on plumbing and steam-fitting supplies. The new list on wrought pipe supplies one of the premier changes, an approximate reduction of 8 per cent. being effective on standard steel and iron piping from December 22. Lower quotations have also been recorded on cement, while the discounts covering radiators and boilers have been revised, thus registering easier price levels on these products.

Substantial declines have been announced on ware products, this change effecting tinners' trimmings, tinware, galvanized ware, and similar lines. Other price reductions noted on the current markets appear on small packings, including asbestos wick, square braided flax and trade packing.

Enamelled ware prices remain at the recent revisions, while the quiet season is now evident in closet equipment. The undertone in copper products and also the lead and zinc markets, retain the recent firmness, although trade in these lines is seasonably dull. Little variation is noted in pipe fittings, with the shading in range boiler quotations now becoming almost general. A readjustment in the soil pipe markets is still being looked for, the variation in discounts showing no signs of immediate change. There is less activity in scrap materials, while the ingot markets also record the seasonal moderate tone attributed to the holiday period.

MONTREAL MARKETS

MONTREAL, December 30.—Outstanding in the market reports covering plumbing and steam-fitting supplies is a reduction in wrought iron and steel piping. From December 22nd all sizes of both black and galvanized pipe will show a reduction of approximately 8 per cent. Both black and galvanized sheet prices are reduced in some quarters, showing the trend of the sheet market still in a downward direction. A minor reduction is recorded in certain smaller packings, including asbestos wick, square braided flax, and trade packings. To the tinsmithing trade an important development is the announcement of lower prices on enamelled ware, tin ware and many products used in the tinshop. To those who carry a stock of manufactured tin ware the reductions will prove most interesting, while to the average shop all kinds of trimmings used in the making of utensils will now sell for less. A reduction has also been announced on radiators and boilers.

Solder quotations show a further slight advance, this being the third price increase in the past few weeks. Cement prices are for the present holding, but a revision in a downward direction is expected early in the New Year. The same can be said of cotton waste, dealers anticipating a revision next month. Range boilers are still rather unsettled, with the lower prices, announced in last issue, prevailing in most quarters. Enamelled ware is now on a more stable basis, selling at the recent reduction. The ingot metal markets are displaying a little easier tone, which is attributed to the present quiet period accompanying the holiday and inventory seasons.

QUIET PERIOD FOR SCRAP METALS

Montreal.

Waste material markets are generally quiet with the closed winter weather now well at hand. The better feeling in the market of last month, especially in non-ferrous metals, is now spent owing to the quieter demand. Prices on these scrap metals are however holding fairly steady for the present, in sympathy with the ingot markets; but as one dealer stated, prices are not a factor that would likely assist toward increased activity at the present time. Iron and steel scrap remain very dull, little business showing in these for some time past. Following are present nominal quotations;

SCRAP—

Automobile tires	0 75
Rubber Shoes	0 03
Yellow brass	0 05
Red brass	0 09
Light brass	0 03¼
Scrap zinc	0 03 0 03¼
Lead, heavy	0 04¼
Lead, tea	0 02½
Light copper	0 08
Heavy copper	0 10½
Wrought iron, R.Rd., No. 1 per gr. ton	10 50
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 50
Heavy melting steel	7 50 to 8 00
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	21 50

REDUCTION ON WARES AND TINSMITHING PRODUCTS

Montreal.

A recent reduction on enamelled ware, tinware and other products includes many lines used in the tinshop, and is of particular interest to those who stock manufactured tinware and other supplies. The changes vary on the different products, but the average decrease on staple lines is approximately 20 per cent. Effective December 22nd., following are products that will prove of interest to the tinsmithing trade, showing reduced prices;

Stamped tinwars, plain, 50-10 per cent discount.
Stamped tinware, retinned, 50 per cent discount.
Pieced tinware, 20 per cent. advance on list.
Stove boards (wood lined) 25 per cent. discount.
Stove boards (paper lined), 40 per cent. discount.
Sheet iron and steel ware, 10% advance on list.
Steel sinks, net list.
Coal hods, japanned, 33 1-3% advance on list.
Coal hods, galvanized, 33 1-3% advance on list
Stove pipe elbows, net list

Milk can trimmings, 33 1-3% advance on list.
Copper bottoms, net list.
Trimmings general, net list.

FURTHER SLIGHT ADVANCE IN SOLDERS

Montreal.

Solder quotations are again increased, this making the third price advance in the past few weeks. These revisions are necessarily made through the continued strength of metals in primary markets, lead, copper and spelter displaying a very firm tendency. Tin is now showing a little weaker, but not to the extent that would cause any marked change in the general undertone of the market. These metals are not quite as active as in previous weeks, but this is

only considered temporary, and the turn of the year may yield further developments.

Other lead products remain unchanged in price, but the undertone in these also is firm. Zinc sheets are also unchanged, but here also present quotations are very firm. It is stated that competition is the real factor in the maintenance of prevailing prices. Present quotations are as follows;

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 10¼
Do., 4 to 8 lbs., sq. ft.	0 09½
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 28½
Do., strictly, lb.	0 26½
Do., commercial, lb.	0 23½
Do., wiping, lb.	0 24½
Do., wire, lb.	0 38
Zinc, sheets, casks	0 11½
Do., broken lots	0 12

LOWER QUOTATIONS APPEAR ON RADIATORS AND BOILERS

Montreal.

Quotations on both radiators and boilers record a decline effective January 1, 1922. The extent of the reduction on the standard radiators is approximately 13 per cent, while prices on water and steam boilers are lowered around 10 per cent. Following are the current revisions:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60. Discount, 59% for hot water and 60% for steam.

Wall Radiators—5 ft., $1.15; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount [illegible]

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 60 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 15 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in. 20 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 15 per cent. Ontario Govt. trimmings, net list.

Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings, 15 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

SHEET PRICES LOWERED IN SOME QUARTERS

Montreal.

Lower quotations appear on both black and galvanized sheets in some quarters of the local market, although there is really little or no change in the undertone. For some time past it has been necessary to quote prevailing prices with a range, as a variation has existed among the different jobbing houses. Dealers who were previously quoting the higher prices have now announced a slight reduction, but the change is purely local, and other dealers are maintaining their former levels. The demand at present in both black and galvanized sheets is seasonably light, but there is some activity noted in the tin plate, although of a spasmodic nature. Little improvement in general is looked for until after the quiet weeks of next month, although one large local distributor stated that a better buying movement should develop immediately following the inventory period as undoubtedly stocks in all sections were very low. Following are local nominal quotations;

BLACK SHEETS—	
19 gauge	4 40 1 50
12 gauge	4 40 4 60
14 gauge	4 40 4 70
16 gauge	4 50 4 80
18-20 gauge	4 50 5 05
26 gauge	4 50 5 25
22-24 gauge	4 65 5 25
28 gauge	4 75 5 35
GALVANIZED SHEETS—	
10¾ ounce	6 75 7 60
28 gauge	6 30 7 20
26 gauge	6 05 6 85
22-24 gauge	5 90 6 60
20 gauge	5 75 6 45
18 gauge	5 75 6 35
16 gauge	5 60 6 35
14 gauge	5 45 6 35
12 gauge	5 30 6 35
10 gauge	5 30 6 35

English Standard—	Queen's Head.	Fleur-de-lis
28 gauge	8 25	7 75
26 gauge	8 00	7 60
24 gauge	7 40	7 10
22 gauge	7 05	6 65
18-20 gauge	6 35	5 20

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

NO CHANGE IN BAR IRON AND STEEL

Montreal

With local stocks very low, and the buying movement now showing a seasonable recession, the local situation on bar iron and steel is practically unchanged this week. There is still the easier tone in the market owing to the quiet demand, and prices are more or less nominal as lower quotations are given in almost all quarters for fair sized orders. The position at primary sources is said to be one of waiting. Prevailing levels are generally admitted to be at the bottom, with present replacement costs, and any spurt in demand with the opening of the new year months is expected to bring about a steady to firm market. Following are present quotations;

IRON & STEEL—	
Common bar iron, 100 lbs.	2 90
Refined iron	1 40
Iron finished machinery steel	2 95
Mild steel	2 90
Single reeled machinery steel	4 75
Band steel	2 90
Spring steel	1 50
Sleighshoe steel	2 90
Tire steel	3 10
Toe calk steel	3 80
Harrow tooth steel	3 05
Mining teeth steel per lb.	0 22
Black Diamond tool and cast steel	0 22

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

NEW LIST REDUCES WROUGHT PIPE PRICES

Montreal.

A reduction of approximately 8 per cent is made in wrought pipe in the announcement of the new standard list. Effective December 22nd. list No. 54 will now be the selling basis for both wrought iron and steel piping. For some time past easier prices were predicted but it was thought that nothing would develop in regard to lower prices until after the turn of the year. With the new lower prices now in effect it is hoped a more stable situation will ensue, price-shading having appeared in some quarters previous to this announcement. Following is list No. 54.

WROUGHT PIPE

Price List No. 54. December 22, 1921.

Standard Buttweld Pipe S/C

Per 100 feet.

SMALL DEMAND FOR BOILER TUBES

Montreal.

There is little or no change in the market for boiler tubes, with the demand now receding to the usual quiet period at this season. Little improvement is looked for until after the opening weeks of the new year as these, and other heavier goods, are very inactive around the closing months of the year. Following are local prices on the various sizes;

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

LOWER PRICES ON SOME SMALLER PACKINGS

Montreal

New lower prices are announced on some of the smaller packings, including asbestos wick, square braided flax and trade packing. Asbestos wick will now sell for 80 cents per pound, square braided flax 60 cents, and trade packing at 30 cents per pound.

EAVESTROUGH PRICES STEADY

Montreal.

Little further activity is expected in eavestrough and conductor pipe until the earlier spring sales, the season having now advanced to the usual dull period. Prices are holding at the revision of November last with chances of any change in this direction said to depend on the sheet markets in the new year. Unchanged quotations are as follows;

EAVESTROUGH—

O. G. Square Bead—Per 100 ft.

8 inch	10 inch	12 inch	15 inch	18 inch
$15 90	$17 70	$21 20	$28 80	$36 80

O. G. Round, and Half Round—Per 100 ft.

8 inch	10 inch	12 inch	15 inch	18 inch
$16 90	$18 70	$22 20	$29 80	$37 80

Discount 70 per cent. off list.

CONDUCTOR PIPE—Per 100 ft.

2 inch	3 inch	4 inch	5 inch	5 inch
$18 40	$22 30	$29 60	$40 00	$49 00

Discount 70 per cent. off list.

CONDUCTOR ELBOWS—

Plain round or round corrugated.

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

LOWER CEMENT PRICES EXPECTED EARLY IN NEW YEAR

Montreal

For the present, quotations on cement are unchanged, but a revision in the nature of a decline is expected with the opening of the New Year. The extent of the reduction is yet uncertain, but Sanitary Engineer is informed that it will be of quite substantial proportion. With the holiday season now at hand business shows a slackening but an increased volume of business is expected to be shown next month as there is still a fair amount of building under construction requiring supplies.

RANGE BOILERS GENERALLY REMAIN AT LOWER LIST

Montreal.

The buying movement in range boilers is now of a minor nature, sales being none too numerous and for small quantities. This might be expected however, at this season, and dealers look for a quieter period until after the opening weeks of the new year. Notwithstanding the dullness, the market attracts attention through the still unsettled situation, and the variation in prices among manufacturers and jobbers. The lower list prices, quoted below, are in effect in most quarters, but certain others still hold the higher figures, maintaining the standard list has not been changed. However, competition is met from all sources and present prices are very nominal. There is expected to be some action taken early in the new year in the hope of stabilizing the situation.

RANGE BOILERS—	Std.	Ex. Heavy
30 gallon	8 75	11 25
35 gallon	11 25	13 50
40 gallon	13 50	16 00
52 gallon	20 00	24 50
66 gallon	28 00	34 00
82 gallon	35 00	46 50
100 gallon	45 00	55 00
120 gallon	54 00	63 25

CORRUGATED SHEETS NOW IN QUIET PERIOD

Montreal

Corrugated sheets have now entered into the usual quiet period at this season of the year. Sales have been fairly active up until the present month, but the colder weather has now caused a slackening in outside work where corrugated sheets are required. Priecs remain unchanged for the present, and developments in the new year are said to depend on primary sheet markets. Following is unchanged list prices and discount;

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 7½%.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

FITTING PRICES UNCHANGED

Montreal

Quotations on the various kinds of pipe fittings are unchanged. A new list on wrought piping usually announces new quotations on nipples and couplings, but list No. 54 shows both these at unchanged discounts. Following are prevailing prices and discounts;

PIPE FITTINGS—	Per Cent.
Cast iron fittings	25
Bushings, cast	27½
Bushings, malleable	25
Flanges	37½
Plugs	27½
Flange unions	22½
Malleable unions	42½
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	50
Do., long	60
Do. 4½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods —	Blk.	Galv.
Class A	0 53	0 65
Class B	0 21½	0 28¼
Class C	0 14	0 21½

ENAMELLED WARE STEADY AT NEW PRICES

Montreal.

Although current sales of enamelled are now somewhat smaller owing to the advanced season, the market is settled on a much more satisfactory basis since the issuing of new prices earlier in the month. Previous to this there was a certain amount of unsettled feeling, and price-shading appeared in some quarters. General lower quotations appear to constitute the requisite for this betterment as prices are now uniform at all dealers. Distributors look for a quieter period until the opening weeks of early spring when building will again commence its activity. Following are list prices and discount;

Sinks, roll rim —			
18 x 30			$23 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 50	$ 7 40	$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet			67 10
Lavatories—			
17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim. F241 or P4345			12 60

Less 33 1-3 per cent.

QUIETER TRADE IN CLOSET OUTFITS

Montreal.

Current trade in closet outfits is now of a very moderate nature, the season of the year, and the usual slackening in building operations being adverse to sales of enamelled ware in general. Quotations are remaining at the slight revision of two weeks ago as follows;

CLOSET OUTFITS—	
Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., Richelieu" bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitrious China	20 00

SOIL PIPE QUOTATIONS ARE UNCHANGED

Montreal.

Local quotations on soil pipe and fittings are holding unchanged at considerably lower levels than exist in other markets. While there was a rumour that a revision to higher levels was likely to be made shortly after the last reduction in these products, there is stated to be no immediate sign of this taking place. With business now seasonably quiet, there will in all probability be no further development until a more active demand is felt after the holiday and inventory periods are over. Following are unchanged discounts;

SOIL PIPE—	
2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%
Fittings—	
2 to 6 inch	50-10%

BRASS AND COPPER SHOW LITTLE VARIATION

Montreal.

Current prices on brass and copper goods are holding at previous figures, while the undertone of the market is little changed although metals in primary markets are again somewhat easier in some instances. This is said to be chiefly due to the seasonable slackening in volume of buying and the lesser interest accompanying the holiday season. The commencement of the new year may yield a return of the activity of previous weeks. Unchanged quotations are as follows;

BRASS—	Base
Sheets	0 25
Rods, ½ to 1 inch, round	0 23
Tubing, seamless	0 32
COPPER—	
Rods, ½ to 2 inch	0 30
Soft sheets, plain, 16 oz. and heavier lb.	0 34
Plain tinned, 16 oz. and heavier, lb.	0 39
Polished and tinned, 16 oz. and heavier, lb.	0 43
Tubing, lb.	0 34

Above prices are for full sheets or bars. Cuts 5c. per lb. higher.

NEW YEAR MAY BRING REVISION IN WASTE PRICES

Montreal

For the present cotton waste prices are holding, but according to one large dealer, a revision early in the new year would not be surprising. The cotton market does not display the strength that was evident in the earlier Fall months and it will be remembered that while many other lines of cotton materials advanced in sympathy with the firmer tone in the market, cotton waste prices remained unchanged. It is for this reason that dealers are now lead to believe that lower prices will shortly be announced with the continued easier trend of raw cotton. Prevailing quotations are;

COTTON WASTE — Cream polishing, 20c; White, XXX, 17c; XX, 16c; X, 15c; XLCR, 15c; X Empire, 14c; X Press, 13c; 6 X Special, 12c. Colored, Fancy, 14c; Lion, 12½c; Popular, 10c; Keen, 9c. Wool Packing, Arrow, 30c; Axle, 25c; Anvil, 20c. Dominion Wipers, Washed and Sterilized, White cotton, 20c; colored cotton, 14c.

Above lines subject to trade discount for quantity.

COMPRESSION GOODS REMAIN AT RECENT REVISION

Montreal.

No further change has been made in prices on compression goods since the recent declines on certain valves and bibbs. Business is now somewhat quieter in the various lines with the undertone of the market little changed. Copper and brass in the metal markets retain their firmer standing but there is likelihood of this reflecting on these goods for the present, and continued strength in primary circles would be necessary to have any effect on finished products. Prevailing quotations are as follows;

COMPRESSION WORK—	
Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard.	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard.	40%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, standard	20%
Gate or straightway	16/10%
Emco Globe Valves	20%
Emco check valves	20%
Jenkins Globe, angle, check and swing check	19%
Jenkins gate or straight way	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body gate	33%

PLUMBERS' OAKUM REMAINS AT DECLINE

Montreal

No further change has been made in oakum prices since the slight reduction of two weeks ago, and the local price is $7.35 per 100 pounds.

EASIER TONE IN SOME METALS

Montreal.

The metal markets have been quiet during the holiday season and changes in prices have been few, although lead shows slightly lower quotations, spelter is a little easier. Buyers are generally busy with the inventory period and are not much interested in market prices.

TIN—Tin is holding fairly well in London although future movements are somewhat uncertain at present. In the meantime the local market is little changed at 39 cents.

COPPER.—There is no change in the copper market on this side, and London is also comparatively quiet. The market is steady however, without any great change in quotations. Local quotations are unchanged at 18 cents for electro, 17¾ cents for casting.

LEAD—London lead has at last commenced to decline in price, but this is not unexpected in view of the high prices prevailing there. This change, however, has no effect on local figures as these have been well below the London levels. The local market is slightly easier at 7¼ cents.

SPELTER—There is a sightly easier tone in both the London and East St. Louis markets and in view of the decline in New York exchange, there is also an easier feeling here. Quotations, however, hold at previous quotation of 7½ cents.

ANTIMONY—This metal continues quiet on the local market and the tone is slightly easier with quotations shaded to 6¾ cents for Chinese, and 7¾ cents for high grade English.

ALUMINUM—Aluminum is still featureless on the market with prices holding at 26 cents.

TORONTO MARKETS

TORONTO, December 30.—Many downward revisions in quotations on plumbing and steam-fitting supplies become effective with the commencement of the New Year. Substantial declines on radiators and boilers attract attention in this respect, the prices on standard radiators being lowered approximately 13 per cent., while both steam and water boilers record a similar revision in the neighbourhood of 10 per cent. The new list on wrought piping also supplies one of the features in the current market reports, the quotations on standard steel and iron pipe now being around 8 per cent. lower than formerly. Reduced prices are also recorded on cement, while a downward price revision appears on ware products, including tinners' trimmings, enamelled lines, tin ware, galvanized ware and similar goods. A readjustment is still being looked for in the soil pipe markets, the variation in discounts showing no signs of immediate revision. The shading of quotations on range boilers has now become almost general.

LOWER PRICES ON CEMENT

Toronto.

Lower prices on cement have now materialized, the extent of the reduction being in the neighbourhood of 9 per cent. Quotations on barrels in car load lots have been lowered to $3.70, while the price on single bags is reduced to $1.10.

The trend of the market has been easier during the last few weeks, building activities being of a moderate nature at this season of the year, while stocks of cement are described as fairly heavy. The current revisions are as follows:

CEMENT— Car load lots.	Toronto.
Per barrel, delivered	3 70
Less car lots .	
Per barrel, f.o.b. yard	4 30
Per barrel, delivered	4 50

Single bags, $1.15 each; 4 bags to barrel.
Extre charge of $1.50 per load on less than 24 bag lots.
Rebate of 20 cents for empty sacks.

NEW LIST SHOWS REDUCTION IN WROUGHT PIPING

Toronto.

A decline of approximately 8 per cent. has been made in prices on standard steel pipe. The new list, which is number 54, supersedes the previous list, which has been in effect since September 22. Some easier prices on piping were more or less anticipated at the commencement of the New Year, but the revision materialized a little earlier than was generally looked for. The pipe markets as a whole have registered a fair proportion of activity, with the movement slowing up during the last few weeks. At the same time, production of steel piping has been on a fairly steady basis, with the result that some slight price shading developed in independent steel circles. To meet this competition, other producers have announced the new price levels, effective immediately. The domestic markets are now governed by List No. 54.

WROUGHT PIPE

Price List No. 54. December 22, 1921.

QUIET SESSION NOTED IN CLOSET EQUIPMENT

Toronto.

Current trade in closet combinations and fixtures is recording a quiet session, with the holiday and inventory periods contributing towards this seasonal dullness. Quotations remain nominally unchanged at the followig levels, with little interest being displayed in these markets:

	each
CLOSET COMBINATIONS, low down	
Closet, standard outfit, oak	28 00
Do., with post hinge seat	28 75
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	31 00

Oak wood strip seat and cover	3 70
Oak post hinge seat and cover	4 75
Mahogany finish post hinge seat and cover	5 00

SUBSTANTIAL REDUCTIONS ON WARE PRODUCTS

Toronto.

All ware products now record an average price reduction on staple lines of approximately 20 per cent. This change is effective at once, and applies to such products as tin ware, enamelled ware, galvanized ware and similar lines. The changes vary to some extent on the different products, some wares, recording substantial declines, while other lines not showing quite such drastic revisions. The actual list remains unchanged, but the discounts have been altered all through on a more or less generous scale.

Following are the revised discounts on a few sheet metal lines: all quotations f.o.b., Toronto, with freight equalized with Montreal, Hamilton and London:

Tinners' trimmings	Net list
Except copper bottom	Net list
Plain tinners trimmings	50-10 per cent.
Roofers' tinners' trimmings	50 per cent
Handles, reaching strips, sheers, steel wire brushes	Write for prices.
Stove boards, paper lined	40 per cent.
Stove boards, wood lined	25 per cent.
Dampers and damper clips	25 per cent.
Stove pipe elbows, tin and black	Net list
Stove pipe elbows, galvanized	Net list
Stove pipe elbows, light, 5 and 6", $2 per doz. net	
Stove pipe elbows, light, 7 in.	$2 20 per doz. net
Stove and range pipe	Net list
Water spirals	50 per cent

LITTLE VARIATION NOTED IN PIPE FITTINGS

Toronto.

Quotations on pipe fittings are generally being maintained at the revised levels recently effective, with little variation having been recorded in the market for these products. While some slightly easier levels were looked for in some quarters on wrought nipples and couplings owing to the reduction which occurred in wrought piping, such a change has not yet materialized. Similar downward revisions have been announced concurrently on previous occasions, but it is stated that present discounts remain unchanged, as follows:

PIPE FITTINGS—	Per cent.
Cast iron fittings	25
Plugs, cast iron	28
Do., solid	28
Do., countersink	28
Bushings, mall.	28
Do., cast	28
Unions, ¼ in. to 2 in.	45

Class A	0 54	0 67
Class B	0 22	0 32
Class C	0 14	0 22

TONE IN COPPER PRODUCTS RETAINS FIRMNESS

Toronto.

The market on copper and brass products is at present quiet, after the price advances recently recorded, but the current inactivity is more or less expected at this season of the year. The undertone of the copper market continues fairly firm, and the trend of raw materials of this nature is being well maintained. Quotations on copper and brass tubing, rods and sheets, remain at the new higher levels as follows:

BRASS—	
Sheets base, per lb.	$ 0 23
Rods, base, per lb.	0 21
Tubing, base, per lb.	0 25
COPPER —	
Rods, base, per lb.	0 28
Soft sheets, plain, 1 oz. and heavier, lb.	0 30
Do., plain tinned, 16 oz. and heavier, lb.	0 37
Do., polished and tinned, 16 oz. and heavier, lb.	0 42
Tubing	0 29

PRICE RECESSIONS NOTED ON RADIATORS AND BOILERS

Toronto.

Through increasing the discount quotations, the prevailing price levels on both radiators and boilers now register a more or less substantial decline. The average reduction of radiators is approximately 13 per cent., while the change on water and steam boilers is in the nieghbourhood of 10 per cent.

This revision to lower levels was generally anticipated as price shading in these products has been reported. The new levels are effective from January 1, 1922, it having been announced in recent market reports that the previous discounts would remain in effect for the balance of 1921. Following are the current changes.

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

BOILERS—

Water:

Round 64 per cent. off list. Square 15 per cent. off list.

Steam:

Round, 28 per cent. off list; square, 15 per cent. off list.

ENAMELLED WARE PRICES AT RECENT REVISIONS

Toronto.

Quotations on enamelled ware are remaining at the recently revised lower levels, with current trade of a moderate nature. There is still some interior re-modelling proceeding in building circles, however, but the holiday season has modified the prevailing trend of activity.

Following are the current quotations:

ENAMELLED WARE—	
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F154 or P3845 or P3847	23 60
18x21" Apron F169 or P4205	17 60
18 x 21" Roll Rim, F197, F199 or P4655-6	15 40
17 x 19" Roll Rim, F241 or P4345	12 60
Sinks, Roll Rim, 16x24 in.	18 10
Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70

Sinks, Flat Rim—	1 only	2 only	3 only
16 x 24	$7 60	$7 70	$7 80
18 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90

Above prices list, less 33 1-3 per cent.

All steel enamel baths, 4 and 4½ ft.	$14 00
Do., 5 ft.	15 00
Do., 5½ ft.	16 75

These quotations are net.

SOLDERS MAINTAIN RECENT HIGHER QUOTATIONS

Toronto

Quotations on solders and other lead and zinc goods are holding at the recently higher levels, while both manufacturers and distributors report that a fairly firm tone prevails in these markets. Current business has slightly receded in volume, but this is attributed to the holiday season and inventory period. Unchanged prices are as follows:

LEAD AND ZINC GOODS—	
Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb	0 09½
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 32½
Do., commercial, lb.	0 22½
Do., strictly, lb.	0 24½
Do., guaranteed, lb.	0 27½
Do., wiping, lb.	0 22½
Zinc sheets, per lb.	0 12

TORONTO MARKETS

(Continued from page 30)

BOILER TUBE MARKETS CONTINUE QUIET

Toronto.

The boiler tube market continues of a quiet nature, with very little variation in current demand. Quotations also remain unchanged. Dealers report the usual inactive period at this season of the year, with a better outlook for some improvement in the Spring months. Following are the prevailing nominal prices:

BOILER TUBES—	Seamless	Lapweld
[illegible] inch	26 00	.....
1¼ inch	27 25	.....
1" inch	26 25	.....
1¾ inch	29 75	25 00
2 inch	28 00	22 00
2¼ inch	32 00	25 00
2½ inch	40 00	27 00
[illegible] inch	44 00	35 00
3½ inch	60 00	40 00
[illegible] inch	75 00	50 25

IRON AND STEEL MARKETS AT FAIR LEVELS

Toronto

Quotations on bar iron and steel are generally being maintained at the nominal lists recently effective. A few minor instances are reported, however, where some slightly easier prices have been given. This condition is stated as applying solely to old sizes and exceptional circumstances, with no general tendency in this direction. The same condition is evident in other domestic markets. The basis market quotations are noted to be on fairly steady levels, at the present time, with conditions in the industry generally reported as favorable for the current season. The structural and bar iron markets are described as waiting the impetus expected from new business in the early months of the year. Following are the average local market prices on bar iron and steel.

IRON AND STEEL		
Mild steel bars, base	3 00	3 25
Mild steel bands, 3-16 in. base	3 50	3 75
Bar iron, base	3 00	3 25
Angle iron, base	3 10	3 35
Horseshoe iron	3 75	4 10
Tire steel	3 50	3 75
Spring steel	5 50	6 00
Crucible cast sheet steel	30 00	35 00
Mining drill steel	.....	18 50
Cast tool steel, medium	20 00	23 00
Cast tool steel, high grade	30 00	36 00
Sleigh shoe steel	3 00	3 25
Norway iron	12 50	15 00
Toe calk iron	4 00	4 50
Hoop steel	3 75	4 25

STILL WAIT REVISION IN SOIL PIPE MARKETS

Toronto

"Eastern markets are meeting American soil pipe competition and in order to do so have been forced to quote prices which are below factory costs," stated a prominent manufacturer of soil pipe and fittings when discussing the present market situation on these products with Sanitary Engineer. "The recent downward revision in Montreal was made to meet foreign competition, and as a consequence some manufacturers are selling their product cheaper than they can afford to do." The primary reason for the wide difference which has recently appeared in quotations between the two chief distributing centres for soil pipe in Canada, is as quoted above, coupled with the advantage of some easier labor costs. This latter factor is described as an important element in foreign markets at this time. In spite of the abnormal conditions apparent in the industry, no settlement has yet been made, and the various quotations are unchanged. Local prices have not been revised, and the nominal list still remains in effect. The fact that Montreal quotations continue to show the new discount levels, has given rise to the impression that a change may not develop until the new year. Whether the revision will be of an upward nature in the East, or of a downward nature locally in order to conform with other markets, is difficult to ascertain. No prediction could be secured for the future, but another distributor was of the opinion that if Montreal markets adhere to their present levels, the local quotations may be gradually expected to meet their competition.

The current local nominal lists are as follows:

SOIL PIPE—	
2 inch	25 per cent.
3 inch	30 per cent.
4 inch	30 per cent.
5 and 6 inch	30 per cent.
8 inch	net
FITTINGS—	
2 to 6 inch	40-10 per cent
8 inch	Net

TIN PLATE PRICES AT RECENT NEW LEVELS

Toronto

The recent brisk demand evident in the primary tin plate markets has been responsible for a corresponding increase in the volume of production. Some shading of quotations, however, is again reported from southern mill centres, this development being attributed to independent producers offering concessions in order to obtain a large ratio of business. In the local markets the quotations on coke tin plates are generally being maintained at the revised lower levels recently recorded. The nominal price level on Canada plates, however, is described as being subject to easier quotations on attractive orders, should they appear. Following are the current lists;

PLATES, CANADA—	Per box
Dull, 60 sheets	5 65
Ordinary, 52 sheets	5 60
PLATES, COKE TIN—	
IC, 20 x 28, 112 sheets	13 50
IX, 20 x 28, 112 sheets	16 50
IX, 20 x 28, 56 sheets	9 00
PLATES, CHARCOAL TIN —	
IX, 20 x 28, 112 sheets	14 00
1XX, 20 x 28, 56 sheets	16 00
PLATES, TERNE—	
IC, 14 x 20, 112 sheets	12 00

SEASONAL RECESSION IN DEMAND FOR SHEETS

Toronto

The recent lowerings in the base quotations on blue annealed, black and galvanized sheets, are stated as resulting from the slackening demand at this season of the year, coupled with certain efforts in southern producing centers to maintain a fair proportion of mill operation in order to distribute production costs. Railroad buying has recently been the strong feautre in the sheet markets, but the latter part of December registered a falling off in volume. The steel requirements in many branches of trade are generally expected to revive in the early months of the New Year. Distributors point out that the usual winter dullness is expected to characterize the market during the next few weeks. Following are the average nominal quotations apparent on current markets;

BLUE ANNEALED—		
10 gauge, base	3 75	4 50
12 gauge	3 80	4 55
14 gauge	3 85	4 60
16 gauge	3 90	4 65
BLACK—		
18-20 gauge	4 30	5 05
22-24 gauge	4 35	5 10
26 gauge	4 40	5 15
28 gauge	4 50	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—	Queen's Head.	Fleur-de-lis.
28 gauge	8 25	7 75
26 gauge	8 00	7 50
24 gauge	7 60	7 10
22 gauge	7 25	6 75
18 and 20 gauge	7 10	6 60
Premier and Apollo—		
10¾ oz.	6 25	7 00
U. S. 28, base	5 85	6 60
U. S. 26	5 55	6 30
22 and 24	5 40	6 15
18 and 20	5 25	6 00
16	5 10	5 85
12 and 14	4 95	5 70

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing sheets.

CURRENT TRADE QUIET IN RANGE BOILER MARKET

Toronto

There is little variation to report in the range boiler situation. Some shading of the nominal price list is still being recorded, but current business in these products continues of a minor nature at this season. Local distributors still claim to be maintaining the level of $9.25 on the 30-gallon standard size, but this quotation has been lowered to $9.00 in some quarters, while another list commencing with $8.75 is now being generally recognized in other centres.

The recent reductions in sheet prices, places raw material costs on a slightly lower basis, but manufacturers point out that other production expenses have registered very little, if any, variation. Whether the new lower list will be nominally recognized in the near future, is stated as depending upon the general trend of the markets and future developments in basic elements.

HOLIDAY DULLNESS EVIDENT IN METAL MARKETS

Toronto.

The current metal markets show very little change, with the holiday season contributing to the general inactivity. Prices also record little variation, both primary and domestic quotations generally holding at the previous levels.

TORONTO MARKETS

Continued from page 32)

COPPER—Buying of copper in domestic markets during the last few days is reported to be light. Continued purchasing of copper by foreign interests for export abroad, has been the chief feature of this metal. Primary markets report that domestic consumers have already covered requirements for the next month or two, consequently current business is light, with no pressure to sell on the part of producers. Prices have been almost steady, with the local quotations between 17½ and 18 cents.

TIN—The tin market is described as holding very well, but the demand is undoubtedly listless. Recent arrivals on the primary markets have increased the available supply and it can no longer be said that there is any scarcity. The fluctuations in Sterling exchange have caused slight variations in tin quotations, but the general price trend remains firm at the recent higher levels. The quotation of 39 cents is still in effect locally.

LEAD—One feature of the lead markets at the present time is the report from southern centres that foreign prices continue to interest as affecting the anticipated possibility of exporting lead to Europe. While inquiries have been in evidence, these have not yet developed into actual business.

The price level is described as steady, with the domestic market unchanged. Local quotations remain at $6.75.

SPELTER—The holiday dullness is particularly apparent in this market, and both offerings and sales have been of a minor character. Prices are nominally unchanged, the local quotation generally holding to $7.25.

ANTIMONY—The current demand for antimony remains of a quiet nature, and there is little new to report in these markets. Between 8 and 10 cents remains the average local quotation.

ALUMINUM—The inactivity in the automobile industry at this season of the year has contributed to the dullness in aluminum circles. With an improvement in automobile production, an increased demand for aluminum is looked for, but the present trend is very quiet. Prices locally are at the 27 cent level.

WINNIPEG MARKETS

WINNIPEG, December 30.—A new lower list on wrought piping, coupled with reduced prices on enamelled ware and a slight downward revision in quotations on range boilers, supply the feature market developments in plumbing and steam-fitting supplies. Other sanitary products generally remain unchanged, with little variation to record in basic conditions. During the current season, a recession has been noted in the volume of trade for such materials as conductor pipe, eavestrough and corrugated sheets. There has also been a slackening in the prevailing demand for galvanized and black sheets. Present business is described as quiet, this condition being usually evident at this period of the year.

LITTLE VARIATION IN SOIL PIPE AND FITTINGS

Winnipeg.

No farther change has developed in the market for soil pipe and fittings for several weeks. Prevailing prices remain steady on the local market. Following are the current quotations:

SOIL PIPE
2 and 3 inch, 20 per cent. off.
4 inch, 25 per cent. off.
5 and 6 inch, 25 per cent. off.
8 inch, 10 per cent. advance.

FITTINGS
2 and 3 inch, 40 per cent. off.
4, 5 and 6 inch, 45 per cent. off.
8 inch, 10 per cent. advance.

DOWNWARD PRICE REVISION ON RANGE BOILERS

Winnipeg.

A slight downward revision has been announced in the prices on range boilers; more particularly the 30 gal. size. Following are the present new quotations:

RANGE BOILERS

20 gallons, each	9 00
25 gallons, each	13 25
30 gallons, each	16 25
35 gallons, each	29 45
40 gallons, each	33 15
50 gallons, each	62 50
60 gallons, each	62 50
120 gallons, each	75 00

QUIET SEASON FOR PIPE AND EAVESTROUGH

Winnipeg.

Owing to this particular season of the year sales of conductor pipe and eavestrough are falling off. The recent quotations are remaining in effect as follows:

CONDUCTOR PIPE—
Round or Corrugated—2 in., $6.69 per 100 ft.; 3 in., $7.70; 4 in., $9.72; 5 in., $13.77.
EAVESTROUGH—
O. G. Sq. Bead—8 inch, $5.40 per 100 feet; 10 in., $6.08; 12 in., $7.29; 15 in., $13.10.

SLACKENING IN DEMAND FOR SHEETS AND PLATES

Winnipeg

The demand for sheets and plates slackened off very much as the close of the year approached. There prevails a lot of optimism, however, that with the New Year things will probably pick up and a larger sale of sheets is looked forward to. Prices remain firm and no indication of any change is in view. Following are the present prices:

SHEETS—

REDUCTION ANNOUNCED ON ENAMELLED WARE

Winnipeg.

A reduction of approximately 20 per cent. has been announced in quotations on enamelled ware. This change reflects on all products such as baths, sinks and lavatories. The new lower prices reflect the trend of these markets, now that stocks of high-priced materials have been satisfactorily reduced.

NEW LOWER LIST ISSUED ON WROUGHT PIPING

Winnipeg.

A new pipe list has now been issued which reduces quotations on wrought piping approximately 8 per cent. The revised list, No. 54, was not available at the time of going to press, but the lower quotations are effective at once.

WATERWORKS, SEWERAGE AND ROADWAYS

Burgessville, Ont.

Construction of tile drainage system is contemplated by North Norwich Twp. Council. C. E. Burgess, secy-treas., Burgessville, Ont.

Good for Houses?

Yes, and Your Business!

VULCAN

Pure Air Furnaces

The greater radiating surface on the Vulcan makes them more effective. They are economical, simple and easy to operate, and very profitable for you to install. Built of heavy metal, they are very durable in use.

Read This

London, Feb. 11th, 1921.

Gentlemen:—
I have used the Vulcan Pure Air Furnace for several years. I find it economical on fuel, easy to operate, and as it has a greater radiating surface than any other in its class, I have been well pleased with the results. I can recommend its use to any. I believe it to be durable on account of the heavy metal in its construction.

The Vulcan Co., Limited

London - Canada

Owners that are Satisfied are Owners of

DAISY

Hot Water Boilers

and they furnish your best advertising

There is no "booster" like the owner of a "Daisy." Every day, in season, he is reminded of its excellence, its efficiency, its simplicity and economy. It comes nearer to running itself than any other boiler. Daisy owners are delighted with the small amount of attention required, and they are constantly advertising the boiler, and you, who installed it.

WHAT IS YOUR ADVERTISING DOLLAR BUYING ?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Markets

Sanitary Engineer Marketing Reports are eagerly looked for by progressive plumbing and heating Engineers of Canada.

A thorough knowledge of prevailing prices and tendencies in the trade is an absolute necessity for the conduct of any business in these days of frequent price fluctuations.

Sanitary Engineer Marketing Reports are compiled at considerable expense. We are determined to keep them reliable, complete, and up-to-date.

Ever Hunt Deer?

Probably you found them by their fixed habit of returning to the same place for water at every dawn and dusk, day after day. That's a pretty natural way of finding deer, by going where deer are sure to be.

Twice a month, practically everybody in Canada that is interested in the plumbing and heating trade, goes to Sanitary Engineer in search of the business items, markets and advertising where they find the latest news and newest goods offered in the Canadian plumbing market.

There, twice a month, you can find and reach practically the whole plumbing and heating trade of Canada. It's a good time and place to tell them about your house and product. A full page weekly costs slightly over half a cent for each subscriber reached!

There is no obligation, no expense attached, in sending for a representative. He will explain this service and point out its advantages to you.

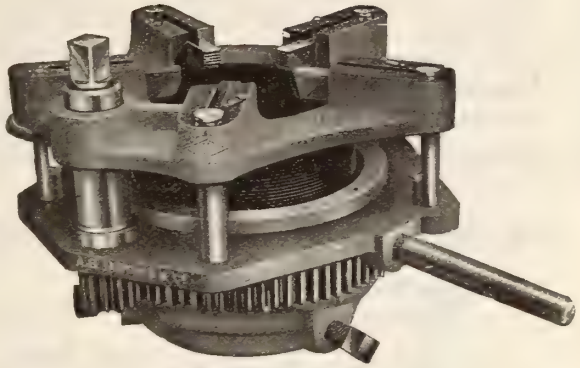
Want More Business?

Then Use



"Toledo" Geared Adjustable Threading Tool
No. 2½. Capacity 2½ to 6 in. inclusive
Weight 120 lbs.

Jardine — Toledo
Pipe Threading Tools

Range ⅛" to 12"—All sizes threaded at one cut
Effective tools in which the dies open out, as the tool advances on the thread, so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter mouth.
Beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble, they work so easily, smoothly, rapidly and accurately.

One man does the work of two

A. B. Jardine & Company, Limited, are the sole makers of "Jardine" Pipe Threading Tools and the sole licensees to make and sell "Toledo" Tools in Canada.

SUPERIOR

To the Dealer:-

The Pilot Superior is the leading Pipeless furnace on the market. It was conceived before other pipeless furnaces were made in Canada and our pioneer experience in this field enables us to place in the hands of the trade the most efficient and economical heating apparatus built. Note the red arrows shown in the illustration which describe the features of this furnace.

Dealers are making handsome profits handling the Pilot Superior. It is easy to sell. One installation sells another and good businesses are being built through them all over Canada.

Why an Oil-Controlled Valve?

WHAT IS the logical medium for regulating a flush valve? Water? Water often contains impurities that obstruct the by-pass and interfere with the smooth working of the valve.

Oil! There is the answer. PerfectO Flush Valves are Oil-Regulated. Water can't cause any trouble—because no water can get into the by-pass—nothing but high-grade mineral oil.

This oil is contained in a sealed, cast-brass chamber. It cannot escape or evaporate and never needs replacing. Its density is unchanging—hence the action of the valve, once it is adjusted, does not vary. PerfectO Flush Valves are Oil-Controlled because an oil-controlled valve gives better service for a longer time. And that's why there is genuine satisfaction ahead when you install PerfectO Oil-Regulated Flush Valves.

SPECIFY CANADIAN SOLID VITREOUS TANKS

The "Bellemeade"

BEAUTY, refinement and attractiveness are combined with the practical usefulness, the permanent durability and the outstanding sanitary characteristics of every Canadian Solid Vitreous closet tank. Each tank is one solid piece of this dense all-clay ware produced from very, very finely ground clays and rocks, selected and blended according to an exacting formula, moulded most carefully, glazed inside as well as out and burned twice under very intense heat.

There are no seams or joints to open up; no lining to corrode or leak; no paint, varnish, enamel or other coating to discolor, chip or wear off; no material to rot, warp, split or deteriorate.

The surface is a live-white lustrous glaze which can as easily be kept clean as a china tea-plate.

It is absolutely non-absorbent; is of substantial weight; its inherent strength ensures a life-time of wear, while its clean sanitary surface ensures the same attractive lustrous appearance after years of use.

When fitted with high-grade Canadian-made fittings, this tank should give the utmost of satisfactory service.

Made in two sizes: The No. 503 especially adapted for all syphon-action and reverse trap closets; the No. 501 somewhat larger for syphon jets.

Plumbing And Heating Lines Revised

Extensive Budget of Price Changes Evident in Plumbing, Heating and Sheet Metal Materials—Manufacturers Announce Endeavour to Reduce Prices to Lowest Possible Levels Based on Current Costs in Anticipation of Improved Business in 1922

THE extensive range of price changes which have been announced in the opening market-reports of the current year, attach particular significance to the prevailing trend of events in the plumbing and heating industry. The lengthy budget of revisions enumerated in the last issue of Sanitary Engineer, has been greatly enlarged during the past two weeks by other numerous and important changes in the quotations on various commodities appertaining to the plumbing trade. Such marked revisions further emphasize the vital necessity of closely following the price tendencies on these products and of keeping in touch with basic conditions.

Announcements of this nature by both manufacturers and distributors of plumbing supplies, add considerably to the progress of liquidation and supply many examples of deflated values in raw material costs. At the same time, market concessions offer more or less substantial arguments for the trade in the effort to convince the general public that prices on this division of building requirements have come down, and are still coming down, in a manner which will stand fair comparison with similar existing conditions in other branches of trade.

The Importance of Price

The price factor is one of the dominant features of modern business development. This situation has been recently accentuated through the increasing number of price readjustments now fast becoming apparent, supported by the fact that the past few months have undoubtedly recorded a larger number of market revisions than during the history of the trade for many years.

Featuring the prevailing reports are downward price tendencies on such commodities as closet combinations, closet seats and enamelled iron tanks. Cotton waste prices, both on white and colored are revised to lower levels through easing of costs in various contributory elements. The downward change in eavestrough, both ridge roll and valley, has appeared through an additional ten points being quoted on the discount levels. A similar decrease is also announced on conductor pipe, with the current price on elbows remaining unchanged.

Many Other Declines

An easier tone in corrugated sheets has resulted in changed discounts being noted in some quarters. List prices are unaltered, but with a quotation of ten per cent. off now given, compared with the previous figure of 7½ per cent. Lower range boiler list prices have now been generally adopted, this being the outcome of price shading recently prevalent in these markets. Lower levels have also materialized in soil pipe and fittings, thus bringing quotations on these products to a more uniform basis. There is also a decline evident in quotations on the Penberthy line of brass valves, while the J.M.T. line of gate valves records another discount revision. Other items included in the lengthy list of reductions are Crescent wrenches, and stove bolts, while a new discount list has been issued on bolts and nuts.

PRINCIPAL PRICE CHANGES

Decline in quotations on closet combinations, closet seats and enameled iron tanks.

Cotton waste prices, both white and colored, revised to lower levels.

Downward revision in eavestrough, both ridge roll and valley.

Ten per cent. drop in prices on conductor pipe.

Revised discount noted on J.M.T. gate valves.

Reduction in prices on Penberthy line of brass valves.

Change in discount on corrugated sheets in some quarters.

Lower range boiler list prices now generally adopted.

Lower levels materialize on soil pipe and fittings, thus bringing quotations to more uniform basis.

Crescent wrench prices are slightly reduced.

Easier quotations on stove bolts through revised discounts.

New discount list issued on bolts and nuts.

Other miscellaneous price tendencies contained in market sections.

Effect on Building Costs

Added to the many reductions which have recently materialized, the present budget of price concessions, should contribute a fair ratio in the general easing of building costs. It will be remembered that such products as cement, standard wrought iron and steel piping, radiators and boilers, and various products, are now on lower cost levels. Another factor which should contribute towards lower building estimates are the recent reductions in sheathings, papers and roofings. Although such products are not vitally associated with the plumbing industry, yet their indirect connection is found in the relation to anticipated improvement in construction activity. The lowering of prices on builders' hardware is another example of this nature, and such events combine in stimulating the building trade in general, and the outlook for a larger proportion of home construction in particular during 1922.

In discussing the extensive degree of market changes, the majority of which are concessions of a more or less substantial nature—certain manufacturers have pointed out that endeavours have been made to reach the lowest possible levels, based on lowered production, costs and easier replacement values. This movement has developed, according to one manufacturer, in the hope that this will assist in stabilizing business conditions generally throughout the coming months.

Duration of Recession

On the other hand, it is admitted as a possibility that the process of deflation may continue to be evident as long as basic elements are experiencing downward revision. The anticipated declines in transportation charges, wage levels, distributing and production costs, are factors which bear an individually small effect on current price levels. Collectively, however, they constitute matters of importance, with a significant appeal to both the producer and ultimate consumer alike.

Incompetent Plumbers Scored at Montreal

J. A. Francoeur Urges That Local Association Deal With Evil Now Affecting the Trade—Over-Supply of Cheap Labor Also Exists

MONTREAL.—At the regular monthly meeting of the Montreal Master Plumbers' Association, Jos. A. Francoeur, second vice-president of the Association, dealt with the evil now existing in the trade both from incompetent engineers, and cheap labor. He advocated that steps should be taken to require a certain amount of university training on the part of any person desiring to establish himself as a sanitary and heating engineer. Alluding to the evils affecting the trade as a whole, arising from the undertaking of work of this kind by incompetent executives, he urged that the local association be the first to inaugurate a system which would eliminate the evils referred to, and suggested that representations be made to the Quebec Legislature along these lines.

Inefficient Labor

With regard to labor conditions prevailing in the trade, Mr. Francoeur said that he was discouraged with the class of men now applying for jobs in the trade. He said that an over-supply of inefficient labor exists, and that the average quality had been brought to a very low standard owing to the fact that the high wages prevailing have encouraged an influx of men from country districts whose only recommendation is that they could mend pots and pans.

Master Plumbers and Local Unions

The meeting considered briefly certain difficulties as to wages and working conditions which exist between the master plumbers and the local unions. On the motion of James Ballantyne it was decided that before dealing with these matters, they consider the general subject of labor conditions affecting the plumbing and steamfitting trade at the present time at a meeting to be held within the next three weeks.

D. A. Bethune, in whose hands had been left the arranging of teams to represent the master plumbers to take part in the Builders' Bonspiel, reported that it had been agreed that only those curlers who are members of existing curling clubs were eligible. However, it was thought, in order to encourage the game among the younger element, that the Master Plumbers' Association, apart from curling clubs, should be entitled to enter a team.

The meeting was the first of the year since the election of the new officers, and H. Lavigueur was welcomed to the chair as president for the current year.

Should Plumbers Have Showrooms?

Halifax, N.S.

Editor, "Sanitary Engineer"—

"In November 1st issue of SANITARY ENGINEER appeared an article entitled 'Wholesaler as Plumbing Merchandiser.' To the mind of the writer this is a question of great importance to the trade, the argument set forth by the manufacturer in reference to the displaying of plumbing fixtures by the (installer) (or plumber) has been an adventure without success in many cases. This is true and in the larger towns and cities it has been proven, that the wholesaler can more successfully carry a display of plumbing goods. But in the smaller towns and rural districts where the plumber is operating, he has no other means of showing his prospect what he is going to instal for him outside of a catalogue and this latter has very little or no effect. The question of price is also quite as important to the retailer. This particular wholesaler does not agree with the present practice of protecting the retailer. Is his idea to sell direct to the customers and thereby take away from the retailers the chance of selling the goods that he is in business to sell?

"Cast iron enameled goods are very high in price. They represent about fifty per cent. of the total contract price of the ordinary houseworks at the wholesale price. Take this away from the retailer, and what has he got. I think the jobber is the cause of the very high prices in enameled goods at the present time. There is another point of interest to the plumber doing business in the smaller towns, which is closely akin to this article, and which for years has been an obstacle. This is that the prospect for a bathroom is able to go to the wholesaler and buy the fixtures that he or she requires and have them shipped home, and in many cases where sanitary conditions are not followed up as closely as should be the 'handy man' is called in to instal the plumbing. The latter condition is one that the trade has had to contend with in the face of the fact that some of our wholesalers, at least, are fair-minded enough to let the plumber live.

"MASTER PLUMBER."

TORONTO SANITARY CONDITIONS IN FAIR SHAPE

The report of the committee on Industrial Fatigue, appointed in 1919 by the Honorary Advisory Council for Scientific and Industrial Research, has been issued recently. The report is entitled "Survey of General Conditions of Industrial Hygiene in Toronto." The committee was composed of a number of experts in physiology and psychology from various universities, a representative of the Trades and Labor Congress, one representative of women's organizations and one manufacturer. Toronto was selected as a representative locality in which to study the general conditions of industrial hygiene. Seventy-six plants, including all the larger factories in the city, were visited. One-third of the total employees in the plants visited were women.

Ventilation was found to be not seriously defective, except in the smaller plants of old-type construction and in buildings, common in Toronto, which have been converted from other uses. The same condition is found in regard to lighting, both natural and artificial. The advantages of clean windows, however, are not enough appreciated. Lavatory accommodation shows some improvement in new plants, but in many the conditions are deplorable, partly owing to the habits of a minority of the employees, and in comparatively few are the recommended standards for number and construction complied with. In dirty occupations, where baths are provided, these are seldom used, mainly because of inadequate dressing-room accommodation. Varied conditions were found regarding disposal of waste, but extremely filthy conditions exist in a few plants.

PLUMBING AND HEATING LINES REVISED

Continued from page 9

When interviewed on the subject of price declines occurring since the New Year, one manufacturer mentioned to Sanitary Engineer that their particular endeavour was to bring prices on their goods down to the lowest possible levels. This movement is generally in preparation for the salesmen going out to their respective territories after the annual inventory period. It was stated that the sales representatives had been given every opportunity to test the prevailing quotations, and they are consequently convinced that present prices are about as low as current costs will allow. With this spirit spreading throughout the trade, the opinion was expressed that business should be encouraged back into normal channels through an accurate knowledge of the facts as regards prices.

"Some twleve years or so ago," remarked one distributor of plumbing materials to Sanitary Engineer, "we were frequently advised that prices were down to rock bottom. Since then, however, repeated adjustments have taken place in the level of values."

Boosting Sales of Bathroom Fixtures

Wright Teale Plumbing Co., London, Ont., Adopts New Plan Which Proves Effective in Aiding Sales of Bath Room Fixtures When Called Upon to Make Installations—Building Business in Toilet Paper, Small Fittings, etc. Brings People to the Showroom Frequently

LONDON, Ont.—The Wright, Teale Plumbing Co. of this city is working out a plan for boosting sales of bathroom fixtures that is producing very satisfactory results. Whenever the firm is called upon to make an installation of bath room equipment, whether in a new residence or an old one, the opportunity is seized to try and sell bath room fixtures.

"We find that the great majority of people are interested immediately," said Russell Wright to Sanitary Engineer. "Most of them had not thought of fixtures but when they are drawn to their attention they are glad to discuss the matter. They realize the value of suitable bath room fixtures and the service that they will give, and we usually find that home owners are appreciative of our having brought the matter to their attention. It seems to me that this matter of selling bath room fixtures is one to which many men in the trade have been giving little or no attention, with the result that men in other trades have been cashing in on a nice business that rightfully belongs to sanitary engineers. We have found that it is a very easy matter to develop sales of fixtures and that they carry a margin of profit that makes the business worth going after. In the case of new homes we frequently get an order for all the fixtures required. In some cases people prefer to buy perhaps only one or two really good fixtures at the time and buy others from time to time. The point for the man in the trade to keep in mind though is that people are really interested in fixtures and that all he has to do to sell them is to talk about them."

Very often when bath room repairs are being made there is also an opportunity for selling fixtures and it is taken advantage of.

Mr. Wright has also found that it pays well to keep a nice display of fixtures in both the shop and window. The window display while not large is striking and carries a real interest to home owners. The firm made a very simple little display stand consisting of a board neatly covered with green baize. On this are shown various fixtures, the white enamelled goods and the shining nickel lines, standing out splendidly against the dark green background. The stand which occupied but little space has been given a permanent place in the firm's display window and it is constantly producing results in the shape of inquiries which sooner or later develop into business.

In addition to this business which is picked up from passers-by the window display and the store display frequently attract home builders when they are in the store making a selection of equipment. If they do not see the fixtures, the matter is tactfully taken up with them and their attention is directed to the displays, with the result that in a large number of instances sales are made.

"It may seem a little thing and unimportant," said Mr. Wright, "but we always make a point of keeping our fixtures and plumbing goods that are on

Continued on page 12

The plan of developing a sale for various plumbing fittings lines, and other bathroom necessities, with the idea of increasing the number of people who visit the showroom, is fully described in the article herewith. The only way to make this plan effective is to have a display of various equipment and accessories arranged in the showroom which the visitor cannot overlook. Placing the sale of plumbing equipment on a merchandising basis, the way to get results is to adopt the plan used by progressive retailers, namely of getting some means to attract a large number of people to the showroom and then utilizing a combination of sales effort with displays of the various lines.

Patterns For Cornice Miters

Written for Sanitary Engineer by O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Miss.

IN SOME cities many of the streets are laid out at various angles to others and this often prompts architects to design buildings that have both obtuse and acute corners on the front. Such a corner is shown by plan D-A-F, while the detail cornice shows how the metal will be bent to ornament the walls.

Now on a side of the building a square return is placed as at D-C with the miter as C-E while a corner of the building has an acute miter as A-B. These miters can be established by bisection or by spacing the lines equal to the projection of the cornice, either way is satisfactory.

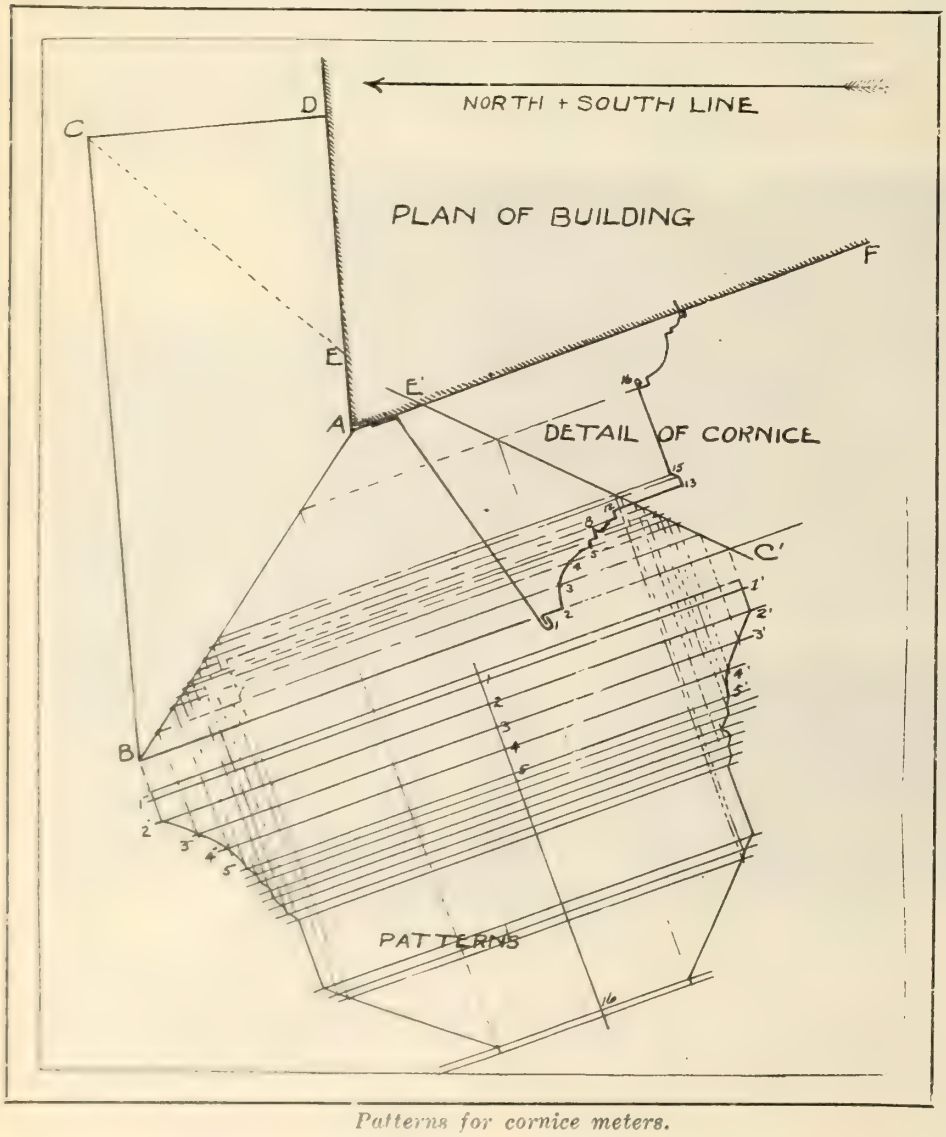
So first draw the wall line D-A-F and along one side of it, detail the section to cornice and divide all curved lines in equal spaces, numbering each point and bend as shown on the plan. After this draw the border line as I-B-C-D. This will give the miter A-B, and the miter C-E being on a 45 degree, can be planted as E″-C″.

Observe in this way we layout both patterns on one stretchout and save further projecting. Then from each point in detail, extend lines parallel with the wall A-F until they intersect both miters A-B and C″-E″.

To set out the pattern for the crown mould and plancser of cornice pick the girth from 1 to 16 from detail, and set off as 1-16 in pattern. Then draw stretchout lines indefinitely and from each point in the miter A-B and also E″-C square out lines at right angles to A-F until they intersect stretchout lines of similar number as in points 1″-2″-3″-4″ etc., also 1″-2″-3″, etc. By joining these various points with lines, we have the 2 miters developed as shown.

The miter on the lower side is for the acute angle while the upper miter is for the square return. The bed mould of cornice would be laid out in the same way, using the same miter lines and that would join to the rest of the cornice as at 16.

These patterns are made to a length easily laid out on the drawing board after which they are punched off on the metal and of course, laps for longitudinal seams and lugs for soldering, must be allowed extra.



Patterns for cornice meters.

BOOSTING SALES OF BATHROOM FIXTURES

Continued from page 11

display clean. This certainly is a big help in making sales. In a great many instances it is the women who really make the final decisions about fixtures. They like to pick them up and examine them and it is certain that they regard a shining nickelled fixture or a spotlessly white one with a great deal more favor than they would a piece covered with dust or with the shine dulled. Keeping stock clean and presentable not only helps to sell it but it just naturally creates a good impression about our shop, and that is something that is valuable."

For the last two months the firm has been handling toilet paper, not alone for the profit it carries, but with a view of advertising the store.

"We have found our sales in the paper increasing steadily," said Mr. Wright, "ever since we put in our first window display. We believe that if we get people coming to the shop for paper they will get our firm name in their minds and come to us for other things and that is what is happening."

The firm keeps a pyramid of toilet paper in one end of its display window. Between this and the bathroom fixtures are shown various plumbing goods. This part of the display is changed regularly and seasonable lines featured as far as possible.

Mr. Wright is optimistic regarding the business outlook for 1922.

"Inquiries are coming in constantly regarding equipment for new homes that are being planned," he said, "and there is every indication that there will be plenty of business offering. The reductions that are being made in building materials and in plumbing goods all have a good effect in getting work started. I believe there is a really large volume of work held up because prospective builders have been so uncertain regarding prices and did not wish to buy and then find out they could have bought more cheaply. The sooner prices are stabilized the better for everybody."

WANTS TENDERS CALLED

Sydney, N.S.—Action against the city is threatened by A. E. Cunningham, contractor, unless tenders are called for the major part of the $25,000 worth of sewer construction which the city is now undertaking for the relief of the unemployment situation.

Heating and Ventilating

The Fan System Of Heating For Homes

Design, Construction and Installation of Furnaces to be Used With Blowers Must Differ From Furnaces Used in Gravity System—Take Steps to Reduce Difference in Temperatures in Heating System of a House

SOME interesting facts in connection with the fan system and other systems of heating homes and buildings, were given by a speaker before a recent gathering of those interested in warm air furnace installations. The address was delivered as follows:—

"We have never heated very many residences with fan systems. This is not because of any doubt in my mind as to the efficiency, or the successful operation of a fan system in the ordinary home but it has been due to the fact, largely, that there have been no fans available that have been adapted to that class of heating.

"There have been no fans available that haven't cost entirely too much money, both in the matter of first cost of installation and in the matter of operation cost. Few people would want to run a fan constantly twenty-four hours a day throughout the winter and in order to have it so set as to operate at will by simply turning on or off a switch would mean so much obstruction in the cold air intake as to forestall any successful operation of the plant as a gravity system.

"Only recently has there been invented and put on the market a fan built specifically for this purpose, one that will deliver the air and will not obstruct the cold air return and yet may be turned on or off by the simple pushing of an electric switch, which may be done from any part of the home.

Different Construction

"Another element enters into the matter, which must be given very careful consideration. The design, construction and installation of furnaces to be used in connection with blowers in the ordinary home must be different from that of furnaces to be used in a gravity system in the same home. The underlying basic principles of heating with forced circulation are so different that I do not see, at least, how any one furnace can be built that would be adaptable to both kinds or classes of heating.

"I heard Billy Sunday speak not long ago and one of the things that impressed me more than any other one thing that he said during the evening was this: that if you are going to pick your teeth, you would not get a crow-bar or a monkey-wrench, or a hammer, or even a saw-log to do it with. If your wife was taken sick suddenly, you would not call in a blacksmith, a tinsmith, nor the furnace man, not even a plumber, and he went on at a considerable length drawing comparisons in which it was clearly shown that if you expect to do any particular thing, you ought to have equipment designed specifically for that thing.

"If you are going to heat a home with a mechanical system, you should use, first of all, a furnace designed specially for that class of work. Then your pipe system should be designed as to give you the proper velocity and deliver your air at the proper point in the home and these points are not the same as ought to be used in a gravity system.

"I may say that in my talk to-day I am not going to assume that it is impossible to heat the average home with a gravity system of furnace heating. In the larger homes of twelve or fourteen rooms, it very often occurs, however, that there are rooms in that home that are very difficult to heat at certain times. There are other rooms that are impossible to heat at any time and there are other rooms that heat entirely too fast, so that the greatest problem that we have facing us in the average eight to fourteen room house is that of heating all rooms the same temperature at all times and under all conditions.

Variation in Temperature

"In gravity heating, where the circulation depends on the difference in temperature of two different columns of air, it is well nigh impossible to do that in a satisfactory manner. I have accumulated some very interesting data in the last three or four years with reference to the difference in temperatures between the ceiling and floor in ordinary and large sized homes.

"In some homes heated with pipeless furnaces, I have found as much as 35 degrees, yes, in one case 37 degrees, difference in temperature between the ceiling and floor. In order to get the floor warm enough so that one's feet would be at least comfortable, it makes the upper portion of the room very warm.

"I have found pipe furnaces to deliver about the same results. I have made tests on hot water heating where the temperature ran as high as 23 degrees higher at the ceiling than at the floor. I have found in steam heated homes that same difference and in almost every case of steam heated homes that I have tested, the temperature runs from 15 to 17 degrees higher at the ceiling than at the floor.

"I have succeeded in overcoming, largely, that condition by using warm air furnaces with large pipes and registers, thereby producing a more rapid circulation of the air within the rooms.

"We have one furnace, that has been tested by a professor in the heating engineering department at a University Farm School and a difference of only 4 degrees shown between the ceiling and the floor when the room was heated to 70 degrees at the breathing line.

"This convinces me that it is possible to reduce the difference in temperature and to heat, not only one room but all rooms in a home, in a very satisfactory manner with warm air provided that you can produce the proper circulation.

"Due to the fact that heat naturally rises, it is obvious that the only way to hold the temperature at the ceiling down to anywhere near the floor temperature is to produce a very rapid circulation of air within the rooms. Now consider a room quite a distance from the furnace with nothing but gravity to produce a circulation through a horizontal run of pipe. It is manifestly impossible in a gravity system to produce that measure of circulation necessary to supply the temperature satisfactorily. That being the case, the only other solution is a mechanical plan to push the circulation fast enough to do the work.

"With apologies to Mr. F. R. Still, of Detroit, Michigan, I want to quote from an article published in the Journal of the American Society of Heating and Ventilating Engineers:

"For example, assume a house which

Great Need for Competent Plumbing Inspectors

Good Sanitary Plumbing as Necessary as the Doctor—No More Beneficial Craft Exists Than Plumbing Operators—Unfortunate That Incompetent Workers Lower Status of Industry

CHATHAM, Ont.—Members of the local Lions Club are wiser on a subject that has been discussed unsparingly by classes, when President Ed. Wanless delivered an address on the plumber of to-day.

"Good sanitary plumbing is as necessary, as the calling of a doctor when one is ill.," said Mr. Wanless in opening his address, "and if one has good plumbing done there is a big chance that they won't need a doctor so often."

The speaker stated that many of the plumbing jobs that were done in the city were an absolute disgrace and a detriment to health, and he strongly advocated an inspector in the city, who should see that the by-law was rigidly enforced. He stated a poor plumber knew nothing of sanitation, which was the cause of much sickness in the homes as a result of sewer-gases.

"It is a case that needs remedying and can be well taken up by the Lion Club," said the speaker.

Mr. Wanless explained fully with illustrations, the correct procedure of fitting a house from the time water was brought from the street till it was fully installed. Also how a correct job was done and comparisons were made of the effect of a poor job.

"Plumbing has always been held up by the people in general as the robbing game of the world, but there is no more beneficial craft," said the speaker. "The average plumber is not excessive in his charges. You are paying only for his time at the rate of one dollar an hour, to say nothing of his education and the time it takes to learn the trade. One pays a doctor or a lawyer in comparison some twenty-five times as much and thinks nothing of it."

He pointed out, following his address, the absolute need of sanitary plumbing and allowed the members to ask questions on the matter, which were willingly explained.

FAN SYSTEM OF HEATING

(Continued from page 13)

has an exposure equivalent to 120,000 British Thermal Units heat loss per hour, when the outside weather is zero and the inside temperature is 70 degrees Fahrenheit. It is usual in such weather to recirculate the air inside the building and it usually comes back to the furnace to about 65 degrees. Raising 1 pound of air from 65 degrees to 140 degrees Fahrenheit requires 17.8 British Thermal Units and to raise it from 65 degrees to 240 degrees Fahrenheit requires 41.5 British Thermal Units. Hence it will require 6,750 pounds of air at 140 degrees or 2,900 pounds of air at 240 degrees Fahrenheit to supply the heat required by the building. In other words, it requires about 2-13 times as much air at low temperature as at high temperature to supply the same amount of heat.

"Theoretically, it should require no more coal in one case than the other, if exactly the same amount of heat is supplied in both cases, but in practice this is not the case.

"Now, the above refers simply to the amount of heat that is necessary to raise those various amounts of air to a given temperature. That has nothing whatever to do with the power necessary to circulate that air. It is known that, to pass a given amount of air through horizontal pipes requires a certain amount of power to overcome the friction and resistance so that in the one case, if the air is driven by a fan, the power required to drive it is an electric power, while in the other case, if it is gravity system, the power required to drive the air through those pipes is simply one of gravity, or the difference in weight between two columns of air at different temperatures.

"Therefore, in addition to the 2,900 pounds of air at 240 degrees Fahrenheit to supply the heat required to heat the building you have about the same amount of air to heat, or you have to heat the 2,900 pounds of air at a higher temperature in order to give you the power necessary to force the air through the pipes and overcome the resistance and friction.

Cost of Fan

"To operate the motor to drive the amount of air required in a fan system would require about 38 watts or approximately 75 per cent. of the current required for an ordinary incandescent lamp. At 10 cents per kilowatt hour it will cost about a third of a cent an hour to run the fan and force the amount of air necessary to deliver the heat through the entire house.

"On the other hand, in order to do the same work on a gravity system, it would require about fourteen pounds of coal per hour to create heat or power enough for a proper circulation of the air, in addition to the heat required for heating the building. If coal costs $14.-00 per ton, it will cost about 10 cents per hour for fuel to circulate the air, as against 1-3 of a cent to use electric current and a fan. These statements are based on there being 14,000 British Thermal Units in a pound of coal and a 60 per cent. efficiency in the furnace and using 14 pounds of coal per hour just to create power necessary for the proper circulation of air in addition to the heat required to heat the building.

"Another thing, which may properly be considered at this point, if the weather is extremely cold outside and it becomes necessary to force the fire, the relative efficiency drops so that it may possibly, at times, require 20 pounds of coal per hour to circulate the air. In that case, the relative cost of gravity system over a fan system is 42 times as great, to circulate the air.

"Please do not misunderstand me. I am not undertaking to tell you that it is going to cost 42 times as much to heat a house with a gravity furnace system as with a fan system. I am referring simply to the cost of circulating the air but that portion of cost added to the actual cost of generating heat enough to take care of the home does increase the cost of operation of a gravity, over a fan system of heating.

Heat Loss Excessive

"There is another element of cost that ought to be considered at this point and that is this, you know as well as I do that heat loss is determined, largely, by the difference in temperature of the air on the inside of the house as compared with that on the outside. Now, if it is necessary, in a gravity system, to heat the ceiling 15 degrees warmer than the floor, in order to make it comfortable at the breathing line and if it is necessary on account of handling a smaller volume of air, to heat that air to 240 degrees or warmer, then the temperature of the air at the ceiling line is excessive and the heat loss is bound to be excessive.

"If you can, by circulating the air faster, reduce the ceiling temperature to within 1 or 2 degrees of that at the breathing line, it is easy to see that your heat loss is going to be less. Therefore, the cost of operating a fan furnace system should be at least 25 per cent. less that that of operating a gravity heating system. In other words, a man might just about as well go down in his basement and throw 75 cents worth of coal into the furnace and 25 cents worth outdoors or into the ash pits, as to undertake to heat his house with a gravity system when compared with what could be done with a mechanical system, if his house has more than 8 rooms."

OPERATION OF MARKING ACT POSTPONED

As we go to press Sanitary Engineer has recived telegraphic advice from its Ottawa representative that the operation of the Marking Act governing marking of country of origin on imports, has been postponed until the next session of Parliament. This action is interpreted as meaning that Section 12 A, of the Customs Regulations, as outlined in a recent issue of Sanitary Engineer will be subsequently repealed. The fact that the postponement is effective until after the close of the session is in itself regarded as indication that the Government has this end in view.

F. E. MUTTON.

Salesmanship Now Being Subjected to the Acid Test

"Many men have wisdom but don't know how to apply it—Industrial Activity directly dependent upon salesmen's efficiency—No use waiting for something to turn up."

By F. E. MUTTON
President and General Manager International Business Machines Co., Ltd.

ONE of the major problems facing sales managers today is building up an efficient sales force to secure orders. Sales organizations are being subjected to the acid test; some of them will fail to survive that test. We have passed through four or five years recently when men who were called salesmen did not have to sell at all; they became very soft in their ideas of work, yet they made wonderful sales records. Now times have changed; order-takers are of no use now.

We have seventy-two salesmen in our Canadian organization, we reach from one ocean to the other, and have offices and service stations in all cities and large towns.

Get Down To Hard Work

It has occurred to me during the last six months to a year, carrying our share of worry as to business conditions, that there are many men who have got a lot of wisdom but do not know how to apply it. They do not realize the vital application of it, and that is the hardest kind of work. Especially for salesmen who have had five years of easy going, it is hard to realize that they have got to get down to hard work or they will not stay in a sales organization very long.

Of course I recognize that a sales organization selling a specialty like Time Recorders or Scales is different from one selling a standard article, however, I believe the same fundamental principles apply, and that this matter of selecting and training salesmen is the most important factor facing executives of any concern to-day. It is the salesmen that keep the factory chimney smoking, and the amount of smoke depends on the efficiency of the sales-organization, absolutely.

The New Conditions

The quicker we all realize that prosperity depends on the action of our own self-starter the better. A good many people are just waiting for something to turn up, even sales managers. To my mind there is nothing "going to happen" until you make it. Instead of the men going out on the 9 o'clock train they will have to go on the 7 o'clock if they are to succeed, and instead of coming in Thursday night or Friday noon, they will come in Saturday morning—if they are lucky. Those are the new conditions that we are facing.

I want to convey this idea; it is not necessary to tell most men these things, it is necessary to "sell" them. In our organization we never tell a salesman to do something. We "sell" the proposition. That is the only way to get the proper co-operation and spirit.

"Prosperity depends on the action of our own self-starter; nothing is 'going to happen' until you make it."

"Salesmen should not guess, but know what they are talking about."

The art of selling is the art of buying. What do I mean?—well, the amount you sell depends on the amount of confidence you can buy, the respect you can buy from the prospective customer. I think that it is an important principle to have the sales force memorize.

Obtaining Salesmen

Now where are we going to get our salesmen? Our experience is that we get our best men through our present sales force. Those men know the policy of the company, they have confidence in the company, they know the calibre of men the company want, and they have seen in action the men that they are going to send in to apply for the position. That is something you cannot do as a general proposition. They know whether he plays pool in the hotel until 2 a.m., or poker until daylight. They know his characteristics through working with him. I emphasize that, because looking back over my experience during the last thirty years I find that the best salesmen it has been my good fortune to secure came through the salesmen we already had.

You will not buy an automobile unless you try it out, but there are many hundreds of salesmen employed by sales managers who have never seen them in action. A man comes to your office, naturally he is at his best, but that does not tell you what he will look like in Peterboro or Montreal or Vancouver. His nails are clean and his shoes are shined. We did the same ourselves years ago. The important thing is to see the man in action in his regular working form, day in and day out, get a line on his characteristics, how he stands up under the test of the three a.m. bus, and the one old kind of pie and no cream.

The Other Fellow's Salesman

The next channel is from the salesmen that canvass you for orders; and that is a good channel. "Do you mean to tell me that you would deliberately employ one of my salesmen?" someone may ask; I certainly do. If you say that is not a fair proposition I do not get your point of view. If my salesmen can make more money with you they will go with you. Therefore I am never too busy to see a canvassing salesman. The bank manager can wait but this man may be the one I need as the corner-stone to a certain portion of our sales force.

I believe the successful sales manager is the man who is never too busy to see a canvassing salesman. If I am in a conference which would make it necessary to keep him too long, I go out and see him for a moment and apologize and make an appointment.

I spent twenty years with the National Cash Register Co. Mr Patterson, the president of that company, is known as a wonderful leader. We were in a convention of the sixteen sales managers of the North American Continent. Mr Patterson came in and remarked: "These are the sales managers, yes; now just what do you

gentlemen do for the high salaries you get?"

Well, it was kind of sudden. One chap stood up and said, "I keep my eye on the territory, I see that the offices are kept nice and clean."

"And you?"

"I check up the accounts and payments and consignments—"

Well, I was thinking fast, it was coming close to me, I said to myself, "these boys are not thinking right," so when he came to me I said, "I employ and train salesmen." I was with the N. C. R. for twenty years.

Looking Them Over

I would have lost the opportunity to secure excellent men if I had been too busy to see salesmen. Often a man has come in and although I did not need him at all, he made an impression. I talked to him fifteen or twenty minutes, asked if he would mind coming in again day after to-morrow—next week,—I wanted to get another slant on him. They never act exactly the same twice in succession. I asked him — "Now just tell me how much money you make and how much you would like to make. It may be that you are fitted for this business. I am going to find out in the next fifteen minutes if you are."

From the Retail Store

Another channel is the retail store. We have secured some excellent men who were retail store clerks. There is a field where you willl find ambition; also, it is a field where men are not over-paid. An illustration; we had difficulty in getting our devices in retail stores. Our time-recording division salesman had been trained to interview manufacturers and factory men, but they fell down on the stores. I discovered that they did not know the language of the retail merchant, they had never been in that atmosphere. I looked about and found a young man who was head clerk in one of the large hardware stores in Hamilton, snappy, well-dressed, knew his job or he would not have been head clerk. I brought him to Toronto and employed him. We had to teach him the time-clock business as it related to the retail store; I said to him, "Now you will have to go into the factory and put on a pair of blue jeans and work from 7 till 5.30 for two weeks, for which you will not get any pay."

"All right," he said, proving his mettle.

I was only testing him really, but this was his mechanical training. The first month that young man was out in guest of orders he sold eighteen machines to eighteen stores. That was good work. He knew the atmosphere and the language.

The weakest source is advertising for salesmen. I do not believe it is good business or sound policy to hire a man who is out of a job. That, perhaps, sounds severe, but there is generally some reason why he is out of a job, and it is difficult to get at the true reason. If you are going to put up a "Safety First" sign get a salesman who is in a position.

"The salesman keeps the factory chimney smoking and the amount of smoke depends on the efficiency of the salesman."

"Many men have a lot of wisdom but don't know how to apply it.

"The Bible"

Now, I want to put before you in this graphic way, these principles:

Get them clean —Mentally
—Physically
—Morally
—Spiritually

That to me is "The Bible" in hiring Salesmen. There is no one of those things that you can afford to overlook. And you can test them all out in your interviewing.

Mentally.—The salesman who will consume time telling those stories that we sometimes hear is not clean mentally. The results show physically and morally.

Spiritually.—This is very important. Sometimes we meet a man who does not believe in such things as churches. I am not preaching a sermon, but I know the value of that element, we all do.

Then I would like to add, Keep Them Clean as to the environment they live in.

Organization

In my opinion the following elements come under the head of organization in a sales force.

Employing Men
Training Men
Supervising Men
Promoting Men
Firing Men

If we are capable of the first four, we will not have to worry about the last.

As to qualifications, here they are:—

Health
Character
Deportment
Reputation in Own Neighborhood
Guarantee Bond
Manner
Ambition
Confidence in Himself

I have a chart on my desk and that is always ticked off 100 per cent. before a man is taken into our organization. Health is most important. If a man has not got 100 per cent. health he is anchored. A lot of talks have been made on Salesmanship; to me Salesmanship is the combination of a lot of qualities. Health is the foundation.

Our company spends a good many dollars a year in taking care of the health of our organization. We talk to them of what to wear, what to eat, etc. A lot is wasted but some gets home and it does a lot of good. I venture to say when you meet one of our salesmen you find he is "in the pink." If he is not, he will not go out, they are trained not to.

Foundation of Everything

When a salesman approaches a prospect, one of the most important elements in getting that man's order is the salesman's health. Selling is largely a matter of domination. You need all the health and energy at your command to dominate some people; if you are only feeling about 70 or 80 per cent. fit, the buyer will do the dominating. Health is the foundation of everything. Take personality, the salespersonality, you just sense it. It is a thing you cannot define, and the greatest element of personality is health. His eyes are bright and his step springy and he thinks just a little faster than his prospect; he cannot do this unless he has 100 per cent. health.

Supervision

Then, supervision. I think lack of supervision is one of the weak links in our work. Every man needs it. Let me illustrate. The chain is—

Salesmen
Sales Agents
District Managers
Sales Managers
General Managers
President

Does it stop there? No, it goes on—

Executive Committee
Directors
Shareholders

I would like to make this subject clear.

Who supervises Salesmen? The Sales Agents.

Who supervises the Sales Agents? The District Managers.

(To be continued.)

PRIMARY TENANT PAYS

Toronto.—Magistrate Cohen in the Public Health Court, held that the lessee of the entire premises was responsible for the plumbing in the premises, despite the fact that the tenant had sub-leased from him on an agreement to keep the plumbing in repair.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred to and Studied

Article No. 46 of Series; Illustration No. 55

FIG 55 shows the best method of treating sewage by broad irrigation on a large scale, and consists of splitting up the area available for filtration purposes into four parts which allows for the periodical resting required for successful results.

The sewage discharges from the tank by gravitation, if possible in open carriers, into the distributing chambers which are constructed with the necessary valves for diverting the sewage into the area so prepared for receiving the sewage.

Each area is separately under-drained connecting to a main effluent pipe which discharges into an inspection manhole so that the filtered effluent can be inspected or analyzed from any area at any time before finally passing into the stream.

It is always advisable to have one area at a lower elevation than the others, so that if the effluent from any filtration area is not up to the standard of purification the valves in the inspection manhole can be closed and the sewage diverted onto the lower area to undergo secondary land filtration before being discharged into the stream.

The sketch fully illustrates the method with the exception of the way in which the sewage is evenly distributed over the land in even layers; this is accomplished by digging grips about 6" deep on the whole surface over which the sewage flows evenly onto the land.

Small iron plates may be placed every fifty yards apart in the grips to dam up the sewage in order to facilitate even distribution.

The underdrains are 3" or 4" agricultural butt jointed pipes about six feet deep, laid diagonally to the flow to prevent the sewage running directly down these subsoil drains. In clay these subsoil drains should be 20 feet apart; in sandy loam 40 feet; and in light soil 60 feet apart.

The effluent outfall connecting to the stream must be well above the water level and if possible above the flood level or drainage will cease in time of flood.

It cannot be said that farm lands treated by sewage—either by broad irrigation or intermittent downward filtration—derive much benefit from a manurial standpoint as the manurial ingredients of sewage can only reach the land with so many times its volume of water, thus rendering it valueless unless some form of extraction is possible.

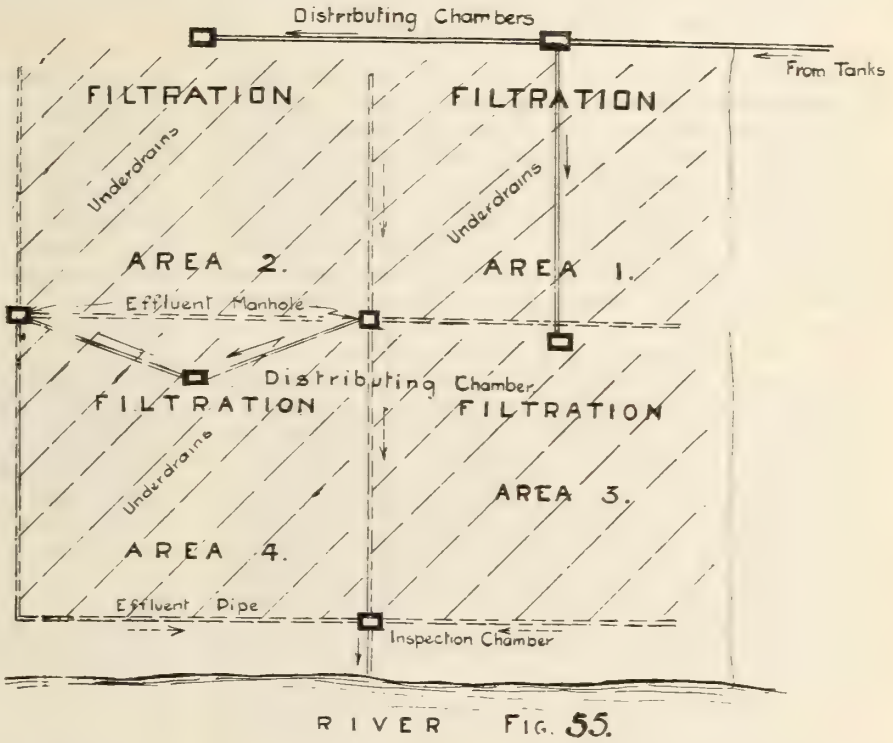

FIG. 55.

Another method of treating the clarified tank effluent on the surface of the land is termed "intermittent downward filtration" and under this system the area is also divided into zones or parts to facilitate periodical resting and well underdraining as previously described.

The surface of the land is cut into ridges and furrows.

The ends of furrows are blocked and the sewage is run into same until its level barely reaches the roots of the plants on the ridges. When this has soaked through, an interval of a few hours elapses before any more sewage is again run into it. This method of treating the sewage is applied in turns over the different areas until the crops have matured then the ridges and furrows are dug over so as to thoroughly mix up the earth and allowed to stand until the soil is again ready to be used for filtration purposes. It is essential that a period of rest be given between each treatment and that the land be kept clear of weeds, etc.

The usual method of treating the septic tank effluent from a small private installation in good porous soil is shown in Fig. 56. The sewage is automatically discharged at certain intervals by the syphon in the second chamber through the discharge pipe into the agricultural open-jointed tile drains. These drains should be 3 or 4 inches in diameter and laid as near the surface as possible. The distance apart or the number of feet of tile required depends entirely upon the nature of the soil. In light sandy soil the tile drains may be laid 30 feet centres and twenty lineal feet is ample for purification purposes, whereas in heavy clay soil the tile should be laid at not more than 10 feet centres or 40 to 50 lineal feet of tile is required for each person.

Fig. 57 shows the arrangements of tile drainage on sloping ground. The automatic syphon discharges into an inspection chamber and the tile drains are laid parallel to the contour or grade of the land, which allows the tiles being laid with the required fall at minimum cost.

Sanitary Engineer
Plumber and Steamfitter of Canada

ESTABLISHED 1907

Member Audit Bureau of Circulations

PUBLISHED TWICE MONTHLY BY

The MacLean Publishing Company, Limited

Montreal TORONTO, CANADA, Winnipeg

Vol. XVI JANUARY 15, 1922 No. 2

The Road of Progress

AT RECENT gatherings of those representing various branches of the plumbing and heating industry there has been considerable discussion about plans for future merchandising of plumbing goods. The opinion has been expressed that plumbers should adopt similar means of co-operative advertising as electrical and other dealers. In planning any such action, care should be taken to ascertain the dissimilarity existing between the plumbing and other industries. Whereas the electrical and other dealers can to a certain extent create business by establishing a desire among consumers for an article, such appliances can be provided through not only electrical stores but through hardware, plumbing and other stores. As a matter of fact in Canada there are said to be more electrical appliances sold through department and other stores than through the exclusive electrical merchant. In the plumbing business, on the other hand, it may be some time, if ever, before it will evolve into a straight merchandising proposition for the reason that even if people purchase their own plumbing material they will be absolutely dependent on the plumber for its installation. It is compulsory by law in most cases to employ a plumber to instal the equipment, and manufacturers have adopted the policy of avoiding communities where inexperienced operators are employed because of the trouble caused through faulty installations. The basis of co-operative advertising would therefore be different in the plumbing industry from others.

In the future the competent plumber will be given proper recognition. His services, while not as vital as the doctor's in case of sickness, are more essential to the general health of the public, and when the industry cuts down all unnecessary overhead and is able to quote satisfactory figures on any job, whether in competitive tender or by open order, the business will then be on the high road to success and it will then not be long before the public will recognize that plumbing as done by sanitary engineers is an important factor in the life of the community.

Many Possibilities Offering

THE VALUE of construction contracts in Canada in 1921 is estimated at $240,000,000 compared with $255,000,000 in 1920 and $190,000,000 in 1910. These figures are significant of the fact that building construction, like many other things, has been on a very fair volume during 1921, but it has been thought poor because of comparison with the high peak of the boom. Another thing which must be considered is that without the recession in material and labor costs in 1921 the actual value of building in that year would have been greater than 1920; the total volume was undoubtedly greater, and this in spite of the fact that industrial construction was practically at a standstill. Why then has there been so much talk about lack of opportunities for plumbing and heating business? It appears as though there has been more talk than action.

The prospects for building construction in 1922 are the best. Much deferred work is to be undertaken as soon as weather permits. The action of certain organizations in taking steps to advertise to the public concerning building costs should result in increasing confidence among prospective builders. The Secretary of the Toronto Builders' Exchange is quoted as stating that construction costs now represent a decline of 35 per cent. from the peak. This being the case, a record year in building might be looked for during 1922 and preparations made by the plumbing and heating industry to take advantage of the situation.

Do Your Men "Yes" You?

B. C. FORBES in a recent editorial dealt with the very unfortunate condition which exists in many organizations. He told how James B. McMahon, then general manager of the company making Gold Dust, demanded to know from John Lee Mahin, the noted expert who was then handling the company's advertising, "What's the matter with our advertising in Ohio?" Mr. Mahin replied that nothing was the matter with it. "There must be," snapped Mr. McMahon. "The proof is that our sales in that state have fallen off badly." Mr. Mahin said he would try to locate the reason, but that he knew the handling of the advertising was not to blame. And he forthwith proceeded to make exhaustive investigation of competitive conditions and so forth in Ohio. After gathering, compiling, and analyzing a mountain of data, Mr. Mahin notified the general manager that he was ready to take up the matter with him.

On a day named by Mr. McMahon, Mr. Mahin arrived with his data. Without examining it Mr. McMahon said, "Sit here while I call in our Ohio salesmen." Eight men trooped in. He asked them what the trouble was, and there was remarkable unanimity among them as to the cause. Then, Mr. McMahon began to address them. Before he got through he had them all assenting that the cause was something totally different from what they had declared—all except one salesman who ventured to disagree with the boss and insisted that in his opinion the trouble was what he had originally outlined. "That's all!" snapped Mr. McMahon, as he dismissed the salesmen.

Turning to Mr. Mahin, he said: "We don't need to go any further to find the trouble, eight so-called salesmen and only one man in the whole lot."

Are you executives quite sure that a lot of your people don't think it wisest to "Yes" you? And are you quite sure that you don't encourage them to agree with you rather than speak straight up to you when they think you are wrong?

There is a suggestion here, too, for those who weakly and meekly "Yes" the boss.

"Yes-ing" pays nobody in the end.

HERBERT N. CASSON briefly stated that if cheapness were so important, there would soon be nothing left but peddlers and post cards. Quality in the end conquers cheapness. The best goods demand a good price, and while some shops may hold the public for a time, by pretending to combine high quality and low price, in the long run they are found out. During the past two years a great deal of trash has been eliminated from our markets, we hope, never to return. The Canadian people are willing to pay a fair price for a good article.

Meet Unjust Charges With Actual Facts

Prevalence of Public Charges Concerning Plumbers' Bills and Tendency Towards Negotiating Wage Levels to Reduce Building Costs Emphasizes Importance of Master Plumbers Having Accurate Records of Their Business—Personal Safety Likewise Demands Them

THE CONTINUED prevalence of unjust charges by the public concerning the remuneration which the plumber must secure for his work, and the tendency of the times toward negotiating wages in order to bring about lower costs, are two factors which make it absolutely necessary for the master plumber to keep at hand records of his business so as to be able to show readily that charges are not exorbitant. Some defence of the plumber's position has been made in a general way, but local figures are more effective in showing that excessive profits are not being made. It is unfortunate that the idea has become so general that plumbers charge as much as they figure they can get. For this reason a close study of the bookkeeping system and other accounting articles which have appeared in recent issues of Sanitary Engineer is urged. The bookkeeping system outlined was compiled by the Trade Extension Bureau of the U. S. after much research and meets the needs of a large number of master plumbers.

With such details at our command we are then well prepared to meet any and all accusations.

This applies to the smallest as well as the largest contractor. On big work, the public believes that competition usually forces prices down to the lowest point. Most of the criticism comes on charges for repair work that is done by the small contractor. It is therefore to his interest, most of all, to have a bookkeeping system that will enable him to immediately and accurately answer any question of costs and profits.

Individual Safety

There is another reason for having good accounting records that is equally important. As a matter of individual business safety, each one of us ought to know what progress he is making financially. Each one is in business to secure a profit, out of which to give his family more or less of the luxuries, as well as the necessities, of life. The game of business as it is played to-day, is such that every fair and possible advantage must be used. Only by having a complete and detailed knowledge of the result of our past efforts can we guide our future course. A proper bookkeeping system, not only gives us this information but enables us to secure it as often as needed. The old method of casting up accounts once a year will no longer serve. We must know, at least monthly, where we stand and in which direction we are headed.

The purpose of this article is to show why proper accounting methods are so essential, also to give certain tests whereby you may intelligently judge your present system, and find the things it lacks. This article will also enable you to correctly judge the merits of any bookkeeping system offered to you by those inside as well as outside of your organization.

Every subject, no matter how complex it appears, has certain simple principles easily understood by any man of average intelligence. These principles in bookkeeping can be made just as easy to see and understand for the Master Plumber as the principles of Sanitation can be made plain to the bookkeeper.

Learn Profits

We have seen that the purpose of a bookkeeping system is to learn our profits. To do this we must know our costs. Our profits at the end of any period, whether a week, a month or a year, are nothing more or less than an accumulation of the profits on the jobs we have done. We then come to the prime requisite of a good bookkeeping system: That on each and every job we do, our books must tell us our profit and likewise our cost.

So as not to depend entirely on a mere statement that any proposed bookkeeping system will do this, let us analyze the subject a little. We should be able to determine whether or not the methods of the proposed system are based on logical principles.

When we start to build anything we must first determine the purpose for which it is to be used. Then starting at the bottom we build step by step, with the ultimate purpose always in mind. So it is with a bookkeeping system. Knowing that a record of our costs and profits is the end to be attained, we begin by making sure that our job ticket will give us a record of the cost and profit on each individual job, and that a similar record of cost and profit is carried all the way through to the final trial balance.

The Job Ticket

The foundation of our bookkeeping system is the Job Ticket, on which is made the original record of the details of the job, and from which the balance of the records are made. Unless the foundation is right the whole structure is bound to be wrong. Unless this Job Ticket is arranged so that the cost and profit on each job can be determined when the job is finished, the system fails at the very start, and will never give satisfactory results. Therefore, when examining any bookkeeping system be sure to see that the Job Ticket provides the means for arriving at the cost of the job, and shows all the items included in that cost, namely: Labor, Material, Overhead and Miscellaneous Charges, such as Permits, Truck Service, etc.

With your costs on each job properly itemized you can arrive at any figures you desire. Without this information you can accomplish nothing in the way of keeping records that will give you the necessary facts of your business.

Accuracy of cost records is another vital point in any bookkeeping system. To know that your cost records are correct they must be a working part of your bookkeeping system, just as your records of Cash and Customers' Accounts are. Then, any inaccuracy in your cost records must show itself. The books will not balance properly until this inaccuracy in your cost record has been traced down and corrected. No man is infallible, and certain safeguards must be used to guard against errors. You have them when you make your cost records a part of your bookkeeping system.

Labor Costs

In a proper bookkeeping system, all the labor purchased through your Weekly Pay Roll is accounted for, because the total charged against the various jobs must equal the total amount of labor paid for and used on those jobs. The total amount of material shown as on hand, is arrived at by using the amounts charged to the various jobs. If you have taken the proper precautions, no material leaves your shop without a written record as to where it goes. This will assure you that your material cost on each job is correct.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Galt, Ont.—W H. Pinkett is going out of the plumbing business and is selling out supplies and equipment.

PERSONAL

George Scott was appointed convenor of the committee on sewers and sanitation for North Toronto, Ont.

OBITUARY

Kingston, Ont.—William Henry Carson, one of Kingston's most widely known citizens, passed away last week. He was apparently in the enjoyment of his usual state of good health just prior to his death and was actively engaged in his duties as city sanitary inspector, a position in which he rendered most efficient service to the city.

INCORPORATION

Samuel & Benjamin, Ltd., composed of S. Samuel, merchant, George T. Pepall, manager, C. Miller, H. M. Samuel and W. T. Louden all of Toronto and F. D. Benjamin of London, England, has been formed to purchase the business carried on in metals in Toronto under the firm name of M & L. Samuel Benjamin & Co. Capitalization of the new company is $2,000,000, head office in Toronto.

INSTALL ICE PLANT

The City Council at Toronto has decided to install an ice plant in the new Live Stock Arena, at the Exhibition Grounds, at a cost of $100,000. This will make the third artificial ice rink in the city, and will be the largest structure of its kind on the continent. The ice plant will be used for making ice for domestic purposes in the summer time.

FIRST OIL-BURNING HEATING PLANT

St. John, N.B.—Byrne & McGeouch, who have the sub-contract for the plumbing and heating of the quarantine station on Partridge Island, have received an oil-burning boiler which will be their first installation for oil fuel in this district. Kane & Parker are the general contractors and the boiler was supplied by E. Leonard & Sons.

The city council at London, Ont., will shortly consider the erection of a new registry office at a cost of $50,000. Mayor J. Cameron Wilson.

APPRECIATES SANITARY ENGINEER

The following excerpt is from a letter received by Sanitary Engineer this week.

Marsh & Scott,
Medicine Hat, Alberta.

The MacLean Publishing Co. Ltd.,
Toronto

We might state that we would not be without the "Sanitary Engineer" in our business.

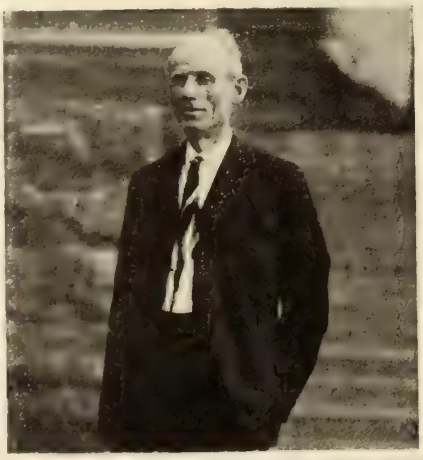
Wishing you the compliments of the season

Yours very truly
(Signed) J. F. Scott.

GOVERNMENT AGREES TO AID IN PETERBORO PUBLIC WORK

Peterboro, Ont.—An official approval of the sewer construction which has been laid out to relieve the unemployment in this city has been received from Hon. Mr. Biggs and the Government, according to its proposal to pay one-third of $5.799, the difference between the estimated cost of work under winter conditions, $21,816, and the estimated cost under normal conditions $16,016.

The trustees of S. S. No. 5 Riverside, Ont., Ervine Barnes, R. R. 5 Ailsa Craig, chairman, want prices and information regarding a water supply system for the school.



F. R. MAXWELL

Former President of the Canadian Society, Domestic Sanitary and Heating Engineers, who was re-elected alderman for Ward Eight, City of Toronto, at the recent municipal elections. Mr. Maxwell will again be identified with the local Board of Health

LOCAL PLUMBER PROTESTS

Victoria, B. C.—With the protest that the plumbers of Victoria had been working satisfactorily for the past thirty years under the provisions of the Municipal Act, and were now suddenly subjected to interference because of the making of on order-in-council, C. J. McDowell, of the firm of McDowell & Mann, paid a fine of $15, imposed by Magistrate Jay in the City Police Court, and gave notice that he would appeal from the conviction.

The charge, as laid by Building Inspector J. Barf, was that of a breach of the Board of Health regulations, in that the defendants had used too light a piping for plumbing connections. Mr. McDowell said that since the case was stood over, a week previously, the pipe had been changed for a heavier one. He questioned the powers of the municipality to obtain a conviction in this way. Magistrate Jay said that there had been a breach of the regulations, and the court must record a conviction.

SEWER CONTRACT

Montreal.—Tenders for the Hochelaga street sewer, one of the several which the City Council plan to construct through the winter months, showed a divergence of over $6,000 between the lowest and highest received. One party tendered for a price of $4,775, while the highest submission was for $11,500. Tenders were referred to the Director of Public Works for a recommendation.

ACTIVITIES OF OTTAWA SANITARY INSPECTORS

Ottawa.—Covering a great variety of different lines of work and investigations 23,420 different matters were attended to by the sanitary inspectors of the city health department according to the annual report for the departmental year ending Oct. 31st last, prepared by Mr. G. O. S. Laflamme, chief sanitary inspector. This has been presented to the Medical Officer of Health.

Of the 23,420 inspections and investigations, in 10,030 cases conditions were found sanitary; in 2,958 conditions were found insanitary and orders were given to remedy same or abate nuisances.

P. B. Fetterly, 201 Bridport St., London, Ont., wants prices on hot water heating, plumbing and electrical work in connection with new $12,000 residence to be erected in spring.

WESTERN ONTARIO NEWS

Prices are wanted immediately on both steam and hot water equipment in connection with $25,000 addition to the Institute of Musical Arts at London, Ont. Also on electric lighting. L. G. Bridgeman, Bank of Commerce Building, architect.

Plans are being prepared and tenders will be called in about a month for installation of new lavatories, shower baths and building of swimming pool 60 x 30 at the Technical School, London. Prices wanted on equipment. Watt and Blackwell, Bank of Toronto, London, architects.

W. H. Gurney, Wingham, Ont., is preparing plans for new business block and wants prices on hot air heating, plumbing and electrical equipment.

The trustees of the Public School at Wellesley, Ont., C.F. Ottman, chairman, want prices and information regarding indoor toilets which it is planned to install.

Plans are to be prepared at London, Ont., for a new suburban collegiate institute to cost $250,000. L. E. Carrothers Bd. of Education, architect. Prices will be wanted on steam heating, electrical work, plumbing and ventilating system.

William Cook, proprietor of the Richmond Hotel, has awarded contract for additional steam heating and radiation to the Helena Power Co.

Plans are being prepared at Preston, Ont., for $20,000 addition to school and prices are wanted on heating and plumbing equipment.

John Hayman & Sons are interested immediately in prices on steam heating equipment, plumbing and electrical work for 20 suite apartment which is contemplated.

William Skelly, 242 King St., London, was awarded plumbing and the McClary Mfg. Co., hot air heating for new $4,000 residence for A. E. White, 174 Langarth St.

The plant of the Meredith Foundry Co. at Dresdon, Ont., was completely destroyed by fire last week.

William Skelly, 242 King St., was awarded contract for plumbing for new $4,000 residence for A. E. White at London, Ont.

Prices on hot water heating, plumbing and electric lighting will be asked for shortly in connection with new $40,000 hospital to be erected at Aylmer, Ont., by the Memorial Hospital Association, H. E. Armstrong, secretary.

Joseph Condy, Walkerton, P. O. contemplates erection of new $4,000 residence in spring and is interested in prices of plumbing and heating equipment.

SEWER BY-LAW PASSED

Oshawa, Ont.—By-law authorizing construction of the Westmount sewer was passed, involving $10,000.

Contracts Awarded

Toronto, Ont.—Gordon Thompson, 40 Jarvis St., Toronto, is awarded general contract for construction of 6 in. water mains costing $32,000 for York Twp. Council.

Chicoutimi, Que.—Plumbing and heating contracts for addition to hospital costing $45,000 for Hotel de St. Vallier are awarded to Edgar Lepine.

North Toronto, Ont.—Contracts for erection of High School costing $160,000 for Bd. of Education, are: heating and plumbing, at $39,750, W. J. McGuire, 91 Jarvis St.

Verdun, Que.—Additional contracts for school costing $100,000 for Verdun School Bd., are: plumbing and glazing, Wm. Noseworthy, 165 Egan St., Verdun.

Victoria, B. C.—Plumbing and heating contracts for addition to hospital costing $107,986 for Royal Jubilee Hospital are awarded to Thacker & Holt, 620 Pandora Ave., at $62,108.

Toronto, Ont.—Heating and plumbing contracts for 3-suite apt. costing $10,000 for Mr. Kirsh, care of B. Swartz, architect, 336 Dundas St. W., are awarded to Danforth Plumbing Co., 267 Danforth Ave., and G. Leslie, care of architect.

St. Catharines, Ont.—Plumbing and heating contracts for residence for Mr. Vaughan, R. R. No. 1, are awarded to Bowman Bros., 32½ St. Paul St.

Halifax, N. S.—Plumbing contracts for residence for P. A. Lavers, 7½ Yale St., are awarded to Roy McKay, 145 South Kline St.

Halifax, N. S.—Roy McKay, 145 South Kline St., has plumbing contract for residence for C. E. Mersereau, 177 Henry St.

Montreal.—Additional contracts for residence for J. W. MacKenzie, 9 Stairs Place, are: Plumbing, W. S. Craig, Upper Water St.

Montreal.—Contracts for residence for F. Hiseler, 20 Willam St., are awarded to Roy McKay, 145 South Kline St.

Montreal.—Plumbing contracts for residence for W. F. Devan, care of builder, R. P. Bradley & Son, 90 Willow St., are awarded to W. S. Craig, Upper Water St.

Montreal.—Additional contracts for 8 residences costing $80,000 for L. P. Forest, 347 St. Joseph Blvd., are: plumbing fixtures, Jas. Robertson & Co., Ltd., 142 William St.

W. M. Gartshore President McClary Mfg. Co.

T. G. Meredith, K.C., Fills Vacancy on Board of Directors Caused By Death of Late President John McClary—A. M. Smart is Vice-President and Treasurer

W. M. GARTSHORE

Appointed President and General Manager of The McClary Mfg. Co., Ltd., London, Ont., succeeding the late John McClary.

AT THE MEETING of the directors of the McClary Manufacturing Company, held at their head office in London, Ontario, W. M. Gartshore was appointed president and general manager, and A. M. Smart, vice-president and treasurer.

The vacancy on the board, caused by the death of the late president of the company, John McClary, was filled by the appointment of T. G. Meredith, K.C.

It is the intention of the directors, at the next meeting, to pass a by-law appointing another vice-president in the person of John McClary Gunn, assistant general manager.

The directors of the company are now constituted as: W. M. Gartshore, A. M. Smart, John McClary Gunn, John McClary Moore, T. G. Meredith, K.C., with J. K. H. Pope as secretary of the company.

At the recent installation of officers of the Masonic lodges at London, Ont., Ben Noble of the plumbing firm of Noble & Rich was installed as Director of Ceremonies for Union Lodge No. 380.

The public are now beginning to realize the importance of domestic sanitation. Plumbing was always considered a convenience. It added to physical comfort. But the public realization of the fact that proper plumbing installations not only are health preservers, but life savers, has been very recent indeed.

SUPERIORITY PURITY DURABLE AS THE PYRAMIDS

Plan Much Building in Western Ontario

Big Volume of Building is Expected to Start in Spring—Details of Some Important Projects.

LONDON, Ont.—Everything points to more building next spring than this city has ever known and the work includes some contracts of unusual interest to the sanitary engineers. The passage by the ratepayers of a grant of $250,000 to aid in the extension of the Western University means that work will be commenced as soon as possible on a group of buildings to cost $2,000,000. They will be of the most modern construction and will be heated by steam. A start will be made immediately in getting the ground ready and all preliminary work done so that construction may proceed as early as possible in the spring.

Another important project is the new $1,500,000 hotel to be erected by Canada Hotels, Limited. The contract for this has been awarded to the Anglin, Norcross Co., and as much work will be done as possible during the winter months and everything gotten ready for rushing the building to completion during the summer. It will be heated by steam and the plans include ventilating system and complete laundry.

The Board of Education plans to build at least two, and possibly three schools, the cost of which is estimated at $300,000. Plans for these, will be prepared shortly by the board's architect, L. E. Carrothers. Steam heating is contemplated for these buildings.

City Engineer Brazier is busy with plans for sewer extensions and new work that will call for an expenditure of approximately $400,000.

Architects report an unusually large number of inquiries for plans and information regarding home building. With lower prices for materials and labor costs reduced they expect that between $2,000,000 and $3,000,000 worth of new residences will go up. This years' total exceeds $2,500,000 and a great number of prospective builders held over their work owing to prices. There is hardly a house to be had here for rent, and no small or medium priced dwellings at all. Every apartment is spoken for months ahead. With a demand like this there is a profitable field for builders and many of them are already busy with plans. Mahaffy Bros. are getting ready to build forty medium priced homes, Hyatt, Bros., expect to build six or eight houses to run from $4,500 to $6,000 each. Thos. Coop plans to erect several homes to cost $3,000 each. John Putherbough stated to Sanitary Engineer that he plans to build three dwellings which will cost approximately $15,000. In addition to these John Hayman & Sons have plans for an apartment house to contain twenty suites.

Another big project that will likely develop in connection with the Western University is the seminary planned by Bishop Fallon. Plans for this are prepared but the work has been laid over owing to costs. The proposed seminary will cost at least $500,000 and the money for it has been obtained. Bishop Fallon stated recently that work will be started in the spring he expected on a large new church at Chatham, Ont.

Another Chatham project in which local capital is interested largely is the new ice cream and ice making plant to be built there by Silverwoods, Limited. President A. E. Silverwood stated to Sanitary Engineer that this would cost approximately $100,000 and that plans for the plant would be prepared shortly.

SHEET METAL EMPLOYERS STAND BY DECISION TO PAY 75 CENTS

Toronto.—Following a recent meeting of the sheet metal section of the Builders' Exchange formal notice was sent to the Sheet Metal Workers' Union, of the final offer of the employers with respect to wages for the present year. The offer made no change in the rate of 75 cents an hour set by the employers before, which was rejected by the union, the formal notice being given for the purpose of clearing up any misunderstandings as to the position of the members of the sheet metal section of the Exchange.

A meeting of the union held at the Labor Temple resulted in no change in the situation. Business Agent H. W. MacKay stated, at its conclusion, that the organization was pursuing the policy laid down by which an effort would be made to negotiate with the individual employers.

FROZEN PLUMBING AND WATER PIPES IN WINNIPEG

The Board of Health Bulletin of Winnipeg states a lot of the trouble now being experienced by owners and tenants and incidentally by the inspectors of the Health Department might be avoided by a little care and forethought.

In most cases the freezing occurs in lock-up stores where the occupants do not keep enough fire or where the fire is allowed to go out at night or on Sundays. This is of course done to save fuel. The Department cannot, however, permit this and will insist on the plumbing in such stores being kept in working order throughout the Winter.

It is interesting to note that in stores where groceries and articles which would be injured by cold are kept, we seldom find the water pipes frozen. It is in stores where clothing and similar goods are sold that the freezing occurs. This goes to show that the plumbing can be kept working if the tenant keeps enough heat in the premises.

A good way to prevent water pipes freezing at night is to turn off the water at the meter at night. If this is done, however, it is important to drain all the water from the pipes by opening one of the taps to let in the air. This drives the water out at the stop and waste cock, but if a tap is not opened the water will not drain out of the pipes and freezing may result.

Some of the older houses may be made much warmer and more comfortable by banking up around the outside walls with earth or ashes.

Cellar windows and coal chutes should be examined and made tight in order to prevent freezing of water pipes, especially in cellars without furnaces.

After a tenant has done all that he can it sometimes happens that a cellar is so cold that the plumbing freezes. If this occurs the Health Department officers will inspect on request and, if found necessary, notify the owner of the building, but this will only be done when the freezing is without doubt due to structural defects.

CONTRACTS AWARDED

(Continued from page 21)

Montreal.—Additional contracts for apt. house for J. Gersovitz, 1017 St. Urbain St., are: Plumbing and heating, J. Becker, 1439 St. Dominique St.

Montreal.—Additional contracts for 3 residences for J. M. G. Poirier, 37 Brisette St., are plumbing, E. Lalonde, 274 Rue Hadley.

Ottawa, Ont.—J. Phillips, 1005 Wellington St., has plumbing and heating contracts for residence costing $7,000 for E. A. Hodgson, 101 Melrose Ave.

Ottawa, Ont.—Plumbing and heating contracts for J. A. McMaster, 110 Sunnyside Ave., are awarded to Gervin & Hodgins, Bank and Sunnyside.

Ottawa, Ont. — Plumbing and heating contracts for residence costing $5,000 for D. H. Lancaster, Grenville Rd., are awarded to Gervin & Hodgins, Bank and Sunnyside.

Ottawa, Ont.—Additional contracts for residence costing $5,000 for C. Drewitt, Riverdale and Brighton are: heating, Pease Foundry Co., 287 Lyon St.

Ottawa, Ont.—Heating contracts for 2 residences costing $10,000 for A. A. Crawley, 192 Argyle Ave., are awarded Pease Foundry Co.

Toronto, Ont.—Plumbing contracts for 1 pair and 1 residence for J. Foley, 10 Keystone Ave., are awarded to Duffort Bros., 862 Kingston Rd.

Toronto, Ont.—Plumbing contracts for bungalow costing $7,500 for Edward Elridge, 40 Foxley St., are awarded to Geo. Atkinson, 766 Dovercourt Rd. Tenders will be received for heating.

Toronto, Ont.—Contracts for residence costing $16,000 for Mrs. J. J. Follett, care of architects, Molesworth, West & Secord, 43 Victoria St., are: sheet metal, A. Matthews, Ltd., 254 Adelaide W.; plumbing and heating, J. R. Honeycombe, 122 Yarmouth Rd.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

ANOTHER extensive budget of price changes on the current plumbing and steam-fitting markets, includes many a premier revision to lower levels. Through changing discounts, easier quotations are noted on eavestrough, both ridge roll and valley. A similar ten per cent. reduction is now evident on conductor piping. The easier tone in corrugated sheets has produced a new discount in certain quarters, while the decline in quotations on closet combinations, closet seats, and enamelled iron tanks attracts special attention.

Other items included in the lengthy list of price reductions are, the Penberthy line of brass valves, cotton waste, both white and colored; one line of gate valves; stove bolts; rivets and burrs; and Crescent wrenches. A new discount list has been issued on bolts and nuts. The lower range boiler list prices have now been generally adopted, while similar reduced levels have materialized on soil pipe and fittings, thus bringing quotations on this line of products to a more uniform basis than has been recently apparent.

Quietness is evident in the sheet markets, with little current business reported in radiators and boilers. The dull session continues in scrap materials, with the ingot metal markets still laboring under a slack demand.

MONTREAL MARKETS

MONTREAL, Jan. 14.—The opening weeks of the New Year continue to bring forth price revisions on many lines of plumbing and steamfitting supplies. A downward revision is announced on the Penberthy line of brass valves, and lower quotations on cement are now given. New lower cotton waste prices are now effective, the reduction varying on the different grades. A new list on bolts and nuts is issued, superseding list of October last, and all bolts,including stove and tire bolts, coach screws and nuts, are now lower in price, the reduction varying on the different classes. The discount on iron rivets and burrs is changed from 50 per cent. to 52 1-2 per cent. off list prices, while cap and set screws also show a reduction. New lower prices are now quoted on the various sizes of Crescent wrenches. There is practically no change in the prices of heavier lines, such as sheets, bar iron, enamelled ware, wrought pipe and fittings, radiators and boilers, range boilers and boiler tubes. Quotations on some of these lines are more or less nominal on the local market, and little marked change may be expected until more activity is shown in the earlier spring months.

PENBERTHY BRASS VALVES NOW QUOTED LOWER

Montreal.

A downward revision is announced in quotations on the Penberthy line of brass valves and following are the new discounts;

Gate valves	33 per cent.
Regrinding valves	20-10 per cent.
Swing check valves	10 per cent.
Compodisk valves	20-10 per cent.

COTTON WASTE PRICES RECORD DOWNWARD REVISION

Montreal.

Quotations on cotton waste and wool packing are revised to lower levels, but wipers remain unchanged. Cream polishing is reduced one cent per pound, while in whites, the higher grades are quoted one-half cent lower and the cheaper qualities from 1 to 1½ cents less. Wool packing prices show a more substantial reduction of from 2 to 5 cents per lb. according to quality. The cotton market has for some time past not been displaying the firm tone that was evident a few months ago, and lower waste prices now do not come as much of a surprise, in fact dealers anticipated a change early in the New Year. Revised prices are as follows;

COTTON WASTE—Cream polishing, 19c per lb.
White—XXX extra, 16c; XX grand, 15½c; XLCR, 14½c; X Empire, 13c; X Press, 11½c.
Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.
Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.
Dominion Wipers—White cotton, 20c; colored cotton, 14c.

CRESCENT WRENCHES SHOW SLIGHT REDUCTION

Montreal

New prices are now quoted on Crescent pattern wrenches, a slight reduction having been made in the various sizes. The 4 and 6 inch will now cost $8.00; 8 in. $10; 10 in. $12.50 a dozen.

CAP SCREWS AND SET SCREWS AT REVISED DISCOUNTS

Montreal.

Through increasing the discounts on square and hexagon cap screws, and set screws, these will now sell for less. Square and hexagon cap are now quoted less 50 per cent., set screws less 55 per cent.

IRON RIVETS AND BURRS HAVE NEW DISCOUNTS

Montreal.

A slight reduction has been made in quotations on iron rivets and burrs. Discounts in each case have been changed from 50 per cent. to 52½ per cent. off list prices. Extras remain as formerly.

VERY LITTLE INTEREST IN SCRAP METALS

Montreal.

The scrap markets fail to show any improvement, and dealers now look for a more or less dull period during the winter months. While there was a slight revival in these markets late last fall, it was not for long standing, the winter weather causing a cessation of activities. Quotations are nominally unchanged, with dealers anticipating little change during the quiet months, they now realizing that price is not a factor either assisting or obstructing a more active market.

SCRAP—

Automobile tires	0 75
Rubber Shoes	0 03
Yellow brass	0 05
Red brass	0 09
Light brass	0 03¼
Scrap zinc	0 03 0 03¼
Lead, heavy	0 04¼
Lead, tea	0 02½
Light copper	0 08
Heavy copper	0 10½
Wrought iron, R.Rd., No. 1 per gr. ton	10 50
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 50
Heavy melting steel	7 50 to 8 00
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	21 50

LOWER WIRE SOLDER PRICES FOR QUANTITY BUYING

Montreal.

Current quotations on wire solder are recorded with a considerable reduction from those appearing in recent weeks. The net price on this class of solder is really unchanged, but a larger differential is now given for quantity buying. Formerly the higher quotations were given, and concession made for orders of fair quantities, but because users of wire solder usually buy in large quantities, it is now thought best to use lower level, and charge the extra for small orders.

The undertone of the lead products market as a whole does not display the same amount of firmness that was evident a few weeks ago, metals in primary markets showing slightly weaker with lower quotations appearing on some lines. However, for the present, other lines are unchanged, with the demand still quiet. Following are present prices;

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq.	
Do., 4 to 8 lbs., sq. ft.	0 09½
ft., lb.	0 10¼
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 28½
Do., strictly, lb.	0 26½
Do., commercial, lb.	0 23½
Do., wiping, lb.	0 24½
Do., wire, lb.	0 32½
Zinc, sheets, casks	0 11½

NEW LOWER QUOTATIONS ANNOUNCED ON CEMENT

Montreal

It was announced in the last issue that new lower prices would shortly be given on Portland cement. Effective from the first of the year a decline of approximately 7 per cent. is made. Current business remains seasonably quiet, but a revival of trade is looked for in the near future as a good amount of building is now under construction. Following are revised quotations.

CEMENT Car load lots—	
Per bag, f.o.b. cars	0 92
Per bag, delivered	1 00
Less car lots—per bag, f.o.b. yard	1 00
Per bag, delivered	1 10
Less 5 per cent.	
Rebate of 20 cents for empty bags.	

RANGE BOILER PRICES STILL BEING SHADED

Montreal

With sales of range boilers still of a small order, quotations are nominally unchanged, but price-shading continues among local distributors. The present quiet period does not offer much assistance in improving this situation, dealers being anxious to obtain orders, even with a considerable price concession. It is the opinion of some that increased volume of trade in the early spring months will remedy the matter, and stocks will by that time have become depleted. Others again admit they cannot find a solution for the problem, and it is their belief that much the same condition will prevail until dealers in general are willing to sacrifice their profit on boilers, and this may be a slow road to recovery from the present state of affairs. The most general quotation on the 30 gallon boiler is $8.75, with the following prices on other sizes;

RANGE BOILERS—	Std.	Ex. Heavy
30 gallon	8 75	11 25
35 gallon	11 25	13 50
40 gallon	13 50	16 00
52 gallon	20 00	24 50
66 gallon	28 00	34 00
82 gallon	35 00	46 50
100 gallon	45 00	55 00
120 gallon	54 00	63 25

BOLTS AND NUTS ARE AGAIN REDUCED

Montreal.

Superseding list of October last, a new list on bolts and nuts is now issued to the trade. Revised discounts record a reduction of varying extent on practically all kinds, plow belts being the only class not showing a decline in prices Following is new list;

BOLTS AND NUTS

Discounts apply to standard list.
Carriage bolts ($1 list), ⅜ in. dia. and smaller, 6 in. and shorter, 47½ per cent.
Carriage bolts ($1 list), ⅜ in. dia. and longer lengths, 40 per cent.
Carriage bolts ($1 list), 7-16 in. dia., and larger, 40 per cent.
Machine bolts, ⅜ in. dia. and smaller, 4 in. and shorter, 55 per cent.
Machine bolts, ⅜ in. dia. and smaller longer lengths, 42½ per cent.
Machine bolts, 7-16 inch dia. and larger, 42½ per cent.
Sleigh shoe bolts, all sizes, 30 per cent.
Coach and lag screws, 55 per cent.
Bolt ends, 42½ per cent.
Square head blank bolts, 42½ per cent.
Plow bolts, 1, 2, 3 head, 35 per cent.
Plow bolts, others, 35 per cent. disc. plus 20 per cent.
Elevator bolts, large heads, 30 per cent.
Elevator bolts, corrugated heads, 60 per cent.
Fancy head bolts, 30 per cent.
Shaft bolts, ($3 list), 30 per cent.
Step bolts, large head ($3 list), 30 per cent.
Whiffletree bolts, 30 per cent.
Tire bolts, 62½ per cent.
Stove bolts, 72½ per cent.
Nuts, 2 in. and smaller, square, blank, off net list, $1.25.
Nuts, 2 in., and smaller, square, tapped, 75 per cent. off.
Nuts, 2 in., and smaller, hexagon. Blank, 75 off; tapped, 25 off.

VALVES AND BIBBS RECORD NO PRICE CHANGE

Montreal

All lines of valves and bibbs are remaining unchanged in price locally, with sales of small but sorting nature. A gradual improvement is now looked for as inventories should result in increased sales, stocks being undoubtedly low among dealers. Unchanged discounts are the following;

COMPRESSION WORK—	
Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard.	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard.	40%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, standard	20%
Gate or straightway	16/10%
Emco Globe Valves	20%
Emco check valves	20%
Jenkins Globe, angle, check and swing check	19%
Jenkins gate or straight way	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body gate	33%

SOIL PIPE FITTINGS QUOTATIONS UNCHANGED

Montreal

Current quotations on soil pipe and fittings continue unchanged, with the movement of these products now seasonal. With the present closed winter weather little activity can be expected, but dealers anticipate a good opening in the spring months, building construction assisting in this direction. Although there is no immediate sign of revised prices, it is generally admitted that competition is holding prices at their present low level, and increased activity a little later may be the factor in increasing quotations. Following are prevailing discounts;

SOIL PIPE—	
2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%
Fittings—	
2 to 6 inch	50-10%
Do., broken lots	0 12

PIPE FITTINGS REMAIN AT UNCHANGED DISCOUNTS

Montreal

The various lines of pipe fittings remain at unchanged quotations, with little change also recorded in the market as a whole. Sales are of fair volume for this season, with a gradual improvement looked for now that inventories are taken and supplies will be required for the earlier spring work. Unchanged prices and discounts are as follows;

PIPE FITTINGS—	Per Cent.
Cast iron fittings	25
Bushings, cast	27½
Bushings, malleable	25
Flanges	37½
Plugs	27½
Flange unions	22½
Malleable unions	42½
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	50
Do., long	60
Do. 4½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods —	Blk.	Galv.
Class A	0 53	0 65
Class B	0 21½	0 28¼
Class C	0 14	0 21½

ONLY MODERATE SALES OF ENAMELLED WARE

Montreal.

With quotations on the various lines of enamelled ware remaining at the revision of December last, business is now of a quiet nature, although not unusually so for this season. Local distributors anticipate a gradual improvement as the weeks pass as present building construction is being carried out in fair volume, and further activity is promised for the spring months. Following are list prices and present discount;

	1 only	2 only	3 only
Sinks, roll rim—			
18 x 30			$23 00
Sinks, flat rim—			
16 x 24	$ 7 50	$ 7 40	$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet			57 10
Lavatories—			
17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim, F241 or P4345			12 60
Less 33 1-3 per cent.			

MORE SETTLED SHEET MARKET LOOKED FOR

Montreal

With current business in sheets now quieter, there is an effort being put forth to stabilize the market, and have quotations on a more uniform basis among the various jobbers and distributors. For some time past it has been necessary to show a range in quoting prevailing prices because of the variation existing in jobbing circles. Dealers admit that during the past few months competition was met, and in some instances orders have been taken at ridiculously low prices, in many cases showing little or no profit for the jobbing house.

It is now considered the opportune time to remedy this situation, and it is hoped that within the very near future an improvement will be noted, and prices set within reasonable reach of replacement values. Optimism is again expressed for the following months, and although sales are not at present over plentiful, the end of the month is looked upon by some as the close of the now more inactive period. Quotations are still nominally unchanged as follows;

BLACK SHEETS—		
10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05
26-gauge	4 60	5 20
22-24 gauge	4 65	5 25
28 gauge	6 35	7 20
GALVANIZED SHEETS—		
10¾ ounce	6 75	7 60
28 gauge	6 30	7 20
26 gauge	6 05	6 85
22-24 gauge	5 90	6 60
20 gauge	5 75	6 45
18 gauge	5 75	6 35
16 gauge	5 60	6 35
14 gauge	5 45	6 35
12 gauge	5 30	6 35
10 gauge	5 20	6 35
English Standard—	Queen's Head.	Fleur-de-lis
28 gauge	8 25	7 75
26 gauge	8 00	7 50
24 gauge	7 40	7 10
22 gauge	7 05	6 65
18-20 gauge	6 35	6 50

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

CANADA PLATES—

NO CHANGE RECORDED IN CORRUGATED SHEETS

Montreal

Although there is a slightly easier tendency in the corrugated sheet market, due to the position of plain galvanized sheets at the present time, where lower prices have been made without any corresponding decline in corrugated prices remain unchanged. Dealers are now mostly interested in bringing the local market to a more stabilized condition as regards prices. For some time past quotations have been more or less nominal locally, and certain price concessions have been offered to secure business. It is now felt that this should be remedied before the more active period in the following months, and an effort is now being put forth to improve this condition. For the present, following are list prices and discount;

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 7½%.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

NO FURTHER CHANGE RECORDED IN WROUGHT PIPE

Montreal.

Quotations on wrought iron and steel piping remain at list No. 54, effective the latter part of December. A fair volume of business is recorded, which is now expected to improve as the opening weeks of the year pass. Following is list No. 54;

WROUGHT PIPE

Price List No. 54. December 22, 1921.

Standard Buttweld Pipe S/C

Size	Steel Blk.	Steel Galv.	Gen. Wrot. Iron Blk.	Gen. Wrot. Iron Galv.

LITTLE IMPROVEMENT NOTED IN BOILER TUBE MARKET

Montreal.

Boiler tubes still display very little activity on the local market, sales are small and cover supplies for repair work only. Quotations remain unchanged as follows;

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

CLOSET OUTFITS RECORD ONLY FAIR SALES

Montreal.

Current trade in closet outfits is now only of a fair volume although slightly improved over the past few weeks of the holiday and inventory period. Distributors look for better business from now on, as building construction promises well for the ensuing months, especially buildings of the smaller class. Prevailing quotations are as follows;

CLOSET OUTFITS—	
Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., "Richelieu" bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitrious China	20 00

BOILERS & RADIATION UNCHANGED AT RECENT PRICE DECLINE

Montreal

No further change is recorded in boilers and radiators since the revision of January 1st when a reduction was announced on both lines. There is a fair amount of business in evidence as building construction is being carried out on a fairly active stage considering the season of the year. Further improvement is looked for as the season advances as contemplated building promises well for the spring and summer months. Following are list prices and discounts;

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60. Discount, 59% for hot water and 60% for steam.

Wall Radiators—5 ft., $1.15; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 64 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 20 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in. 20 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 20 per cent. Ontario Govt. trimmings, 10 per cent.

Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings, 25 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

BAR IRON AND STEEL PRICES REMAIN UNCHANGED

Montreal.

Current business in bar iron and steel is still of a quiet nature, although not exceptionally so for this season of the year. Dealers look for a gradual improvement in the coming months, both stocks and prices being much more fav-

ourable for increased trade than twelve months ago. There is yet little sign of construction requiring the larger supplies, but it is still early and it is thought that a decided turn for the better will be taken later in the spring months. Following are unchanged prices;

IRON & STEEL -

Common bar iron, 100 lbs.	2 90
Refined iron	4 40
Iron finished machinery steel	2 95
Mild steel	2 90
Single reeled machinery steel	4 75
Band steel	2 90
Spring steel	4 50
Sleighshoe steel	2 90
Tire steel	3 10
Toe calk steel	3 80
Harrow tooth steel	3 05
Mining teeth steel per lb.	0 22
Black Diamond tool and cast steel	0 42

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

METAL MARKETS ARE AGAIN SOMEWHAT EASIER

Montreal.

Metal markets generally have been somewhat easier during the past week, and prices have receded slightly. There is no marked weakness, but the market has been sagging and it would not be surprising if lower prices were registered in some lines.

TIN—Owing to heavy shipments from the Straits the London market has been easier in tone, and from all appearances will be lower still. Available supplies are very heavy and demand is not very great at present. Quotation is slightly easier at 38 cents.

COPPER—Producers' prices in U.S. A. are still nominally unchanged, but business may be done at a shade less. The London market is also lower on both standard and electro. Locally prices are unchanged at 17¾ cts. for electro, 17 cts. for casting.

LEAD—The American market is firm and as the local market is based on American prices, the situation here is firm. London is steady but prices have only a nominal bearing locally. It would not be surprising to see higher prices in the near future. Local price unchanged at 7 cents.

SPELTER—This metal is considered fairly cheap to-day and higher prices are anticipated over the next few months. The London market is slightly easier, but this is only considered temporary. Local price 7½ cents.

ALUMINUM—This metal continues to this metal, but prices, if anything are slightly easier, especially for import lots. Chinese is quoted at 6¾ cents, high grade English 7¾ cents.

ALUMINUM—This metal continues to show an easier tendency, and while quotations are for the present unchanged, lower prices would not be surprising in the near future. Present quotation, 26 cents.

TORONTO MARKETS

TORONTO, Jan. 14.—Another extensive budget of price developments is apparent on the current markets. Closet combinations, closet seats and enamelled iron tanks are recorded with easier price levels. Cotton waste prices, both white and colored, are revised downward, while a similar recession is noted in eavestrough, both ridge roll and valley. Conductor pipe records a decline of 10 per cent., with a revised discount having been announced on the J. M. T. line of gate valves. Reductions are also prominent on the Penberthy line of brass valves, while a change in the discount on corrugated sheets is evident in some quarters. The lower range boiler list prices have been generally adopted, together with easier levels materializing on soil pipe and fittings, thus bringing quotations on these products to a more uniform basis. Other decreases noted are on Crescent wrenches, and stove bolts, while a new discount list has been issued on bolts and nuts.

Little business is reported in radiators and boilers, with the quiet session still evident in the sheet market. Marked activity is noted in the tin plate industry. The dull period continues in scrap materials, with slackness in demand still featuring the ingot metal markets.

NEW DISCOUNT LIST NOTED ON BOLTS AND NUTS

Toronto.

Among the numerous price developments recorded on the New York markets, is the revision in discounts on bolts and nuts. Both carriage and machine, as well as miscellaneous bolts, appear with lower quotations through increasing the discounts. The revision is of varying extent on the different products. Both square and hexagon, black and tapped, are also noted with easier price levels. The complete list of changes follow:

BOLTS AND NUTS—

Discounts apply to standard list.
Carriage bolts ($1 list), ⅜ in. dia. and smaller, 6 in. and shorter, 47½ per cent.
Carriage Bolts ($1 list), ⅜ in. dia. and longer lengths, 40 per cent.
Carriage Bolts ($1 list), 7-16 in., dia., and larger, 40 per cent.
Machine Bolts, ⅜ in. dia. and smaller, 4 in. and shorter, 55 per cent.
Machine Bolts, ⅜ in. dia. and smaller, longer lengths, 42½ per cent.
Machine Bolts, 7-16 inch dia. and lrager, 42½%.
Sleigh Shoe Bolts, all sizes, 30 per cent.
Coach and lag screws, 55 per cent.
Bolt ends, 42½ per cent.
Square head blank bolts, 42½ per cent.
Plow bolts, 1, 2, 3 head, 35 per cent.
Plow bolts, others, 35 discount, plus 20 per cent.
Elevator bolts, large heads, 30 per cent.
Elevator bolts, corrugated heads, 60 per cent.
Fancy head bolts, 30 per cent.
Shaft bolts, ($3 list) 30 per cent.
Step bolts, large head, ($3 list) 30 per cent.
Whiffletree bolts, 30 per cent.
Tire bolts, 52½ per cent.
Stove bolts, 72½ per cent.
Nuts, 2 in. and smaller, square, blank, off net list, $1.25.
Nuts, 2 in., and smaller, square, tapped, 75 off.
Nuts 2 in., and smaller, hexagon.
Blank, 75 off.
Tapped, 25 off.
Hexagon—Terms—Cash in 30 days from date of shipment, less 2 per cent.

LOWER QUOTATIONS ALSO APPEAR ON STOVE BOLTS

Toronto.

Quotations on stove bolts are also revised in the downward direction, in conjunction with changes which appear on other makes and styles of bolts. The new discount is 72½ per cent., compared with the previous figure of 67½. This reduction, therefore, is in the neighborhood of 16 per cent.

LOWER LEVELS MATERIALIZE ON SOIL PIPE AND FITTINGS

Toronto.

The anticipated readjustment in the local quotations on soil pipe and fittings has now materialized. The revised price levels, however, are still somewhat above the quotations which have recently prevailed in eastern markets, but it is stated that the current changes are in keeping with the present production costs, and that other levels indicate an unusual situation. On some sizes of pipe a decrease of 25 per cent. is noted, while the local quotation on fittings is now 50 and 10 per cent., compared with the previous figures of 40 and 10. Following are the latest revisions:

SOIL PIPE—

2 inch	40 per cent.
3 inch	40 per cent.
4 inch	40-5 per cent.
5 and 6 inch	40 per cent.
8 inch	net

FITTINGS—

2 to 6 inch	50-10 per cent.
8 inch	net

LOWER RANGE BOILER LIST NOW GENERALLY ADOPTED

Toronto.

As pointed out in previous issues of Sanitary Engineer there has recently been a strong tendency to drop back to the $8.75 level on the 30-gal'on standard range boiler. With this situation being generally evident, a new lower list has been adopted by some distributors, showing an easier range of prices on these produc's. There is stated to be only a small sale for boilers during the current season, but the movement to shade the nominal levels has been evident for some weeks. Following is the list now being generally recognized as the prevailing market values:

RANGE BOILERS—

Size.	Standard.	Ex-Heavy.
30-gallon	$ 8 75	$11 25
40-gallon	13 50	16 00
52-gallon	20 00	24 50
66-gallon	28 00	34 00
82-gallon	35 00	4 50
100-gallon	45 00	55 00
120-gallon	54 00	63 25
144-gallon	78 00	93 00

(Continued on page 30)

Send Your Orders to Mueller

For Cast Iron Sink Traps

Good quality grey iron goes into the castings, and high grade workmanship into the machining and assembling of them.

We constructed them as perfectly as our sixty-five years of experience in making plumbing goods could make them, and as in other *MUELLER* products, "Quality" is made the first consideration.

They are dependable and will give the best of service to you and your customers. A heavy coat of aluminum paint covers them, giving a very high grade appearance. They are furnished with brass cleanout screws, wide outlets, heavy knurled brass coupling nuts and may be depended upon to provide a deep seal.

Prompt delivery, as we ship from stock

REVISED DISCOUNT NOTED ON GATE VALVES

Toronto.

Current prices on valves and compression work are mostly stationary at the recently revised levels, with the exception, however, of the J. M. T. line of gate valves. The discount on these products has been revised, with the result that prices are now 10 per cent, lower than formerly. Business in these products is described as quiet, a condition which is considered more or less usual at this season of the year. Many firms have been engaged upon the annual inventory, and consequently little variation in the prevailing degree of market activity has been recorded. Following are current changes.

VALVES—	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecocks, stand'd	54
Roundway stop and waste cocks, std.	46
Brass steam cocks, standard	40
Globe, angle and check valves, std.	20
Mueller globe, angle and chceck	20
Mueller composition disc steam valves	20
J. M. T. valves, screwed	20|10
J. M. T. C., screwed	25|10
J. M. T. gate valves, screwed	25|10
Jenkins gate or straightway, screwed	25
Jenkins globe, screwed	19
Radiator valves, standard	58
Do., removable disc	58
Emco, J. D. valves, screwed	20
Emco, check valves, screwed	20
Webber gate valves, screwed	25
Emco, Globe valves, ¼" to 2", screwed	30
Emco, Globe valves, 2½" to 3", screwed	20
Basin cocks—	
No. 0 and 1, Fuller pattern	30
Quick opening No. 3633	43

COTTON WASTE PRICES REVISED TO LOWER LEVEL

Toronto.

Easier prices have now been announced on both white and colored cotton wastes in all grades. The decline varies between a ½-cent and one cent per lb. on the different grades, with a similar ½-cent decrease on cream polishing waste. While the raw cotton markets are temporarily fairly steady, they have recently been in a more or less unsettled condition, and the easier trend of quotations on cotton wastes is attributed to the lowering of costs in the various contributory elements in these markets. Following are the current revisions:

WASTE Cream, polishing, per lb., 19c.

White, cotton, XXX, 18c per lb.; XX, 16c; X, 15c; SC, 14c; XXX, Extra, 16¼c; XX Grand, 15½c; gLCR, 14½c; % Empire, 13c; X Press, 11½c.

Colored, cotton—Fancy, 13½c per lb.; Lion, 12c; Standard, 10½c; Popular, 9c; Keen, 7½c; No. 1, 13c; No. 7,12c; No. 1A, 11c; No. 1B, 10c.

Above lines subject to trade discount for quantity.

CRESCENT WRENCH PRICES ARE SLIGHTLY REDUCED

Toronto.

New prices are given on the Crescent pattern wrenches, a slight reduction having been made in the various sizes. Following are new prices:

CRESCENT WRENCHES—4 and 6 inch, $8; 8 in., $10; 10 in., $12.50 dozen.

DECLINE IN QUOTATIONS ON CLOSET COMBINATIONS

Toronto

A reduction has been recorded in prices on low down closet combinations, with a similar decrease noted on closet seats, and also the enameled iron closet tanks. The decline on combinations is approximately between 7 to 8 per cent., while the downward revisions in closet seat prices are of a more marked nature. This change follows on the recent decline which was recorded in enamelled ware products a few weeks ago. Following are the new net prices:

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	$26 00
Do., with post hinge seat	26 75
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	28 75
Do., vitreous china, with oak post hinge seat and cover	29 25
Do., vitreous china, with mahogany post hinge seat and cover	29 50
Do., white Vitro or Pussyfoot, with maoak post hinge seat and cover	29 25
Do., white Vitro or Pussyfot, with mahogany post hinge seat and cover	29 50
Do., enamelled iron tank with oak post hinge seat and cover	29 25
Do., enamelled iron tank with mahogany post hinge sea and cover	29 50
Additions or reductions to above	
Add for reversible trap bowl	1 25
Add for syphon jet bowl	7 00
For ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 80
CLOSET BOWLS—	
Washdown bowl, less spud	10 00
Reversible trap bowl, less spud	11 25
Syphon jet bowl, less spud	17 00
"Richelieu" bowl	10 50
CLOSET TANKS, low down	
Oak, Vitro or Pussyfoot tank with fittings, less seat	13 10
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 25
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	18 00
CLOSET SEATS—	
Oak wod srip seat and cover	3 25
Oak post hinge seat and cover	4 00
Mahogany finish post hinge seat and cover	4 25

DOWNWARD REVISION IN EAVES-TROUGH AND PIPE

Toronto.

Revised discounts are now quoted on both eavestrough and conductor pipe. The revision is approximately a decline of 10 per cent., this quotation having been added to the current figures. This change applies to both ridge roll and valley eavestrough, and conductor piping, but quotations on elbows remain unchanged. Following are the list prices and discounts:

TROUGH (EAVE)— O. G. Square Bead and half round. Size in girth:	Per 100 ft.
8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50
Less 70 and 10 per cent.	
PIPE (CONDUCTOR)— Plain, round or corrugated.	**Per 100 ft. in 10 ft. lengths.**
2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	23 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00
Less 70-10 per cent.	
ELBOWS (CONDUCTOR)—	
2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00
Less 60 per cent.	

REVISED DISCOUNT ON CORRUGATED SHEETS

Toronto

As pointed out in recent market reports, an easier tone has developed in corrugated sheets, especially since the last downward revision in quotations on flat sheets. This trend has resulted in a change in discounts on the corrugated, the level being 10 per cent., compared with the previous discount of 7½. The list prices are unchanged, as follows:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50
Less 10 per cent.	

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

EASIER TONE IN LEAD WITH SOLDER PRICES STEADY

Toronto.

While some higher prices are now quoted in certain quarters on solders, yet this change applies to such grades as strictly, commercial and tinkers. Quotations on basic markets, however, while maintaining the recent increased levels, show a tendency towards a slightly easier undertone. This development is also noted in lead. Generally, however, the following are the average local prices at present in effect:

LEAD AND ZINC GOODS—	
Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb	0 09½
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 32½
Do., commercial, lb.	0 22½
Do., strictly, lb.	0 24½
Do., guaranteed, lb.	0 27½
Do., wiping, lb.	0 22½
Zinc sheets, per lb.	0 12

LITTLE BUSINESS REPORTED IN BAR IRON AND STEEL

Toronto

Orders for bar iron and steel are admittedly not very numerous at present, but the general situation is described as in fairly good shape considering the present season of the year. Quotations on the local markets are practically unchanged from former levels, while reports of pending reductions in bar prices by leading producers in the southern primary centres have been strenuously denied. New business for 1922 has not opened up to any extent, as yet. Following are local nominal quotations:

IRON AND STEEL		
Mild steel bars, base	3 00	3 25
Mild steel bands, 3-16 in. base	3 50	3 75
Bar iron, base	3 00	3 25
Angle iron, base	3 10	3 35
Horseshoe iron	3 75	4 10
Tire steel	3 50	3 75
Spring steel	5 50	6 00
Crucible cast sheet steel	30 00	35 00
Mining drill steel		18 50
Cast tool steel, medium	20 00	23 00
Cast tool steel, high grade	30 00	36 00
Sleigh shoe steel	3 00	3 25
Norway iron	12 50	15 00
Toe caulk iron	4 00	4 50
Hoop steel	3 75	4 25

TORONTO MARKETS

(Continued from page 30)

QUIETNESS STILL EVIDENT IN SHEET MARKETS

Toronto

Business on the current sheet markets is of a quiet nature, with a more settled condition becoming evident as regards prices. One dealer described the situation as there "being nothing to shade prices for, trade being very dull at present," and in this opinion, price developments would not uncover any improvement in this situation. While it is yet early to determine future prospects, there is a fairly hopeful attitude among dealers generally. The current prices follow:

BLUE ANNEALED—		
10 gauge, base	3 75	4 50
12 gauge	3 80	4 55
14 gauge	3 85	4 60
16 gauge	3 90	4 65
BLACK—		
18-20 gauge	4 30	5 05
22-24 gauge	4 35	5 10
26 gauge	4 40	5 15
28 gauge	4 50	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED -	Queen's Head.	Fleur-de-lis.
28 gauge	8 25	7 75
26 gauge	8 00	7 50
24 gauge	7 60	7 10
22 gauge	7 25	6 75
18 and 20 gauge	7 10	6 60
Premier and Apollo—		
10¾ oz.	6 25	7 00
U. S. 28, base	5 85	6 60
U. S. 26	5 55	6 30
22 and 24	5 40	6 15
18 and 20	5 25	6 00
16	5 10	5 85
12 and 14	4 95	5 70

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing sheets.

ONLY MODERATE TRADE IN ENAMELLED WARE

Toronto

Current business in enamelled ware products is described as of a moderate nature, with quotations remaining unchanged at the recently lower levels. The nominal local discount on list prices is maintained at 33-1/3 per cent, with dealers generally anticipating an improved development in these markets with the promise of increased building activity during 1922. Following are the current quotations :

ENAMELLED WARE—	
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F164 or P3845 or P3847	23 60
18x21" Apron F169 or P4205	17 60
18 x 21" Roll Rim, F197, F199 or P4655-6	15 40
17 x 19" Roll Rim, F241 or P4345	12 60
Sinks, Roll Rim, 16x24 in.	18 10
Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70

Sinks, Flat Rim—	1 only	2 only	3 only
16 x 24	$7 60	$7 70	$7 80
18 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90

Above prices list, less 33 1-3 per cent.

All steel enamel baths, 4 and 4½ ft.	$14 00
Do., 5 ft.	15 00
Do., 5½ ft.	16 75

These quotations are net.

LOOK FOR GRADUAL IMPROVEMENT IN FITTINGS

Toronto

While the current volume of business in pipe fittings is described by distributors as being of a quiet nature at this time of the year, the outlook for improved trade during the ensuing season is generally optimistic. Demand for pipe fittings of various kinds is expected to reflect the anticipated improvement in construction circles, this condition being supported to some extent by the fact that the erection of many homes is reported already planned for 1922. Quotations on these products are steady at previous levels, the following discounts being in effect:

PIPE FITTINGS—	Per cent.
Cast iron fittings	25
Plugs, cast iron	28
Do., solid	28
Do., countersink	28
Bushings, mall.	28
Do., cast	28
Unions, ¼ in. to 2 in.	45
Do., 8 in., 2¼ to 4 in.	45
Flanged unions	25
Dart unions, blk., ¼ to 2 in.	33½
Do., ⅛ in., 2¼ to 4 in.	23
Do., galvd., add to black	30
Nipples, blk., and galvd. ⅛ to 4 in. close and short	50
Do., 4½ in. and larger	40
Do., long, ⅛ in. to 4 in.	60
Do., 4½ in. and larger	50
Do., running thread	30
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—	Black	Galvanized
Class A	0 54	0 67
Class B	0 22	0 32
Class C	0 14	0 22

STEADY UNDERTONE IN COPPER & BRASS GOODS

Toronto

Quotations on brass and copper products are remaining at the revised levels recently effective, and distributors state that these markets reflect the tone of copper on the primary metal centres. While copper is maintaining a firm position, the current demand has nominally receded, a condition which is due to the prevailing quietness at this season of the yar. Prices on tubing, sheets and rods are generally maintained at the following levels:

BRASS—	
Sheets base, per lb.	$ 0 23
Rods, base, per lb.	0 21
Tubing, base, per lb.	0 25
COPPER —	
Rods, base, per lb.	0 28
Soft sheets, plain, 1 oz. and heavier, lb.	0 30
Do., plain tinned, 16 oz. and heavier, lb.	0 37
Do., polished and tinned, 16 oz. and heavier, lb.	0 42
Tubing	0 29

WROUGHT PIPE MARKET AT MODERATE LEVELS

Toronto

Quotations on wrought piping are now covered by List No. 54, which became effective during the latter part of December. The revision averaged a price decline of around 8 per cent., and is calculated to place this market on a substantial basis for current trade in the early months of the year. Prevailing business is described as fair for this season, while production is still recording a moderate rate.

WOULD SHADE BOILER TUBE PRICES FOR GOOD ORDER

Toronto

Prices on boiler tubes are nominally unchanged, with trade in these products of a quiet nature. Dealers state that the following quotations represent the average market. Any changes that might be made would constitute slight fluctuations, with very little variation from the prevailing levels. Such seesawing from week to week could hardly record any substantial change, according to the opinion of one local distributor. However, it was freely admitted that such price shading from these figures is general if any attractive business is in sight. For general purposes however, the following quotations are generally in effect:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00	.....
1¼ inch	27 25	.....
1½ inch	26 25	.....
1¾ inch	29 75	25 00
2 inch	28 00	22 00
2¼ inch	32 00	25 00
2½ inch	40 00	27 00
3 inch	44 00	35 00
3½ inch	60 00	40 00
4 inch	75 00	50 25

QUIET SESSION IN RADIATORS & BOILERS

Toronto

The situation in radiators and boilers has registered very little variation. Quotations are unchanged at the downward levels recently announced, and trade is naturally of a restricted nature at this season of the year. Following are the current prices and discounts:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

BOILERS—

Water:

Round 60 per cent. off list. Square 15 per cent. off list.

Steam:

Round, 28 per cent. off list; square, 15 per cent. off list.

CHANGE IN PRICES ON PENBERTHY BRASS VALVES

Toronto

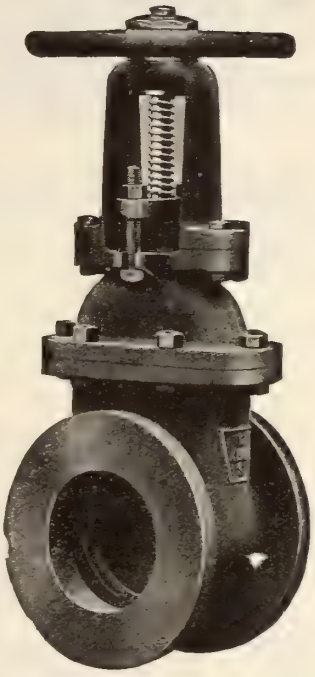
Another downward revision has been announced by the manufacturers in quotations on the Penberthy line of brass valves. The new prices are approximately 10 to 15 per cent. lower than formerly. Following are the revised discount levels:

PENBERTHY BRASS VALVES

Gate valves	33 per cent.
Regrinding valves	20-10 per cent.
Swing check valves	10 per cent.
Compodisk valves	20-10 per cent.

For Winnipeg Market Quotations see page 34.

Reflect Credit on the Work
Use Kerr Valves



Kerr Valves make good. For every one installed there is a return of satisfaction and good-will, ample for all concerned.

The man who has recommended and installed Kerr Valves is closest to the client, and, naturally, the lion's share of consequent new business goes to him.

KERR VALVES ARE SUPERIOR

Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face-to-face dimensions; observe the accessibility of the stuffing box; the strong, generous flanges and the properly spaced bolting. Kerr Valves will help your business—ask for Catalogue No. 5.

WINNIPEG MARKETS

WINNIPEG, Jan. 14.—Featuring the current market reports in the sanitary and heating industry, are several price revisions to lower levels. These changes affect such products as wrought piping, radiators and boilers, while an easier tendency has developed in both range boilers and cotton wastes. Conditions in other primary markets generally remain unchanged, with little variation recorded in quotations. The proportion of present business is described as of a very moderate nature, this condition being generally looked upon as seasonal.

NEW LIST QUOTATIONS ON WROUGHT PIPING

Winnipeg.

As pointed out in the last issue of Sanitary Engineer, new lower quotations have appeared on wrought piping. The revised list quotations—No. 54—are now available as follows:

BLACK PIPE

F.O.B.	Winnipeg	Calgary, Edmonton, Lethbridge & Medicine Hat.	Saskatoon.	Regina.	Brandon.
LIST NO. 54.

REVISION LOOKED FOR IN COTTON WASTE PRICES

Winnipeg.

At the present time waste prices are steady, but it has been noted that a revision in the near future would not be surprising. The cotton market does not show as much strength as it did the latter part of last year. At present, however, the following list prices are generally in effect:

WASTE—Cream, polishing, 24½c per lb. White—XXX extra, 21c; XX grand, 20c; XLCR 19c; X Empire, 17½c; X Press, 16c.

Colored—Fancy, 17½c; Lion, 16c; Standard, 14½c; Popular J, 13c; Keen, 11½c

Above lines subject to trade discount for quantity.

NO MARKED CHANGE IN PRIMARY SHEET MARKETS

Winnipeg.

The current demand for both black and galvanized sheets remains of a quiet nature. Quotations locally are fairly steady, following the trend in primary market circles, where very little change has been recorded. The average local prices follow:

SHEETS—	Per 100 lbs. Black.	Galv.
10 gauge	5 70	....
12 gauge	5 70	....
14 gauge	5 80	....
16 gauge	5 90	6 75
18 gauge	6 30	6 90
20 gauge	6 30	6 90

STILL MEETING COMPETITION IN RANGE BOILER PRICE

Winnipeg.

At this season of the year, sales of range boilers are of a dull nature, and therefore the market is far from active. Prices at present, continue merely nominal, as competition is met from all sources and the quotations on the 30 gallon standard size have suffered as a result. It is expected, however, that some movement will develop in the near future, with the object of stabilizing this condition. Following is the general list:

RANGE BOILERS—

30 gallons, each	$ 9 00
35 gallons, each	13 25
40 gallons, each	16 25
52 gallons, each	23 45
66 gallons, each	33 15
82 gallons, each	40 60
100 gallons, each	62 50
120 gallons, each	75 00

LITTLE VARIATION IN SOIL PIPE & FITTINGS

Winnipeg.

Prices on soil pipe and fittings are being maintained at previous levels, with the current demand of a very moderate nature at this season of the year. There has been some fluctuation recorded in other market centres, but the following are the unchanged nominal local quotations:

SOIL PIPE—

2 and 3 inch, 20 per cent.
4 inch, 30 per cent.
5 and 6 inch, 25 per cent.
8 inch, 10 per cent. advance.

SOIL PIPE FITTINGS—

2 nd 3 inch, 40 per cent.
4, 5 and 6 inch, 45 per cent.
8 inch, 10 per cent. advance.

DECLINE IN PRICES ON RADIATORS & BOILERS

Winnipeg.

Quotations on both radiators and boilers are now on an easier level through a revision in the discounts. The extent of the reduction varies slightly on the different styles. Following are the new discounts on these products:

RADIATORS AND BOILERS—

Square hot water boilers, 15 per cent.
Square steam boilers, 15 per cent.
Round hot water boilers, 60 per cent.
Round steam boilers, 20 per cent.

Radiators—

Steam, 54 per cent.; water, 53 per cent.

MEET UNJUST CHARGES WITH ACTUAL FACTS

Continued from page 19

Most important of all, however, is a proper check on the distribution of Overhead Expense to the various jobs. There is nothing that has caused more failures in this business than lack of proper records of Overhead. You buy and sell Overhead Expense just as you buy and sell labor and material. It is just as essential that your customer pay for his share of your Overhead Expense as it is that he pay for each and every fixture and fitting that goes into a job.

The matter of distributing, properly, to each job its proportion of Overhead, is a little more difficult than distributing the cost of definite items such as labor and material. Yet it must be done if we are to be safe against financial disaster. A little of the Master Plumber's time spent in reasoning out the distribution of Overhead will be just as profitable, if not more so, than the time spent in trying to secure additional work. In the absence of the proper knowledge of Overhead, the additional work may only bring closer the financial crash. A proper bookkeeping system will tell you whether or not you are getting back as much overhead as you are spending. If it does not, reject it then and there, because sooner or later it will cost you many times the amount you paid for it.

To sum it all up then in a few words. A bookkeeping system that is to fulfill its object must do this:

> Give your costs and profits on each job: Analyze the costs as to the main items, particularly Labor, Material and Overhead; Give you a comparison of the amounts *spent* for Labor and Overhead with the amounts *charged* to jobs to cover these items. Only thus can you know that all that has been spent has been applied to the proper jobs.

CONGRATULATIONS

Geo. Fenn, Sec.-Treasurer. and John H. Jackson, veteran plumber and tinsmith of Ecclestone & Bates, Ltd., Sanitary Engineers—Bracebridge, Ont.,—were both elected to the Board of Education 1922 at Bracebridge Municipal Elections.

PERFECTION HANGERS

Clears Clogged or Frozen Pipe

Supplies a Real Need

Show Desolvo in your window with a conspicuous card explaining, in very few words of large, easily read type, what it does for consumers. You will be agreeably surprised with the resulting sales.

It is easy to sell when you explain the saving in trouble and expense of tearing up floors, woodwork or lawns. The main thing is to let customers know what it does and that you have it for sale.

OVER 4,000,000 RIVETS

—THINK OF IT!

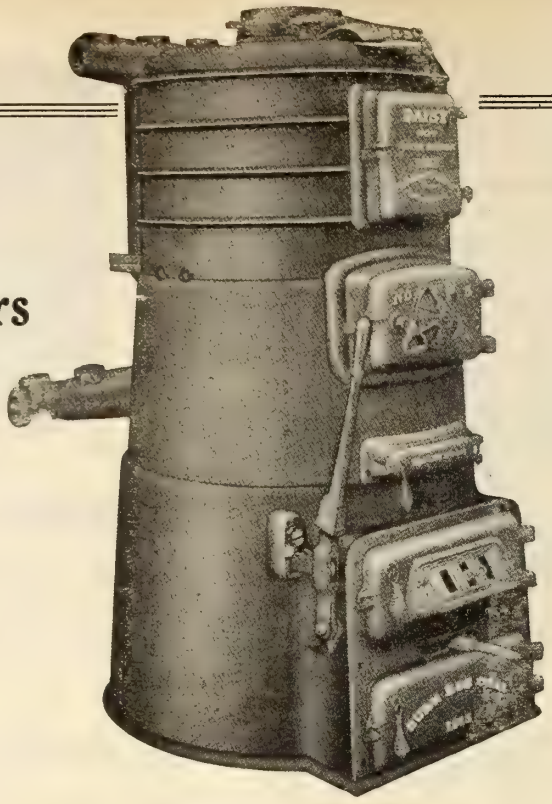
We used that many rivets in the Range Boilers we marketed during the past year.

We desire to thank the plumbing trade again for their continued loyalty to the products we have been supplying for over a quarter of a century.

Toronto Hardware Mfg. Co. Limited.

DAISY

Hot Water Boilers



The Daisy Boiler is the friend of householders. Its simplicity, ease of operation, economy and reliability steadily make new friends and hold the old ones.

DAISY

Hot Water Boilers

With a Daisy, it is easy to keep an even temperature through the night or any other time with a minimum fuel consumption.

You'll find it good business to specify the "Daisy."

Good for Houses?

Yes, and Your Business!

VULCAN

Pure Air Furnaces

The greater radiating surface on the Vulcan makes them more effective. They are economical, simple and easy to operate, and very profitable for you to install. Built of heavy metal, they are very durable in use.

Read This

London, Feb. 11th, 1921.

Gentlemen:—
I have used the Vulcan Pure Air Furnace for several years. I find it economical on fuel, easy to operate, and as it has a greater radiating surface than any other in its class, I have been well pleased with the results. I can recommend its use to any. I believe it to be durable on account of the heavy metal in its construction.

WEST

Furnace Carburetors

Save 15% in Fuel Bills

West Furnace Carburetors and Smoke Abaters supply warm oxygen to the fire. This burns the carbon and gases. It makes useful these rich materials, that, without the carburetors, are lost up the chimney.

West Furnace Carburetors are putting big profits in the pockets of aggressive Sanitary and Heating Engineers.

Territory Still Open

For 1922—a Forecast

During 1922 MACLEAN'S MAGAZINE will continue to live up to the high standard which has been set. The articles will be of two characters: those which are essentially timely and those which describe some phase or facts of Canadian life which may have existed for a score of years—or more—but which have never before been served up for your delectation and entertainment in such a readable form. To use the language of the journalist, MACLEAN'S readers may expect the best news articles with a national slant and bright, entertaining feature-articles. These will be written authoritatively and among early ones which we can announce are articles by:

John Nelson — Nellie McClung — Janey Canuck — Stephen Leacock — Arthur Stringer — Charles A. Hayden — Dr. C. K. Clarke — J. L. Rutledge — C. C. Jenkins — C. L. Shaw — Agnes C. Laut — George H. Ham and James Mavor.

Some Details of the 1922 Short Fiction Program

First of all there is a novelette starting in January 15—"The Sail Dragger"—a gripping, sea-adventure story from the pen of Frederick William Wallace; illustrated by C. R. Patterson.

Other fiction scheduled includes: three "Lenix Ballister" stories, by Archie McKishnie; two fascinating romance-adventure stories by Madge MacBeth; "Wetherell's Romance" and "Her Feet Were Crossed," by Alan Sullivan; "Pierre des Lacs," by H. B. Atlee; "The Lost Stirrup" and "Alter Idem," (two more in his series of racing stories) by W. A. Fraser.

Illustrators

Whose Work Will Appear in MacLean's During 1922.

ARTHUR HEMING
C. W. JEFFREYS
CHARLES A. MACLELLAN
DUDLEY GLOYNE SUMMERS
R. M. BRINKERHOFF
ARTHUR WILLIAM BROWN

BARNET BRAVERMAN

Heming Will Return

It is perhaps a long way off to announce Arthur Heming's next feature in MACLEAN'S, but anything he writes—or paints—is of such paramount interest to MACLEAN'S readers that we will draw aside the veil a moment and let you have a peer at something which is coming through, probably not until toward the close of 1922.

Mr. Heming has once more left the cities and retired to a quiet Inn, where he is engaged upon another book, which will be a worthy successor of "The Drama of Our Great Forests." It will treat, of course, of Canada's vast North Land, but from a very different view-point.

A Striking Series by "Sapper"

Now, the only war-writers who receive attention are the few who, by their craftsmanship and wide human appeal have a likelihood of more than ephemeral fame. Among the chief of these is "Sapper"—H. Cyril McNeile. Throughout the war his engaging personality was displayed in newspaper articles and books of short stories. Now he is writing stories of the peace, which are just as enthralling. The best of these will appear in MACLEAN'S MAGAZINE during 1922.

Feature Departments

In addition to the most attractive offering of the best short stories and serials, and the more serious literature — biographical, reminiscent, political — MACLEAN'S provides its twice-a-month

Review of Reviews Department

which keeps its readers posted on current topics and developments in all parts of the world; also the semi-monthly articles on

The Business Outlook and Investment Situation

which is looked upon as the most authoritative review of this kind in the Dominion; and the special articles on

Topics of National Interest in Canada

which have made MACLEAN'S something more than a magazine—a National Institution.

WOLVERINE TAP PLUG

It Cuts and Taps its way through.

Can be Applied in a jiffy.

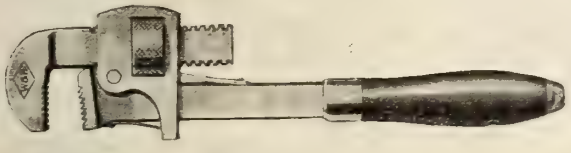
Scientifically Made—absolutely dependable for holding leaks in pipes, radiators, boilers, etc.

The "Service Plug" for temporary or permanent repairs.

WOLVERINE —LIMITED—

76 Nelson St. Toronto

Wolverine Products Always Satisfy



Choose the Right Tool

You can't expect a cheap, inefficient wrench to hold and turn rusted pipe or fittings. It's bound to slip or break.

WILLIAMS' STILLSON WRENCH is dependable; it is made for heavy duty. Drop-forged from special steel, carefully hardened and tempered, its sturdy strength is proof against the knocks and strains of hard service. The tough teeth retain their sharpness; they 'bite' instantly, yet release readily.

For grip, power and endurance, choose Williams' Stillson, Wood and Steel Handle patterns—eight sizes 6 to 48 inches. Made in Canada.

WHAT IS YOUR ADVERTISING DOLLAR BUYING ?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer's circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Markets

Sanitary Engineer Marketing Reports are eagerly looked for by progressive plumbing and heating Engineers of Canada.

A thorough knowledge of prevailing prices and tendencies in the trade is an absolute necessity for the conduct of any business in these days of frequent price fluctuations.

Sanitary Engineer Marketing Reports are compiled at considerable expense. We are determined to keep them reliable, complete, and up-to-date.

JARDINE

Pipe Threading Tools

REGISTERED J TRADE MARK

Range ⅛" to 12"—All sizes threaded at one cut. Effective tools in which the dies open out, as the tool advances on the thread, so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter mouth.

Beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble; they work so easily, smoothly, rapidly and accurately.

One man does the work of two.
A. B. Jardine & Company, Limited, are the sole makers of "Jardine" Pipe Threading Tools and the sole licensees to make and sell "Toledo" Tools in Canada.

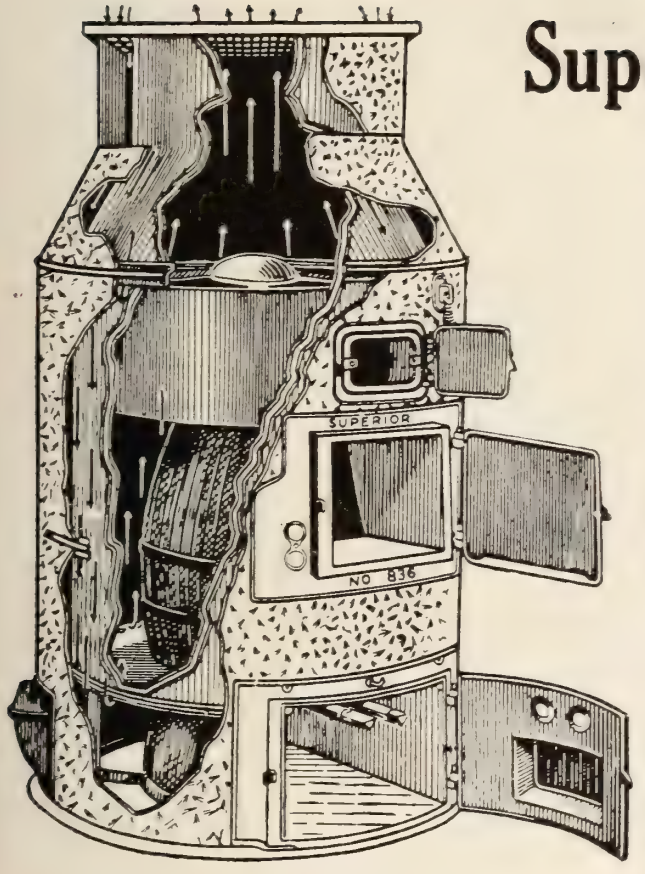
Comfort and Efficiency

PILOT



Superior Pipeless Furnaces

"Comfort and efficiency," words closely associated in the mind with "Pilot."

It is comparatively easy to explain why the Pilot leads the Pipeless Furnace field: It is correctly designed for perfect circulation by gravity; the splendid design has been strongly backed up by the use of selected materials and the best of workmanship under expert supervision.

It is your desire to specify and install for your clients installations that will reflect credit and good-will toward your business—the Pilot does that to perfection.

Make 1922 A Canadian Vitreous Year

Why should huge quantities of closets, tanks and lavatories be imported into Canada every year, when CANADIAN SOLID VITREOUS fixtures are procurable through any recognized jobber from Halifax to Vancouver?

Canadian Solid Vitreous is an all-clay ware—burned twice.

It has a live-white lustrous glaze surface—clean and sanitary.

Not only is the glazed surface of this ware vitreous, however—the body itself is vitreous, being blended from very finely ground clays and rocks, moulded with infinite care and fired under extreme heat.

Each piece is built in a substantial weight—its inherent strength ensuring a life-time of service; its permanent hard white surface—as easily cleaned as a china plate—ensuring the same spotless appearance after years of use; its vitreous make-up ensuring absolute freedom from the contamination of dangerous acids or germs which many wares are liable to absorb.

A range of several hundred patterns gives a selection to suit almost any individual taste.

The low cost of Canadian Solid Vitreous ware is the final argument in favor of its exclusive use.

THE "LAKESIDE"

A syphon jet closet of unusual merit; modelled on lines of dignified simplicity, yet substantially massive in both design and weight. It has a strong syphonic action, large water area and deep seal.

The illustration shows this closet with extended front lip and raised rear vent features; we can furnish it also with raised front lip, integral seat, cut-out back, side supply, local vent and many combinations of these.

THE "BELLEMEADE"

No material has yet been discovered for the manufacture of closet tanks which for a moment can compare with Canadian Solid Vitreous ware.
The tank is one solid piece, glazed inside as well as out; is absolutely non-absorbent; there are no seams or joints to open up; no lining to corrode or leak; no paint nor varnish to discolor or wear off; no material to warp or split.
Made in two sizes—the smaller for use with any wash-down type of closet—the larger for syphon jets.

The School Board In London Built A Collegiate

London had needed a new collegiate for a long time. It had to be a well built school, one modern to the minute—yet economy was to be practiced throughout—which meant that everything in the London Collegiate was to be the best for the purpose—for everything built into that school was to be there to **last**—articles that would never have to be replaced by "something better."

That's why the School Planning Committee selected

DENNISTEEL
Made in Canada

Steel Lavatory Compartments
Hygienic—Fire-proof—Nonmarkable

They based their selection on the principle that Dennisteel Compartments are the last word in sanitation and the most durable that could be installed. The appointments of the new school are beautiful—the Dennisteel Compartments, enameled to harmonize with their surroundings, are well in keeping with the good taste of the building.

SANITARY ENGINEERS! Your school board needs to know the full story of the Dennisteel Lavatory Compartment—they need to know that they are the first choice of those who have studied the school and public building problem. It means money to you to bring this to their attention —Steel Lavatory Compartments should be part of your job.

We also make Steel Lockers, Steel Cabinets, Steel Shelving, etc.; Ornamental Iron and Bronze; Commercial Wirework of all kinds; General Builders' Ironwork; "Boca" Solid Steel Sash.

Encourage Use of Rural Water Systems

Educational Work Undertaken by Ontario Agricultural College to Instruct Student Farmers Concerning Value of Rural Water Supply—Advice Given to Farmers During Summer Months on This Subject—How The Plumber May Co-operate

AN IMPORTANT movement has been initiated by the Ontario Agricultural College, Guelph, Ont., to encourage the installation of water supply systems on farms in the interests of utility and comfort for the farmer. Efforts are being made by the staff of this educational institution to bring about improved conditions on the farm by educating the farmers of to-morrow who attend the college as students, and also by visiting numerous farms in various parts of the province and studying present systems so as to be in position to make recommendations. Considerable publicity matter is appearing in country newspapers from this college pointing out the value of running water on the farm.

Much of this work is being done under the direction of Professor R. R. Graham and for the purpose of finding out just how the plumber may co-operate in this movement, Sanitary Engineer interviewed Professor Graham.

It was explained that while the college has for some time past been dealing with this subject in certain terms, the course has recently been extended. Other educational effort, in the form of short courses, is being made under the direction of the Ontario Minister of Agriculture.

Subjects Taught

Describing the Ontario Agricultural College efforts in this direction Prof. Graham pointed out that the question of farm water supply comes under the Physics Department, and the subjects taught include; tile drainage, ventilation, cold storage, farm water supply, water supply systems, farm plumbing and sewage disposal, concrete work, etc. Special demonstration rooms have been fitted up in which working models of various water supply systems have been erected showing also the operation of septic tanks.

Students have been much interested in this branch of training, those from the cities being particularly susceptible to the suggestions in view of their having been used to such conveniences. During the summer months when the college courses are closed, the students visit various parts of the province calling upon farmers and acting in an advisory capacity regarding the best methods of installation. Blue prints are given showing the best method of laying out drains, establishing pumps, the course of water supply, etc., and the only expense which the farmer pays is the actual cost of the material used.

So much importance is attached to this educational effort by manufacturers of water supply systems and other farm sanitary equipment that engineers are periodically sent to Guelph by these companies to explain fully the working of the various systems. In this way most of the available systems have been thoroughly studied by the students.

Standardize Systems

In the interests of a wider usage of these systems, Professor Graham is working on plans for the standardization of various installations including gravity, compression, gas engine and electrical. It is felt that if the majority of these systems were to be simplified and standardized, that they would have a much more ready acceptation from the farmer. Much of the difficulty in the past is said to have been due to faulty installations caused largely because of the lack of information concerning all the details of every type of system. This situation has done little to convince the skeptical farmer, but it is believed that with a standardized system offering plumbers an opportunity to become thoroughly acquainted with all its details so as to be able to instal a system which will give 100 per cent. service, the number of systems in use would be greatly increased.

In addition to the regular terms the Ontario Agricultural College arranges a special short course each summer for farmers, and the subject of water supply systems is dealt with to some extent at these courses. Each one of these terms would influence between 200 and 300 farmers.

Plumbers Can Co-operate

Linking up with this educational effort, plumbers should find it easier to convince those in the rural districts concerning the value of water supply systems, and now is a good time of year to go after this business for the farmer now has time on his hands, and the old tendency to refuse winter jobs because of fear of freezing is very much exaggerated. In this part of the country frost very infrequently extends more than one foot below the surface of the earth and as for the water freezing, it is unnecessary to turn the water on until the whole system is completed and then the danger of frost is no greater than that of any city system. Winter should be one of the most active periods for installing farm conveniences.

One of the chief arguments of the farmer against such systems has been the cost. In this connection it is pointed out that after much investigation by the Ontario Agricultural College the average cost of installing running water on the farm including pump power for operation, plumbing, piping and all ordinary fixtures in a standard set has been established as $600.

Another Phase of Showroom Question

Prominent Master Plumber of Quebec Province About to Close Showroom After Ten Years' Successful Merchandising of Plumbing and Heating Goods—Lack of Protection From Wholesalers Given as Cause—Says Individual Plumber's Showrooms More Effective if Properly Protected

In recent issues of Sanitary Engineer have appeared a number of articles based on interviews with various master plumbers concerning the subject of showrooms for plumbers. In the interview which follows another phase of the question is outlined, namely, the lack of protection afforded the trade by certain wholesalers. Sanitary Engineer will be glad to have YOUR opinion on this important topic and your name will be withheld if desired.

DISCUSSING the question of showrooms for plumbers with a prominent master plumber of Quebec province this week, Sanitary Engineer learned that another showroom is to be closed up on May 1 due to the unsatisfactory condition of affairs which is said to exist as between various branches of the industry. This master plumber has been conducting a showroom for the past ten years and has been in business for a total of nineteen years. He claims that up until two or three years ago the showroom was a paying proposition but that since that time the wholesalers have given no protection and are to-day in many cases selling direct to consumers at the equivalent price at which the plumber buys. This plumber claims that the margin of 20% which was formerly given on plumbing goods was sufficient to pay for the showroom cost and with adequate protection afforded by wholesalers, much business was developed through this medium.

The showroom stock carried by this master plumber averaged about $5,000 in value and rental of $150 per month was paid, despite all of which it was said to have been a paying proposition until wholesalers adopted a policy which gave no protection.

Will Lose Business

This master plumber was against the principle of confined showrooms to wholesalers, giving it as his opinion baesd on long experience, that the plumber can merchandise plumbing and heating goods through a showroom and increase the volume of sales thereby. He fully expects to lose a certain volume of business when he closes his showroom, and he is confident that this business will be lost to the trade altogether because what he loses will not be secured by the wholesaler.

From the foregoing it is evident that this plumber after long experience is confident that plumbers should operate individual showrooms, but another phase of this question has been brought out, namely the action which certain wholesalers are said to be taking which is bringing about much the same object as was outlined some time ago by a wholesaler in Sanitary Engineer.

It was pointed out that the average plumber operating a showroom could, if protected, effectively compete with the plumber who endeavors to curtail his costs by eliminating the cost of a showroom. The extra volume of business on both fixtures and installation work which the showroom produced, in the case of the master plumber interviewed, was described as quite sufficient to enable the meeting of competitive prices and still bring a fair profit. The volume of business would, of course, necessarily have to be fairly large to enable this to be done, and obviously it would not be possible to do so immediately after the showroom is opened. The process was described as quite similar to that of the retail store which found it necessary to work up a volume of business gradually through the exercise of merchandising principles. However it was pointed out that the plumber would have no incentive to merchandise plumbing equipment unless the wholesaler would provide the necessary protection.

Co-operative Publicity among Plumbers

Great Amount of Educational Work Which Needs to be Done Among the Public Concerning Plumbing and Heating Justifies Co-operative Local Campaigns Among P. and H. Contractors—Some Plans Which Have Been Proved by the National Trade Extension Bureau

THE man who would truly succeed, operating a comparatively small business in a big town community, must find some means of attracting the attention of possible customers. This means must be just as effective and just as certain as those used by the very large business enterprises. This proposition is not to be denied if the business is to expand and grow as it should.

And when we refer to larger business enterprises we do not necessarily mean larger plumbing and heating establishments. Every line of industry is your competitor, for they are all competing with you for that buyer's dollar. Therefore, the less you do in attracting the buyer's dollar your way, the easier is the other merchant's pathway.

According to the judgment and opinion of recognized authorities upon business matters, the average merchant or business man should spend from two to five per cent. of his gross annual sales on advertising. This has become accepted as a fact. In truth, under today's conditions, the business man who fails to accept this as a fact, and fails to proceed accordingly, can certainly look forward to disappointment in the volume of his sales and in the growth of his business.

But again, the volume of the sales of a business which is doing less than $50,000 a year, with these percentages, produces an advertising appropriation that it would hardly pay to invest in the large city newspapers, in individual advertising.

The foregoing are conditions which are presented in every line of business including the plumbing and heating trades. In every line, the competition between individual smaller enterprises is usually very keen. Consequently, the plumbing and heating industry can offer no exception to any rule which is safely general.

Take in any line of business effort. The very fact that competition is keen to secure the business which naturally exists, makes it just that much more certain that it would be wise for the business men in any particular line to co-operate, effectively and continuously, in an effort to produce a larger volume of trade for that particular line of business as a whole. In other words, when three or four men, fighting tooth

and nail to get one job, plenty of reason exists for those three or four men to effectively and constructively co-operate in the direction of creating a half a dozen other jobs.

To an average sensible man, it is only necessary to consider, very shortly, the foregoing proposition, in order to see that every intelligent business man ought to be willing to co-operate to the fullest possible extent, no matter how keenly he might, as an individual, compete for his share of the business so produced. Moreover, it does not take much thinking to arrive at the conclusion that co-operative effort of this sort—by producing more business for the trade as a whole—will inevitably bring about conditions that will very soon greatly reduce the evils of the over-keen competition, which are the direct results of a reduced volume of demand.

Education Needed

There is no business, in the whole catalogue of commercial effort, that is more in need of proper exploitation before the public than the plumbing and heating industry. There is no element in the plumbing and heating industry that stands in the position of benefiting from effective advertising as much as does the Plumbing and Heating Dealer.

The business facts and figures to prove this are at the command of any one who cares to make even the slightest investigation. Compared to almost any other equipment in the average modern dwelling, the plumbing and heating equipment, is ridiculously small in comparative cost, and hopelessly outclassed in the matter of extent, with reference to what is possible. That is true of new buildings. In the case of buildings already standing, it is almost a universal condition that where any replacements or improvements have been made, everything but the plumbing and heating equipment has been considered. This last has usually been allowed to remain just as originally installed, no matter how obsolete or antiquated it may have been.

The Worst Competition

Among the Plumbing and Heating Dealers everywhere, we hear much talk of competition. Seldom if ever, however, do we hear mention made of the name of the worst competitor that the Plumbing and Heating Dealer has. This competitor—worse by far than the fellow who forgets overhead, profit, and everything else in his eagerness to land a job—is lack of knowledge, on the part of the public at large, concerning the enormous value of modern sanitary and heating equipment in the way of economy, comfort and convenience.

Remove this lack of knowledge on the part of the public, and it will be found that the other kinds of competition will almost automatically cease to have cause for existence.

The co-operative "group" newspaper advertising campaign offers the Plumbing and Heating Dealers in any locality, a means of properly educating the public most effectively at an individual expense to the contractor which is trifling. By this means, the local association—or local group, where no association exists—can present to the public, a newspaper advertising campaign that will be impressive, both as to size and amount of space. Yet the individual contractor will find his expense no more—and perhaps even less—than the amount that would be represented by a proper and conservative advertising

A number of samples of local advertising as recently done by master plumbers, are shown herewith. This is specific advertising for the plumber's own business and is of a different nature to the co-operative advertising of an educational nature which is dealt with in this article. These will give plumbers some suggestions for attractive layout of ads dealing with bathroom fittings and accessories, laundry tubs, tinsmithing, etc.

Heating and Ventilating

Investigation of Warm Air Furnaces

Extensive Investigation Conducted by National Warm Air-Heating And Ventilation Association, and University of Illinois Reveals Many Interesting Points Concerning Capacity And Efficiency of Various Heating Systems

(Reproduced in Sanitary Engineer by special permission Engineering Experiment Station, University of Illinois)

AN EXTENSIVE investigation of warm air furnaces and heating systems has been conducted by the National Air Heating and Ventilation Association and the University of Illinois. Some of the previous bulletins issued in connection with this investigation have appeared in Sanitary Engineer but the bulletin which is commenced herewith deals with the work recently accomplished. A complete outline of the work done in connection with pipe and pipeless furnaces, will be given in this and succeeding issues of Sanitary Engineer.

Objects of the Investigation

The principal objects of the investigation are briefly stated as follows:

(1) To determine the efficiency and capacity of commercial warm-air furnaces under conditions similar to those existing in actual installations, with leaders, stacks, and registers, to form a complete system.

(2) To determine satisfactory and simple methods for rating furnaces so that the proper size and type of furnace can be definitely selected for the service required.

(3) To determine methods of increasing the efficiency and capacity of furnace heating equipment, and the advantages or desirability of certain types of design.

(4) To determine the heat losses in furnace heating systems and the value of insulating materials as affecting the economy of the furnace, or the leaders and stacks, and finally of the system as a whole.

(5) To determine the proper sizes and proportions of leaders, stacks, and registers supplying air to first, second, and third floors.

(6) To determine the friction losses in cold air or recirculating ducts and registers, and their proper size, proportions, and arrangement or location.

(7) Eventually, to make a study and comparison of outside and inside air cir-

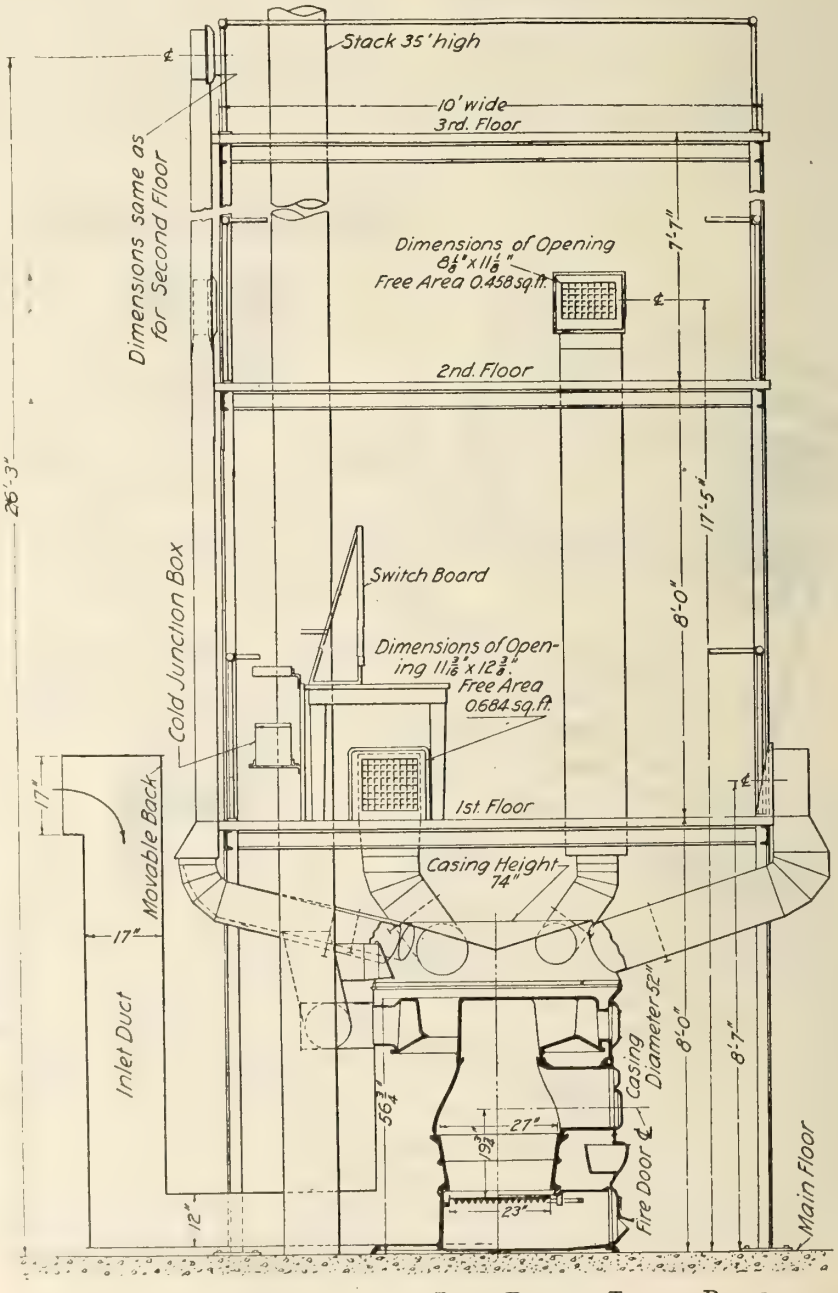

FIG. 3. SECTIONAL ELEVATION OF PIPED FURNACE TESTING PLANT

culation as affecting the economy and operation of furnace systems.

In addition to these, the original objects of the investigation, there has been added the investigation of ordinary gravity type furnaces operating with small motor driven fan units. Such units are not intended for continuous service, but will merely serve to accelerate the air flow in cold weather, and temporarily to increase the capacity of a gravity system. It should be made clear that this work with small fan units does not include, at present, the more elaborate "fan-furnace" systems which are installed in large buildings to provide for both heating and ventilation.

Discussion of the Problem and Methods Employed

It should be noted at the outset of this discussion that the fundamental ideas involved in the methods used in this investigation, as well as the furnace plant itself and its essential features, were developed and put into operation by the Department of Mechanical Engineering of the University of Illinois in the spring of 1918. This preliminary work soon developed the fact that very little could be accomplished in the investigation of warm-air furnaces and furnace systems unless the furnaces were operated under the natural gravity flow conditions which exist in the actual installations. The research aspects of the problem then became very definite, and may briefly be stated under two general heads:

1. The exact measurement of large quantities of air, flowing at very low velocities, under extremely small heads, but at atmospheric pressure, and usually at high temperature; this measurement, moreover, must be made just as the air enters or leaves a register face, and, in piped furnace work, at a number of widely separated register faces.

FIG. 4. FLOOR PLAN AND DIMENSION TABLE FOR PIPED FURNACE TESTING PLANT

2. The exact measurement of the temperature of air flowing over hot metallic surfaces, at points where the temperature measuring element is in fairly close proximity to the hot surface; this case, also, requires additional temperature readings to be taken simultaneously at many points.

These two problems have occupied the research staff almost constantly since the work began. The first problem has been solved by an indirect method, using anemometers and an elaborate calibrating plant. The second problem has been solved by the use of thermocouples and a potentiometer, after calibrating all couples in position, and determining the correction for radiation for each couple exposed to hot surfaces.

II. Summary of Principal Results to Date

4. General Classification of Results.— Any discussion of the results so far obtained by the furnace research staff can be divided naturally into two parts, the first dealing with the special apparatus and methods that have been developed for doing the testing work, and the second with the actual performance data obtained from the tests which have been made on various kinds of furnace equipment.

5. Special Apparatus and Methods.— The measurement of air velocity and the temperature of air under the particular conditions existing in warm-air furnace heating by natural circulation has required the erection of full-size plants operating under actual conditions and the development of special testing equipment and methods which are briefly outlined in the following paragraphs. The itemized list of results here given will also serve as a general index in finding most of the information given in the bulletin.

(1) A complete three storey furnace heating plant with 10 leaders, stacks, and registers operating by natural circulation on re-circulating air has been erected and is now in operation.

(2) A complete pipeless furnace plant of the single register type also operating by natural circulation on recirculated air has been erected and is now in operation.

(3) Methods of operating these plants under uniform conditions, using any solid fuel, so that reliable test data may be secured, have been developed and perfected. This includes special temperature regulating devices operating by automatic draft control, which have been found of prime importance in this work.

(4) A satisfactory method of making accurate measurements of air temperatures in close proximity to hot furnace castings has finally been perfected. This involved the determination of the radiation effect of such castings on small thermocouples, the measurement of the castings temperature and the development of an air temperature-rise indicator of great sensitiveness.

(5) Methods for measuring the true amount of air issuing from register faces at low velocity have been perfected

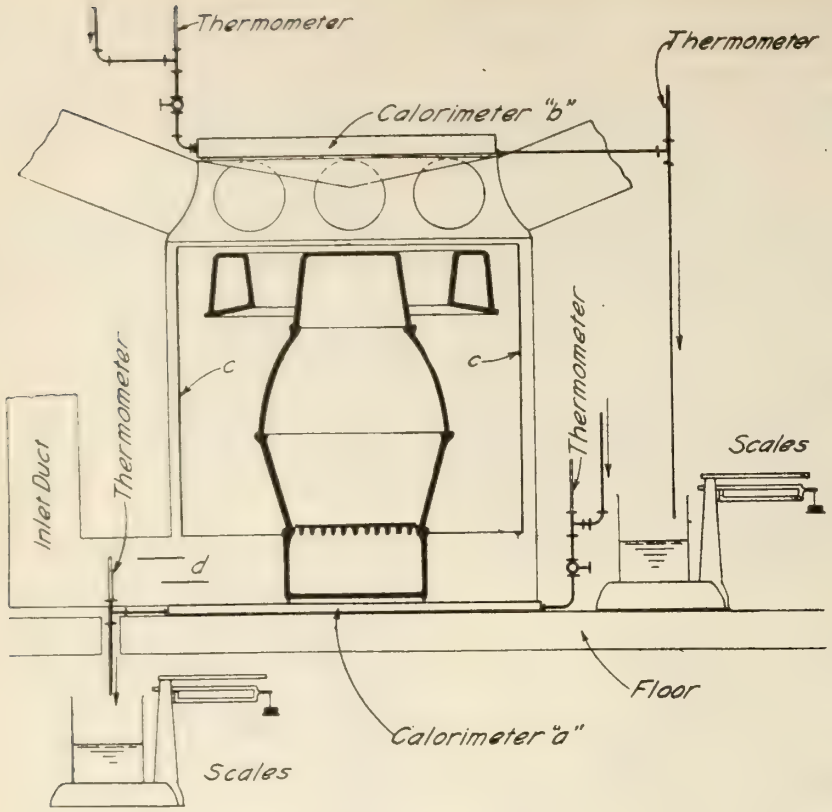

FIG. 5. AUXILIARY TESTING EQUIPMENT FOR PIPED FURNACE

for both piped and pipeless furnaces. Similar methods have been developed for checking the amount of air entering a furnace at the same time.

(6) A positive and fundamental method of calibrating all air measuring instruments used in this work against **weight of air**, with an accuracy well within one per cent., has been developed, and is always available.

(7) A special manometer reading directly to 0.001 of an inch head of alcohol has been developed and four of these gauges are now in use.

Performance Data and Results Obtained from Tests

The tests so far run have covered a wide range, and include not only tests on the main plants, but also tests on much of the auxiliary equipment used in furnace heating.

(1) Complete testing codes for both piped and pipeless furnaces have been drawn up, tried out in detail, and are now before the American Society of Heating and Ventilating Engineers.

(2) The measurement of air temperatures across an air stream such as that flowing in furnace leaders or stacks has been made, and the differences between the air and the pipe temperatures accurately determined.

(3) The heat loss from a pipeless furnace has been determined.

(4) The heat insulating efficiency of most of the commercial furnace pipe and casing coverings has been measured.

(5) The investigation of the relative value of solid and slotted fire pots has been begun and results with furnaces operating on hard and soft coal obtained.

(6) The application of small fan units to ordinary furnace installations has been made one of the objects of the investigation and the results of the preliminary investigation are included in this report.

(7) A study of the proper proportions for leaders and stacks has been made, and the air carrying capacities of leaders and stacks with varying relations of cross sectional area have been ascertained.

(8) The effect of one type of register grille on the air delivering capacity of a pipeless furnace has been determined. The study of register grilles in general is now in progress.

(9) The effect of height of register, on furnace or leader capacity has also been determined for the piped furnace.

(10) Typical performance curves for both piped and pipeless furnaces, showing the relation between combustion rate, draft, heating capacity, air temperature at registers, and efficiency, have been obtained.

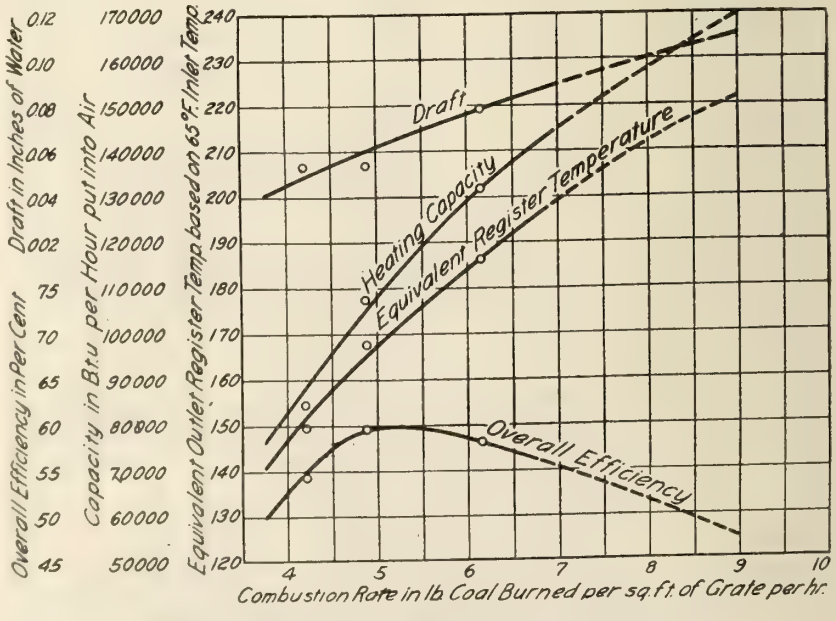
(11) Comparative tests of a pipeless furnace operating first on hard coal and then on soft coal have been made, but complete performance curves on soft coal are not yet available.

The Piped Furnace Plant

General Description of plant—For sectional elevation and plan of this plant see Figs. 3 and 4.

(a) The main switch board and the instruments for reading temperatures have been moved from the first floor of the plant (Fig. 3) to the main floor of the laboratory. This change gives a much steadier mounting for the instruments, and also makes it possible to use the switch board for temperature readings on the other two plants as well as on the piped furnace plant.

(b) A special closed calorimeter tank, a, (Fig. 5) of the same diameter as the furnace and one inch high has been placed under the furnace for determining the radiation loss from the fuel bed or fire-pot to the floor. This tank is supplied with water which intercepts the radiant heat that would otherwise enter the floor, and thus makes it possible to determine the magnitude of the loss to the floor.



Overall Efficiency in Per Cent.
Draft in Inches of Water
Capacity in B.t.u. per Hour put into Air
Equivalent Outlet Register Temp. based on 65°F. Inlet Temp.

B.t.u. per sq. in of Leader per hr. available for H'tg above 70° F.
Height of Register above Grate in Feet

Fig 7. Effect of Height of Register above Grate upon Velocity of Air Flow and Heating Capacity

(c) An open calorimeter tank, b, has been placed on top of the furnace bonnet (Fig 5) for determining the radiation loss from the top of the bonnet. This tank is supplied with water and functions in much the same way as the bottom tank.

(d) A black iron adjustable shield, c, (Fig. 5) has been placed just inside the furnace casing so that it reaches from grate level to under side of radiator. Its position can be changed, by long screws, in order to increase or diminish the distance between this shield and the casing. This shield acts as secondary heating surface, since it intercepts the radiant heat from the fire-pot and combustion chamber so that this heat may be transferred to the air passing up through the furnace.

(e) Two horizontal curved shields, d, of black iron (Fig. 5) have been inserted in the recirculating duct at the point where this duct enters the furnace casing. These shields also intercept radiant heat and transfer this heat to the entering air in exactly the same way as indicated in (d) for the circular shield.

The balance of the main plant, including all leaders, stacks, and registers, has not been changed, and the original three-storey steel structure erected in the Mechanical Engineering Laboratory is still in place. This structure merely serves as the working skeleton of a house and carries the stacks and registers which run to the various floors. All important dimensions are given in the sectional elevation and plan (Fig. 3 and 4), which show the equipment in use on May 1, 1919. These figures are taken from a former bulletin and repeated here for use in studying the performance curves prepared from three tests on this original plant and shown in Fig. 6. A ten-leader plant is still in use and all stacks have been cased in to simulate furred wall conditions. One of the four stacks to the second floor and one of the two stacks running to the third floor are single, but all other stacks are double wall with 5/16-inch air space. The single stacks were made 3-inch deep instead of 3½-inch in order to make them comparable with double wall stacks.

8. **Results of Tests.**—The remodelled main plant as described in the preceding paragraphs has not been subjected to a complete series of tests. A table of the results of five tests on the original main plant will be found in a former bulletin and the results from three of these tests Nos. A-1, A-2, and A-3, have been presented in graphical form (Fig. 6.)

Performance Curves from Piped Furnace Plant

It has been found practically impossible to make satisfactory comparisons between two or more types of furnaces from a few isolated tests. In fact, comparisons on such a basis may prove very unsatisfactory and lead to erroneous conclusions.

If, on the other hand, the results of a series of tests are plotted on co-ordinate paper, and the performance curves of the furnace over its entire range of practical operation are drawn, the relation of all factors affecting performance is clearly indicated. Such a series of performance curves is given in Fig. 6 for the piped furnace plant. The rate of combustion is shown along the horizontal axis, and the various curves indicate:

(a) the draft necessary at the smoke outlet, in inches of water;

(b) the heating capacity at bonnet in B.t.u. per hour;

(c) the equivalent register temperature at the register faces based an 65 deg. F. inlet temperature at the recirculating register;

(d) the efficiency of the furnace in per cent., which is the ratio of the heat put into the air as it leaves the furnace bonnet to the heat value of the coal burned.

As a discussion of a similar set of curves for a pipeless furnace is given in Section IV, reference to that discussion will readily show how to interpret the curves.

Effect of Air Temperature at Register Face and Height of Register above Furnace on Leader Capacity

One of the most important results of the work done on the piped furnace plant was the determination of the heat carrying capacity of first, second, and third floor leaders and stacks. These results were given in the first report of progress, but they are so important that it seems advisable to repeat part of the discussion and the plotted results in this bulletin.

Curves (Figs. 7 and 8) have been plotted from data obtained in seven tests on the main plant, showing the relation between the register temperatures on any floor, and the B.t.u. carried per square inch of leader pipe per hour to each of these floors.

(To be continued)

QUESTIONS AND ANSWERS

Messrs. E. T. Wright Company, Limited, Hamilton, Ontario: Can you give us the names of manufacturers of closet hinges in Canada?

Answer. The Canadian Brass Company, Galt, Ontario.

The Stratford Brass Company, Stratford, Ontario.

Salesmanship Now Being Subjected to the Acid Test

Many men have wisdom but don't know how to apply it—Industrial Activity directly dependent upon salesmen's efficiency—No use waiting for something to "turn up."

By F. E. MUTTON
President and General Manager International Business Machines Co., Ltd.

Continued from last week

Who supervises the District Managers? The Sales Manager.

Who supervises the Sales Manager? The General Manager.

Who supervises the General Manager? The President.

Who supervises the President? The Executive Committee.

Who supervises the Executive Committee? The Directors.

Then last, but not least, who supervises the Directors? The shareholders.

Enthusiasm Injections

One of the reasons salesmen fall down is because they are not supervised closely enough. I do not mean bossed. We do not know the meaning of "Boss" in our organization.

Supervision means, for one thing, that you get out with the salesmen occasionally, especially the men in the Provincial territory, who are meeting to-day probably the greatest resistance in the history of trade in this country. They are only human, they get lonesome, they have gone a week perhaps without an order. The greatest asset for a salesman to have is a big stout heart, not knowing the meaning of "Quit." Well, that man needs supervision, it might be termed, or Assistance, a new injection of Enthusiasm, which he can only get from an executive higher up.

I have recently returned from a trip to the Coast. I am running the manufacturing end as well as the selling end, but there is nothing else so important to my mind as going out and visiting these men, spending a day or two or three with them, getting that heart-to-heart touch that they appreciate so much—I know it because I have been there and received that treatment.

Necessity For Training

As to training. How few firms seem to realize its necessity. I have had men come to me who seem to have been given a price list and an order book, and left to grab any further knowledge they could out of the atmosphere. Those salesmen are going to run up against other men in parallel lines who have been trained, and we have got to see to it that our men are equipped to meet these trained men. If in your own judgment the new salesman is the right material for your organization, then it is worth spending time and money to give him the proper ammunition.

Peddling Troubles

It is important to train salesmen to know that it is no earthly use telling their troubles to fellow salesmen.

To salesmen I say, if you do not agree with the policy of the house, don't go to Bill Jones about it, he cannot cure it; go to the General Manager, and if he does not satisfy you, go to the President.

Get your men to have enough confidence in you and the house to know that they can do that. Many good sales organizations are wrecked by "gossip" breeding disloyalty, so have them feel that if they think they have any complaint they can come to you, and either they will "sell" you that they are right or you will "sell" them that they are wrong.

"People are only suspicious of things they do not understand." It is of primary importance in training salesmen that they should know and thoroughly understand the policy of the house. Then it will have their support.

Constructive Help

One of the chief duties of the Sales Manager is to give his men constructive help in their work. If a sales manager cannot help his salesmen make sales, what is he for? I have three sales managers in my business, one for each division. Each of them when he visits an agency helps the man there to make sales. If he could not he would not be the sales manager. I do not mean for him to go out and canvass the stores. I mean he is everlastingly gathering material and thinking, so that he has something to take out with him and say, "Put this down in your note book."

A Talk On Cards

I have a little talk on cards for our salesmen. I am a great believer in teaching through the eye. Some of these cards are:

Success is Simple. You can talk five minutes on that to a Convention.

Service. Action of one on behalf of another in the interest of both.

Add Yourself Up. Don't overlook the weak spot—we all have a lot of them.

Think In Big Figures. Teach the salesman who is selling two thousand to think of ten thousand.

We Are Only As Big As We Think. Let him look at that a minute.

Increase Health And Knowledge. The salesman can never afford to stop doing that.

Men Make The Business. You can take the biggest concern in Canada and burn down the whole institution, and they could collect insurance and build up again, but if you took my seventy-two salesmen I would have some job to get things going again. Trained men are of more value than machinery and plant. Let them know how much you value them.

Teach Salesmen Not To Guess, to know what they are talking about.

Cut Out Gossip, Fault-finding And Destructive Criticism. What is wanted is Constructive Criticism.

A Man Is Known By The Company He Keeps, And A Company Is Known By The Men It Keeps.

The Open Mind Is The Growing Mind.

Men Should Not Be Employed At Any Task Which A Machine Can Perform.

Self Analysis. Teach the Salesman to analyze himself, the most helpful thing he can do.

Better To Aim At Perfection And Miss It Than To Aim At Imperfection And Hit It.

Organize The Brains of Your Organization.

Don't Make The Same Mistake Twice! But If You Never Make Any Mistakes You Are No Good.

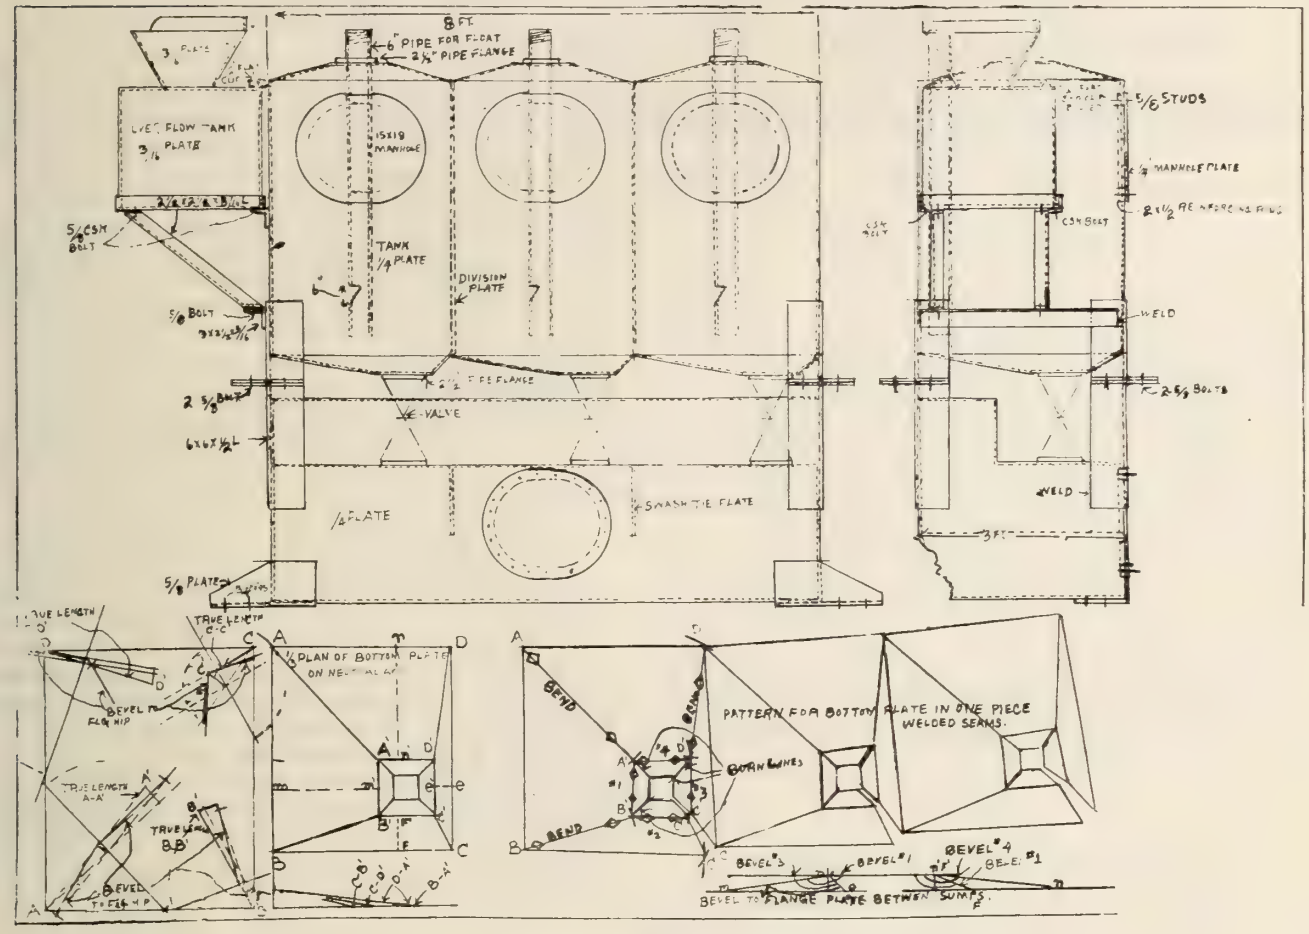
Co-operation.

Concentration on the work you are doing.

(Continued on Page 21)

Patterns for Tank Bottoms

Prepared for Sanitary Engineer by O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Missouri.



Patterns for Tank Bottoms

ABOARD ship, especially some of the naval craft, few tanks are made as shown in this drawing, where several individual tanks are placed in a line and each fed with a pipe line and valve.

As these tanks are square or rectangular, whichever the case may be, the bottoms have peculiar shapes, being placed off center in one corner as our plan for the first tank shows.

Attention is called to the construction details of how the angle irons are bent and attached in supporting the work, also many other details as the overflow tank and hopper, brackets, etc.

To set out the pattern for the bottom, a plan is drawn as A-B-C-D and then the hip lines are determined by the diagram which is shown below. Where C-B' C-D'; D-A' and B-A' are the true lengths for the line in plan. The rise of the bottom is not very pronounced as the elevation shows. By means of these triangles the patterns are laid out as shown to the right.

It is understood that where metal of a quarter thickness or so is used, then a neutral axis line must be used to develop the working drawing.

This neutral axis is the center line of plate and it does not matter whether the plate is a 1-16 of an inch thick or 10 or 12 inches thick.

This central line is used for measuring and constructing the working drawing to. Otherwise the same geometrical treatment is required for heavy plate as for light metal.

Where true angles are required for the hips as in these bottoms, they can be determined as shown at the left of plan. An enlarged treatment on determining the true bellows of hips will be taken up in the later drawings showing other features, as it is a little small to see details by the scale of our drawing.

Its main feature is to show to the extent laying out work is met with on ships, and in fact problems of many peculiar shapes must be worked out in marine works as well as on land.

QUEBEC TO COMPETE FOR NEW INDUSTRIES WITH EQUAL TESTING

Montreal.—Complaining that the Province of Quebec must now compete with its sister province for new industries at a disadvantage, because it is not allowed to grant free sites and exemption from taxation to prospective manufacturers, a delegation representing trade and municipal bodies, recently waited on the Prime Minister in the Montreal Government offices. Premier Taschereau stated definitely that he would do his utmost to remedy the situation and Legislation may be passed allowing the province to offer these concessions to industries who contemplate locating in Quebec. It is thought, however, that bonuses will not be allowed.

Catalogues and Booklets

"HAPPY THOUGHT" RANGES

Another catalogue recently issued by the Happy Thought Foundry Company, Limited, Brantford, Ontario, covers a line of cast and steel ranges. This book is very highly and effectively finished throughout, containing both detail information and many illustrations.

Sanitary Engineer
Plumber and Steamfitter of Canada

ESTABLISHED 1907

Member Audit Bureau of Circulations

PUBLISHED TWICE MONTHLY BY

The MacLean Publishing Company, Limited

Montreal TORONTO, CANADA, Winnipeg

Vol. XVI FEBRUARY 1, 1922 No. 3

IT IS ESTIMATED that ninety per cent. of the men unemployed this winter are ordinarily associated with some branch of the building industry. This indicates another phase of the importance of this industry in the general prosperity of the country. Various organizations and other influences are at work to bring about a resumption of building on a broader scale in the coming Spring. Secretary George Gander, of the Toronto Builders' Exchange, has stated that building costs are now 35 per cent. below the peak so there should be some encouragement on this score. It must not be thought, however, that building has fallen off to any great extent, for building to the value of $240,000,000 was done in Canada during 1921, which, taking into consideration the decline in prices as compared with 1920, revealed a bigger volume of building last year than in the immediately preceding years. The anticipated increase in building this year, if it materializes, will not have to go far ahead to create a record.

* * * *

Valuable Opportunities Offering

THE PLANS of the Ontario Agricultural College for the education of farmers along the lines of rural water supply, are outlined elsewhere in this issue. A reading of these plans should indicate to the plumber a valuable opportunity to link up with this effort and so increase the field of trade. The present is a good time to link up with this plan because of the fact that the farmer now has time to consider such questions and the present time is quite suitable to proceed with the actual installation of such a system.

There has been a great need for some educational work along the line now being conducted by the O. A. C. and also by the Provincial Department of Agriculture and already tangible results have been secured. Obviously the education of the farmer of to-morrow who is attending the college, and the education of between 200 and 300 farmers in short courses each summer, is bound to bring forth results. The subject is a broad one including not only the education of the farmer, but the investigation of various systems so as to be in position to make recommendations and a thorough study of the method of installation needed with various systems. The question of standardizing systems and methods of installation is now being taken up.

Meanwhile active participation on the part of the plumber in this campaign should open up a valuable field of business without waiting for a revival of building. The possibilities for the sale of plumbing equipment are very great once a farmer has installed a water system and having in mind the fact that such installations will cost anywhere in the neighborhood of six hundred dollars, this means an opportunity for much profitable business to the plumber. It is a class of business which is not difficult to secure if satisfactory service can be given, for the advantages far outweigh the cost and every new system sold stands as a constant advertisement to other farmers.

* * * *

Where the Farmer Comes in

THE REDUCED buying power of the average farmer is to some extent reflected in the plumbing and other trades of the rural districts of Canada. The situation in these districts presents a problem which requires some consideration and in the solution of which the master plumber may play a part. In the agricultural sections as a whole we see the farmer battling against indebtednes with reduced ability to buy for home and farm, and we see him when he is forced to buy for his needs, paying, as a rule, prices much out of proportion to those which he secures on what he has to sell. There must be some concentration upon measures for improvement and the farmer should realize that there will be little relief, from discussing tariffs and trying to effect changes through the administration of the country. Progressive farmers to-day realize that sound progress and lasting prosperity is bound up in the land itself; intensive scientific cultivation is what is needed.

The intelligent attention of everyone must be given both to the development of industry and agriculture. True, the latter has undergone more severe liquidation recently than the former, but both will reach their proper proportion in short time and each will have to effect bigger production on an economical basis so that consumption and production will be in sufficient volume to carry the business of the country along on the crest of the wave of progress.

Accelerated business conditions cannot be expected until conditions in the agricultural sections as well as the industrial sections, improve. The farmer, like the industrial worker, must come to a realization that happiness and prosperity are not bound up in governmental action but depends upon the skill, attention and aggressiveness of the individual in his immediate task.

* * * *

Courage

THE WORD of command given by an officer to his men is not to be questioned. It is to be obeyed. The men must go forward at the command into the situations from which they might flee if controlled by individual choice.

We speak of this because no quality is more essential now in handling credit than courage such as will stand up against criticism and against all unfair attacks and will not shrink when duty points the way.

At a time when business runs low, pressure is exerted upon merchants to grant special concessions. Here courage is required. If it is not right to grant a credit on the evidence obtained or submitted, then no amount of pressure should be allowed to alter the decision and cause undue chances to be taken.

We are seeing too many cases of real cowardice in the granting of credit in some lines of business; too many instances where the judgment of the plumber has been hasty, due to pressure.

It is better to yield up a position than to yield up conscience and sound principles should guide the granting of credit, for only thus shall legitimate merchandising be defended and the honorable and efficient merchant protected against the unfair competition of the dishonest and incompetent.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

Article No. 47 of Series; Illustration 56-57.

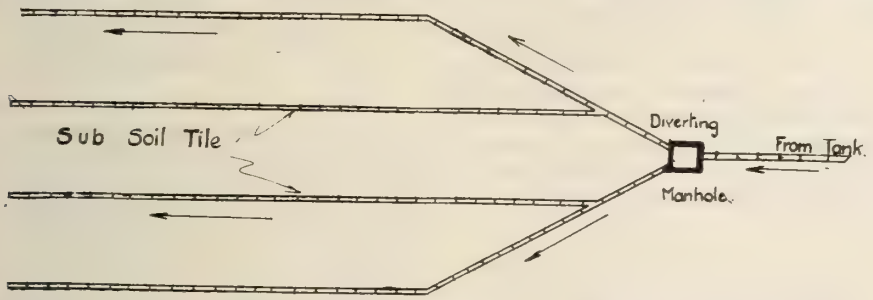


FIG 56.

THE usual method of treating the septic tank effluent from a small private installation in good porous soil is shown in Fig. 56. The sewage is automatically discharged at certain intervals by the syphon in the second chamber through the discharge pipe

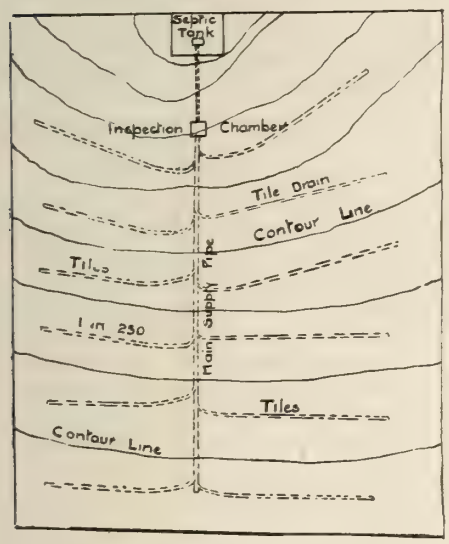

FIG. 57.

into the agricultural open-jointed tile drains. These drains should be 3 or 4 inches in diameter and laid as near the surface as possible. The distance apart or the number of feet of tile required depends entirely upon the nature of the soil. In light sandy soil the tile drains may be laid 30 feet centres and twenty lineal feet is ample for purification purposes, whereas in heavy clay soil the tile should be laid at not more than 10 feet centres or 40 to 50 lineal feet of tile is required for each person.

Fig 57 shows the arrangements of tile drainage on sloping ground. The automatic syphon discharges into an inspection chamber and the tile drains are laid parallel to the contour or grade of the land, which allows the tiles being laid with the required fall at minimum cost.

"LIKES CANADA'S SALES TAX" SAYS R. T. CRANE, JR.

Montreal.—"I think the Inter-Allied debts should be wiped out completely. It is the best remedy for the present international situation. Such a step would help business and give industry a chance to start up again," declared Richard T. Crane, Jr., president of Crane, Limited, Montreal, and of the Crane Company, Chicago, who is here for a few days doing inspection work in connection with his plant here, and the construction of the new crane office building on Beaver Hall Hill.

"Canada is a great country," continued Mr. Crane. "Its possibilities are wonderful, and with the straightening out of world conditions a greater appreciation of its resources and facilities will be recognized. But at the present time we are just finding our feet again. Things are commencing to improve, and it will be a while yet before a normal state prevails and the world settles down to a business career again."

The worst evil of the times in the United States is the taxation law. "Its iniquities are innumerable and until such time as they are amended and put on a wholesome basis, like your system in Canada, unemployment will be large. We have the income tax system in operation in the States," he added, "and it is not fair. The only equitable tax is the sales tax, like that which is in operation in Canada. I believe we will have it enforced yet. The business tax is responsible for the unemployment because business men cannot go ahead when all their surpluses are eaten up by taxation."

WILL SOON NEED PUMPS

London, Ont.—In connection with work that has been undertaken by the Water Commissioners to increase the city's water supply, General Manager E. V. Buchanan pointed out to Sanitary Engineer that the sinking of preliminary test wells had been so satisfactory that it is decided to continue this work and in the spring the most promising wells will be connected up and pumps. Prices on pumps both horizontal and vertical will be wanted before long.

In connection with the improvements that are being made in the city's waterworks system, work is now in progress on an aerator and settling basin at the Horton St. pumping station and a filtration system is also being constructed.

The Water Commissioners have worked out a very successful scheme for saving several million gallons of drinking water daily. By constructing a small dam in an old mill race they have a natural reservoir of river water. This is pumped to supply the requirements of the locomotives, the railways being a good customer for water. The river water being softer than the drinking supply is better for the boilers and in addition does not deplete the city reservoir.

WESTON TO MODERNIZE TOWN'S WATER SYSTEM

Weston, Ont.—Plans for repairing and extending the water system were presented to the Town Council by members of the Water, Power and Light Commission. The commission proposes to line the reservoir with concrete, and generally bring the system up to date. The cost is estimated at $17,000.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

NEW FIRMS

Ottawa, Ont.—Mr. Newton has commenced a plumbing business in connection with his hardware store at 1098 Wellington St.

RETURN TO PLUMBING BUSINESS

T. J. O'Heir, former comptroller, and George G. Halcrow, M. L. A., have gone into business together at their old occupation of plumbing. The former verified this announcement and indicate that he was finished with public life.

FIRE LOSS

Montreal.—H. E. Trafford & Co., plumbers, have suffered fire loss.

OBITUARY

The death occurred in Montreal of John O'Rourke, who conducted a plumbing and steamfitting business at 1051 St. Catharine St., East.

MOVE THEIR OFFICE

Kaus.ine Co., Ltd., of Toronto, Water Supply & Sewage Disposal Systems, have moved from 28 Eastern Ave. to 164 Bay St.

TO OPEN WINNIPEG BRANCH

The Canadian Asbestos Co. announce that they will shortly open a Winnipeg branch to take care of their Western business. Officials of the company are now on their way to arrange the details.

SMITH'S FALLS ORDERED TO FILTER ITS WATER

Brockville, Ont.—The provincial board of health has served notice on the town of Smith's Falls that it must reach a definite decision regarding the installation of a filtration plant for its water supply or suffer the penalty imposed by law. The water supply is now secured from the Rideau river.

KINGSTON SANITARY INSPECTION

Kingston, Ont.—At the meeting of the City Health Committee, it was decided to recommend that Eugene Sleeth, late of the 21st Battalion, be appointed Sanitary Inspector, to fill the position left vacant by the death of the late W. H. Carson.

The members of the committee felt that in view of the feeling of members of Council that a returned man should be given the preference for the position, in case he had the necessary qualifications, the Committee yesterday considered the applications first of those coming from ex-soldiers.

QUEBEC BUILDERS EXCHANGE ISSUE PAPER

Sanitary Engineer has received from E. G. Brosseau, plumber, Quebec City, a copy of a new paper being published by the Builders Exchange of Quebec City, of which Mr. Brousseau is an official.

CONTRACT AWARDED

Thomas Jackson & Son, Winnipeg, are awarded a contract by the provincial government for installation of a sewer, approximately one mile long, from the Selkirk asylum to the river, involving a total expenditure of $30,000.

CONSTRUCTION CONTRACTS IN CANADA IN YEAR 1921 VALUED AT $240,000,000

The value of construction contracts in Canada in 1921, was $240,000,000, as compared with $255,000,000 in 1920, $190,000,000 in 1910, and $99,000,000 in 1908. However, if price recessions in material and labor costs are taken into consideration, the volume of new construction undertaken during 1921 was many millions of dollars greater than the 1920 total.

PORT CREDIT WATERWORKS TO BE STARTED VERY SOON

Port Credit.—Preliminary work for the new Port Credit waterworks system will be rushed through in order that active work may be commenced as soon as the frost is out of the ground. All attempts to prevent the water system being installed have failed. It is hoped to have the plant in operation by next fall. The whole system is estimated to cost $110,000—$60,000 for the central plant and $50,000 for the distribution system.

TWO LARGE COLLECTOR SEWERS FOR MONTREAL

Montreal.—The construction of two large collector sewers has been decided upon by the city's executive committee, plans for which are practically complete, and work will commence as soon as possible. One sewer will be in St. Henri-St. Cunegonde, annealed portions of the city in which the sewerage system is very antiquated. The other will be built on Boulevard Gouin and will take care of the rapidly growing northern section on the city. Both sewers will join up with the present system.

It is understood that the committee's action was hastened by the fact that while the sewers in themselves are badly needed, their building will give employment to hundreds of men on the actual work and in factories supplying material, thus relieving the unemployment to some extent.

$600,000 FOR CHATHAM WATERWORKS

Chatham, Ont.—The much debated question of the source of Chatham's future water supply promises to be one of the main topics of discussion in municipal circles during the present year.

The controversy has been started by a decision on the part of the new water commissioners to ask the ratepayers of Chatham to pass a by-law granting $600,000 for the purpose of erecting a new waterworks system. Nothing is said in the resolution as to whether this implies going to Lake Erie for water, or continuing to take the supply from the Thames. That question will be settled later, after the board receives expert advice from engineers and health experts.

It will take a whole year to secure all the data on the question, it is estimated, and in the event of the by-law passing the electors next November, it will be 1925 or 1926 before the new water works system can be ready for use.

WOULD ERECT PLANT TO MAKE CAST IRON PIPE

St. John, N. B.—When tenders were called for cast iron pipe for the water and sewerage dept., Major R. A. McAvity appeared on behalf of T. McAvity & Sons, Ltd., and said that if his firm received the preference on cast iron pipe on a competitive basis they would fit up a plant at a cost of $30,000 to manufacture cast iron pipe in St. John. They also intended to install electric furnaces and were prepared to go ahead and make two sizes of pipe at first. If the undertaking proved satisfactory they would eventually erect a special plant employing from 150 to 200 men. If they received the present contract they were prepared to manufacture eight inch pipe right away. Price and quality being equal, all they wished was a preference.

The mayor said that the home manufacturers would certainly get the preference. He would pass the information on to the commissioner of water and sewerage and have him consider it.

STRESS NEED OF FILTER PLANT

Windsor, Ont.—Essex Border Utilities Commission will make another attempt to induce Windsor and Walkerville to become partners in a filtration plant to serve municipalities within jurisdiction of the commission. Officials of the commission will ask the Windsor Water Board and the Walkerville Water Company to discuss the plan at a joint conference to be held at an early date.

Thousands of dollars a year can be saved by using a filtration plant to serve five municipalities, it was asserted at a meeting of the commission. Each of the municipalities will have control of their distribution plants, it was stated. All the commission asks is that it be given charge of pumping the water from the filter beds, which will be built above Ford City, if an agreement is reached.

WESTERN ONTARIO NOTES

William Hurrell, Wyatt Ave., London, Ont., wants prices on hot air heating, plumbing and electrical work for new $4,000 residence.

The town council at Forest, Ont., will shortly take up the question of installing a new waterworks system, as a result of action taken by the business men who petitioned the Provincial Board.

Prices will be asked for shortly by the Board of the Christian Church at London, Ont., Rev. J. H. Versey, pastor, on heating, plumbing and electrical work in connection with new $50,000 church.

The council at Wiarton, Ont., will shortly consider extensive alterations and improvements in connection with waterworks including the installation of new electric pumps. Mayor McDonald chairman of committee.

The Methodist Congregation at Creditton, Ont., contemplates erection of a new church to cost $15,000 and will be interested in prices of heating.

M. Angus, 92 Dillabough St., London, Ont., wants prices on hot air heating, and plumbing for new $3,000 residence.

WATER SYSTEM

Windsor, Ont.—After acquainting new members with the history of negotiations looking to an improved water supply for the border muncipalities, the Essex Utilities Commission, will seek further conferences with Windsor Water Company. Last year Walkerville interests declined to co-operate.

A report from the Board of Health, recommending construction of a $600,000 municipal general hospital was referred to the commissions engineer for data as to the cost apportionately to various municipalities, both as to population and assessment.

Montreal Plumbers' Annual Curling Bonspiel

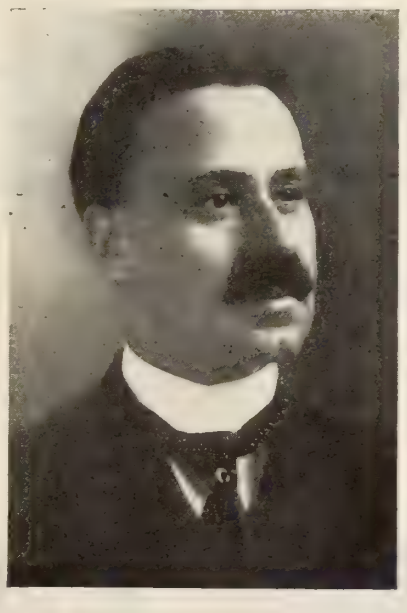
James Griffin's Rink Again Wins Good Mfg. Co. Trophy—Good Curling Marks the Annual Outing

MONTREAL.—The local fraternity of sanitary and heating engineers turned out en masse for the annual curling bonspiel on Friday afternoon, January 20. It was plumbers' day in earnest at the Caledonia Curling Club premises, and a good attendance of the city's master plumbers saw as fine curling as has been seen at the rink for some time. James Griffin, who won the Good Mfg., Co., trophy last year, skipped the winning rink again this season, but not until two hard fought games. In the opening match, Jas. Ballantyne drew against D. A. Bethune, while Jas. Griffin found himself up against the stalwart Jas. Buchan.

Ballantyne showed fine curling in his bout with Bethune, and both rinks had strong thirds in Martin, Quigley and Harry Munday. The leads were green, but very good, and the seconds hardly ever lost a stone.

The same can be said of the Buchan-Griffin match, with cracks like Jno. Watson and P. C. Ogilvie playing at third in support. Ogilvie was specially good and became really the determining factor in some of the pinches. The Bethune brothers were against each other at second, and both showed fine form. Geo. Delaney and H. Lavigueur at lead also showed class.

Griffin won the trophy after a ding-dong battle in the final with Jas. Ballantyne. The game was far closer than the score indicated, but Griffin came in strong at the finish, this said to be one of Mr. Griffin's "faults" in his favorite pastime.



E. G. BROUSSEAU

Master plumber of Quebec City and official of the Quebec Builders Exchange, who was elected chairman of the Trade Section at the annual convention of the Association of Canadian Building and Construction Industries in Hamilton, Ont

At the conclusion, prizes, donated by the Jas. Robertson Co., were presented by Jas. Ballantyne to the winners and runners-up. Jno. Watson, J. Corcoran and David Trotter also assisted in the pleasing ceremony of presentation, and after four hours of hard play, followed by light refreshments, the Plumbers' Bonspiel of 1922 became history. It is the second year's play started for the cup and it must be played for a third year, and then winners play off in single competition for possession. Following were the rinks;

Plumbers' Bonspiel—

Geo. Delaney	H. Lavigueur
J. M. Bethune	W. J. Bethune
Jno. Watson	P. C. Ogilvie
Jas. Buchan (Skip)—5	Jas. Griffin (Skip)—11
T. Latourelle	J. Belisle
W. U. Hughes	J. A. Gordon
M. J. Quigley	H. W. Munday
Jas. Ballantyne	D. A. Bethune
Jas. Griffin (Skip)—16	J. Ballantyne (Skip)—6

SALESMANSHIP NOW BEING SUBJECTED TO THE ACID TEST

(Continued from Page 16)

Study, Learn and Teach.

Think.

Tell Your Griefs To The Man Who Can Help You.

Through The Eye

The purpose of these cards that I use at conventions, and further that I distribute around our factory and office is to educate the Organization through the eye, and at conventions you will find the salesmen copying them down in their note books, in other words, they are gathering ammunition that is going to help them at some time.

The Sales Manager who can select the proper men and train them properly will never have to look for a lucrative position. The position is looking for him.

CATALOGS AND BOOKLETS

The Williams Tool Corp., of Brantford, Ont., have produced a very cleverly written booklet called "Don't Let It Happen To You." This is attractively gotten up, and draws a parallel between the business man who decides to invest in a car and mar his pleasure in the purchase, for some time at least, by the failure to invest in suitable equipment fpr the same, and the manufacturer who after landing a large heating contract neglected the small item of purchasing a good set of dies for his machine.

Another Test As To Retailers' Status

Classing of Certain Retailers as Manufacturers Continues Despite Previous Rulings—Another Test Case Instituted at Ottawa—To Get Definite Ruling on Tinsmiths

THE CASE which was instituted against the government by the Dominion Board, Retail Merchants' Association of Canada to determine as to whether retail confectioners could be classed as manufacturers, came before the Exchequer Court, Justice Audette presiding, on January 12. This case, which also has some bearing on the status of other retail merchants, including tinsmiths, was taken against William Karson, of Sparks street, Ottawa, and was defended by the Retail Merchants' Association, through their council, T. A. Beament, K.C.

E. M. Trowern, secretary of the Board, was present on behalf of the Association, and gave evidence to show that at no time could the provisions of the Act be interpreted as meaning that merchants selling direct to consumers, were liable for the payment of the three per cent. tax levied against manufacturers. Mr. Bodley, secretary of the Canadian Association of Confectioners, gave evidence for the Crown, which defended its case through Messrs. Hogg & Hogg, barristers, Ottawa.

This case has created considerable interest, owing to the fact that a similar case was fought out and judgment was rendered in favor of the retail merchants by the late County Judge R. D. Gunn, of Ottawa. An appeal was taken by the late government, but was eventually dropped, a new suit being instituted under the amended Act. When judgment has been rendered in this case, it is the intention of the Retail Merchants' Association to secure, through the courts, if necessary, a definite understanding as to the status of tinsmiths and merchants in other lines of trade. It has already been definitely ruled by the courts that merchant tailors, making clothing for sale direct to the consumers, are not liable for the tax, and in a general way this ruling was understood to include tinsmiths and others doing business in a similar manner, but time and again since the original ruling, officials of the department have seen fit to place interpretations both upon the Act and the court ruling which have been anything but satisfactory to the retail trade.

This particular case, it was pointed out by Mr. Trowern in his evidence, was not a matter of whether small retail confectioners should pay a tax because large confectioners were paying it, but rather a case where the law clearly stated that only wholesalers and manufacturers who make up goods for sale to retailers, are called upon to pay the tax provided by the Act. "We are endeavoring to see that the government lives up to the provisions of its acts, irrespective of whether they are logical or not," said Mr. Trowern. "The tax was never intended to be collected by retail merchants and we object to having them placed under the provisions of the Act."

FILTERED WATER BASIN FOR CHATHAM

Chatham, Ont.—At the last meeting of the Board of Health this year, Dr. T. L. McRitchie, M. O. H., read his annual report in which he gave a resume of the general health of the city.

The report makes mention of the city's water supply, and the M. O. H. recommends that a chlorine water basin be installed to take the place of the chlorine injector. It states the water provided the citizens during the year has been good with the exception of two short periods, when a few samples showed some contamination. This was always at a time when the chlorine injector was out of commission, so that some water entered the city mains without chlorination. This could be easily overcome should the Water Commissioners take the necessary steps to provide a proper filtered water basin where all water, before entering the city mains, would be chlorinated without having to use a high pressure pump to inject the chlorine. This obviates the danger of the pump being out of use through need of repair.

Three new filters were installed early in the year, making eight in all, with a normal capacity of 2,100,000 gallons, while the amount used in the same time varies from 1,500,000 to 1,800,000 gallons. This surplus water, in the event of the installation of a chlorine basin, would provide for the easing off of capacity pumpage. The chlorine would also have 40 minutes to one hour before entering the city mains instead of receiving the chlorine as the water enters the city mains as it does at the present time. Chlorine is used in the water the whole year round, but less chlorine is used in the winter than in summer.

CO-OPERATIVE PUBLICITY AMONG PLUMBERS

(Continued from Page 11)

appropriation based upon the volume of his business.

Thus, in a number of cases in large cities, the "upstairs" stores in numerous lines of business have joined together and produced page advertisements to emphasize for public attention the fact that their upstairs locations enable them to offer better prices on merchandise, because of lower rental expenses, etc.

The electrical contractors and dealers in many localities have also combined in the effective production of large space advertisements in the newpapers.

The list of activities of this sort could be prolonged considerably. But what's the use? A fact is a fact. You can dodge a fact only just so long, but no matter how cleverly you dodge, eventually the fact will hit you in the head.

It is a fact that the public sadly needs education on the matter of modern sanitary equipment. It is a fact that the Plumbing and Heating Dealer is the last point of contact in the trade with the buying public. It is a fact that the Plumbing and Heating Dealer's responsibility to himself and to the public is that he should let the buying public know where he is to be found, and what he can supply. It is a fact that group advertising supplies the P. and H. Dealer with the means of satisfying these conditions at an expense which he can afford. It is a fact that in large cities exist the widest possible opportunities to turn the foregoing facts to profitable use.

The matter of distributing the expense for campaigns of this character is one that is easy enough of solution. Each contractor in a group will surely know what his gross volume of business is. Let each one be assessed a definite, equal percentage of his volume of business. Let the advertisements be signed with the name of the local association or group, followed by the individual signatures of the firms co-operating to produce the advertisements.

In order that there may be no advantage to any one firm in the matter of the position of their name in the signature of the advertisements, let the original order of these names in the first advertisement be determined by lot. Thereafter, in the case of every advertisement, let the names of the firms be rotated in position, the top one each time becoming the bottom one in the next appearance of the advertisement.

WINDSOR OBJECTS TO PLUMBING INSPECTOR EXAMINING JOURNEYMAN

Windsor, Ont.—The Plumbing By-law came up for a final reading this week, but council adjourned before finally completing the reading. The by-law will in all likelihood be finally passed upon in a few days. Some discussion took place as to an added clause stipulating that all journeymen plumbers commencing work in the city should pass an examining board consisting of the plumbing inspector and several others to be selected from the master plumbers. Mayor H. W. Wilson objected to this clause, on the ground that a board would mean further expense to the city, and that the city plumbing inspector was capable of examining the plumbers satisfactorily. After considerable discussion, Mayor Wilson submitted an amendment to the clause stipulating that the plumbing inspector alone conduct the examination. The amendment was defeated.

A scale of fees, the maximum of which is $1, was fixed for the issuance of permits under the Plumbing By-law.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

MANY products of direct interest to the heating and sanitary industry now register price reductions. Pipe fittings, valves, and the steel markets supply the feature revisions. New discounts have been announced on standard globe, angle and check valves, with other makes of compression goods recording a similar change. Practically all kinds of cast iron pipe fittings are easier in price through revised discount levels, while malleable fittings, in both galvanized and black, are also reduced. An easier trend is noted in certain sheet centres with slight recessions on English galvanized, Welsh Canada plate, tin and terne plates. Reductions are announced in some quarters on practically all grades of bar iron and steel, while quotations on these products are sagging in general. Through changing the discounts, other price reductions appear on metal ceilings and walls; while easier levels are recorded on Stillson wrenches in the Canadian pattern, and also agricultural and knife-handled wrenches of various makes.

Activity in boiler tubes has somewhat improved, but business in piping is described as decidedly moderate. Quietness prevails in scrap materials, with an easier tone in ingot metal circles. The cotton waste markets reflect the quietness in raw cotton, without any further change in the domestic situation. Trade in radiators and boilers is stated to be fairly satisfactory for this season of the year. Enamelled ware is quiet, and the volume of orders for closet combinations and fixtures is small, the cold weather restricting building operations where these products are utilized. This condition applies to corrugated sheets, eavestrough, and conductor pipe. The quiet session is still evident in both soil pipe and range boilers, with the current dull period resulting in price shading on certain products. Trade anticipations in general point toward improvement during the Spring and Summer seasons, while any increase in the volume of construction activity should be more or less directly reflected by general conditions in the sanitary and heating industry.

MONTREAL MARKETS

MONTREAL, January 30.—Another extensive list of price developments is reported on the current markets, reductions in prices covering many important lines of plumbing and steamfitting supplies. Bar iron and steel in all grades is reduced approximately 25 cents per 100 lbs., and common bar iron will now sell for $2.65 per 100 lbs. Standard and Emco line of globe, angle and check valves are reduced through a revision in discounts, and corrugated sheets are now quoted at less 10 per cent., former discount being 7½ per cent. Pipe fittings record an outstanding revision when practically all kinds show a reduction of varying extent. Cast iron fittings are now less 30 per cent., while other lines are from 5 to 10 per cent. lower with the exception of class A pound goods, these being advanced one cent per pound. A price decline is recorded in eavestrough and conductor pipe, also in metal ceilings and walls. An easier tendency has again crept into the sheet markets and English galvanized sheets, Welsh Canada plate, tin plate and terne plates are now quoted lower. Ingot metals are also easier in tone, and some are shown at a reduction in price. Tools also feature when Canadian Stillson, agricultural, Coe's and W. & B. knife handled wrenches are now lower in price.

Business is seasonably quiet in many lines, although present building operations are assisting in the movement of radiators, boilers and enamelled ware to an extent. With the month of January now closed, however, a gradual improvement in business in general is looked for.

REVISED DISCOUNTS ON SOME LINES OF VALVES

Montreal.

Standard globe, angle and check valves are reduced approximately 6 per cent., while the Emco line of globe and check valves show a more substantial reduction with discounts revised from 20 per cent. to 33 per cent. off list prices. The standard valves will now sell at less 25 per cent. Other lines of compression goods are unchanged for the present, with business said to be of a spasmodic nature, although generally showing a slight improvement since the close of inventory period. Following are present discounts;

COMPRESSION WORK—	
Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard	40%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, std.	25%
Gate or straightway	16/10%
Emco Globe Valves	33%
Emco check valves	33%
Jenkins Globe, angle, check and swing check	19%
Jenkins gate or straight way	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body gate	33%

REDUCTION NOW MADE ON BAR IRON AND STEEL PRICES

Montreal.

Reduced prices are announced on all grades of bar iron and steel, and common bar iron will now sell for $2.65, a reduction of 25 cents per hundred pounds. Other lines show a proportionate decline with the exception of the higher grades of steel, such as mining tool steel and Black Diamond tool and cast steel, these being reduced ½ cent per pound. Although former prices were considered reasonably low, and many thought the next revision would be in the nature of an advance, the trend of the market is undoubtedly still downward, due for the most part, according to local dealers, to the dull period at present apparent. One large local distributor stated that competition played no small part in the present reductions. While business in these lines is at present seasonably quiet, there is

every reason to believe that an improvement is in sight and in the hope of securing the earlier trade some houses offered the lower figures which were soon followed by the remainder. Following are revised quotations,

IRON & STEEL—

Common bar iron, 100 lbs.	2 65
Refined iron	4 15
Iron finished machinery steel	2 70
Mild steel	2 65
Single reeled machinery steel	4 75
Band steel	2 65
Spring steel	4 25
Sleighshoe steel	2 65
Tire steel	2 85
Toe calk steel	3 55
Harrow tooth steel	2 80
Mining tooth steel, per lb.	0 21½
Black Diamond tool and cast steel	0 21½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

EASIER PRICES RECORDED ON STILLSON WRENCHES

Montreal.

Slightly easier quotations are given on the various sizes of the Canadian pattern Stillson wrenches, the discount being revised from 50 per cent., to 52½ per cent. off list prices.

AGRICULTURAL WRENCHES NOW LOWER IN PRICE

Montreal.

A reduction is made on agricultural wrenches, these now being quoted at less 52½ per cent. Coe's and W. & B. knife handled are also lower, the former now selling at less 40 per cent., the latter less 45 per cent.

EASIER TREND AGAIN NOTED IN SHEET MARKETS

Montreal.

Reductions of varying extent are recorded in the general sheet markets, and English galvanized, Welsh Canada plate, terne plate and tin plate each have lower prices. English standard galvanized sheets are reduced 50 cents on all gauges in both Queen's Head and Fleur-de-Lis. Bright tin plates in full boxes, $1.10 per box lower, while the 56 sheet boxes show a decline of 50 cents per box. Terne plates will now sell for $16.50 a box, former price being $17.50 Welsh Canada plates are 25 cents lower in both 52s and 60s.

Black sheets and American galvanized sheets remain unchanged, prices on these now considered at a very low level in comparison with replacement costs. The reduction on other lines now recorded are said to be entirely due to local distributors, as no change in particular has developed in the English market recently. Business locally continues rather dull, although slightly improved over the quiet weeks at the close of last year. Dealers are still convinced that sales will gradually increase as the weeks pass, and it is hoped that a much steadier market will prevail locally than has been the case in the past twelve months.

Following are revised quotations;

BLACK SHEETS—

10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05
26-gauge	4 60	5 20
22-24 gauge	4 65	5 25
28 gauge	6 35	7 20

GALVANIZED SHEETS—

10¾ ounce	6 75	7 60
28 gauge	6 30	7 20
26 gauge	6 05	6 85
22-24 gauge	5 90	6 60
20 gauge	5 75	6 45
18 gauge	5 75	6 35
16 gauge	5 60	6 35
14 gauge	5 45	6 35
12 gauge	5 30	6 35
10 gauge	5 20	6 35

English Standard—	Queen's Head.	Fleur-de-lis
28 gauge	7 75	7 25
26 gauge	7 50	7 00
24 gauge	6 90	6 60
22 gauge	6 65	6 15
18-20 gauge	5 85	6 00

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

CANADA PLATES—

LOWER PRICES ARE ANNOUNCED ON METAL CEILINGS AND WALLS

Montreal.

Metal ceilings and walls, for inside work, are slightly reduced through the change in discount from 10 per cent. to 12½ per cent. off list prices.

EAVESTROUGH AND PIPE DISCOUNTS SHOW REVISION

Montreal.

Revised discounts are now quoted on both eavestrough and conductor pipe, while elbows and sundry lines remain unchanged in price. Square bead, round and half round troughs are now quoted less 70-10 per cent, a reduction of approximately 10 per cent. The same reduction is recorded on round conductor pipe, both plain and corrugated, while plain and corrugated square and octagon prices are now quoted less 70 per cent on their higher list prices. Following are list prices and discounts.

EAVESTROUGH—

O.G. Round and Half-round, per 100 ft., 8 in., $16.90; 10 in., $18.70; 12 in., $22.20; 15 in., $29.80; 18 in., $37.80.

O.G. Square bead, per 100 ft.: 8 in., $15.90; 10 in., $17.70; 12 in., $21.20; 15 in., $28.80; 6 in., $36.80.

Discount 70|10 per cent.

Conductor Pipe, Round, Plain and Corrugated, per 100 ft.: 2 in., $18.40; 3 in., $23.30; 4 in., $29.60; 5 in., $40.00; 6 in., $49.00.

Discount 70|10 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz.

2 in., $5.25; 3 in., $6.00; 4 in., $10.50; 5 in., $24.00; 6 in., $29.00.

Discount 60 per cent.

CORRUGATED SHEETS NOW LOWER IN PRICE

Montreal.

The easier tendency in corrugated sheets for some time past, owing to the softer tone in the flat galvanized sheet market, has resulted in slightly lower quotations. The discount is now revised from 7½ per cent. to 10 per cent. off list prices, with list prices remaining as formerly. Little improvement is yet shown in the movement of these sheets, the season still considered early for any active sales to commerce. Follow- are unchanged list prices with revised discounts;

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

PIPE FITTINGS HAVE REVISED QUOTATIONS

Montreal

Through a revision in discounts, practically all kinds of pipe fittings are reduced in price. Cast iron fittings are now quoted at less 30 per cent., formerly being less 25 per cent. On other cast and malleable fittings the reduction varies from approximately 5 to 10 per cent. Class A in pound goods is the only line showing an advance in price quotations now being one cent per pound higher. Class B and C are both slightly reduced. Following are revised prices and discounts;

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30
Flange unions	30
Malleable unions	47
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	50

Class B	0 20	0 28
Class C	0 13	0 20

SAP BUCKET PRICES NOW ARE ANNOUNCED

Montreal

The new season's prices are now announced on sap buckets, spouts and syrup cans. These are much lower than the opening quotations of last year, and jobbing houses are convinced that the reduced prices will assist towards a good season in these lines. It is yet early in the season for these supplies, but buying is expected to commence in the following weeks. New quotations are as follows;

SAP BUCKETS—

Straight pattern, per 100:—No. 7, $13.80; No. 8, $15.00; No. 9, $16.80; No. 12, $18.00; No. 16, $21.60.

Galvanized straight:—No. 9, $23.00; No. 12, $27.00; No. 16, $31.00.

Western, (flaring) pattern:—6 qt., $13.50; 10 qt., $18.00.

Frontenac:—10 qt., $19.00.

Galvanized western:—10 qt., $27.00.

Spouts:—Sterling, $20.00; Eureka, $15.00 per 1000

Square 1-gal. syrup cans, $16.75 per 100.

BOILER TUBE SALES ARE SOMEWHAT IMPROVED

Montreal

In the past two weeks a noticeable improvement has been felt in the movement of boiler tubes. This is termed as only seasonable as boilers are now undergoing repairs before the open weather of spring. Distributors look for a continued improvement in the weeks following. Quotations are remaining unchanged for the present as follows;

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

QUIETNESS PREVAILS IN SCRAP MARKETS

Montreal

Quietness still prevails in the waste material market, ferrous scrap being particularly dull. There are a few small deals going through in nonferrous metals, but here also the business is of a spasmodic nature. Consumers are apparently not interested at all, regardless of the extreme low prices quoted by dealers in the hope of obtaining business. Dealers state that little improvement may now be expected until the earlier spring months when the weather opens. Following are local nominal prices.

SCRAP—	
Automobile tires	0 75
Rubber Shoes	0 03
Yellow brass	0 05
Red brass	0 09
Light brass	0 03¼
Scrap zinc	0 03 0 03¼
Lead, heavy	0 04¼
Lead, tea	0 02½
Light copper	0 08
Heavy copper	0 10½
Wrought iron, R.Rd., No. 1 per gr. ton	10 50
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 50
Heavy melting steel	7 50 to 8 00
No. 2 busheling	4 00
Boiler plate	8 00
No. 1 machinery cast	21 50

ANOTHER REVISION IN WASTES THOUGHT LIKELY

Montreal.

It is quite apparent that still another revision in cotton waste prices is not unlikely. Dealers state that while there is no present announcement forthcoming, the cotton market is such that prices could again be revised and still be in line with conditions in raw material circles. It will be remembered that a slight change was made in quotations only two weeks ago. Following are present prices;

COTTON WASTE—Cream polishing, 19c per lb. White—XXX extra, 16c; XX grand, 15½c; XLCR, 14½c; X Empire, 13c; X Press, 11½c. Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.

Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.

Dominion Wipers—White cotton, 20c; colored cotton, 14c.

NO CHANGE REPORTED IN WROUGHT PIPE

Montreal.

Wrought iron and steel pipe still sells under list No. 54, no change being recorded since the revision in December last. A fair amount of business is now recorded, sales showing a slight increase since the inventory period, dealers no doubt placing small orders sorting up their stock. Following is list No. 54.

WROUGHT PIPE

Price List No. 54. December 22, 1921.

RADIATION AND BOILERS NOW SELLING FAIRLY WELL

Montreal.

The opening month of the year is bringing satisfactory returns insofar as sales of radiators and boilers are concerned. Dealers state that business is fairly brisk, and if the volume of trade is maintained, sales will be in advance of last year, and above expectations. The reason outlined is that building operations are now being carried on in practically every month in the year, and last Fall a good amount of new building was commenced. These buildings have now reached the stage where heating systems are required. A continued improvement is now looked for by those dealing in these lines. Quotations remain unchanged since the revision a few weeks ago.

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60. Discount, 59% for hot water and 60% for steam.

Wall Radiators—5 ft., $1.15; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 64 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 20 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in. 20 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 20 per cent. Ontario Govt. trimmings, 10 per cent.

Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings, 25 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

LITTLE BUSINESS IS REPORTED IN SOIL PIPE

Montreal.

Orders in soil pipe are admittedly not very numerous at present, the cold weather not allowing work to be carried on very extensively. Quotations on both pipe and fittings remain unchanged, and although it is generally conceded that competition is now holding prices at their present levels, there seems no indication of a revision in an upward direction. Following are unchanged discounts;

SOIL PIPE—	
2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%
Fittings—	
2 to 6 inch	50-10%
Do., broken lots	0 12

ONLY FAIR BUSINESS IN ENAMELLED WARE

Montreal

Only a limited amount of business is now reported in the various lines of enamelled ware. There is a fair amount of new building under construction, and this is demanding supplies, but sales to the outside territories are seasonably quiet. Quotations on all lines are holding unchanged as follows;

Sinks, roll rim—			
18 x 30			$23 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 50	$ 7 40	$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet			67 10
Lavatories—			
17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim, F241 or P4345			12 60

Less 33 1-3 per cent.

PRACTICALLY NO CHANGE IN RANGE BOILERS

Montreal

The standard list on range boilers still remains unchanged, with the 30 gallon boiler nominally quoted at $8.75. There was an effort put forth by different dealers last week to stabilize the present unsettled condition in the selling of these products, but up to the present nothing definite has been accomplished. Although some are of the opinion that a higher list of quotations will make its appearance it remains in doubt whether this will have the desired effect on the local market. Following are present quotations;

RANGE BOILERS—	Std.	Ex. Heavy
30 gallon	8 75	11 25
35 gallon	11 25	13 50
40 gallon	13 50	16 00
52 gallon	20 00	24 50
66 gallon	28 00	34 00
82 gallon	35 00	46 50
100 gallon	45 00	55 00
120 gallon	54 00	63 25

EASIER UNDERTONE NOTED IN LEAD PRODUCTS

While quotations on lead products in general are remaining unchanged an easier undertone has again crept into the market. Metals on primary mar-

kets are without exception recorded with a softer tone, with lower quotations now appearing on some lines. Solder quotations are said to be steadier than other products, but with the easier undertone continuing lower prices in some quarters would not be surprising. Trade is described as fair for this season of the year, orders however continuing of a small nature. Following are unchanged quotations;

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq.	
Do., 4 to 8 lbs., sq. ft.	0 09½
ft., lb.	0 10¼
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 28½
Do., strictly, lb.	0 26½
Do., commercial, lb.	0 23½
Do., wiping, lb.	0 24½
Do., wire, lb.	0 32½
Zinc, sheets, casks	0 11½

CLOSET COMBINATIONS REMAIN UNCHANGED IN PRICE

Montreal

As in other lines of enameled ware, closet outfits are seasonably quiet on the market at present. While a fair amount of new building is now requiring supplies, orders from other sources are by no means numerous. Quotations locally are remaining unchanged, notwithstanding slightly revised prices are quoted in other western markets. Present quotations are as follows;

CLOSET OUTFITS—	
Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Do., deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., Richelieu" bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitrious China	20 00

METAL MARKETS ON THE DOWNWARD TREND

Montreal

The trend of the metal markets has been downward in all lines and the London market is especially weak. The cause of the decline is not distinctly apparent unless it is the unsettled condition in Europe, but the tone of the market is disappointing.

TIN.—The London market continues to drop and is now down £16 a ton from the highest point reached last month. Stocks are undoubtedly large while the price is now very low. Local market is easier at 36½ cents.

COPPER.—This metal is lower, both in London and New York. The outlook is uncertain, but to-day's figures are certainly reasonable. Consumption is below normal but should gradually increase. Local prices are easier at 17½ cents for electro, 17¼ cents for casting.

LEAD.—This is the steadiest metal on view, and prices show little change in any markets. Supply and demand are fairly well balanced and the outlook is fairly good for this metal. Quotations unchanged at 7 cents.

SPELTER.—Both London and East St. Louis continue to decline, and there seems litle backbone to the market. It would not, however, take much buying to again stiffen prices. Local quotation remains at 7½ cents.

ANTIMONY.—Although antimony is very quiet, and the trend of the metal markets in general is downward, quotations are unchanged up to the present at 6¾ cents for Chinese, 7¾ cents for high grade English.

ALUMINUM.—Quotations on this metal are also unchanged at 26 cents, with the market dull and featureless.

TORONTO MARKETS

TORONTO, January 30.—Numerous price reductions continue to supply the premier feature of the current sanitary and heating industry market reports. Practically all kinds of cast iron pipe fittings are reduced through revised discounts, while malleable fittings, both black and galvanized, record similar price reductions. New discounts are noted on many lines of compression goods, particularly the standard globe, angle and check valves, with a corresponding change on various makes of these products. Price declines also appear on metal ceilings; while quotations are sagging on bar iron and steel. An easier price base is also announced in some quarters on brass rods. A reduction is recorded on agricultural wrenches.

Lead materials at present await the basic market trends, while fair trade has been recorded in boiler tubes. An improvement is foreshadowed in the volume of sheet business, with quietness being the current feature in soil pipe centres. The dull season now prevails in enamelled ware products, with the current degree of construction activity being reflected in radiators and boilers. It is anticipated that Spring business will improve the sales of closet combinations and fixtures; while trade in piping is decidedly moderate. The present quietness has resulted in price shading on range boilers. The scrap material markets show very little variation, while a quieter tone is noted in ingot metal circles.

REDUCTION RECORDED ON AGRICULTURAL WRENCHES

Toronto.

Through a revision in the discount, quotations on Agricultural wrenches are again on an easier level. The new discount is 50 and 5 per cent. off, compared with the previous quotation of 50 per cent.

PRICE DECLINE APPEARS ON METAL CEILINGS

Toronto.

Following the reductions recently recorded on conductor pipe, eavestrough, and corrugated sheets, manufacturers of galvanized products have announced a similar recession in quotations on metal ceilings and walls for inside work. The discount is revised from 10 per cent., to 12½ per cent. off list prices.

REVISED DISCOUNTS APPEAR ON COMPRESSION GOODS

Toronto.

Through a revision in the discounts, varying reductions are announced on certain lines of compression goods. These changes principally affect globe, angle and check valves. The discount on standard, has been revised from 20 to 25 per cent, and a number of similar quotations have also been announced, the extent of the decline being greater on some other valves. Following is the new list of quotations on these products:

VALVES—	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecocks, stand'd	54
Roundway stop and waste cocks, std.	46

REDUCTIONS IN MALLEABLE AND CAST FITTTINGS

Toronto.

A decline of approximately 10 per

(Continued on page 30)

MUELLER

Compression Stop Cocks

Beauty of design—freedom from sharp angles and creases—and the ease with which they can be kept clean—make MUELLER Compression Stop Cocks especially desirable for residence plumbing.

The well-known MUELLER quality of materials and workmanship insures that dependable service which builds reputation for the wise plumber.

Each MUELLER Cock is tested to withstand 200 pounds hydraulic pressure—and is fully warranted.

The four Cocks here shown are a few of the many MUELLER patterns—all designed to meet specific requirements.

Write today for detailed information and prices. Mail orders given immediate attention.

TORONTO MARKETS

(Continued from page 28)

cent. has been announced in the quotations on malleable and cast iron fittings, plugs and unions. This change revises the discount on cast fittings, and also the prices on pound goods, both black and galvanized. The new lists are expected to place the market on these products at a basis for Spring business anticipations. Following are the latest revisions:

PIPE FITTINGS—	Per cent.
Cast iron fittings	30
Plugs, cast iron	30
Oo., solid	30
Do., countersink	30
Bushings, malle.	32
Do., cast	32

Class C	0 13	0 20

LEAD MATERIALS AWAIT BASIC MARKET TRENDS

Toronto

No further change has been made in quotations of the various lines of lead products since the repeated advances in solder quotations a few weeks ago. If the marked strength had continued in metals on primary centres, changes would no doubt have developed in other lines besides solders, but a slightly easier trend is now reported in ingot circles, although dealers state not to the extent as to cause any immediate lower prices in the finished products. For the present the market on a whole is fairly steady apparently awaiting developments in basic materials. The market is seasonably dull, but witr the turn of the year, more activity is looked for in following weeks. Prevailing quotations are as follows:

LEAD AND ZINC GOODS—	
Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb	0 09½
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 32½
Do., commercial, lb.	0 22½
Do., strictly, lb.	0 24½
Do., guaranteed, lb.	0 27½
Do., wiping, lb.	0 22½
Zinc sheets, per lb.	0 12

IMPROVEMENT FORESHADOWED IN SHEET MARKETS

Toronto

Orders for sheets and plates are said to be of a moderate nature, but in fair proportion for this season. Steel companies generally report more anticipations for a higher rate of output during the next few months than of an upward trend to prices. Prevailing quotations are nominally unchanged, but it is recognized that any large-sized order might result in slight concessions.

Tin plate mills are still reported running at a high rate of production. The recent appearance in certain markets of some larger projects, points to a more general recognition of the present degree of liquidation in the steel industry, and in also construed as foreshadowing an increased volume of construction work with the approach of the open season. Nominal prices remain as follows:

BLUE ANNEALED—		
10 gauge, base	3 75	4 50
12 gauge	3 80	4 55
14 gauge	3 85	4 60
16 gauge	3 90	4 65
BLACK—

QUIET BUSINESS IN SOIL PIPE WITH NEW DISCOUNTS MAINTAINED

Toronto

Soil pipe and fittings are still being quoted at the recently revised discount levels, with current business described as quiet. It is considered a little early in the season for any marked revival. Prices on American 8-inch extra heavy soil pipe and fittings are now quoted on an easier level, but this size is in very little request, and domestic quotations remain at net list.

SOIL PIPE —	
2 inch	40 per cent.
3 inch	40 per cent.
4 inch	40-5 per cent.
5 and 6 inch	40 per cent.
8 inch	net
FITTINGS -	
2 to 6 inch	50|5 per cent.
8 inch	net

FAIR TRADE RECORDED IN BOILER TUBES

Toronto.

Trade in boiler tubes is described as fair at present, with one distributor stating that it was as good as could reasonably be expected at this time of the year. There has been some improvement in demand evident during recent weeks, and according to the general opinion in these markets, current business has not been at all bad. Prices are generally unchanged, with the following list governing all moderate orders. It is admitted, however, that some shading of these quotations has appeared where an unusually attractive inquiry is made:

BOILER TUBES—	Seamless	Lapweld
1 inch	26 00	
1¼ inch	27 25	
1½ nch	26 25	
1¾ inch	29 75	25 00
2 inch	28 00	22 00
2¼ inch	32 00	25 00
2½ inch	40 00	27 00
3 inch	44 00	35 00
3½ inch	60 00	40 00
4 inch	75 00	50 25

QUOTATIONS SAGGING ON BAR IRON AND STEEL

Toronto.

Prices show softness in the market for bars and shapes, with certain producers in the south having cut prices on bars around $1.00 per ton in the effort to obtain sufficient orders to keep the mills running at a moderate capacity during the present season. There has been no general changes recorded, however, but the current activity in steel circles contains more of an expectation for Spring improvement than an actual volume at present. Quotations are described as sagging, but whether this condition will spread to the local distributors also, cannot be ascertained. The following prices are nominally in effect, with shading for any attractive order being general:

IRON AND STEEL		
Mild steel bars, base	3 00	3 25
Mild steel bands, 3-16 in. base	3 50	3 75
Bar iron, base	3 00	3 25
Angle iron, base	3 10	3 35
Horseshoe iron	3 75	4 10
Tire steel	3 50	3 75
Spring steel	5 50	6 00
Crucible cast sheet steel	30 00	35 00
Mining drill steel		18 50
Cast tool steel, medium	20 00	23 00
Cast tool steel, high grade	30 00	36 00
Sleigh shoe steel	3 00	3 25
Norway iron	12 50	15 00
Toe caulk iron	4 00	4 50
Hoop steel	3 75	4 25

EASIER BASE PRICE NOTED ON BRASS RODS

Toronto.

A recession of one cent per lb. in the base price on brass rods has appeared in certain quarters with quotations covering other copper and brass products remaining unchanged. Copper in the ingot stage has recorded slightly easier levels with these developments attracting considerable attention in view of the recent firmness reported in these markets. The announcement that some copper mines are contemplating a resumption in operations is considered one of the contributing factors in the easier tone. The fluctuations, however, are not considered of sufficient extent

DULL SESSION PREVAILS IN ENAMELLED WARE

Toronto

Current trade in enamelled ware products is described as quiet, with this condition being not unexpected at this time of the year. The cold weather naturally restricts building operations, and prevailing activity is of a minor nature. Quotations are maintained at the levels recently in effect as follows:

ENAMELLED WARE—	
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F154 or P3845 or P3847	23 60

16 x 24	$7 60	$7 70	$7 80
18 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90

Above prices list, less 33 1-3 per cent.

All steel enamel baths, 4 and 4½ ft.	$14 00
Do., 5 ft.	15 00
Do., 5½ ft.	16 75

These quotations are net.

CONSTRUCTION ACTIVITY IS REFLECTED IN RADIATORS

Toronto

Trade in radiators and boilers is described as fairly satisfactory for this season of the year. Some manufacturers state that sales are slightly better than at this time last year, while hardly exceeding present expectations. Interest in these products chiefly relies on constructive work, and brisk building activity is generally looked for during 1922. This should reflect in the later volume of business in radiators and similar goods. Following are the recently revised quotations:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

ANTICIPATE SPRING WILL IMPROVE CLOSET SALES

Toronto

Orders for closet combinations and fixtures are neither numerous or extensive. However, the recent declines in quotations are evidently aimed at stimulating the trade basis for the anticipated volume of Spring and Summer business. Little variation is recorded in the general conditions, with prices being maintained at the following levels:

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	$26 00
Do., with post hinge seat	26 75
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	28 75
Do., vitreous china, with oak post hinge seat and cover	29 25
Do., vitreous china, with mahogany post hinge seat and cover	29 50

Oak post hinge seat and cover	4 00
Mahogany finish post hinge seat and cover	4 25

NEW LIST ADOPTED ON RANGE BOILERS

Toronto

Just as we go to press, Sanitary Engineer, is advised that a new standard list on range boilers has been adopted. This shows a complete revision from the prices which have recently been in effect, but a varying discount quotation is announced on the standard weight and extra-heavy range boilers. The following is the new price list, together with discounts as announced by certain local manufacturers and distributors:

Size.	List Price.
5-gallon	$13 50
12-gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 50 per cent.
Extra heavy, 40 per cent.

MAINTAIN RECENT NEW DISCOUNTS ON TROUGH

Toronto

Quotations on eavestrough and conductor pipe remain at the recent easier levels, with business in these products naturally restricted at this season of the year. Weather conditions offset any activity in such construction work where trough and piping are required, but with the recent price developments placing quotations on a moderate basis for Spring trade, future improvement is generally looked for in these markets. Following are the current levels and discounts:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth:	Per 100 ft.
8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50

Less 70 and 10 per cent.

PIPE (CONDUCTOR)—

Plain, round or corrugated.

	Per 100 ft. in 10 ft. lengths.
2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	23 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00

Less 70-10 per cent.

ELBOWS (CONDUCTOR)—	
2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

CORRUGATED SHEETS AT RECENT LEVELS REVISED

Toronto.

The corrugated sheet market reflects the trend of developments in primary sheet circles, and quotations remain at the recently revised levels. Conditions are described as quiet, at present, but with general expectations prevailing for improvement in the early Spring. The discount of 10 per cent. is now in effect, with the list prices remaining unchanged as follows:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

ACTIVITY IN PIPE IS DECIDEDLY MODERATE

Toronto

Activity in tubular goods is generally around the same proportion as prevailed during the month of December, which means that the volume of business is decidedly moderate. A curtailment in pipe buying was prevalent towards the end of the year, and the revival has not yet materialized. It is a little early in the season, and current trade is spasmodic. The pipe mills in southern centres are averaging a production rate of around 60 per cent. of capacity. List No. 54, still governs the domestic markets.

JUST MODERATE TRADE IN SCRAP MATERIALS

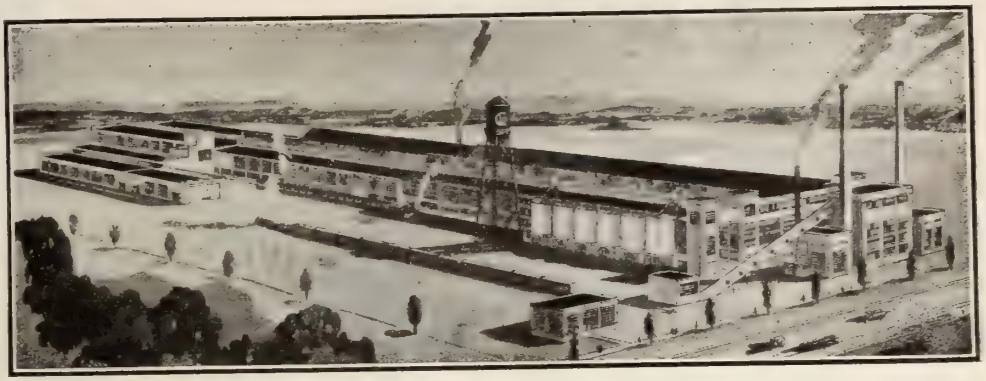
Toronto

Considering that the majority of consumers are still confining their purchases to current needs, dealers report that there is a fair amount of business being done. Business in scrap rubber is low, but copper scrap has continued

(Continued on page 34)

The Libbey-Owens Co. Use Jenkins Valves

It was but natural when it came to a question of the best valve installations that the Libbey-Owens people should select "JENKINS"—the valves that are tested for service and guaranteed satisfactory.



The Libbey-Owens Glass Producing Plant at Hamilton, Ont.

Fig. 106

The trouble-free service which Jenkins Valves always render reflects credit on the man who instals them. Complaints and "come-backs" are practically unknown because Jenkins Valves are made to satisfy and—they do.
A type and a size for every service everywhere.

Auto tires	0 50	1 00
Solid tires	0 75	1 25

QUIETER TONE RECORDED IN INGOT MARKETS

Toronto.

The ingot metal markets are recording a slightly easier tone, with the exception of aluminum. Forward inquiry for aluminum has shown some improvement. A reaction from recent higher prices recorded at primary centres has developed in copper and spelter, with tin quotations fluctuating on most markets. Consuming demand is again of a quiet nature, with litt'e activity generally reported.

COPPER.—The announcement tha. some copper mines are planning to resume operations in the near future, has caused a reaction from the firm position recently noted in copper circles. Some very slight concessions in price were again offered during the week to induce buyers to re-enter the market, but only declines have resulted. It is stated that large consumers are booked up for the present and are adopting a waiting position as regards futures. The local situation has failed to register any improvement, quotations remaining at 17½ and 18 cents.

TIN.—The tin market continues to fluctuate at primary centres, but there is little fundamental change to record. Prices have eased in London, and this has not encouraged the immediate outlook. Consumers' buying is reported light. Local activities are unchanged, with prices nominally quoted at 38 cents.

LEAD.—This metal has been quiet, but large producers are maintaining quotations, in spite of the absence of interest. It is reported that London stocks are fairly low, and an improved inquiry from this direction is expected in some quarters. Meanwhile, the local quotations are unchanged, generally ranging at $6.75.

SPELTER.—An easier tone has also been recorded in this market, and the improvement of recent weeks is now only in moderate evidence. Some concessions are reported from primary markets, but prices on domestic centres are generally unchanged, the local figure being $7.25.

ANTIMONY.—With prices locally ranging between 8 and 10 cents, there is little new to record in this market Southern primary centres report an easier tone.

ALUMINUM.—The tone is firmer in aluminum. Consuming inquiry for forward delivery is reported better, and prices are moving up in some quarters. The change is only slight, however, as yet. Local prices still remain at 27 cents.

WINNIPEG MARKETS

WINNIPEG, January 30.—The reduction in quotations on enamelled ware products supplies the feature revision on the current plumbing and steam-fitting markets. Other sanitary and heating supplies are generally unchanged in price with the exception of cotton wastes which record a slight downward revision in both white and colored grades. Wrought iron piping is being maintained at the recent new list, and quietness now prevails in both the primary and domestic sheet markets. Current trade is described as quiet, but the demand for this class of goods is generally expected to increase in volume with the advent of Spring trade.

LITTLE VARIATION IN SHEET QUOTATIONS

Winnipeg.

An easier trend is reported from primary steel centres on certain steel products, but the domestic markets show very little change. The winter dullness is now apparent, with prices generally unchanged around the following levels:

SHEETS—	Per 100 lbs. Black.	Galv.
10 gauge	5 70	....
12 gauge	5 70	....
14 gauge	5 80	....
16 gauge	5 90	6 75
18 and 20 gauge	6 30	6 90
22 and 24 gauge	6 35	7 05
26 gauge	6 40	7 20
28 gauge	6 65	7 80
10¾ oz.	....	8 20

LITTLE VARIATION IN RANGE BOILER MARKET

Winnipeg.

Although there is an effort being put forth to stabilize the range boiler market, nothing definite has been reached as yet, and quotations are unchanged. Whether new prices will be forthcoming soon, cannot be determined, but it is thought some arrangement will be decided upon shortly. Following are the unchanged quotations:

RANGE BOILERS—	
30-gallon	9 00
35-gallon	13 25
40-gallon	16 25
52-gallon	23 45
66-gallon	33 15
82 gallon	40 60
100-gallon	62 50
120-gallon	75 00

ENAMELLED PRODUCTS NOW REGISTER REDUCTION

Winnipeg.

All enamelled ware, such as bath, sinks, and lavatories are now quoted easier in price. The extent of the reduction varies on the different products, with substantial declines in some lines.

REDUCED PRICES APPEAR ON COTTON WASTES

Winnipeg.

In keeping with the easier markets on cotton goods cotton waste has been reduced in price. Following are the new quotations:

COTTON WASTE—	Per lb.
Cream polishing	0 22
White—XXX extra	0 18½
XX Grand	0 17½
XLCR	0 16½
X Empire	0 15½
X Press	0 14
Colored—Fancy	0 15½
Lion	0 14
Standard	0 12½
Popular J	0 11
Keen	0 09½

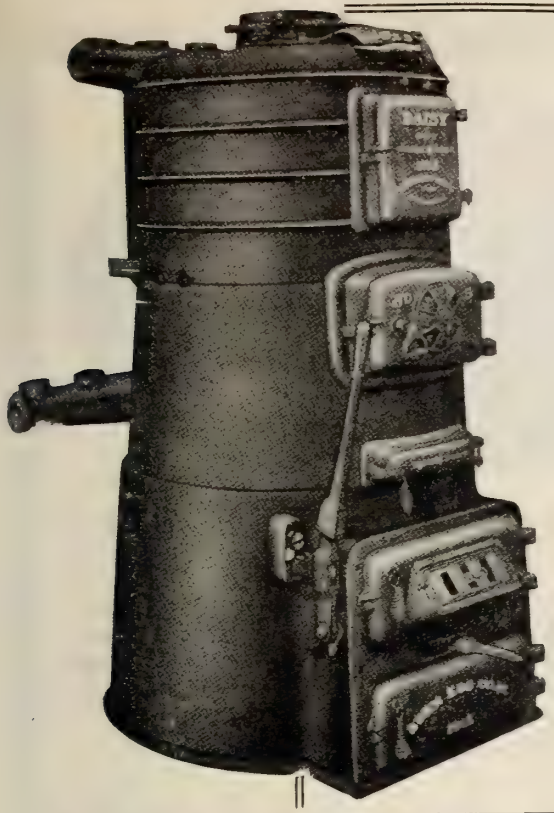
BUSINESS QUIET IN WROUGHT PIPING

Winnipeg.

Quotations on wrought piping are maintained at list No. 54, and very little new development has been recorded. Current trade in these products is reflecting the seasonal dullness at this period of the year.

NEW COMBINATION STOVE

Lemarre & Company, Limited, St. Remi, Quebec, are putting on the market a new combination stove for coal and wood. The above firm have now patented this, and claim it is the only one of its kind on the market. In appearance, it is similar to the ordinary cooking range, but the fire pot is different as it is built on the principle of the Quebec Heater, lined with fire brick, either with or without grates. The manufacturers claim it will give better service for heating purposes, while it will cook just as well at any range.



The Common-Sense Boilers

DAISY

Hot Water Boilers

Most of your customers can be relied on for common sense. You can be assured of interest and find it easy to put in Daisy Boilers when you show the fuel economy, easy of operation and perfect satisfaction.

If possible show your prospect a Daisy you have installed. No argument beats the Daisy in actual use and the invariable enthusiasm of its new owner.

There are over 60,000 Daisy Hot Water Boilers in use: 'Nothing succeeds like success'; you can easily see there is good business in handling the "Daisy."

VULCAN

Pure Air Furnaces

The greater radiating surface on the Vulcan makes them more effective. They are economical, simple and easy to operate, and very profitable for you to install. Built of heavy metal, they are very durable in use.

Read This

London, Feb. 11th, 1921.

Gentlemen:—
I have used the Vulcan Pure Air Furnace for several years. I find it economical on fuel, easy to operate, and as it has a greater radiating surface than any other in its class, I have been well pleased with the results. I can recommend its use to any. I believe it to be durable on account of the heavy metal in its construction.

Do You Read These Advertisements?

Every advertisement in this magazine is worth reading. It is the product of some concern that is using a modern piece of selling machinery— technical paper advertising—to present most effectively to you the leading features of its line.

These advertisers are making it easier for you to buy intelligently with the least waste of your time and theirs. They realize that a sales force can not replace this service at equal cost. They know that advertising is good business, for the manufacturer who does not advertise cannot save the cost of advertising. Consistent advertisers are progressive merchandisers. They are saving your money and their own; and it pays to do business with them.

Don't miss your opportunities. These advertisements are interesting. Some are distinctly instructive, and a glance through them every month will keep you posted on the latest developments in Sanitary Engineer.

West Furnace Carburetors

Positively Save 15% in Fuel

These reliable, efficient carburetors supply the hot oxygen necessary to burn the gas from the free carbon so generously present in anthracite coal.

This means saving the valuable heat components that formerly went up the chimney after contributing practically nothing in the way of heat. The proposition is sound—write us to-day.

Territories Still Open

The Canadian Combustion Co., Ltd.
43 Victoria St. Toronto

THE Royal
Automatic Gas Water Heater

PAYS THE PLUMBER A GENEROUS PROFIT

You get a liberal discount on the heater itself and make a good profit on the installation. The Royal Automatic is one compact unit—easily installed anywhere in quick time. No trouble—keeps a supply of piping hot water ever ready in the storage tank. No coils—never limes nor clogs up. Free from fumes. Just the perfect, convenient, efficient water heater that makes lasting friends for you and builds up your business.

Sold only by or through plumbers.

Write for literature and complete information. Today!

BASTIAN-MORLEY, LIMITED
195 Victoria Street, Toronto

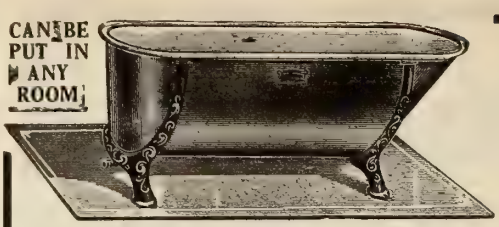
Easily Cleaned

The APEX Closet Bowl has special features that place it in a class by itself.

Clean-out device located at head of trap. Any obstruction can be located and removed in five minutes without disconnecting from floor or water. **Cannot overflow.** Silent in operation.

Find out all about the APEX before installing another closet bowl. Canada Patents for sale.

THE APEX SUPPLY CO. 203 E. STATE ST. TRENTON N.J.



PROFITS IN COUNTRY TRADE

This advertisement is of interest to you if you number amongst your customers people who do not have the advantages of city conveniences.

TWEED ENAMELLED STEEL BATHS

—made of galvanized steel, enameled, and installed without plumbing—give country folk the advantages of a modern bathroom at a very small cost. Write us for price lists and further particulars about these baths, the "Tweed" Sanitary Closet and other home conveniences.

THE STEEL TROUGH AND MACHINE CO., LIMITED
Tweed, Ont., Canada.

Louis A. Payette, 304 University St., Montreal, Quebec and Eastern Representative.

WROUGHT PIPE

Suitable for the approaching period of building activity, road construction, etc. This is a line of great importance in making successful, profitable contracts. Our C. T. Brand of Wrought Pipe has been

THOROUGHLY INSPECTED

by practical, experienced men. It is tested to 600 lbs. hydraulic pressure, and branded with our trade-mark. We carry this line of reliable pipe in sizes ⅛-in. to 4-in. Black or Galvanized. We also manufacture nipples and couplings, black and galvanized, in all sizes.

Ask your Jobber for C. T. Brand Wrought Pipe

Canadian Tube and Steel Products Co., Ltd.
Operating Canadian Tube and Iron Co., Limited
Works at Lachine Canal, Montreal

Bull Dog Brand Seats & Tanks

Strongly made of superior materials, and thoroughly proof against warping, opening, etc. Investigate the Bull Dog line of products.

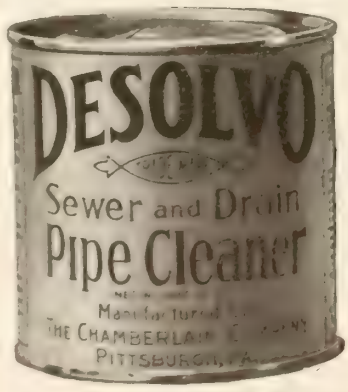
HOURD & CO., LIMITED
London, Canada.

Superior Plain

Closet Bend

The advantages of this fitting appeal to every thinking engineer. It is absolutely tight, no more floor seepage, permanent and at the same time easily removable for repair or replacement of bowl, widest range of adjustable flange and fits any make of closet. Made in 18 in. lengths, plain or tapped on both sides. Ask your jobber for the K.T. Closet Bend, Plain or Tapped

When Answering Advertisements Please Mention Sanitary Engineer



Clears Clogged and Frozen Pipe

No Need to Tear up Floors or Lawns

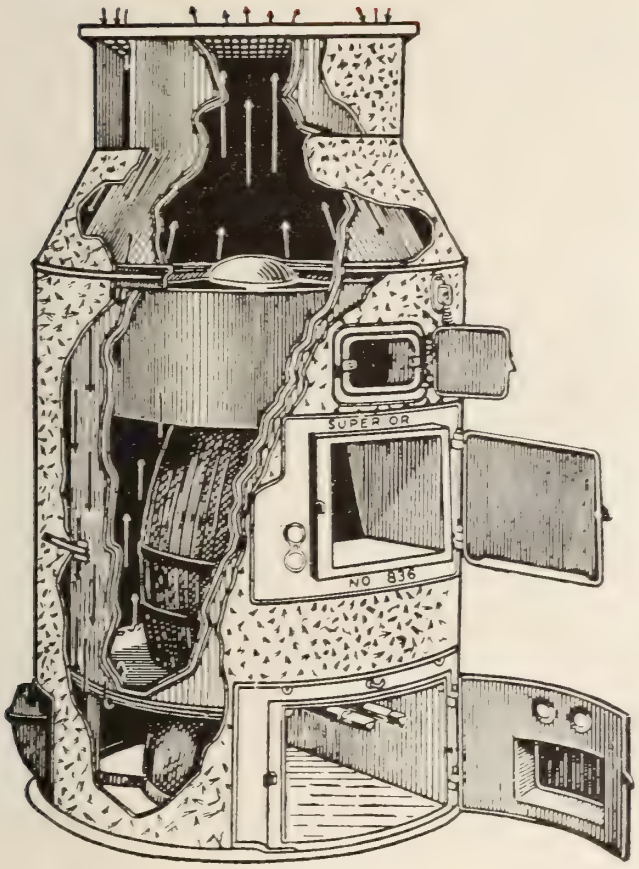
Display Desolvo conspicuously in your windows. A brief, clear show-card will explain its usefulness to the user. Better yet, put it in your local advertisements.

You will find a gratifying volume of sales as soon as you show users what Desolvo does for them, and let them know you sell it.

The Chamberlain Desolvo Co., Limited
109 Church Street, - TORONTO

Western Canada Representative: N. D. McPhail and Company, Standard Bank Bldg., Vancouver, B.C.
Eastern Canada Representatives: Richardson and Bureau, 55 St. Francis Xavier St., Montreal.
Ontario Representative: L. F. Mayne, 875 Trafalgar St., London, Ont.

PILOT SUPERIOR PIPELESS FURNACE



Easy to install—A good mechanic can install it in one day.

It Leads in Selling Points

Adjustable Collar. This is handy and often extremely valuable. It permits adaption to varying heights of cellars.

Direct-Connected Clean Out. This is another convenience and comfort for the user. Its advantages are too obvious to require comment.

Hot Blast. This acts as a carburetor, supplying the additional heated oxygen to make the combustion perfect.

The Dust-Damper is a convenience that is much appreciated in keeping the dust from ascending from ash-pit to be deposited in the house.

Cast Iron Ashpit Bottom. A protection that makes it easier to shovel out the ashes with no fear of injury to the heating plant or cellar floor.

The Deep Roomy Ashpit permits a reasonable accumulation of ashes without risk of burning out the grate-bars.

Anti-Clinker Grate, the four-bar triangular type. This is the simplest and best grate ever invented.

Correctly Proportioned Combustion Chamber, a help and economy in saving fuel and yet an assurance of a warm, genial temperature in the house.

Fire Pot in Two Sections. There are no worries over expansion and contraction with its cracks and fissures.

Deep, wide Cup Joints assure solid, substantial construction with no flimsy connection between sections.

Hall-Zryd Foundry Company, Limited

Manufacturers of Pilot Stoves, Ranges and Furnaces.

Hespeler, Ontario

Western Branch: Post Office Box 687, Winnipeg, Manitoba

The One Best Bet

ONE thing is sure. When you instal a VitrO "No Trouble" Tank you've done a good job. You have a right to feel proud of it. It's going to give a whole lifetime of satisfaction. It's going to be a lasting advertisement for the quality of your work.

"No Trouble" isn't a pet phrase. It's an established fact in regard to VitrO Tanks. Every part of the VitrO Tank is designed and made to avoid trouble. It is a ***perfect*** tank. Outside--a handsome molded, seamless, nonporous tank that can never leak or corrode—— inside a scientifically accurate piece of mechanism.

It pays to instal the best. Choose VitrO for every particular job.

Gives Easy Access To The Sewer

A-2231

A very profitable line for the trade is the "Emco" A-2231 Cleanout Plug.

This plug is designed to give easy access to the sewer, and is suitable for a test plug. It is made of brass and is of sufficient weight to give long service. Threads cannot rust and it is easily removed. Also made for iron pipe thread connections.

All "Emco" products are rigidly tested before leaving the factory.

Sold by leading jobbers.

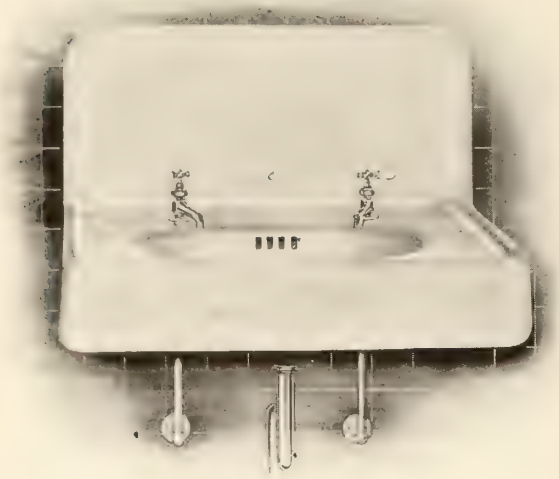
"All fault is gone — when 'Emco' goes on"

Empire Brass Manufacturing Co., Limited

LONDON and TORONTO, CANADA

It Pays in Increased Business to Specify—

Beaver Brand



Durability and Beauty That Make Sales

"Beaver" Porcelain Enameled One-Piece Lavatory is illustrated above with apron, oval-shaped basin with rear outlet, patent overflow and chain stay, on concealed brackets.

Dimensions—Size of lavatory 16x20 inches; basin 10x14 inches; height of back 8½ inches; depth of apron 4¼ inches.

Roughing in measurements—Centre to centre of supplies, 11½ inches; centre of outlet to wall, 6¼ inches; centre of supplies to wall, 3½ inches.

"Beaver" Porcelain Enameled Two-Section Laundry Tub, on painted iron stands, with roll rim and high back, cast in one piece; complete with two wringer holders, N.P. soap dishes, plugs and stoppers; painted exterior.

Dimensions—Length over all, 52 inches; height from floor to top of tub, 30 inches; height from floor to top of back, 40 inches; front to back, outside, 25¼ inches; front to back, inside, 21 inches; depth inside, 13½ inches.

Roughing in measurements—Centre to centre of supplies, 9 inches; centre to centre of outlets, 24½ inches; centre of waste to wall, 6 inches; centre of waste to end, 14¼ inches; height of stands, 16¼ inches; distance from floor to centre of supplies, 34¼ inches.

The "OLD TWIN"
A Syphon Jet of Proven Merit

THE "OLD TWIN"
With top supply and Integral Seat

THE "OLD TWIN"
With side supply and extended Front Lip.

The Syphon Jet is the highest development of closet manufacture—the large water area, deep seal and powerful syphonic action commending it as the most advanced type of sanitary fixture under any mode of installation.

The "Old Twin" was one of the earliest models of Syphon Jet construction, and although details of its design have been altered in sympathy with modern improvements, its essential characteristics remain unchanged.

There have been many and varied designs of syphon jet closets placed upon the market since its evolution but none have surpassed its underlying superiority in action and practical sanitation.

This closet is produced with a variety of special features including:—

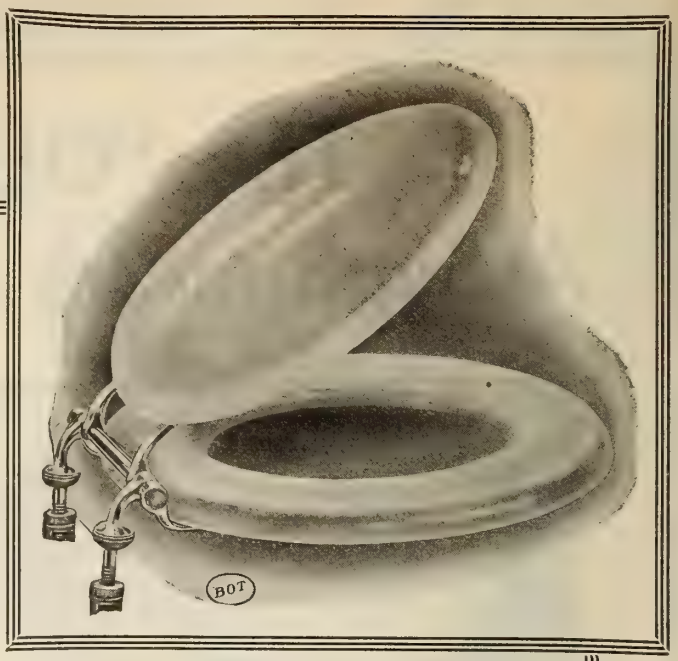
Side Supply
Raised Front Lip
Extended Front Lip
Raised Rear Vent
Integral Seat
Centripetal Action
Donovan Flange
Clean-out Plug
Integral Seat Hinge Bar

as well as almost any combination of these.

CANADIAN POTTERIES
LIMITED

SAINT JOHNS
QUEBEC

Sales handled exclusively through recognized Jobbing houses.



Did You Ever?

Mr. Sanitary Engineer:

Did you ever sell an article that was Perfect? The WORLD'S FINEST CLOSET SEAT and the MOST SANITARY CLOSET SEAT yet produced is the "B.O.T." BLANCO. **IT IS PERFECT**, ask anyone who has installed one.

First made with the regular "B.O.T." DOWELLED SEAT CONSTRUCTION; then covered with a heavy coating of "B.O.T." SHEET BLANCO, which leaves NO SEAMS; lastly finished on a BUFFING WHEEL just as metal is polished.

IT IS proof against hot or cold water, WILL NOT CRACK, PEEL or DISCOLOR; is EASILY CLEANED with soap and water, hence is IMPERVIOUS TO DISEASE GERMS.

Your customers are in favor of a WHITE CLOSET OUTFIT, a "B.O.T." BLANCO SEAT adds the finishing touches, or, in other words, MAKES A FIRST-CLASS JOB.

SOLD in all styles. Further information gladly sent on request.

National Advertising is Creating an Extensive Demand for

"Standard" PLUMBING FIXTURES

Make sure that you get the contract for profitable plumbing work in your district by advertising STANDARD PLUMBING FIXTURES.

By consumer advertising in some of the leading National magazines, we are educating the public on the many features possessed by the "STANDARD" line, with the object of getting them to specify "STANDARD" when they are in the market for plumbing fixtures.

So that people may know you handle the "STANDARD" line, we have had prepared a number of attractive window signs which are beautifully lettered in black and gold and which may be easily transferred on your window front. They measure 18″ in width by 5″ in depth.

This sign will be mailed to any Sanitary Engineer free of charge upon receipt of application addressed to our general office.

First in Householders' Hearts

DAISY

Hot Water Boilers

Apparently small things convince people, sometimes. Recently, the owner of a Daisy made a very convincing talking point out of the way he could "sleep in" in the mornings, when the "Daisy" was on the job. It was only another way of saying how little attention Daisy Hot Water Boilers require and how easy they are to attend. Besides, they are economical and efficient.

"Aggressive Merchandising Policy and Well Appointed Showroom Plumber's Best Guarantee"

So Says Ontario Manufacturer of Plumbing and Heating Equipment in Dealing With Master Plumber's Complaints of Lack of Protection—Says Every Plumber Should Have A Showroom—Plumber Should be Protected to Reasonable Extent When Material is Sold Direct to Consumer

A NUMBER of angles to the controversy regarding showrooms for plumbers have been brought out in recent issues of Sanitary Engineer, one of the most interesting being that set forth in an interview which appeared in the February 1st issue. This interview with a prominent master plumber of Quebec province indicated that through lack of protection from wholesalers this plumber was faced with the necessity of closing up his showroom after conducting it for a great many years. It had been his experience that within the last two or three years wholesalers had shown an increasing tendency to sell plumbing equipment direct to consumers at or near the price to the plumber so that there was no longer any protection for the latter. This plumber was of the opinion that a great deal of business would be lost to the industry through his not operating a showroom. He was quite in favor of plumbers conducting individual showrooms but contended that wholesalers should give more protection.

Sanitary Engineer has taken steps to put before a number of manufacturers and wholesalers of plumbing and heating equipment, the views expressed by this plumber and following is some information gleaned on the subject from those sources.

Practice is Confined

One Western Ontario manufacturer states:

"We have known in an indirect way that wholesalers have on occasions adopted the practice of soliciting orders for plumbing fixtures and fittings direct from the consumer, a practice which has been confined, we feel sure, to the wholesaler but which the manufacturer has not adopted. While our advertising policy and appropriation has been largely directed to the plumbing trade and wholesale distributors, we have appealed to consumers by direct correspondence but in every case where specialties have been offered to the consumer prices have been arranged to provide adequate protection for the plumber. The contracting plumber in Quebec City referred to in your letter of the 2nd has, however, overlooked a very important fact that the prices from the wholesaler to the consumer cover the material only; that the consumer would be forced to secure an installation price from the master plumber except in very rare cases where the material purchased is of such a nature that it could be installed by the consumer.

The Best Guarantee

"More aggressive merchandising policies supplemented by a well appointed showroom are the contracting plumber's best guarantee and assurance that he will receive the preference over quotations for material only furnished by wholesale distributors."

A Central Ontario manufacturer states:

"Having reference to plumbers maintaining a showroom for the purpose of showing their goods, and the expense attached thereto in view of the fact that many jobbers maintain a show-room and sell direct to the general public, we would point out that this is a matter which is not universal. In some cities the jobber sells direct to the public and in other places he does not. In any event, we have always understood that a jobbing house selling a bath or anything connected with plumbing material, protects the plumber who is installing it to a reasonable extent.

Plumbers Should Have Showroom

"It is our candid opinion that the plumbers ought to maintain a showroom themselves. It is not often that the general public go to a wholesale house for the purpose of selecting their goods. It may be that those who want a better class of goods than the ordinary line of goods, would go to a jobbing house where they could have a larger selection than they can have from the ordinary plumber. In any event, we think it is to the interest of the plumber for him to maintain a showroom—perhaps not too elaborate, but one which will display the ordinary goods which are generally used.

"We would rather not be drawn into a discussion of this kind, but it is our candid opinion that every plumber ought to have a showroom at his place of business."

Keen interest has been displayed in this vital question and expressions of opinion have been forthcoming from practically every phase of the sanitary and heating industry. The entire facts of the case, together with the various angles which different viewpoints have accentuated, have provided one of the feature topics in recent issues of Sanitary Engineer. Not only has this topic appealed very strongly to the trade in general—including plumbers, wholesalers and manufacturers—but the importance of the underlying elements has contributed towards molding the future policy of this branch of the industry, as well as forming an important part in trade expansion and general improvement. Opportunities for further discussion will be provided through the medium of these columns, providing that additional points of interest and new developments are forthcoming.

Plumbers Want Revision of Sales Tax

Many Important Problems to be Dealt With at Coming Session of Parliament to Open March 8—Suggestions for Sales Tax Revision

SEVERAL matters of vital importance to the plumbing trade will be dealt with at the forthcoming session of Parliament which opens in Ottawa on March 8. Already there is much speculation concerning the attitude of the new party which has been elected, toward certain legislation enacted by the late government. One of the matters in which the trade is particularly interested is in connection with the sales tax, for while this form of taxation has been looked upon as a model by many business men in this country and abroad, it has been found that it operates unfairly in certain respects and numerous representations have recently been made for a change in the method of application. Some of these recommendations have been outlined in recent issues of Sanitary Engineer.

As a rule the present Act assesses a sales tax of 1½ per cent. on sales by manufacturers to wholesalers, another 1½ per cent. on sales by wholesalers, and a straight 3 per cent. tax on sales by manufacturers to retailers and consumers. On importations by retailers or consumers the sales tax payable at the customs house is 4 per cent., and on other importations it is 2½ per cent.

Suggested Changes

One suggestion which has been made is briefly, as follows:

That sales by manufacturers to wholesalers for resale by the latter, and sales by wholesalers to other wholesalers for resale be exempt from sales tax:

That sales by manufacturers and wholesalers to retailers or consumers be subject to sales tax at the rate of 3 per cent.:

That it be compulsory to extend such sales tax on the invoice as a separate charge to be added separately to the selling price—without the manufacturer or wholesaler being allowed to absorb any part of the tax.

The proposal, as it reached the Canadian Manufacturers' Association, includes no suggestion of change in the present sales tax requirement "that domestic purchases by manufacturers for the purpose of re-manufacturing into other goods for sale are subject to 1½ per cent. sales tax," nor in the present requirement "that importations by manufacturers for the purpose of re-manufacturing into other goods for sale, and also importations by wholesalers, shall be subject to 2½ per cent. sales tax, payable at the custom house."

If the Act were amended in accordance with the above suggestion, it is claimed by those advocating the changes that it would:

1. Eliminate the necessity of a manufacturer charging sales tax where his sales are exclusively to wholesalers holding a sales tax license as a wholesaler:

2. Do away with the present situation, with which all wholesalers and many manufacturers are faced, of absorbing half of the sales tax when selling direct to retailers or consumers:

3. By exempting from tax purchases made by wholesalers or jobbers from manufacturers do away with the agitation of the wholesalers that the manufacturers, do away with the agient sales tax of 1½ per cent. on sales by manufacturers to wholesalers.

4. Reduce the possibilities of loss in the event of wholesalers becoming insolvent:

Under the current rulings where a wholesale customer becomes insolvent, and a manufacturer has paid the Government the sales tax in respect of goods sold to such customer, but has not received payment of the tax from the customer, the loss falls upon the manufacturer:

5. Simplify the collection of the tax.

SUGGESTIONS ON SALES TAX REVISION

1—Manufacturers' sales to wholesalers for resale be exempt.
Wholesalers' sales to other wholesalers for resale be exempt.
Manufacturers' and wholesalers' sales to retailers or consumers subject to 3% tax.
To extend sales tax on invoice as separate charge added separately to selling price. Manufacturer or wholesaler not allowed to absorb any part of tax.
2—Retailer suggests manufacturers collect all sales tax and include it in cost of goods rather than as separate item.
3—Only about 25% of present tax passed on to consumer says another retailer, suggesting manufacturers and wholesalers include it in prices shown on invoice.
4—Margin of profit on certain fixed price lines too small for retailer to bear cost of sales tax.

TINSMITHS' CASE TO THE SUPREME COURT

The controversy over the status of the tinsmith for taxation purposes has been very much drawn out and the various stages have been dealt with in Sanitary Engineer. It will be recalled that a test case instituted at Ottawa in the case of a merchant tailor to determine whether any merchant doing business on the same basis could legally be classed as a manufacturer, was decided in favor of the retailers and no trouble was anticipated. It developed, however, that this ruling was not being upheld by the Collectors of Inland Revenue and a subsequent case involving a confectioner was tried. This case was decided in favor of the Government, and the case is now to be taken by the Retail Merchants Association to the Supreme Court, as mentioned in the Feb. 1 issue of S nitary Engineer. This case will be in the form of an appeal from the last court decision. The case is being followed closely by retailers who operate tinsmith shops and the decision will be one of great importance to the trade.

PLUMBER IS HIGHLY HONORED

Toronto.—James Richards, late president of local 46, plumbers' and steamfitters' union, was made an honorary life member recently of the union and presented with a gold watch. He is the only honorary member of the international union, and one of the few in organized labor who have been so honored.

PORT CREDIT WATERWORKS

Port Credit, Ont., will endeavor to break the deadlock over the waterworks problem by direct action. The special meeting to deal with the problem, it is authoritatively stated, will formulate a plan for a new waterworks area to include Port Credit, Cooksville, Streetsville and the Township of Toronto. Reeve Patterson and his colleagues in the municipal council will ask the Provincial authorities to apply Mayor Dallyn's plans for a lake shore waterworks to the southwest of York Township, Mimico, New Toronto, Long Branch and Etobicoke Township.

Heating and Ventilating

Investigation of Warm Air Furnaces

Extensive Investigation Conducted by National Warm Air-Heating and Ventilation Association, and University of Illinois Reveals Many Interesting Points Concerning Capacity And Efficiency of Various Heating Systems

Second Article of Series Reproduced in Sanitary Engineer by special permission Engineering Experimental Station, University of Illinois

KNOWING the B.t.u. loss per hour from any room on any floor (first, second, or third and given any register temperature, using the value of B.t.u. per square inch of leader pipe from these curves (Fig. 8), simple division will give the square inches of leader pipe necessary to heat the room to 70 deg. F. on a zero day.

From the data obtained in the seven tests it was apparent that the temperature at the registers on the second floor was approximately 10 degrees lower than that on the first floor, or about 175 deg. F. In like manner, from the second floor curve, it was found that one square inch of leader pipe at this temperature will supply 160 B.t.u. per hour available for heating rooms. Dividing the heat loss from the second floor rooms by this value gives the square inches of leader pipe necessary to offset the heat loss from the second floor rooms.

In the same way, the test data show a register temperature on the third floor which is about the same as that on the first floor. From the third floor curve it may be seen that at 185 deg. F. register temperature one square inch of leader pipe will carry 215 B.t.u. per hour. The square inches of leader pipe for third floor rooms are found as before.

In plotting the curves the average register temperature for any one floor was used in each case. It was found by reference to the test data that there was a considerable variation in register temperatures on any one floor. It is, therefore, evident that the size of the pipe as figured may not be absolutely correct in each case. It is not much in error, however, and in view of the large increase in pipe areas from one size to the next, the error is negligible for all practical purposes.

It is quite evident that the design of a furnace heating system must be based on the B.t.u. loss per hour from each room. This method of computation is quite familiar to the engineer and can be used by any well qualified furnace man, as fairly simple formulas can be made to cover most types of installation. A later bulletin will cover such applications, and, therefore, no space is given to the calculation of heat losses here.

If, for example, it is found that the room on the first floor of a house has a heat loss of 16,600 B.t.u. per hour, and a register temperature of 185 deg. F. is to be used, each square inch of leader supplies 115 B.t.u. and the calculated area becomes

$$\frac{16{,}600}{115} = 144 \text{ square inches}$$

which requires either one 9-inch and one 10-inch leader, or a special 13½-inch leader.

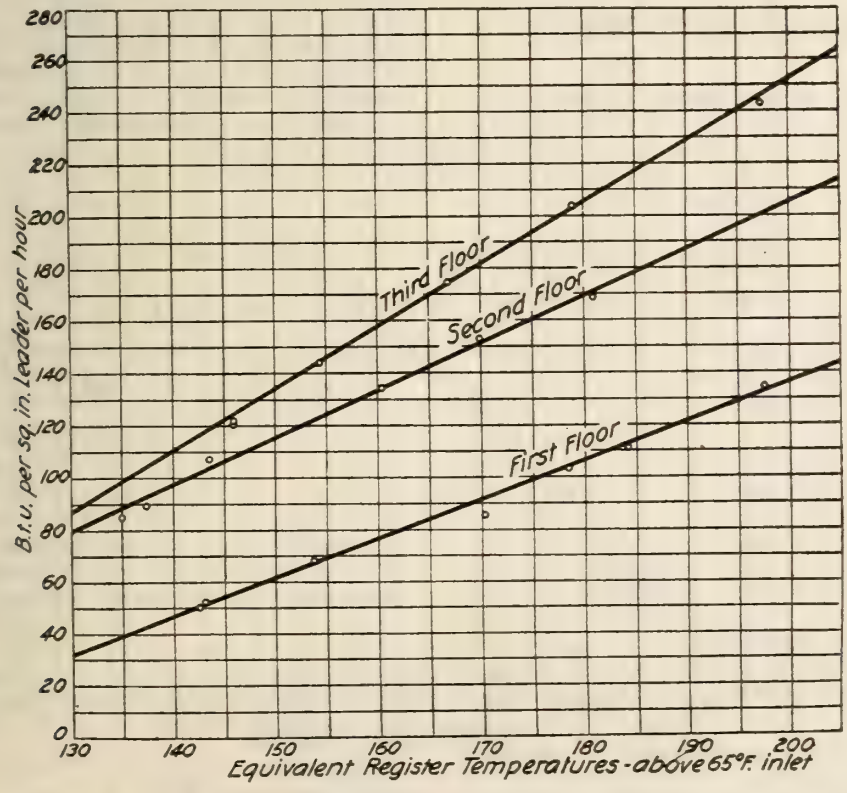

FIG. 8. EFFECT OF AIR TEMPERATURE AT REGISTER ON LEADER CAPACITIES

THE PIPELESS FURNACE PLANT

General Description of Plant

The plant and the arrangement of equipment for the testing of the pipeless or single register furnace is shown in the sectional elevation Fig. 11. In brief, the plant consisted of a frame structure eight feet in height supporting a platform ten feet square. This platform served as a floor in which was inserted the register, and below this was erected the furnace proper. The main floor of the laboratory was used as the firing floor, and the platform above as the reading or working floor. The chimney was located three feet to the rear of the furnace, and was of 12-inch galvanized-iron pipe 35 feet in height.

The furnace used in these tests was

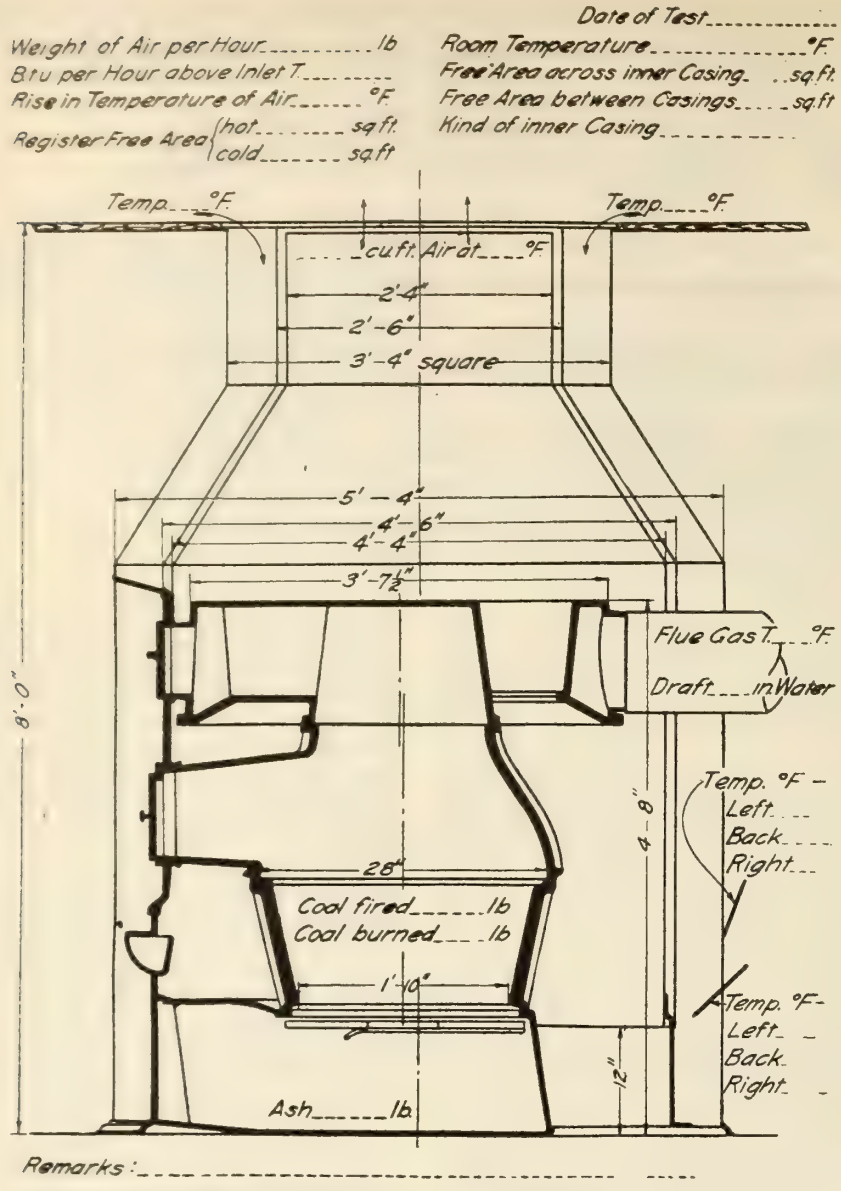

FIG. 10 SECTIONAL ELEVATION AND DATA SHEET OF PIPELESS FURNACE

representative of the plain cast-iron horseshoe radiator type, without special radiating surfaces, corrugations, or any special devices for increasing either efficiency or capacity of operation. The fire pot supplied with the furnace was of the slotted type, but fire clay fillers were used to close the slots.

The following equipment was used in the tests of the furnace: coal and ash weighing and sampling equipment, air measuring devices and calibrating equipment for same, temperature measurement equipment, temperature and draft controlling equipment, draft indicating and recording gauges, carbon dioxide indicating and recording apparatus, and a Wahlen gauge.

The air measuring equipment is shown in the sectional elevations, Figs. 10 and 11. This apparatus consists of an anemometer with its special register traversing carriage, a cold-air register cover plate with felt gasket and clamping screws, an air supply pipe and damper, shown entering the side of the casing near the floor, a motor-driven blower and speed regulating rheostat, a 10-1/32 inch air measuring pipe with its vertical Pitot tube and piezometer ring and thermometer, and the Wahlen gauge. The blower was used to supply a definite amount of air, which was measured by means of the Pitot tube and the Wahlen gauge, and this air was then delivered to the furnace and out through the warm-air register. At the register, the anemometer was used to traverse the area and so determine the mean velocity of the air passing the register grille. The speed control of the blower motor made it possible to reproduce any desired velocity of outflow, and a calibration of the anemometer was made for any given register temperature. Such a calibration curve is reproduced in Fig. 13. This method of calibrating the anemometer was particularly advantageous because it was done exactly under the same conditions as existed during a test of the furnace.

The temperature measuring equipment consisted of thermocouples for reading temperatures at points where radiation of heat from the furnace rendered the use of thermometers inaccurate. Thermometers were used at such external positions as were not affected by radiation.

The air temperature controlling mechanism which operated the draft dampers is described in section V of this bulletin. Successful operation of this device was absolutely necessary in all furnace tests, for upon proper draft control depends the rate of fuel combustion, which affects outlet air temperature, capacity, efficiency, and all other characteristics of operation of the furnace. The device used consisted of a special thermostatic element and mechanism used in conjunction with an electric motor for operation of the air supply damper and the butterfly damper in the smoke pipe of the furnace. Details of the device, described in Section V, are shown later. The importance of maintaining consist-

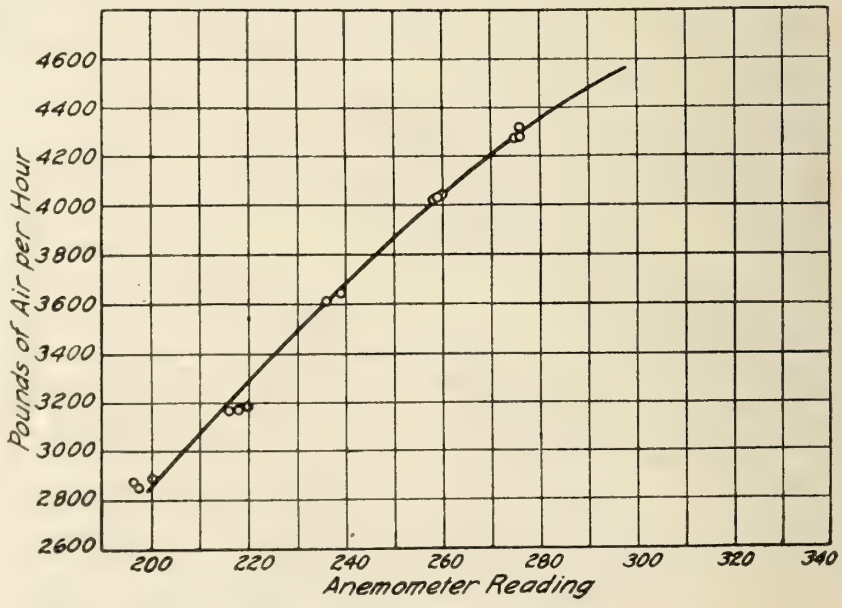

FIG. 13. TYPICAL ANEMOMETER CALIBRATION CURVE

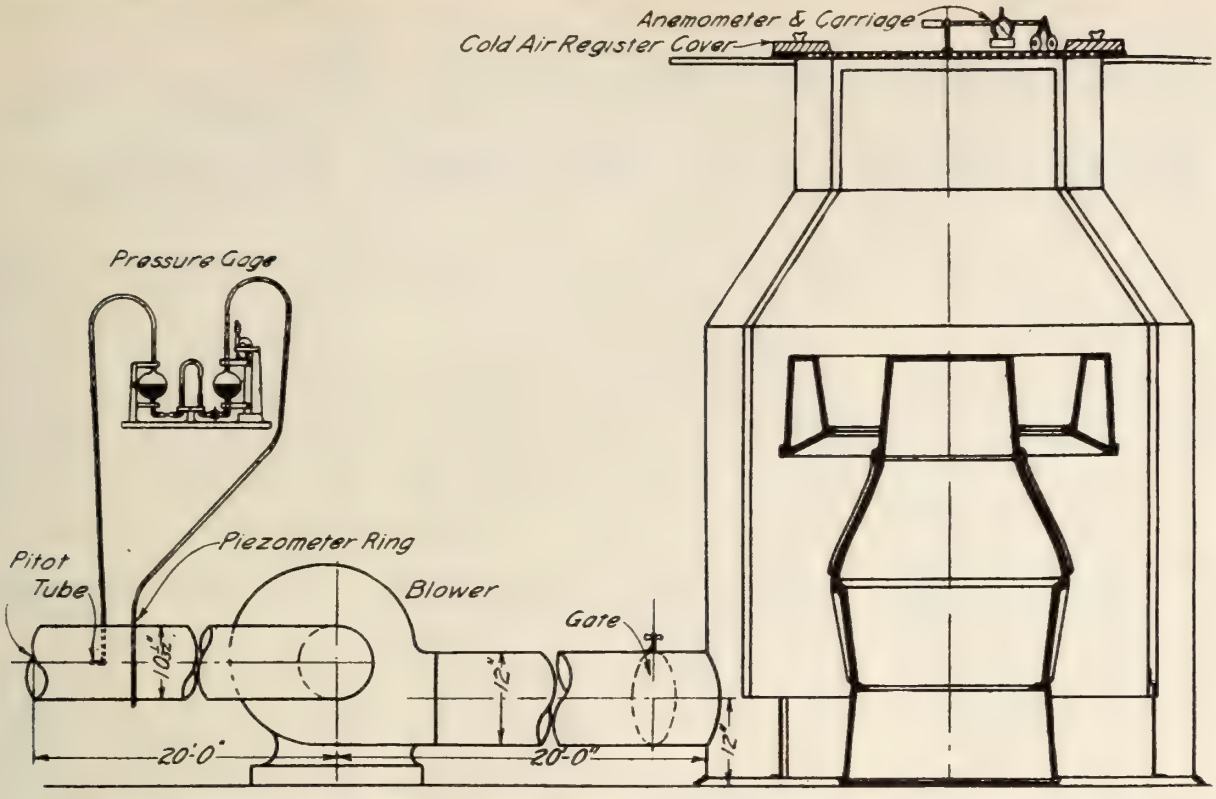

FIG. 11. SECTIONAL ELEVATION OF PIPELESS FURNACE, WITH ANEMOMETER CALIBRATING EQUIPMENT

ent conditions in furnace testing cannot be over emphasized, and a uniform combustion rate is absolutely essential. Since draft is the controlling factor in combustion rate it was found desirable to keep a continuous record of the operation of the draft dampers. The draft recorder drew automatically a chart which showed how uniform were the periods of operation of the dampers. The draft tube entered the smoke pipe at a point six inches outside the furnace casing. The draft was controlled by a butterfly damper in the smoke pipe, and the ash pit damper. The check damper in the smoke pipe was sealed to prevent any leakage of air into the pipe with consequent errors in the CO^2 reading. For CO^2 determinations a recording meter was used.

In the conduct of a test on the pipeless plant the services of two men were required, except in calibrating the anemometer, when three were necessary.

(To be Continued)

Solving Plumbers' Accounting Problems

Some Plumbers Take A Great Deal Of Work On Which There Is No Profit Because They Have Not A Proper System of Administration—A Successful Master Plumber Outlines Reasons For His Success

Written for Sanitary Engineer by C. D. HENDERSON, President Henderson Business Service, Ltd., Brantford, Ont.

ASK ANY sanitary engineer what he is in business for and he will answer "To make a profit" and yet day after day he sells goods and takes contracts on which he knows down in his heart there is no possibility of deriving a profit.

Ask him why he does this and he will likely say that he can not obtain a fair price in competition—or in other words—he admits that he is guided by his competitor rather than by his own good judgment.

This is a regrettable condition of affairs that exists in few other lines of business and which is responsible for the fact that few sanitary engineers are making any headway, commensurate with the care and hard work necessary.

Readers of this article will say it is all very well to criticize but what we want is a solution out of the difficulty. The writer is not posing as a "Business Moses" who will lead our trade out of the wilderness, but I do know there are some sanitary engineers in Canada who are the exception to the rule and a study of their business methods might help others who are less successful.

A Case in Point

Without mentioning any names, I will take for example a concern in Ontario whose progress I have watched for ten years. In 1912 this firm occupied a small but neat inviting shop in a medium sized city and both parties were well and favorably known in the district, one of them a practical man and the other of good business ability with a fair knowledge of the Plumbing and Heating business. Competition in this city was and still is exceedingly keen, in fact the casual observer might have said that the business was overpopulated. But these two men had vision—they knew that there would be abundance of work to do and believed that the majority of people were willing to pay a reasonable price for quality and service. Unlike their competitors, they did not have the idea that price was always the dominant feature of a sale, in fact, their plan was to work up a clientele of a good class of customers and create new business rather than pitch into the hurly-burly of cut throat competition.

Now, as to their progress to date—They have not installed all the big jobs

(Continued on page 15)

Questions and Answers Regarding Plumbing and Heating Practice

Question

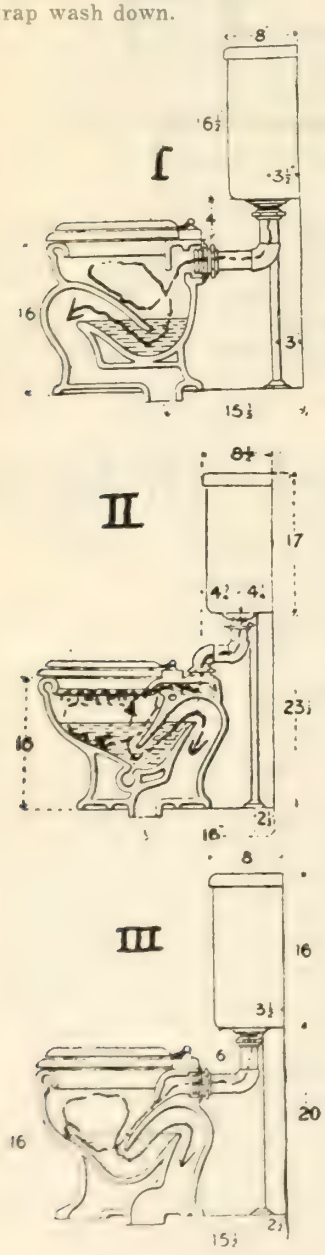
The Editor, Sanitary Engineer.

I am an interested reader of your magazine, and wish you would kindly explain, and demonstrate by sketch, the action of water subsequent to leaving the tanks of the wash down, siphon jet and siphon action closets.

AN APPRENTICE.

Answer

The following three sketches will demonstrate the action of water subsequent to leaving the tanks of the 1. wash down, 2. siphon jet and 3. reversible trap wash down.



RE FUEL CONSUMPTION

The Editor, Sanitary Engineer.

Would you kindly give an estimate of the amount of fuel per day for a theatre containing 1,314 feet of radiation and a Gurney boiler capacity 2,500 feet No. 945s. The walls are of solid brick with air space and plastered on the brick inside. There is a suite and two stores in the front of building. Temperature required in auditorium, about 65°, temperature outside anywhere from freezing to 35 below. The owners claim they have an excessive fuel bill. They are burning Drumheller coal (lump). Thanking you for your trouble.

(Signed)—ROBT. LUMO,
Dauphin, Man.

Answer.—The amount of fuel required to keep a building at a uniform temperature day and night may be estimated on the basis of 3½ tons of hard coal or 2½ ton of hard coal for every hundred square foot of direct steam radiator surface during a heating season of 180 days. In a theatre building the heating surface required is something different to that for the ordinary type of building. An allowance must be made for intermittent service, and this varies with the type of theatre where such radiation may be installed. A building requiring heat at night only requires 30% more heating surface than one that is to be heated every hour of the twenty-four. Now, if the radiation surface in this building has been figured on this basis of a 30% margin, we may consider that the heating surface is equivalent to 1,000 square feet of direct surface, and that 35 tons of soft coal will be required for the heating season.

If the radiation has been figured so that no allowance has been made for the intermittent service we must base our estimate on the entire radiating surface installed, thus allowing 46 tons of soft coal. From this we can deduct about 1-3 to allow for the eight hours when the fire may be allowed to run on a checked draft.

Therefore, we may say that between 30 and 35 tons of soft coal will be a safe estimate of the amount of fuel required for an average winter season of 180 days.

SEWAGE DISPOSAL

Question

The Editor, Sanitary Engineer.

Having passed over your sewage disposal and waterworks talk, I thought you could be of great help to me in regard to a waterworks which I am about to repair. What would be your idea of an underground intake? The reservoir is situated between two hills and we have springs coming from both sides. Would it be better to build a dam and syphon the water into the reservoir? If I had an underground intake, would the quicksand interfere with it? I was told that the sand would pack around the pipes and within a short time stop them from absorbing water.

(Signed) H. FREDETTE, Plumber,
Plantagenet, Ont.

Answer

In answer to your inquiry re waterworks, whilst your letter is not very clear we presume the information you are seeking has reference to the best method of collecting the water from the various springs on the hillsides adjacent to yuor reservoir, which, we take it, is in the valley.

Firstly: If all the outlets of the springs come to the surface above the elevation of the reservoir and can be collected into one jointed pipe main laid direct into the reservoir, this appears to be the easiest solution of gathering the water, provided of course, that same is fit for drinking purposes and not contaminated.

Secondly: If the collecting ground is saturated with water and it is only possible to gather the supply by under drainage with open jointed field drain pipes into one main pipe leading to the reservoir, then from the description of the ground through which the branches and main will travel there will always be a chance of vegetable growth and silt finding its way into and around the open pipe joints along the pipe line and same cannot be entirely prevented. But a certain amount of growth and silt can be prevented reaching the pipe by using an open jointed spigot and socket pipe and surrounding same with large broken stones, etc., so as to create a space for the silt to collect in, and at the same time arrest the growth of all vegetable roots around same, but eventually if there is a great amount of sand to be dealt with, this will in the course of time become siltered up and consequently the pipe joint blocked.

Thirdly: Before advising the best construction method of connecting up the reservoir from the collection area, we would have to be furnished with a sketch plan and profile showing the distances and general location of the reservoir, the springs and the grades and also some data regarding the collection ground with reference to the soil and the quantity of water available.

From the general opinion gathered from the letter we would think that if the levels permit of an earthern dam being constructed at little cost and the under drainage system proposed is adopted, the scheme would be more efficient, and consequently more economical, if the dam was constructed and designed to act both as a storage and settling basin. In that case ample provision should be made for permitting same being easily cleansed.

If you feed directly into the reservoir from your underdrains the silt or sand will find its way through the pipes into the reservoir and eventually get into your mains, damaging the service valves as well as discoloring the water. It would then be advisable to divide your reservoir into two compartments and have your intake in one and your outlet in the other, trapping the inlet and outlet pipe by means of a baffle wall, so that the silt will settle in your first compartment and the clear water will pass over the baffle wall into your mains. If this arrangement is carried out in designing the tank, ample provision must be made for the simple cleansing operation of the first compartment.

As regards the size and general details of the tank (or dam if constructed) no data are given to permit us giving any approximate sketch, so same cannot be dealt with in this reply but the second compartment of the reservoir should be of sufficient size as to hold ample water supply for the needs of the community during the cleansing operation and also some by-pass system should be installed for diverting the water from one compartment to the other during same.

Asbestos Industry Tax Under Discussion

Quebec Legislature Reviews Taxation on Asbestos Products—Domestic Producers Claim Handicap By Reason of Tariff Situation

MONTREAL.—The question of the royalty on asbestos production at the mines, and a reduction of tax on all products manufactured in the province, was recently discussed in the Quebec Legislature in the hope of relieving the present quiet state in this industry. It was argued that the question of asbestos production should occupy the serious attention of the Government, not only because it was one of the province's richest natural resources, but because of its relation to the tariff situation. In this connection, it was pointed out that asbestos used in world commerce comes from the province of Quebec, and is exported to the United States without any appreciable duty on it, whilst the United States Government through the Fordney Act, was putting additional duties on Canadian made goods crossing the border.

The Minister of Mines, however, pointed out that the tax that was at present being imposed on the asbestos production of the province was 3 per cent. and the Government had, in order to encourage the manufacture in the province, reduced this tax to 2 per cent. on all asbestos manufactured within the limits of Quebec. The tax had been fixed by Order in Council. First it had been on the profits made by the asbestos companies but the owners had objected to this, particularly during the war period when asbestos was selling at a high price. Consequently the tax was changed to 2 per cent. on the net value of the product. However, the business increased very rapidly from about $5.000,000 to $14,800,000 and in 1920 the tax was raised to 3½ per cent. in 1918 and in 1920 it was raised to [illegible] per cent. Production was carried on to such a large extent, however, that the market had been flooded and all the companies had large stocks in their sheds for which there was no market at the end of 1920.

The Government, however, had no wish to interfere with any industry and had reduced the tax on asbestos for export purposes from 5 to 3 per cent. for the first four months of last year, and 2 per cent. on asbestos manufactured within the Province.

SOLVING ACCOUNTING PROBLEMS.

(Continued from page 13)

in their district which seems to be a proud distinction that many of our sanitary engineers are striving for, but they have had a very nice share of the business in the community and to-day as a result of their high aim and good business principles, their financial standing is a credit to the trade. Their showroom is one of the sights of the town and they both own their homes and are yearly laying aside a little sum for the day when they can enjoy a well earned rest.

Some Good Advice

If you were to have a chat with either member of this firm and were to ask their reason for success, I imagine he would say something like this:

"My friend: Success in the plumbing and heating business like any other business, consists in buying goods (or labor) at one price and selling at a higher price. The higher price being ample to cover the cost of operating your business, and a reasonable profit. There is no mystery about it. It is simply a fundamental law of business which no human being can ignore without ending in disaster. For instance: If a job costs $100.00 and my books show that it costs 25% of sales to operate my business, then it is quite apparent that I must add 33-1/3% to this $100.00 to break even and then my profit must go on top of that. So you see how fool-hardy it is to imagine that we can beat the game and by some miracle we may make a profit by adding 15% or 20% to cost.

"You will say that you can't obtain any business if you add 50% or 60% to your cost—very well, if you admit your inferiority as a business man by saying that you are unable to obtain any business without paying for it out of your own pocket—then you had bettter get out of business and work for someone else who can, otherwise you will simply plod along year in and year out, making no more than a bare living.

Other Important Factors

"This to my mind is the most important feature of business success. Of course, there are other things to be considered, such as establishing a name for quality; keeping an accurate accounting system; careful buying; introducing a spirit of salesmanship into your business, all of which spell advancement, financial responsibility and contentment. Now think this over and come in again next week for another chat."

You—Mr. Reader, may say this all sounds nice in theory, but "there ain't no such animal." Well, I'll tell you, you're dead wrong because I know a few of them and if your business is not what it should be and you would like to talk to a fellow engineer who is making good, just drop me a line and I will be glad to arrange an interview for you with one of them.

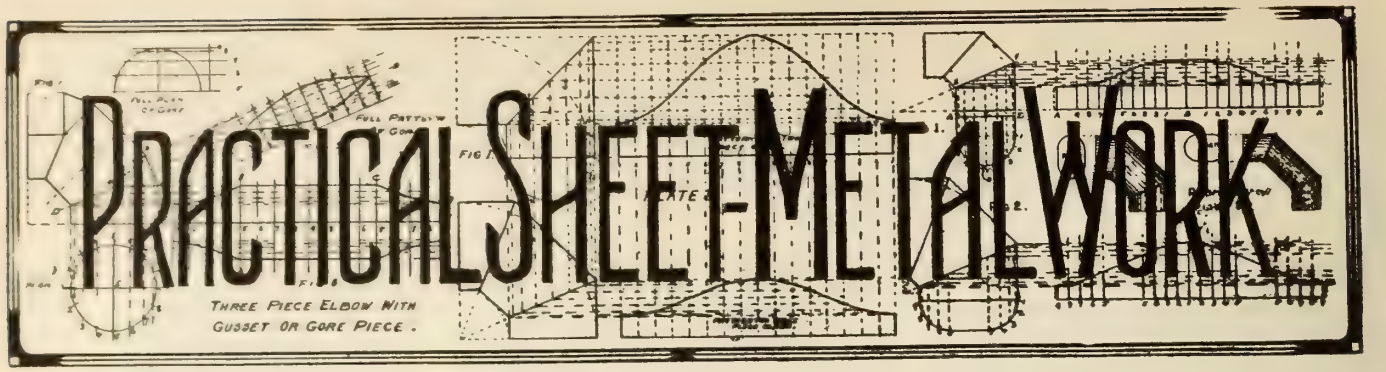
Metal Market Tendencies

COPPER.—Dullness is the most prominent feature of the copper markets. Buying continues of a light nature, with American reports indicating that some export sales have recently been made at concessions. The fact that more copper producers are preparing to resume operations in the near future, has caused the present dullness. Consumers appear to have their needs covered for the first quarter, and a waiting policy is generally being adopted as regards future requirements. The local quotations remain at 17½ cents.

TIN.—The tin market is quiet with little variation in prices. Some easier levels are reported from London, but not of sufficient extent to affect the comparative firmness of the market on this side. Inquiries are not lacking, but actual business is quiet. The local price average is 36 cents.

SPELTER—This market is described as moderately steady with a fair amount of activity. Some awakening of buying interest is looked for, with slight indications of a firmer recovery. Prices of spelter on domestic circles are generally unchanged, the local level being $7.00.

ALUMINUM.—There has been no change in the aluminum market worthy of particular record. Holders, however are not pressing any metal for sale, so that prices generally remain unchanged from previous levels. The local quotation averages 27 cents.



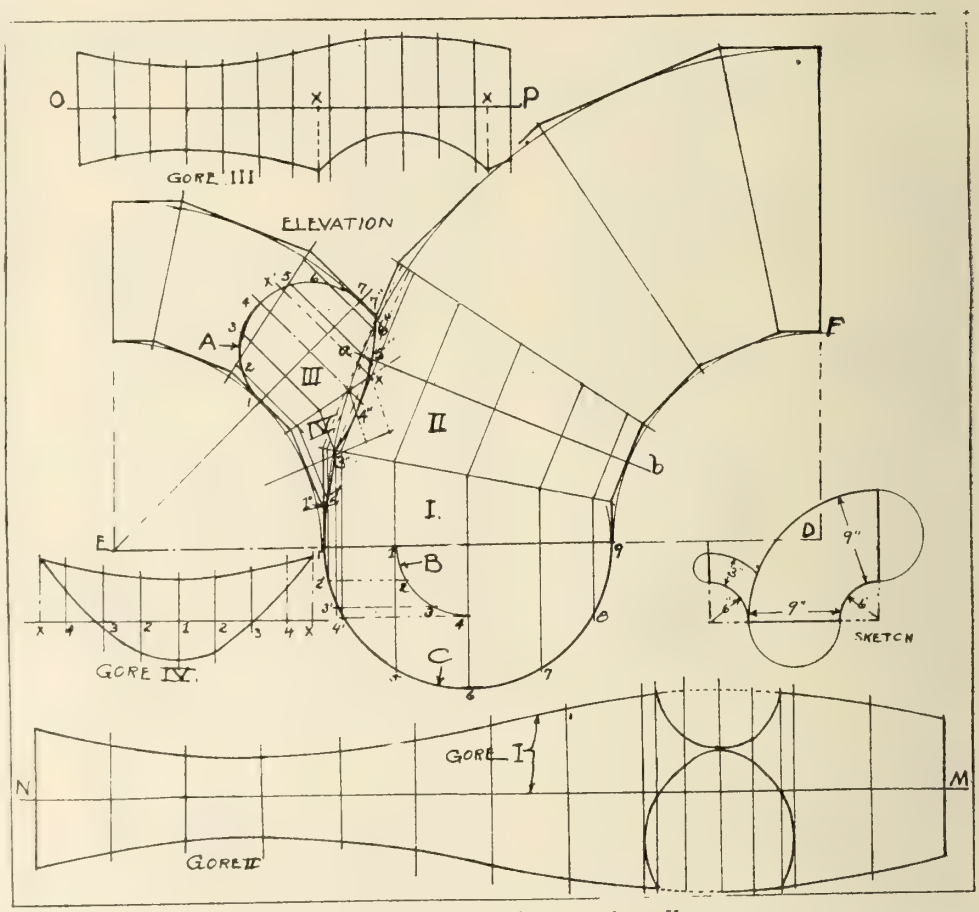
Patterns for Intersecting Elbows

Written for Sanitary Engineer by O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Missouri

OUR SKETCH of elbow shown in this drawing was used in connection with a forge piping system with measurements as shown in the sketch. It might have been possible to shift the smaller elbow with an angle to intersect the straight pipe elbow, with a straight tee and that would be saved quite a bit of developing, but such possibilities a person never knows whether they are permissible from the bare drawing.

In this case the large elbow is described first, following the measurements for the throat as D-9, and for the heel as D-1. Then treat the elbow for a 5-piece elbow, or 8 equal spaces in the heel and draw your miter lines as shown. Then describe the small elbow so it is tangent with the heel of the large one as F-1, and adding the diameter. Then treat this also for a 5-piece elbow, making the heel of throat into 8 equal spaces, and draw the miter lines as shown. Through the centre of the gore III draw the line F-7 and from its center describe the half section A and divide in equal spaces. From here draw the lines parallel with the heel to intersect the miter line between gores III and IV, and then from this 4th gore extend them as shown.

Next describe the half section C and reproduce the half section A and set a quarter of it as B, with all its points and from here project them to intersect the large section as in points 1-2-3-4. The balance of C divide in equal parts and square up lines thereby producing elevation lines. Now where these lines intersect those lines from A you establish the miter line as shown. Observe that the miter between gore III and IV crosses the developed miter in point X. This will be the high point as a start and finish for the gore IV. So this completes the working drawing from which the patterns may be laid out.



Patterns for intersecting elbows.

To set out the pattern for the large elbow, we pick the girth from the section C and set it off on a line M-N. Draw straightout lines and then pick each line from gore L of elevation and set on the top and on the bottom side M-N the same as you would develop any elbow pattern. Only in this case the upper half of pattern will represent the gore I and they both together will represent the gore II. All the other gores can be laid off from this pattern. If the opening in the large elbow is desired then from the line a-b pick those distances to points 7-6-5 x 4-3 and set them off on the proper line working in each case from the center of the line M-N. This will give the outline for the large opening shown. In the same pattern we set off the opening as required for the heel of gore I by picking the lines from base 1-9 to 1-2-3 and setting them off on similar lines working from the center line M-N. In this way we lay off both patterns for openings in the one girth and they can be transferred in the other gores cut out of metal by simply quick punching through the lines thus established.

To set out the pattern for gores III and IV of the small elbow, they are set

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

Article No. 48 of Series; Illustration 58-59.

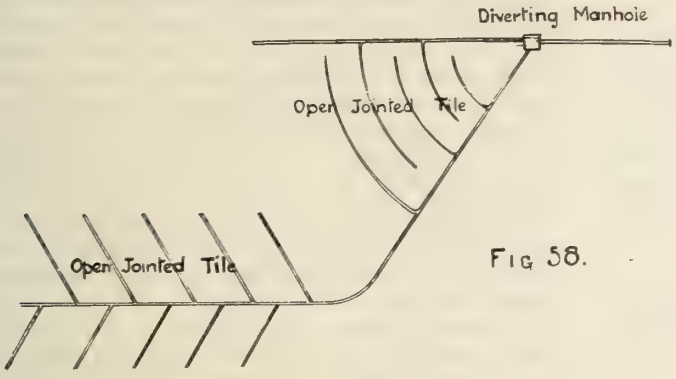

FIG 58.

FIGURE 58 illustrates another system of arranging the tile drains which will produce good results providing the tiles are laid correctly.

Fig. 59 shows the layout of a complete private installation, utilizing unsuitable ground for filtration purposes. The ground being badly drained, under drains are laid centrally between the distribution tiles at a lower level and surrounded by coarse material to allow the water in the ground to find ready access to the main outlet into the stream which should be located wherever possible, above the maximum flood level of the stream. Valves should be inserted in the chamber so that the sewage can be applied to any portion of the area in order to provide the necessary period of rest required for bacterial life.

NEED NEW HEATING FACILITIES

A new heating apparatus is needed for the town hall at Napanee. Boyle & Son offered a warm air furnace at $667, the council to do the needed work. The council decided to ask for tenders for a hot water system for heating the council chamber and offices, and a hot air system for the hall above.

ways, reclamation of old inland ponds, bogs and swamps, and the use of more water for the family and the stock now than in the earlier days of the country. When this Province becomes more thickly populated and when all the farm homes and stables are equipped with water systems, the problem will be still more acute unless present supplies are increased by making old wells deeper or sinking new ones into good water-bearing formations at lower levels, says R. R. Graham of the Physics Department of the Ontario Agricultural College, in a recent report.

In addition to this problem, there is the more serious fact that present supplies are badly polluted in certain sections of the country. The two difficulties, namely, shortage and pollution, in some cases at least, will in all probability be eventually overcome by the same method, namely the sinking of deeper wells.

The Department of Physics at the O. A. C. is now co-operating with the Geological Department of the University of Toronto, and it is hoped a topographical survey of the Province will soon be made showing the main water-bearing

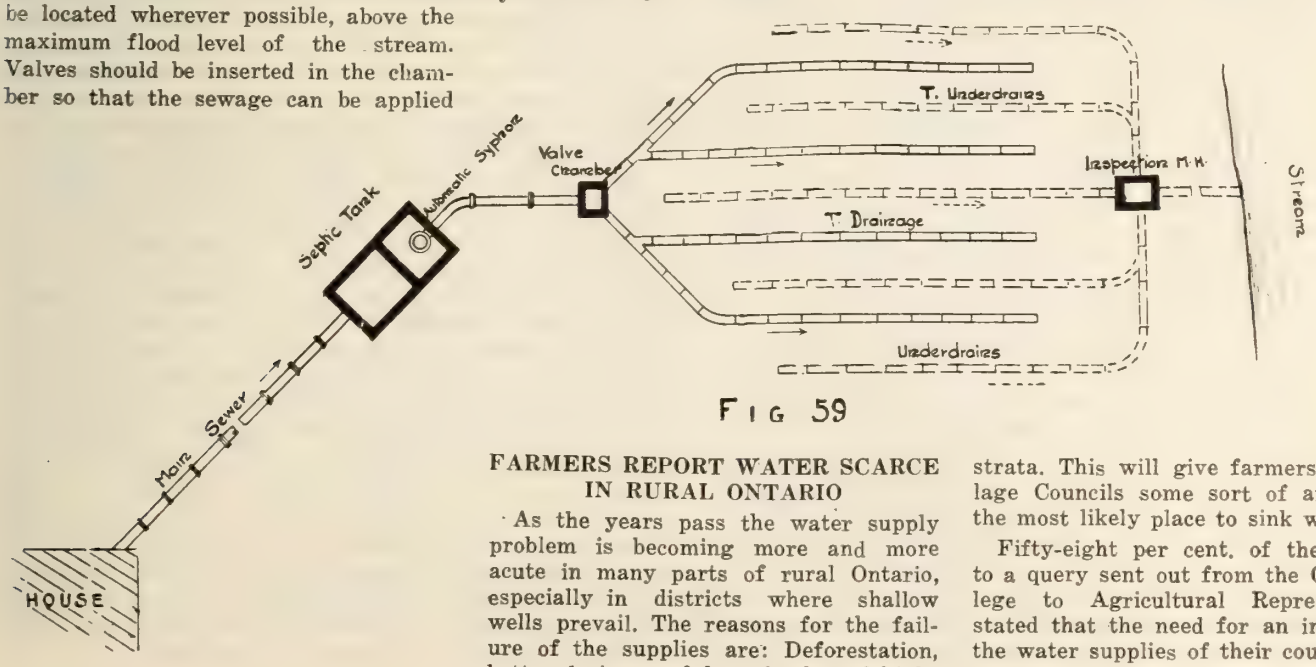

FIG 59

FARMERS REPORT WATER SCARCE IN RURAL ONTARIO

As the years pass the water supply problem is becoming more and more acute in many parts of rural Ontario, especially in districts where shallow wells prevail. The reasons for the failure of the supplies are: Deforestation, better drainage of farm lands and high-

strata. This will give farmers and Village Councils some sort of an idea of the most likely place to sink wells.

Fifty-eight per cent. of the answers to a query sent out from the O. A. College to Agricultural Representatives stated that the need for an increase in the water supplies of their counties was urgent.

Sanitary Engineer

Vol. XVI FEBRUARY 15, 1922 No. 4

A Field For Business

AT A RECENT convention of a Canadian organization of farmers' wives it was stated that in reply to a questionnaire sent to two hundred and twenty-five representative farm homes, the following reports had been made. Thirteen enjoyed electric light, sixty-eight reported furnaces, one hundred and sixty-five had no water in the house, forty had good water systems and nine had only soft water, sixty-six had washers, three had electric washers and churns and five had minor electric appliances.

As a representative showing, these figures indicate the great need for water supply systems, sanitary equipment, electric lighting systems, etc., on Canadian farms. With such a fertile field offering there should be no lack of business in the rural districts. True the farmers have had to face lower prices and poorer crops in the last year or two, but in the majority of cases they have savings laid away from better years for times such as this, and they will readily see the advantage of encouraging efficiency on the farm by the use of modern equipment.

Careful Guidance

IN LAYING plans for carrying on plumbing business during 1922 careful consideration should be given to the trend of the times. The extent of the plumber's success will be governed largely by his ability to anticipate the trend of public sentiment and other influences which will affect this year's business. Many lessons were learned from business in 1921 and with these lessons learned and business now in better condition than at the commencement of last year, the plumber has a fair start toward making 1922 a better year for business than was 1921. Without attempting to make any predictions as to what is likely to transpire, attention can be drawn to some developments which are bound to affect the situation. For instance conditions are such that economy, conservatism and efficiency will prevail in business because the pressure of circumstances compels observance of these measures.

Business that tries to run ahead of the conservative progress of the times is liable to disaster. This does not mean that plans for stimulating trade should not be encouraged, but that these should take into consideration existing sentiment and keep in mind the fact that business is business and not speculation. During the boom, business had to speculate despite itself, due to the rapid change of circumstances. Rising markets often made it unsafe not to "go long on materials." Failure to expand under conditions then existing seemed like turning one's back on opportunity. But that is not true of prevailing times. Undue stimulation and expansion will not bring the same response this year. Profits can be made and success can be established but they must be built up by means of economy and efficiency. Turnover will probably not reach the volume experienced in the boom times due to the economies which in turn are being practised by the consumer. Therefore profit margins in business can only be increased by economies in production costs, coupled with a fair and justifiable effort to encourage business.

Fake Directory Schemes

A NATION-WIDE swindle involving over a million dollars and of which business men are the victims has just been brought to light as outlined elsewhere in this issue. As it is possible that the large plunder secured may tempt others to try similar schemes in this country it is well that the trade should be made acquainted with the modus operandi adopted.

The operator, a well dressed businesslike man, calls upon a firm with a dummy directory, (which turns out to be a bogus one), in which appears an advertisement of the firm in question. He asks for payment. If the order is questioned a signed contract is produced, the signature to which has been obtained by one of several fraudulent methods. In most cases however the presentation of the printed advertisement is sufficient to lull suspicion and the amount demanded is paid.

The scheme is not a new one; it was worked for a time in England some years ago, but for much smaller amounts—usually two or three dollars—on the pretense that the firm's name was to appear in larger type in a directory, which of course was a mythical one.

It should be borne in mind that no honest publisher of a directory will require payment without full investigation where any suspicion exists in a customer's mind. Where doubt arises business men are warned to investigate thoroughly before making payment for advertising space.

* * * *

The Sales Tax

A NUMBER of recommendations will come before the next session of Parliament which is to assemble on March 8, and to the trade one of the most important matters will probably be that of the Sales Tax. While in principle this form of taxation is as acceptable as any form of taxation could be, yet there are many loopholes in connection with the regulations under which it is imposed which permit of a good deal of misunderstanding.

Recent articles which have appeared in Sanitary Engineer on this subject have set forth views of plumbers, wholesalers and manufacturers on this question and it is apparent that there is a great need for some definite line of action to be established and followed throughout. At the present time some manufacturers are absorbing the Sales Tax while others are not, the same applies to many wholesalers and retailers. The way it works out the retailer generally has to absorb a goodly portion of the tax and this is contrary to the original regulation in which the government made it clear that the Sales Tax was to be passed on to the consumer. Certain manufacturers who are passing on the Sales Tax, as they are expected to do, complain that the practice of other manufacturers in absorbing it as an added incentive for business are establishing a precedent which makes it hard for them to do business.

A great deal could be said on this phase of the subject but it is unnecessary as the question of margin of profit does not directly bear on the question of how the Sales Tax should be handled. The equitable way for the tax to be dealt with is to pass it on to the consumer as the government intended it to be. Everyone is a consumer and will pay a fair portion of taxation according to what they buy. It is to be hoped that a thorough airing of the question will result in some satisfactory action at the next session of Parliament.

Fake Directory Scheme Run to Earth

Ringleaders in National Directory Frauds Indicted by Grand Jury—Five Men Arrested on Charge of Mulcting Million from Directory Advertisers in Many Cities

IF AT any time during the past twenty-five years your firm has paid forty, seventy-five or several hundred dollars to a business directory publishing house merely to honor your signature to a contract for advertising space which the officer signing did not recollect ordering, and of which no record could be found—you were possibly one of thousands who have been victimized to the estimated extent of more than a million dollars by a ring of alleged directory swindlers who have waxed rich on their spoils through a generation.

It has remained for the vigorous administration of the New York District Attorney, Joab H. Banton, at the request of the National Vigilance Committee, to take action of a decisive nature by rounding up five men, known in eminently respectable business and social circles in New York and Brooklyn, who are alleged to be the "higher-ups" in this nation-wide scheme which is believed to have bled unsuspecting business men in the name of advertising. Incalculable injury to the legitimate directory publishing business has resulted from the practices against which action has been taken. In the past, legitimate directory publishers had themselves spent thousands of dollars to fight these practices with which they were, as competitors, almost powerless to cope.

Under the keen direction of Assistant District Attorney Jerome Simmons, who had charge of the investigations for the State, the intricate phases of the alleged fraud were uncovered one by one. It was the privilege of the National Vigilance Committee of the Associated Advertising Clubs of the World to aid Mr. Simmons in many ways. When arrests were made every New York City newspaper gave a front page column or more to the story. Newspapers in scores of other principal cities carried similar stories.

The Men Arrested

Three brothers by the name of White and a partner, William B. Orr, were indicted by the New York County Grand Jury and arrested on December 30th, 1921, on charges of Grand Larceny. The White brothers are James H., Michael, and John F., all of New York City. William B. Orr is a resident of Brooklyn. These men did business under the name White, Orr & Co., at 156 Fifth Avenue, New York City, where they published a book known as "Reference Register." It is alleged that they collected every year on advertisements in this book although two issues only were published in the last four years. The book also contained advertisements of financial and commercial firms of high standing which had never been ordered nor paid for by the advertisers.

Arthur B. Bowen, one of the principals in the alleged fake directory scheme—but operating independently of White Brothers and Orr—was indicted and arrested several weeks ago. His arrest was kept secret until the others could be apprehended. The charge against Bowen is forgery, alleged to have been accomplished by altering an innocent signed paper into a contract for advertising space in a directory which never existed. Bowen's arrest was made by Detective Joseph A. Daly, of New York Police Headquarters, in charge of detectives who worked on the case, when he discovered a hunchback negro in a little job printing shop in Harlem by whom it is alleged Bowen had advertisements printed and additional lines printed on signed slips to be collected.

Among the business directories, under spurious publishers' names, on which it is alleged fraudulent collections have been made in various parts of the country are: Randall's Commercial Register, Lockwood's Reference Directory, Cushing's Directory, Livermore's Lexicon of Financial Firms, Howard's Handy Guide, Lloyd's Industrial Record, Parker's Annual Business Manual, McMillan's list of Manufacturers, Norcross Reference Book, Plymouth List of Jobbers and Odell's Official Directory.

An Ingenious Scheme

The mulcting scheme in which it is charged the Whites, Orr and

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

OBITUARY

Chas. H. Ivey, vice-president Empire Brass Co., London, Ont., died in Naples, Italy.

MOVE TO NEW OFFICES AND SHOWROOMS

Byrne Brothers, Toronto, announce that they have removed to new offices and showrooms at 465 Bloor Street, West.

SCARBORO WATER SYSTEM WORKING IN GOOD SHAPE

Birch Cliff.— With a number of services yet to be ins.alled, 170,000 gallons of water are being pumped daily by the new Scarboro waterworks system. The capacity of the plant is 500,000 gallons a day. It was stated at a meeting of the Public Utilities Commission that the actual water consumption would not be given until the meters had been given their first reading. The plant is working perfectly and the engineers reported that all the pumps had lived up to specifications.

IMPRESSIVE FUNERAL SERVICE

Port Arthur, Ont.—The funeral of William Brown Sime, ex-Alderman and head of the Dominion Plumbing Company, Port Arthur was very impressive. The funeral service at the house was attended by a large number of persons and hundreds lined Court Street, along which the procession proceeded to Arthur, and, with bared heads paid a silent tribute to the passing of an estimable citizen and one who had been associated with many public organizations. All plumbing and heating establishments were closed and many master plumbers attended the funeral.

OPEN PLUMBING BUSINESS

Sarnia, Ont.—Bob Callum and James Sweet announce that they have formed a partnership to engage in plumbing, heating and sheet metal work of all kinds. Both are well known in the city and especially so in the building trades which they have been associated with locally for a great number of years. The former served his apprenticeship with W. J. Barrie and for eight years was with Goodwin and Co., and the past seven years has been employed with J. Filsinger. The latter served for eight years with J. Filsinger. The new company have leased premises at 139 Queen Street and are now open for business.

ONTARIO INCORPORATIONS

Gentle, Travis and Weinraub Ltd., Head office Toronto, capital $40,000, to carry on business as plumbers, steamfitters, tinsmiths and manufacturers and as contractors for plumbing and sanitary fixtures and supplies, heating and ventilating plants, drainage work, etc.

ARMSTRONG HOLDERS

The Armstrong Mfg. Co., Bridgeport, Conn., has recently placed on the market two sizes of holders which have been designed for use in making both right and left hand pipe nipples. The one holder known as No. 20 is suitable for nipples from ¼ to 1 inch in size, while the other holder known as their No. 30 is for nipples ranging in size from 1 to 2 inches.

CHANGES IN FIRM

Hamilton, Ont.—The Kaustine Company of Toronto, which has been reorganized and transferred to Dundas, is one of the new local industries which is having a successful start. Associated with the concern is the Dominion Welding Products Company. The new directors are John F. Crowley, president and general manager; H. F. Powell, vice-president, and W. G. Gibbs, all of Dundas. The company manufactures steel tanks, steel plate, water supply and sewage systems. The concerns are operating at present in the old Chapman Engine Works premises, and work has been going on for some time getting in the equipment of the two companies.

HEATING PLANTS URGED FOR WINNIPEG HOUSES

Winnipeg.—The establishment of central heating plants, under civic ownership and control, is believed by S. C. Oxton, deputy minister of public works, in the provincial government, to be a solution to the problem of heating Winnipeg buildings. Mr. Oxton bases his opinion on the record of the provincial government's central heating plant. This plant heats the parliament buildings. The cost of heating is away below what it would be with a separate plant in each building.

Mr. Oxton believes it would be much cheaper for householders to pay their share for a central heating plant than to provide and maintain their own plants. He said to establish a central heating system the limit of radiation would have to be arrived at. Once established, such a system would free householders from furnace worries.

McCLARY MFG. CO. BUYS REPUBLIC STAMPING AND ENAMELING COMPANY

Announcement has been made to Hardware and Metal by the McClary Manufacturing Co., London, Ont., of the purchase by that firm of the Republic Stamping and Enameling Company of Toronto.

LONG BRANCH WANTS WATER SUPPLY

Delegations from both the east and west sections of Long Branch will attend the Township Council to ask for immediate consideration of the recommendation of the superintendent of sanitary engineering of the Ontario Board of Health, that drinking water be secured from the New Toronto mains. Nominal terms, covering cost and interest, are stated to be available.

WESTERN ONTARIO NEWS

W. H. Biggs, 72 Bruce St., London, wants prices on warm air heating, plumbing and electrical work for new $4,500 residence.

Fred Merrick, Front St., Strathroy, Ont., wants prices on warm air heating, plumbing and electrical work for new $3,500 residence on which he has commenced work.

The congregation of Dundas Center Methodist Church, London, want prices on hot water heating system which it is planned to instal this spring. Rev. John Garbutt, 484 Dundas St., pastor.

Watt & Blackwell, Bank of Toronto Building, London, are preparing plans for new sanatorium to cost $250,000, and want prices on heating, plumbing and electrical equipment.

J. Vicar Munro, Bank of Toronto, London, is preparing plans for new $20,000 church to be erected by Methodist congregation at Crediton, Ont., and wants prices on warm air heating and electrical work, also sheet metal work.

Plans are to be prepared immediately for new Sunday school at Listowel, Ont., for Knox Church. H. P. Wanzer, chairman of building committee. Prices wanted on warm air heating, plumbing and electrical work.

Council at Goderich, Ont., will secure estimates on cost of sinking new wells and if satisfactory, contemplates building new pump house and installing new pumping equipment. Mayor Wigle, chairman of committee.

ASBESTOS EMBARGO FOR QUEBEC

Quebec.—"The government is giving the matter of an embargo on raw asbestos very serious consideration," Premier Taschereau states. "We are anxious to do everything possible to build up an industry in manufactured asbestos in this province, so as to reap the benefit of the great asbestos deposits this province contains."

"BULLDOG" SANITARY WOODWORK

An excellently finished and clearly illustrated catalog has recently been issued by Hurd & Co., Ltd., of London, Ont., covering the "Bulldog" line of Sanitary Woodwork. Closet seats and tanks in various designs, makes, and styles are clearly featured throughout. The book is a simple yet adequate catalog covering this class of products.

PETERBORO FILTRATION PLANT SOON READY

Peterboro.—Waterworks Superintendent, R. L. Dobbin, in his report showed that by the commission laying its own pipes in commission with the filtration plant, over $18,000 had been saved. Contracts for the plant were let for $304,-813, and to the end of December, $219,-936 was expended. Expectations are that the plant will be opened very shortly.

OFFER WITHDRAWN BY NEW TORONTO

Etobicoke Township Council has received notice from New Toronto Public Utilities Commission of withdrawal of the offer to supply water for other sections of the township. An offer of two year's standing had been made to supply 100,000 gallons at a 15-cent rate, a second such amount at a 10-cent rate, and a third at 9 cents, but it was deemed unfair to hold these prices over for another year.

The situation is complicated, in view of the recent decision of the Ontario Municipal and Railway Board that the Long Branch water supply must be received from New Toronto, and that no other scheme would be received by the board.

AUTOMATIC TEMPERATURE CONTROL

A new booklet covering automatic temperature regulation has been issued by the Steam Fittings Co., Ltd., of West Drayton, Middlesex, Eng. This booklet gives descriptions and illustrations of a number of devices such as steam traps and other specialties. The purpose of such products is to maintain constant temperatures by automatically shutting off the heating medium when the desired temperature is reached, and re-admitting it at a slight drop. The "Sanson" line of automatic temperature regulators manufactured by the Steam Fitting Co., are so adapted as to operate electric, steam and water heaters. Other products, such as strainers, automatic air valves, thermometers, gauges, and high pressure screw-down bib cocks, are also included in this interesting booklet.

Contracts Awarded

Kitchener, Ont. Heating and plumbing contracts for church costing $40,000, are awarded to Canadian Blower & Forge Co., and Henry Neeb, Foundry Street, Kitchener.

Toronto, Ont. Plumbing and heating contracts for four stores and apartments costing $40,000 for J. H. Rocke, are awarded to R. J. Ritchie; C. J. French Hardware Co., has plumbing and Howard Furnace Co. the heating contracts for four stores and apartments for J. MacLean; Ross Belyea has plumbing and A. S. Poutney has heating contracts for store and apartments for T. Wright; plumbing contract for residence for Ive & Loader is awarded to Duffort Bros; plumbing and heating contracts for four bungalows for T. H. and W. French are awarded to Robert Whitton; John W. Sheard has heating and plumbing contracts for residence for L. Spiers; plumbing contracts for 3 pair residences for M. MacDonald are awarded to W. J. Watson and Howard Furnace Co. has heating contract; R. Whitton has plumbing and W. Howard the heating contracts for four apartment, duplex residence for Simon & Steadman.

Ottawa, Ont. Plumbing and heating contracts for residence for S. Brooks are awarded to A. J. Williams and Gervin & Hodgins; heating and plumbing contracts for two residences for Barrett Bros. are awarded to J. R. Cameron and Gervin & Hodgins.

North Vancouver, B. C. Plumbing and heating contracts for school for North District School Board, are awarded to J. P. Young.

Montreal, Que. J. Demers has plumbing and heating contracts for stores and four residences for Mr. Murphy.

Quebec. Plumbing and heating contracts for rebuilding Morin block are awarded to J. Miller.

Victoria, B. C. Plumbing and heating contracts for alterations to Bank of Toronto are awarded to Barney Boe Ltd.; plumbing contract for alterations to store for A. E. Todd are awarded to Hayward & Dods.

Outremont, Que. Plumbing and heating contracts for residence for J. A. Goyer are awarded to E. Lesperance.

Vancouver, B. C. Plumbing and heating contracts for apartment block for Kitsilano Investment Co. are awarded to Orr Bros.

GAS LIGHT FIXTURES

R. E. King, Maitland, Hants County, N.S.—Could you give me the address of firms making Gas Light Fixtures.

Answer.—We are pleased to quote you herewith the following list:

Barton Netting Co., Windsor, Ont; Bennett & Wright Co., Toronto; Consumers Gas Co., Toronto; Farquhar Bros., Halifax, N. S.; Galt Electric & Gas Fixture Co., Galt, Ont.; The Garth Company, Montreal; W. J. McGuire, Toronto; The Robt. Mitchell Co., Montreal; The Jas. Morrison Brass Mfg Co., Toronto; Wentworth Brass Co., Hamilton, Ont.

FAVORS FORMING DRAINAGE BOARD

Montreal.—For supervising the construction and for co-ordinating all plans for the construction of sewers, the public works committee of aldermen resolved to recommend the appointment of a drainage commission, which would operate on lines similar to the water board, which for two years has had entire charge of the extensive aqueduct improvements.

In the course of the discussion, instances were cited where the insufficiency of sewers was the cause of frequent floodings by the fact that the sewers were too small for the localities, or where a large sewer emptied into a small one, or where a large trunk sewer had been built at the cost of $800,000 and had never been utilized.

As it was further estimated that the construction of trunk sewers in the not too remote future would require an outlay of some $12,000,000, the committee accepted the suggestion of Ald. Bray and will report accordingly.

A New Water-Works Hazard.—Crawfish, according to the Engineering News Record, threatened to destroy a canal bank on the Cape Fear River, by tunneling into the bank and causing it to leak. Sheet piling did not cure the trouble, as the fish worked round the ends or beneath the piling, so rows of auger holes were made in the bank. The holes were filled with chloride of lime and small sticks of dynamite exploded in them. Other holes were charged in the same way with common salt and the fish were presumably exterminated as the leaks stopped.

A CORRECTION.

In the January 15 issue of Sanitary Engineer appeared an article setting forth the selling methods adopted by Wright-Teale Co., London, Ont. An illustration was used on the same page emphasizing some point brought out in the article and by coincidence the illustration was one of the showroom of Messrs. Noble and Rich of the same city. Sanitary Engineer regrets any misapprehension which may have resulted.

FAKE DIRECTORY SCHEME

(Continued from page 19.)

Bowen and their agents have been engaged, while old in concept, has been somewhat ingenious in application. It was particularly well designed to evade detection and identification of the principals.

Checking accounts were opened at various small banks in New York and New Jersey in fictitious names and checks made out to them were collected through these accounts, it is alleged. Assistant District Attorney Simmons found that under the names of Alexander Livermore and Benjamin Knapp, more than $30,000 was cleared through an Edgewater, N. J., bank in about 16 months. This money was then checked out to enrich Orr, the White brothers and their agents

Serious Losses to Advertisers

Investigation showed that numerous firms have been victimized to a serious extent through payments for directories which have never existed. A paint and oil company in New York, when approached by an investigator, searched its files for only 18 months back and found receipts and cancelled checks for advertising space in various spurious directories aggregating almost $3,000. All of these were identified by the investigator as fraudulent.

That the operators of this kind of scheme find graft easy is shown by marginal notations upon some of the used "order blanks" in the possession of the District Attorney. A series of these bear the rubber stamp of a New Orleans lumber merchant, with the signature of his secretary. The slips bear dates of February, 1907, and call for amounts of $700, $640, $510, and $1,000. Upon the $700 order is this pencilled notation: "Signature O. K. Soft."

Written in ink on another order is this: "Have agent discontinue calling. Signature O. K. but don't like price. Too high. Will cut to $500, and keep between it and $600."

But conditions evidently changed for a later order bore this pencil message: "Make it $1,500. Soft."

According to accomplices in the scheme, who have confessed to Mr. Simmons, signatures were obtained originally by getting signed requests for a free directory or a signed order for listing a name in the directory.

Turned Signed Forms Into Contract

After obtaining an original signature, the signed paper was altered by the ancient but convincing process of cutting off a printed line at the top and by printing in new lines, such as, "Order for Advertising Space," or "Publishers' Advertising Contract," and other phrases essential to the alteration in space left for the purpose. One of the witnesses before the Grand Jury was a man who is said to have actually seen James White alter the signed slips and who himself, at White's direction, filled in amounts to be collected. Signatures were obtained time and time again by getting the victim to sign a blank form on the excuse that it must be returned to the collector's office to show that collections had been regularly made. Such form was called a "Has Paid Voucher."

It is alleged that "Phillips' Directory," a small but legitimate publication, bought by the Whites some years ago, was used to get signatures on orders which were later altered and collected upon in various amounts—depending upon the commerical rating of the firm and the ease with which it could be parted from its money by the system employed.

Studiously avoiding use of the mails, great pains were taken by collectors to avoid arrest or serious consequences if arrest occurred. The "collector" always travelled with an "outside" man who carried all the signed papers and receipts to be covered in the day's rounds. The collector carried only his one victim's signed "contract," a receipt and the directory. The book he carried was probably the only one in existence. Thus equipped, he was ready to show the victim his page or half-page advertisement, which in fact had been specially printed and pasted in the book. It carried also many advertisements of prominent houses which were not paid for but were inserted to create an atmosphere of respectability for the book. If the victim became suspicious, the collector withdrew, saying that he would have the office write about the matter. He then returned the signed contract to headquarters and advised that it be killed.

Alleged Principals Evaded Custody

If a collector at work was ever arrested the papers and book in his possession made slim evidence on which to base a criminal charge and yielded no trace of the collector's employers or associates. In fact, as far as is known, few of these agents have ever been in custody. Michael White was arrested in Dallas, Texas, in 1915 with a coworker named J. Mack, but could not be held because of lack of evidence. It is said that an operator in Elgin, Ill., was forced to flee across the prairies to Chicago, to escape arrest by the local police. In San Diego, Calif., many years ago the authorities met with greater success by arresting an agent named Fleischman who carried on his person incriminating evidence leading to a sentence of 5 years in San Quentin.

PLUMBERS ACCEPT CUT

Sarnia, Ont.—Sarnia plumbers after taking a week to think over a wage reduction proposal of 10 cents an hour contained in the ultimatum of the master plumbers, returned to work this week on the employer's terms.

"DUNHAM" STEAM TRAP

Among the catalogs and booklets recently to hand, is a copy of the French issue of Bulletin No. 200 issued by the T. A. Dunham Company, Limited, of Toronto, Ontario. This booklet illustrates two of the principal products which figure in the Dunham system of heating. The preparation of this catalog in French, is with the purpose of being helpful to architects and heating contractors in Eastern Canada. A number of clear cut illustrations, give an accurate idea of the method of installation of Dunham appliances on radiators under varying circumstances.

HEATING THE HOME

An interesting book depicting various methods of "Heating the Home" has been compiled by the Dominion Radiator Co., Ltd., of Toronto, Ont. The introduction to the book deals with the early methods of heating, and introduces step by step the open fireplace of olden days, and the coal-stove and the hot air furnace.

Hot water heating, as achieved by the Safford Mogul boilers and Safford radiators, is then fully enlarged upon in this interesting catalog. The various attributes of this style of heating, are described in detail. A number of illustrations of radiators and heating apparatus in practical installation, complete the booklet.

TYPE "M.H." ELECTRIC RANGE

The Canadian Westinghouse Co., Ltd. of Hamilton, Ont., are now giving special prominence to their New Type "M. H." Electric Range which is their latest design in electric stoves. This product includes all the latest features of electric ranges, including the various heat units, the removable rack guides, the three-heat double-pole switches which entirely disconnect the heaters from the circuit, the thermostat embedded in the oven door to indicate the heat in the oven, and many other modern improvements. Locking handles are provided for the oven doors, and upper warming closet can be furnished if desired. There is the usual large sized oven, a boiler, and four heating plates. The standard plug receptacle is also provided for connecting other socket appliances.

PATTERNS FOR ELBOWS

(Continued from page 16.)

off in much the same way being careful to pick the girth from A and setting the point X in its proper position. Otherwise the process of common elbows is applicable. Laps for riveting the various gore pieces together must be allowed extra, also for seaming.

It will be observed that by extending the lines from section A direct into the large elevation and thereby ignoring the miter between gores III and IV a regular tee intersection would be made and this would save making the small gore pieces IV separately, as this is always a loose part and gives more or less trouble when assembling.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

AN extensive list of price reductions features the current markets on heating and sanitary lines. The asbestos market records easier levels, while reductions are also noted on galvanized sheets, plumbers' oakum, bar iron and steel, Stillson wrenches, brass and copper wire, and the higher grades of white wastes. There has also been a revision in Trimo wrench prices, while some variance is noted in closet outfit quotations. Easier price levels also appear on zinc sheets, and a similar tendency exists in the primary copper stages. Ingot metals are dull and on a buyers' market, with only moderate trade in scrap materials and prices sagging slightly. The recent easier price levels are credited with having stimulated business in boiler tubes, and more inquiries are reported for pipe fittings. Moderate trade at present exists in current circles, requirements for plumbing and steam-fitting materials being described as just about equal to general expectations at this season. Brighter prospects are evident for an active building program throughout the Spring and Summer periods, with signs of present activity in construction prevailing in numerous quarters.

MONTREAL MARKETS

MONTREAL, February 14.—Markets for plumbing and steamfitting supplies are still featured by price recessions in numerous lines. The new standard list on range boilers, as outlined in our last issue, is now issued to the trade. List prices and discount are now quoted where formerly net quotations were given. Up to the present a few firms have not yet adopted these new selling prices, but it is expected they will become general in the near future. Another important revision is on asbestos products. Pipe coverings are now about 25 per cent. lower in prices, this reduction taking place since the beginning of the year. Asbestos sheathing is now quoted at $8.00 per 100 lbs., a reduction of 3 cents per pound. The sheet markets are again featured by a revision in all but American galvanized sheets and black sheets. Reductions are of a minor nature on all lines, but show that the trend of the markets in general is still in a downward direction. Zinc sheets are the only line in lead products with reduced quotations up to the present although the undertone of the market is somewhat easier owing to the trend of metals on the primary markets. Higher quality wastes are again slightly reduced, following the revision of two weeks ago. In tools, chain pipe vises and machinists' hammers have new lower prices. The market for waste materials is little changed, while ingot metals are quiet but a little steadier.

CHAIN PIPE VISES HAVE LOWER QUOTATIONS

Montreal.

A reduction has been made in the quotation on both No. 1 and No. 2 chain pipe vises. No. 1 will now call for $4.15, and No. 2 for $8.75 each,

EASIER QUOTATIONS ON MACHINIST HAMMERS

Montreal.

Machinist's hammers show a reduction in prices of approximately 10 per cent., with following prices now given; No.30, 1 lb., $9.20; 1¼ lb., $9.90 a dozen.

LOWER PRICES RECORDED ON ASBESTOS PRODUCTS

Montreal.

Since the opening of the year the trend of the asbestos market has been decidedly downward, and in the past six weeks quotations on pipe coverings have dropped approximately 25 per cent. Asbestos sheathing is now quoted at lower figures, showing a reduction of 2 cents per pound. This is now quoted locally at $8.00 per 100 lbs. Local distributors now anticipate a fairly steady market as present levels are well down to productive costs, and compare favorably with pre-war prices.

NEW LIST ADOPTED ON RANGE BOILERS

Montreal.

A new standard list on range boilers is now issued, list prices quoted with a discount, where formerly net prices only were given. Manufacturers state that in future list prices will remain at set figures, any revisions occurring to be made through the changing of discounts. Present discounts are 50 per cent. for the standard boiler, and 40 per cent for the extra heavy in all sizes. These new prices are really a revision, as some of the smaller boilers in standard weight are reduced, while larger sizes are advanced in price. The 30 gallon boiler, however, remains unchanged at $8.75 net. In the extra heavy, all the better selling sizes are shown at reduced figures, and only the very large boilers show increased quotations. The amount of reduction varies on the different sizes, some being of minor proportions, while others show a substantial decline. Although at the moment the new quotations are not yet adopted by all concerned, it is expected that in the next few days all dealers will adhere to these revisions, and hope is expressed that the market will now settle down with uniform prices quoted in all quarters. Following are list prices and discounts;

RANGE BOILERS:—

5	Gallon	$13.50
12	"	14.00
18	"	15.00
25	"	16.00
30	"	17.50

100	"	103.00
120	"	117.00
144	"	164.00
168	"	187.00
192	"	210.00

Discounts, Standard weight, 50 per cent.
Extra Heavy, 40 per cent.

HIGHER QUALITY WASTES RECORD LOWER PRICES

Montreal.

There is now a further reduction announced in the prices of the higher grades of cotton wastes, cream polishing being lowered one cent per lb., and three qualities of whites are now one-half cent lower. Other lines, also wool packings and wipers are unchanged in price. The cotton market has displayed an easier tendency in recent weeks and lower quotations are now announced on other cotton materials such as sash

cord, rope, cotton clothes lines, etc. Following are revised quotations.

COTTON WASTE—Cream polishing, 18c. per lb. White—XXX extra, 16c.; XX grand, 15c., XLCR, 14c.; X Empire, 13c.; X press, 11½c.

Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.

Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.

Dominion Wipers—White cotton, 20c; colored cotton, 14c.

EASIER QUOTATIONS APPEAR IN SHEET MARKETS

Montreal.

The local sheet markets are featured this week with revisions on many lines, English standard galvanized sheets, both Queen's Head and Fleur-de-Lis brands being quoted 25 cents per 100 lbs. less. Welsh Canada plates are reduced 25 cents in boxes of 52s. and 60s. while terne plates are now quoted at $16.00 per box of 112 sheets, former quotation being $16.50. In bright tin plate, whole boxes are quoted 50 cents less while the 56 sheet boxes are reduced 25 cents. Black sheets and American galvanized are the only two lines remaining unchanged, quotations on these still being quoted with a range because of the variation in quotations among the different jobbing houses. Business in all lines is described as seasonably light, although a few inquiries now coming to hand offer encouragement, and dealers are still firm in their opinion that a revival in business will be forthcoming at the close of the winter months. Revised quotations are as follows.

BLACK SHEETS—

10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05

TERNE PLATES

20 x 28 IC. 112s	16.00

LOWER PRICES NOW QUOTED ON ZINC SHEETS

Montreal

Slightly easier quotations are now recorded on zinc sheets, both in full casks and broken lots, the reduction being ½ cent per lb. in both qualities. All other lines remain unchanged, with the undertone of the market remaining somewhat easier owing to the softer tone in metals on primary markets. In this connection, lead, the principal metal, is reported considerably lower on the London market while the situation on this side remains fairly steady because of consistent demand. Prevailing prices are the following:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 18½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq.	
Do., 4 to 8 lbs., sq. ft.	0 09½
ft., lb.	0 10¼
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 28½
Do., strictly, lb.	0 26½
Do., commercial, lb.	0 23½
Do., wiping, lb.	0 24½
Do., wire, lb.	0 32½
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

LITTLE VARIATION NOTED IN SOIL PIPE AND FITTINGS

Montreal.

Current quotations on soil pipe and fittings remain at former discounts, with little variation to report in business conditions. Trade is seasonably light at present with little improvement looked for until the weather opens in the later spring months. Following are unchanged discounts:

SOIL PIPE—	
2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%
Fittings—	
2 to 6 inch	50-10%
Do., broken lots	0 12

BOILER TUBE PRICES NOMINALLY UNCHANGED

Montreal.

Local quotations on boiler tubes are nominally unchanged with slightly lower prices offered for attractive inquiries. Business continues of fair volume although the lack of new work is still apparent. Nominal prices now quoted are the following

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

QUIETNESS STILL PREVAILS IN IRON AND STEEL

Montreal

The volume of business now recorded in iron and steel is of a limited nature, with stocks also comparatively low but quite ample to take care of prevailing demand. However, expectations of spring business are expressed in different quarters, and an improvement is looked for with the close of the present month. In primary circles, also, trading is at a low ebb, wtih quotations nominally unchanged. Although a revision was made locally only a few weeks ago, it is reported that further price concessions are offered for attractive orders. Whether this will develop into a further general lowering of prices is hard to determine, but the opinion is expressed that improved business in later months will remedy this situation. Unchanged quotations are as follows:

IRON & STEEL—

Common bar iron, 100 lbs.	2 65
Refined iron	4 15
Iron finished machinery steel	2 70
Mild steel	2 65
Single reeled machinery steel	4 75
Band steel	2 65
Spring steel	4 25
Sleighshoe steel	2 65
Tire steel	2 85
Toe calk steel	3 55
Harrow tooth steel	2 80
Mining tooth steel, per lb.	0 21½
Black Diamond tool and cast steel	0 21½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

SOMEWHAT EASIER TONE IN BRASS AND COPPER GOODS

Montreal

Base prices on brass and copper sheets, rods and tubes remain unchanged on the local market, with the undertone somewhat easier owing to a softer tone in metals on primary markets. Copper in the past few weeks has been quoted slightly lower after the decided firmness previously displayed. While slightly lower quotations are not unlikely in the near future, following are present prices;

BRASS—	Base
Sheets	0 25
Rods, ½ to 1 inch, round	0 23
Tubing, seamless	0 32
COPPER—	
Rods, ½ to 2 inch	0 30
Soft sheets, plain, 16 oz. and heavier lb.	0 34
Plain tinned, 16 oz. and heavier, lb.	0 39
Polished and tinned, 16 oz. and heavier, lb.	0 43
Tubing, lb.	0 34

Above prices are for full sheets or bars. Cuts 5c. per lb. higher.

LITTLE VARIATION IN COMPRESSION GOODS

Montreal.

The various lines of compression goods show no further price changes since the revision of certain lines of valves two weeks ago. Trade continues of a quiet nature, with orders still of a sorting character, and dealers anticipate little variation until the later months of spring when building operations will require supplies.

COMPRESSION WORK—

Compression work, standard	43%
Fuller work, standard	30%
Bath cocks, compression	30%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard.	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard.	40%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, std.	25%
Gate or straightway	16/10%
Emco Globe Valves	33%
Emco check valves	33%
Jenkins Globe, angle, check and swing check	19%
Jenkins gate or straight way	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body gate	33%

EARLY IMPROVEMENT EXPECTED IN TROUGH AND PIPE

Montreal.

Eavestrough and conductor pipe quotations are unchanged since the revision in recent weeks. The movement of these products is naturally quiet at this season of the year, but towards the end of the month increased sales are looked for as dealers will at an early date anticipate their season's requirements. As in the case of other galvanized products dealers state that present prices on these products are now well down to existing quotations on galvanized sheets, and a fairly steady outlook is lent for spring business. Naturally the trend of trough and pipe depends entirely on the market for these sheets and on this market it has been pointed out for some time past that further revision would be of a minor nature as present prices are considered reasonably low at manufacturing centres. Unchanged prices and discounts are the following;

EAVESTROUGH—

O.G. Round and Half-round, per 100 ft., 8 in., $16.90; 10 in., $18.70; 12 in., $22.20; 15 in., $29.80; 18 in., $37.80.

O.G. Square bead, per 100 ft.: 8 in., $15.90; 10 in., $17.70; 12 in., $21.20; 15 in., $28.80; 6 in., $36.80.

Discount 70|10 per cent.

Conductor Pipe, Round, Plain and Corrugated, per 100 ft.: 2 in., $18.40; 3 in., $23.30; 4 in., $29.60; 5 in., $40.00; 6 in., $49.00.

Discount 70|10 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz.
2 in., $5.25; 3 in., $6.00; 4 in., $10.50; 5 in., $24.00; 6 in., $29.00.

Discount 60 per cent.

UNCHANGED QUOTATIONS ON PIPE FITTINGS

Montreal.

Current quotations on both cast iron and malleable fittings remain unchanged since the revision of a few weeks ago. Business is now described as being of a spasmodic nature, one week showing a fairly active movement, while the next brings reports of a rather dull trade. Unchanged prices and discounts are the following;

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30
Flange unions	30
Malleable unions	47
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	50
Do., long	60
Do. 4½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods —	Blk.	Galv
Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

ACTIVITY IN CEMENT IS NOW MODERATE

Montreal

Current quotations on cement are unchanged since the revision at the beginning of the year. Trade is seasonably quiet at present but dealers are anticipating a renewal of activities early next month as contemplated building returns show that a good amount of construction work will commence as soon as the weather permits. Following are unchanged quotations;

CEMENT—Car load lots—

Per bag, f.o.b. cars	0 92
Per bag, delvered	1 00
Less car lots—per bag, f.o.b. yard	1 00
Per bag, delivered	1 10

Less 5 per cent.
Rebate of 20 cents for empty bags.

ONLY SORTING BUSINESS IN WROUGHT PIPE

Montreal

List No. 54 still covers the wrought pipe market locally. Although present quotations are generally considered reasonably low, there are reports of certain mills offering a price concession on attractive orders. The market on the whole however is stated to be fairly steady apart from this condition which has recently crept into the market. The movement of piping continues of fair proportion for the present season of the year, although orders are almost entirely for small quantities.

RADIATORS AND BOILERS ON MODERATE BASIS

Montreal.

During the past two weeks the movement of radiators and boilers has experienced a temporary slackening but not to the extent as to cause any undue concern among manufacturers and distributors. It is stated that there is still a fair amount of building under construction that will require supplies in the earlier spring months, and business should remain fairly active until the later spring and summer season, when supplies are always more in demand. Quotations on all lines remain unchanged with the market said to be steady to firm since the revision at the opening of the New Year.

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60. Discount, 59% for hot water and 60% for steam.

Wall Radiators—5 ft., $1.15; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 64 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 20 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in. 20 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 20 per cent. Ontario Govt. trimmings. 10 per cent.

Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings, 25 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

SAP BUCKETS NOW BEING SHIPPED

Montreal

Shipments of sap buckets are now being made from manufacturers' and jobbers' warehouses. Booked orders for these supplies up to the present have only been of fair proportion. Quebec territories, where the sugar making industry is carried on more extensively showing only fair results. The sale of these goods depends entirely upon the opening of the season next month or early in April, and dealers have not felt disposed to place their orders until a later date when the actual demand will be felt. Quotations on both buckets and spouts remain unchanged at opening prices, named a few weeks ago.

SAP BUCKETS—
Straight pattern, per 100:—No. 7, $13.80; No. 8, $15.00; No. 9, $16.80; No. 12, $18.00; No. 16, $21.60.
Galvanized straight:—No. 9, $23.00; No. 12, $27.00; No. 16, $31.00.
Western, (flaring) pattern:—6 qt., $13.50; 10 qt., $18.00.
Frontenac:—10 qt., $19.00.
Galvanized western:—10 qt., $27.00.
Spouts:—Sterling, $20.00; Eureka, $15.00 per 1000
Square 1-gal. syrup cans, $16.75 per 100.

CLOSET QUOTATIONS NOW PURELY NOMINAL

Montreal

Local quotations on closet outfits are nominally unchanged, with very little business now being transacted. When approached in connection with easier prices appearing in other markets, one local dealer stated that while local quotations remain nominally unchanged, slightly lower levels were quoted in some quarters for quantity buying. Unchanged net prices are as follows:

CLOSET OUTFITS—	
Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., Richelieu" bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitrious China	20 00

SMALLER CONSTRUCTION NOW REQUIRING ENAMELLED WARE

Montreal

Current business in enamelled ware is still described as quiet, but not exceptionally so for this season of the year. There is a fair amount of building under construction, particularly of the smaller class, and this is now requiring supplies. Quotations are nominally unchanged at 33-1/3 per cent. off list prices, although there are certain price concessions made, especially for fair sized orders. Following are list prices and discounts:

Sinks, roll rim—			
18 x 30			$23 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 50	$ 7 40	$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet			57 10
Lavatories—			
17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim, F241 or P4845			12 60

Less 33 1-3 per cent.

RE-ACTION MAY DEVELOP IN INGOT METALS

Montreal

Quietness still prevails in the ingot metal markets, with few changes in prices, and the recent declines seem to

be nearly completed for the present. What the future will bring forth is difficult to say, but present prices are certainly very low and a revision upward would not be altogether surprising.

TIN.—Tin has again reached a point very near the low level touched in August last, and it shows a decline of about £22 as compared with six weeks ago. This would seem to be a very safe level. Supplies, however, are still ample and demand is only fair, so that there may not be any particular recovery as yet. Stock price 36½ cents.

COPPER.—London has been weak, partly owing to advance in exchange and also owing to large supplies of recovered metal. New York has also been lower, but producers are again firmer in their ideas and some of the distress copper has been taken off the market. Local market is quiet with prices slightly easier at 17 cents for electro, and 16¾ cents for casting.

LEAD.—London has been much weaker, but the American market remains steady and there is little change on this side. The feature of the past few months has been the consistent demand for this metal, which has helped to stabilize prices. Local market is quoted at 7 cents.

SPELTER.—The London market has again been lower, chiefly owing to the advance in exchange, but East St. Louis seems to be more steady at $4.50 for spot, and this is probably near the low point on this movement. With present price on ore there is little profit to smelters at this figure. Local market is quiet at 7¼ cents.

ANTIMONY.—There is nothing new about this metal as it is dull in sympathy with others, with very little demand. Quotations are unchanged, Chinese being quoted at 6¾ cts., high grade English at 7¾ cts.

ALUMINUM.—This metal still fails to produce a feature in the market, but remains very dull with quotations somewhat easier at 25 cents.

TORONTO MARKETS

TORONTO, February 14.—Reductions in galvanized sheets, asbestos products, and plumbers' oakum, provide the features of the current market reports. Other revisions to lower price levels cover bar iron and steel, brass and copper wire, Trimo and Stillson wrenches, and the higher grades of white wastes. The decline on gas stoves is now more general, with easier prices on certain scrap materials. The tendency in primary copper stages has also reacted, while ingot metals are generally dull and easier.

EASIER PRICE LEVELS ON ASBESTOS PRODUCTS

Toronto.

The trend of the asbestos market since the commencement of the present year has been decidedly downward. The average decline on these products has registered in the neighbourhood of 25 per cent., and the present level is stated as being on a more uniform basis for the anticipated volume of seasonal trade. Asbestos sheathing attracts particular attention with a reduction of $2.00 per 100 lbs., this now being quoted at $8.00 per cwt. Discounts now in effect covering other asbestos products are as follows:

ASBESTOS PRODUCTS—

PIPE COVERING—

Air cell, 4 ply	55 per cent. off list.
Air cell, 3 ply	60 per cent off list.
Air cell 2 ply	65% off standard list.
Boiler Covering	$1.90 per bag. F.o.b. Toronto.
Asbestos Sheathing	$8.00 per 100 lbs.

REVISED DISCOUNT NOTED ON STILLSON WRENCHES

Toronto.

Another revision has been made on the Canadian pattern Stillson wrenches. The new discount is 55 per cent. off list, compared with the previous quotation of 52½ off.

FURTHER REDUCTION NOTED ON PLUMBERS' OAKUM

Toronto.

A reduction of approximately 50 cents per 100 lbs. has been recorded in some quarters on plumbers oakum. The revised quotation is $6.50 per 100 lbs. in 50-lb. bales.

ANTICIPATE IMPROVEMENT IN SOIL PIPE TRADE

Toronto.

Conditions in the soil pipe market are nominally unchanged, with discounts on both soil pipe and fittings remaining at the revised levels quoted at the commencement of the year. Weather conditions are at present confining the market for these products, but anticipations of a good season in the building industry are expected to be generally reflected in an improvement in the future tone. Following are local current discounts:

SOIL PIPE—

2 inch	40 per cent.
3 inch	40 per cent.
4 inch	40-5 per cent.
5 and 6 inch	40 per cent.
8 inch	net

FITTINGS—

2 to 6 inch	50|5 per cent.
8 inch	net

QUIET CONDITIONS EXIST IN RANGE BOILERS

Toronto.

There have been few developments recorded in the range boiler market since the adoption of the new list prices and discounts. Although some distributors are stated as still maintaining the previous net prices on these products, yet it is noticeable that the quotation on the 30 gallon standard size is the same in each case. It is thought that the revised list will be uniformly accepted in the near future. Current trade is of a spotty character in this line, with dealers stating that price shading seems to have been overcome for the moment, there being no attractive business to shade prices for.

RANGE BOILERS

Size.	List Price.
5-gallon	$13 50
12-gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 50 per cent.
Extra heavy, 40 per cent.

LEAD PRODUCT PRICES REFLECT BASIC TRENDS

Toronto.

There has been no change recorded in prices on lead and zinc products, but recent developments on the primary metal markets attract special attention. Tin prices are considerably easier, and a similar trend has recently been apparent in spelter. Lead quotations, however, are holding their own, this metal awaiting an improved foreign inquiry, where current stocks are described as low. Should this fail to materialize, some revisions in quotations on these finished products are claimed to be more or less likely. Solder prices are fairly firm, however, and the markets in general await future developments in primary centres:

LEAD AND ZINC GOODS—	
Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Lead sheets, 4 to 6 lbs., sq. ft. in rolls, lb	0 09½
Cut sheets, ½c to ¾c lb. extra and cut 1-¾ inch	26 00
sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 32½
Do., commercial, lb.	0 22½
Do., strictly, lb.	0 24½
Do., guaranteed, lb.	0 27½
Do., wiping, lb.	0 22½
Zinc sheets, per lb.	0 12

EASIER TENDENCY IN PRIMARY COPPER STAGE

Toronto

The current market is described as quiet in copper and brass products, these metals in the primary stage having developed an easier tendency. Manufacturers of copper and brass sheets, tubing and rods are credited with the expression that "there is nothing discouraging in the present situation." Although trade is of a quiet nature, expectations generally prevail as to an improved volume of business in the near future. Following are current prices:

BRASS—	
Sheets base, per lb.	$ 0 23
Rods, base, per lb.	0 20
Tubing, base, per lb.	0 25
COPPER —	
Rods, base, per lb.	0 29
Soft sheets, plain, 1 oz. and heavier, lb.	0 30
Do., plain tinned, 16 oz. and heavier, lb.	0 37
Do., polished and tinned, 16 oz. and heavier, lb.	0 42
Tubing	0 29

SMALL ORDERS PREVAIL IN COMPRESSION GOODS

Toronto.

Quotations on compression goods are at present remaining at the recently revised levels. Trade in these products has been chiefly of a sorting character, with distributors noting some slight improvement in the number of orders since the completion of inventory period. The total volume, however, is described as small. Prospects for a more extensive construction program generally through spring and summer seasons is looked upon as the forerunner of better activity in compression work, and the sign of a larger volume of business in the near future. Following are current quotations:

VALVES—	Per cent.
Compression work, standard	43
Fuller work, standard	30
Bath cocks, compression	32
Do., Fuller	25
Flatway stop and wastecocks, stand'd	54
Roundway stop and waste cocks, std.	46

LOWER PRICES DEVELOP BUSINESS IN TUBES

Toronto

Since the introduction of the new lower prices on boiler tubes, business in these products is stated to have registered some signs of improvement. The volume of inquiry for small repair orders has increased, while trade of a sorting nature has materialized in some quarters. The following quotations represent the average prices on the local markets:

BOILER TUBES

Size	Seamless	Lapweld
1 inch	24 75	——.
1-¼ inch	24 50	.....
1-½ inch	24 00	.....
2 inch	24 50	20 00
2-¼ inch	27 75	23 00
2-½ inch	32 50	23 75
3 inch	40 00	30 00.
3½ inch	50 00	32 50
4 inch	52 50	34 25
4½ inch	65 00	43 50

FURTHER REDUCTIONS ON GALVANIZED SHEETS

Toronto

A reduction of approximately 25 cents per 100 lbs. has been announced on galvanized sheets. This change results from the primary conditions, it being noted that galvanized has been so little sought during the past few weeks in southern centres that price concessions on these products had been recorded. Buyers continue cautious, and the irregularity in American price levels has been reflected in the easing of domestic quotations. While it is yet early for Spring business, a few bright spots are reported from time to time. The volume of inquiry is described as more encouraging as to the impetus expected from the seasonal buying usually evident during the next two months. Following are the revised quotations:

BLUE ANNEALED—		
10 gauge, base	3 75	4 50
12 gauge	3 80	4 55
14 gauge	3 85	4 60
16 gauge	3 90	4 65
BLACK—		
18-20 gauge	4 30	5 05
22-24 gauge	4 35	5 10
26 gauge	4 40	5 15
28 gauge	4 50	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—	Queen's Head.	Fleur-de-lis.
28 gauge	8 00	7 50
26 gauge	7 75	7 25
24 gauge	7 35	6 85
22 gauge	6 90	6 40
18 and 20 gauge	6 75	6 25
Premier and Apollo—		
10¾ oz.	6 00	6 75
U. S. 28, base	5 60	6 35
U. S. 26	5 30	6 05
22 and 24	5 15	5 90
18 and 20	5 00	5 75
16	4 85	5 60
12 and 14	4 70	5 45

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing sheets.

PLATES, CANADA—	Per box
Dull, 60 sheets	5 30
Ordinary, 52 sheets	5 25

LOWER PRICE LEVELS ON BAR IRON AND STEEL

Toronto.

As announced in the last issue of Sanitary Engineer easier prices have now appeared on bar iron and steel. The sagging quotations recently noted resulted in lower levels being generally adopted, a condition which is attributed to the quiet season coupled with the resultant price shading for moderate sized orders. The extent of the reduction amounts to approximately 15 cents per 100 lbs., on the different grades although in some cases a lowering of 25 cents is noted. Following are the revised level

IRON AND STEEL

Mild steel bars, base	2 85
Midl steel bands, 3 16 in. base	3 35
Bar iron, base	2 85
Angle iron, base	2 95
Horseshoe iron	3 60
Tire steel	3 35
Spring steel	5 50
Crucible cast sheet steel	30 00
Mining drill steel	18 50
Cast tool steel, medium	18 00
Cast tool steel, high grade	31 00
Sleigh shoe steel	2 85
Norway iron	12 50
Toe caulk iron	4 00
Hoop steel	3 75

MORE INQUIRIES REPORTED FOR PIPE FITTINGS

Toronto

Quotations on pipe fittings are generally being maintained at the recently revised levels, with current business of a spasmodic nature. The anticipated development of spring business has not yet materialized, distributors admitting that it is early in the season for any marked improvement. There has been reported, however, a larger number of inquiries, but whether this is due to potential business, or is a result of the many recent price changes, is hard to determine. Following are the current prices, with no change having been recorded as yet on Dart unions, or wrought nipples and couplings:

PIPE FITTINGS—	Per cent.
Cast iron fittings	30
Plugs, cast iron	30
Oo., solid	30
Do., countersink	30
Bushings, malle.	32
Do., cast	32
Unions, ¼ in. to 2 in.	47
Do., 8 in., 2¼ to 4 in.	47
Flanged unions, std.	30
Flanged fittings	30
Dart unions, blk., ¼ to 2 in.	33½
Do., ⅛ in., 2¼ to 4 in.	23
Do., galvd., add to black	30
Nipples, blk., and galvd. ⅛ to 4 in. close and short	50
Do., 4½ in. and larger	40
Do., long, ⅛ in. to 4 in.	60
Do., 4½ in. and larger	50
Do., running thread	30
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—		
ClassA	0 54	0 67
Class B	0 29	0 28
Class C	0 13	0 20

BRASS AND COPPER WIRE SLIGHTLY REDUCED

Toronto.

A decline of between 2 and 2½ per cent. has been announced by the manufacturers in prices on brass and copper wiring. This change reflects the recent easing of exchange rates and reduction in similar costs.

DECLINE ON GAS STOVES NOW MORE UNIFORM

Toronto

Some lower quotations on gas stoves are now generally announced by manufacturers of these products. Easier levels on certain makes have been effective for a few weeks, this change now being more uniform. The extent of the decline is approximately 7½ per cent. This reduction is expected to stimulate the volume of spring booking orders.

ANOTHER REVISION IN TRIMO WRENCH PRICES

Toronto.

It is announced that another revision has been made in the discounts on Trimo wrenches, and prices have therefore been slightly advanced on most sizes.

VARIANCE IN PRICES ON CLOSET OUTFITS

Toronto

The market covering closet combinations and fixtures is chiefly attracted at present by the variance in quotations given on the standard oak outfit. This price was recently reduced to $26 by certain local distributors, and is still being maintained. On the other hand, other market sources are stating a level of $27.50, with the assurance that quotations will even up at this level in the near future. However, the following

Mahogany finish post hinge seat and cover	4 25

MODERATE ACTIVITY IN ENAMELLED WARES

Toronto

The finishing of buildings which were commenced last fall coupled with erection of many small dwellings during the current season now reflects a moderate tone of activity in enamelled ware. Distributors of these products are generally anticipating a good season during 1922, owing to the expected stimulation in construction work generally. Prices remain unchanged, with the following quotations and discounts at present in effect.

ENAMELLED WARE—

Do., 5 ft.	15 00
Do., 5½ ft.	16 75

These quotations are net.

BUILDING IS REFLECTED IN RADIATOR SALES

Toronto.

Business in radiators and boilers is stated to be on a moderate basis, with the proportion of current building activity practically governing the degree of present sales in these products. The market is quiet, but improvement is looked for in the near future, as prospects are evident for a generous building programme during the coming seasons. A number of buildings which were commenced last fall, are now being completed, while some new buildings have also reached the stage where radiation is required. Following are unchanged quotations.

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

FURTHER DECLINE NOTED ON WHITE WASTES

Toronto

A further reduction has been announced on some grades of white cotton wastes, and also on the cream polishing. The extent of this additional decline is one cent on the cream polishing, and one half on the finer grades of white waste. This change is attributed to the condition of the raw cotton markets, and places prices on these products on a more uniform basis. Following are the revised quotations:

Cream, polishing	0 18
White, XXX	0 18
XX	0 16
X	0 15
XC	0 14
XXX, extra	0 16

Above lines subject to trade discount for quantity.

EARLY ACTIVITY IN CEMENT REQUIREMENTS

Toronto

The degree of construction work in general is being reflected in sales of cement. Early promises of an extensive building programme for the spring and summer seasons, is indicated by prevailing activity in construction circles generally and a brisk movement in both city and country is expected to develop. Prices remain at the following levels:

CEMENT—

Car load lots.	Toronto.
Per barrel, delivered	3 70
Less car lots	
Per barrel, f.o.b. yard	4 30
Per barrel, delivered	4 50

Single bags, $1.15 each; 4 bags to barrel.
Extre charge of $1.50 per load on less than 24 bag lots.
Rebate of 20 cents for empty sacks.

QUIET CONDITIONS IN CORRUGATED SHEETS

Toronto

Due to the recent fluctuations in the flat sheet markets, a slightly easier tendency is also noted in some quarters in the market for corrugated sheets. These products, however, are usually in moderate evidence at this season of the year, current weather conditions handicapping activities in these lines. Prices and discounts at present remain unchanged at the following levels:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

BETTER FEELING NOTED IN PIPE MARKETS

Toronto

Inquiries for stee piping are described as slightly more numerous, although the volume of current business is not large. Since the completion of inventory work, some sorting orders have been reported. The general situation, however, both in foreign and domestic pipe markets is described as offering a fair amount of small business with inquiries in steady proportion. Here and there are noted spasmodic signs that larger sizes of pipe contain prospects of improvement. There are some reports circulating that in spite of the prevailing low levels, certain independent steel mills in the south are slightly shading prices on attractive orders. The list No. 54, however, continues to cover the local markets:

WROUGHT PIPE

ONLY MODERATE TRADE IN SCRAP MATERIALS

Toronto

Most divisions of the waste material markets have been slow as regards either the volume of transactions or the amount of interest. Scrap iron and steel are still moving spasmodically, with prices generally unchanged. Current business is mainly confined to immediate and nearby requirements. Interest in copper grades has suffered a relapse due to the easier tone in virgin copper prices,

IMPROVEMENT EXPECTED IN EAVESTROUGH ORDERS

Toronto.

Improvement in the volume of eavestrough and conductor pipe sales is looked for in the near future by manufacturers and distributors of these products. The advent of spring weather has stimulated early activity in advancing construction programmes and more extensive developments in the direction of building homes and other erections are generally expected. Quotations on these lines are being maintained at the current discount levels given as follows:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth: Per 100 ft.

8 in.	15 90
10 in.	17 70

4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

BUYERS' MARKET EXISTS IN INGOT METALS

Toronto

A buyers' market now generally prevails in all the ingot metals. The firmness in copper circles has receded owing to the preparations of producers to resume operations, coupled with the fact that consumers are fairly well supplied for the initial quarter. Other metals have shown some signs of slightly fluctuating, especially in London, but the undertone in most ingots remains more or less unchanged witth prices fairly steady.

WINNIPEG MARKETS

WINNIPEG, February 14.—Price revisions on sanitary and heating materials again feature the current market reports. Lower quotations are announced on both malleable and cast iron pipe fittings, while wrought couplings and nipples have also been placed on easier price levels. Other primary steam-fitting and plumbing goods remain generally at unchanged levels, with few developments recorded. Trade is described as dull in places, with anticipaitons generally in evidence regarding an improved volume of trade during the early Spring period.

LOWER QUOTATIONS APPEAR ON WROUGHT FITTINGS

Winnipeg.

Through a revision in the discounts, quotations on wrought iron pipe fittings are now reduced. The general market tone in these products has been slightly easier, and this change places the new prices on the following discount levels:

WROUGHT IRON NIPPLES—

Class A	65% off
Class B and C	70% off
Union Elbows and Tees	60% off
Boiler Elbows and Couplings	60% off
Unions	45% off
Dart Unions, ¼ and 2 in., 25 and 10%,	
⅛, 2½, 3 3½ and 4 in.	20%
5 and 6 in.	20%
Railing Fittings	50%

LOWER QUOTATIONS ON NIPPLES AND COUPLINGS

Winnipeg.

Revised discount levels have been announced on wrought iron nipples and couplings. This change places these products upon slightly easier price levels. The new discounts are as follows:

WROUGHT COUPLINGS—

⅛ to 4 in. 25%; 4½ and larger, 10%.

WROUGHT IRON SUPPLIES—

Close or short,

4 in. or smaller, 40 and 10%; 4½ in. and larger, 30 and 10%.

Long,

4 in. and smaller, 50 and 10%; 4½ in. and larger, 40 and 10%.

REVISED DISCOUNTS NOTED ON CAST IRON FITTINGS

Winnipeg.

The new discounts now effective on cast iron pipe fittings, places quotations on these lines at a reduced level. Following are the revised discounts:

CAST IRON FITTINGS

Elbows, Tees, Crosses, Return Bends, Caps and Lock Nuts	25%
Reducers	30%
Bushings	30%
Plugs	25%
Drainage Fittings	30 & 10%

LITTLE CHANGE RECORDED IN PIPE MARKETS

Winnipeg.

Little variation has been recorded in the pipe markets, trade developments being of a moderate nature at this season. Wrought iron and steel piping still sells under list No. 54, which became effective last December.

AMERICAN MILLS NOW UNDERBIDDING GERMAN STEEL COMPETITORS

Toronto

One encouraging feature in the steel industry from the American viewpoint is the fact that United States mills have recently succeeded in underbidding German producers. Serious price competition has been encountered in foreign markets during the last year or two, although German mills being able to take full advantage of lower wage scales and cheaper production costs, and thus secure coveted orders. This situation is now being reversed in some instances, namely on wire and tubular products. Southern producers have recently sold goods to Japan in the face of German competition, and have also secured pipeline orders from Mexican sources. The trend towards recovery in exchange rates, is a considerate factor, but it is also stated that this success would indicate the German prices are slightly rising, while prices on this Continent have been steadily falling for some time past, due to the producers' efforts to lower costs. Any direct stimulation to the American foreign steel trade, reflects in the conditions governing the steel industry in general, and brisk activity in southern circles is usually accompanied by more cheerful optimism and a brighter outlook in Canadian steel business.

Markets

Sanitary Engineer Marketing Reports are eagerly looked for by progressive plumbing and heating Engineers of Canada.

A thorough knowledge of prevailing prices and tendencies in the trade is an absolute necessity for the conduct of any business in these days of frequent price fluctuations.

Sanitary Engineer Marketing Reports are compiled at considerable expense. We are determined to keep them reliable, complete, and up-to-date.

JARDINE

Pipe Threading Tools

REGISTERED J TRADE MARK

Range from 1/8" to 12"

All sizes threaded at one cut. Effective tools, in which the dies open out as the tool advances on the thread, so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter mouth.

Beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble; they work easily, smoothly, rapidly and accurately.

One Man Does the Work of Two

A. B. Jardine & Company, Limited, are the sole makers of "Jardine" pipe threading tools and the sole licensees to make and sell "Toledo" tools in Canada.

Cast Iron Ash Pit Bottom
Dust Damper
SUPERIOR

When you specify, or install, Pilot Pipeless Furnaces, you are not only giving your customer good service and a square deal, but building good-will and future business.

Pilot Superior Pipeless Furnaces cost less to install; they do not block up the cellar with a lot of costly pipes; no remodelling of the house is needed, merely one hole cut in the floor.

In this effective, pipeless system, the heated air leaves the central portion of the one large register, circulates through the house, because lighter than cold air, and, having warmed the rooms, cools and returns to the lower levels of the house. There it enters the outer portion of the register into an exterior casing of the furnace. It is then reheated by passing over the hot castings of the furnace. Ask for literature, to-day. This Pipeless Furnace is going to pay you!

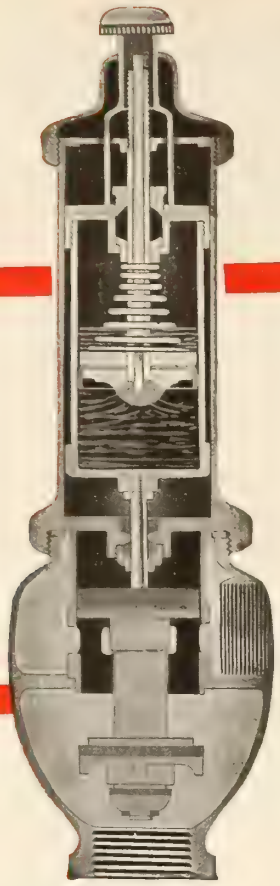
PERFECTO
— OIL-REGULATED —
Flush Valves



What Difference Does the Oil Make?

IF all water were pure water—if it didn't contain any sand or dirt or lime—if it didn't increase friction and corrosion, then water would be every bit as satisfactory as oil, for the operation of a flush valve.

Unfortunately, it isn't so, and the **PerfectO** Flush Valve is regulated by oil, because oil is better than water. Dirt or other impurities in the water cannot clog the by-pass, because they can't get near the by-pass. The operation of the valve is controlled entirely by oil. It doesn't depend on the water supply, hence it does not vary. Yet the valve action can be regulated in an instant without bother or fuss.

Write for our Illustrated Catalogue

All vital working parts are constantly immersed in oil, enclosed in a sealed cast-brass chamber. This reduces friction to a minimum and insures a life-time service from every **PerfectO** Oil-Regulated Flush Valve.

Our new illustrated catalogue is now off the press. Write for your copy.

GALT BRASS COMPANY, LIMITED

GALT - CANADA

Sanitary Engineer

Plumber and Steamfitter of Canada

Vol. XVI. PUBLICATION OFFICE, TORONTO, MARCH 1, 1922 No. 5

Efficient, Durable, Sanitary

OUR "EMCO" Quick Pression Basin and Shampoo Cock is designed to fit any size lavatory.

Water can be run from the shampoo outlet or for the basin without the necessity of turning on or off two or more taps. All the cocks are on the quick pression principle and insure an absolute shut-off.

It is a valued asset in the barber's shop because of its attractive design and simplicity of operation.

Leading jobbers everywhere handle "Emco" sanitary fixtures and plumbing supplies.

"We cover all the 'Emco' line—with a finish that is fine."

Adjustable
Non-Syphon
Sink Trap

ANTHES

Cast Iron Traps

Anthes Adjustable Non-Syphon Sink Trap

This trap is designed so as to be positively non-syphoning, and is a very convenient and economical trap for use on either new or old work.

Short P. Trap

This is the one and one-half inch size, painted. This must be seen to convey an idea of the excellent workmanship, accurate threading, etc., of all Anthes Products.

Adjustable Bath Trap (*Painted*)

2 in. x 6 in. tapped for 1½-in. I.P. thread nickel plated brass cover.

All iron pipe connections. Outlet can be placed in any direction, thus making position adjustable. The trap measures 6 in. over all and can be used with 6-in. joists.

Standard Drum Trap (*Painted*)

Nickel-plated brass cover, supplied either male or female. Size 2 x 6 in. Tapped 1½-in. I.P. thread. Can be used with short nipple and female cover if more length is desired.

Bottle Trap (*Painted*)

This bottle trap is threaded female both ends for 1½-in. iron pipe.

Fitted with brass clean-out screw.

Anthes Foundry Limited

Winnipeg

The "OLD TWIN"
A Syphon Jet of Proven Merit

THE "OLD TWIN"
With top supply and Integral Seat

THE "OLD TWIN"
With side supply and extended Front Lip.

The Syphon Jet is the highest development of closet manufacture—the large water area, deep seal and powerful syphonic action commending it as the most advanced type of sanitary fixture under any mode of installation.

The "Old Twin" was one of the earliest models of Syphon Jet construction, and although details of its design have been altered in sympathy with modern improvements, its essential characteristics remain unchanged.

There have been many and varied designs of syphon jet closets placed upon the market since its evolution but none have surpassed its underlying superiority in action and practical sanitation.

This closet is produced with a variety of special features including:—

Side Supply
Raised Front Lip
Extended Front Lip
Raised Rear Vent
Integral Seat
Centripetal Action
Donovan Flange
Clean-out Plug
Integral Seat Hinge Bar

as well as almost any combination of these.

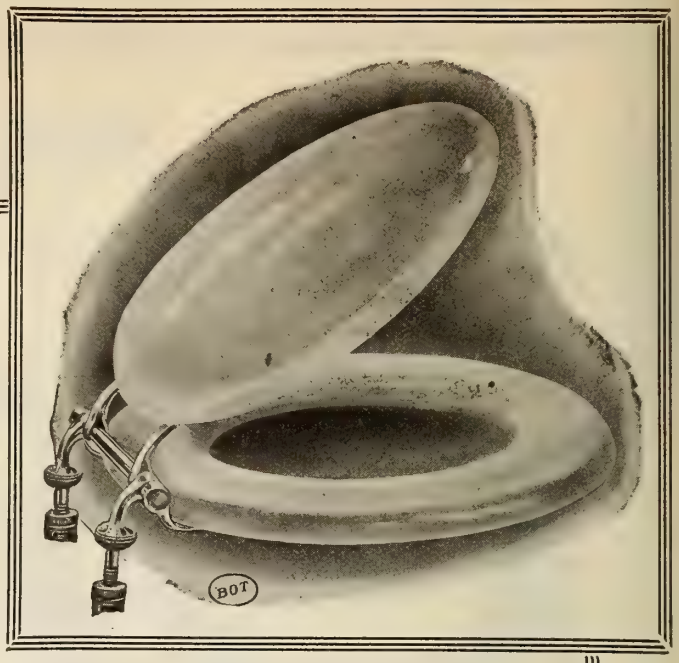
Sales handled exclusively through recognized Jobbing houses.



Did You Ever?

Mr. Sanitary Engineer:

Did you ever sell an article that was Perfect? The WORLD'S FINEST CLOSET SEAT and the MOST SANITARY CLOSET SEAT yet produced is the "B.O.T." BLANCO. **IT IS PERFECT,** ask anyone who has installed one.

First made with the regular "B.O.T." DOWELLED SEAT CONSTRUCTION; then covered with a heavy coating of "B.O.T." SHEET BLANCO, which leaves NO SEAMS; lastly finished on a BUFFING WHEEL just as metal is polished.

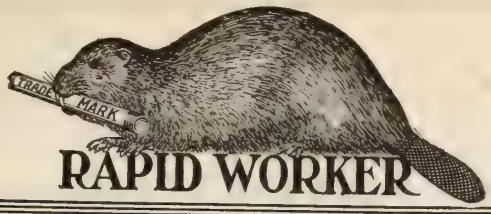
IT IS proof against hot or cold water, WILL NOT CRACK, PEEL or DISCOLOR; is EASILY CLEANED with soap and water, hence is IMPERVIOUS TO DISEASE GERMS.

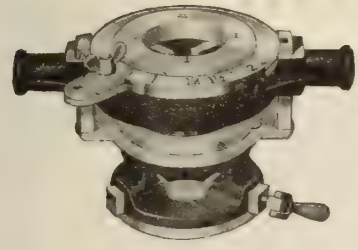
Your customers are in favor of a WHITE CLOSET OUTFIT, a "B.O.T." BLANCO SEAT adds the finishing touches, or, in other words, MAKES A FIRST-CLASS JOB.

SOLD in all styles. Further information gladly sent on request.

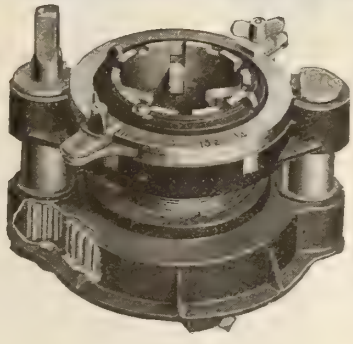
CANADIAN BRASS COMPANY
LIMITED

Galt — Toronto

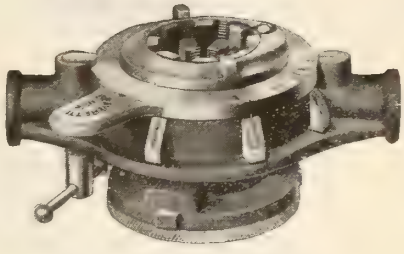




No. 25 Beaver
1 inch to 2 inch



No. 61 Beaver
2½ in. to 6 in.



No. 6 Beaverette
⅛ in. to ¾ in.

Showing the Martin Portable Vise Stand and Pipe Bender in Use and Packed.

The Martin Portable Vise Stand and Pipe Bender is invaluable. It cuts the cost of good-fitting jobs. Plumbers find it indispensable. It stands anywhere. It is the only device that doesn't need to be fastened on floor, wall or ceiling. It will pay you to send a 10-day free trial order to us, through your jobber, or if jobber doesn't handle them, direct.

BEAVER

Tools That Help Business

Beaver Tools will help your business by making a good profit on every job. Here are shown three self-contained Beavers with no loose parts to complicate matters. They will handle jobs of the diameters shown under each cut without changing dies! One man can pull any sized Beaver Tool with one hand—they make one-man jobs.

Other Easy Working Beavers

No. 3, Jr., ⅛ to 1 inch (Ratchet.)
No. 4 Beaver 1 to 2 inch; or ½ to 2 inch (Ratchet.)
No. 26 Beaver 1 to 2 inch (Ratchet.)
No. 61 Beaver 2½ to 6 inch.
No. 80 Beaver 4½ to 8 inch.
No. 90 Beaver 9 to 12 inch.
These three are similar to No. 41.
No. 23 Beaver 1 to 2 inch or ½ to 2 inch.

Square End Pipe Cutters

No. 1 cuts ⅛ to 1 inch.
No. 5 cuts ½ to 2 inch.
No. 10 cuts 2½ to 4 inch.
No. 15 cuts 2½ to 6 inch.
All four cut pipe without burrs—with knives feeding automatically.

One Man Can Do the Work of Two

With Beaver Tools there is no changing dies—no bushings. One man alone can thread 2" pipe because of the narrow receding dies. With ordinary stocks it takes two men to do it. Two men for you to pay and they can't cut as many threads nor such good ones as with the Beaver.

Borden-Canadian Co.

110 Church Street - Toronto

Empty Shelves— and a Prediction

WITH inventories completed, retail hardware merchants find their stocks smaller now than at any time in recent years. Merchants have held back on spring bookings and freely admit that present stocks are totally inadequate for "Spring and Summer" trade.

Reports from retailers in all parts of Canada are such that we predict a pronounced buying movement within the next six weeks. We are entering a period of improved but cautious buying activity. Purchases will be considered more carefully, comparisons will be made more freely than heretofore. Merchants are adopting a "convince me" attitude. Unknown houses and unknown products are going by the boards these days. Merchants are not taking chances on buying any lines where there is an element of doubt as to the standing or reliability of the manufacturer or the product.

Merchants are the "choosers" to-day. The question is not one of where can I secure goods? It is a question of "whose line will I stock?" At the moment of decision, the line consistently advertised in Hardware and Metal—all other things being equal—is the one that stands the best chance of acceptance by the merchant. The 34th Annual Spring Buying and Directory Issue of Hardware and Metal, reaching the trade on March 18th, will be studied closely by over 95% of the most important wholesale and retail hardware buyers across Canada from coast to coast. Thousands of feet of empty shelving will be filled up with lines advertised in the 34th Annual Spring Buying and Directory Number. Reservation should be made immediately.

Prepare for Good Times

Trade is gradually mending. It is by no means in a flourishing state but the time is not far away when it will be.

When the rush of business comes we must not be caught in a state of unpreparedness. In dull times we ought to be getting ready for good times.

Now is the time to replenish stocks, roll up sleeves and get out and sell.

Says Plumbing Goods Manufacturers Give Trade Discounts Too Freely

Plumbing Supply Houses Discuss Recent Article in Sanitary Engineer Concerning the Closing Up of the Showroom by a Prominent Master Plumber, Due to Lack of Protection—Say Small Wholesale Distributors Sell to Anyone

IN FURTHER discussion of the question of show rooms for plumbers, relative to the article appearing in February 1st issue, "Another Phase of Showroom Question," where lack of protection from wholesalers is given as the cause of a prominent master plumber in Quebec province closing his showroom, Sanitary Engineer has received the opinions of some of the plumbing supply wholesalers in Montreal. One large local distributor stated that after a careful study of the conditions which are prevailing in the marketing of plumbing supplies, they were willing to admit the situation was deplorable. The cause, however, was more or less general and improvement could only be looked for when all interested, from the manufacturer to the master plumber, are willing to shoulder some of the blame, and commence working together in an effort to remedy matters as they now stand.

According to this wholesaler, the manufacturers are extremely lax in their classification of jobbers, selling almost anyone and everyone, with certain instances of even going direct to the trade. Owing to competition this meant that the legitimate jobber, who has the desire to market his goods through proper channels, the master plumber, is confronted with the situation where he must either sacrifice a considerable amount of business, or else meet the competition of small jobbers, both wholesale and retail, with prices that left little or no profit for themselves. This was one of the chief causes of the unsettled market in many plumbing lines most apparent in the months of last fall and early winter.

Sell To Anyone

These smaller houses, no doubt in their anxiety to obtain business in other lines, will sell to anyone who will pay the price, which is usually the same figure that they would charge a master plumber for his goods. Further than this, they will also provide journeymen plumbers for their customers, who install the goods, usually at an hourly rate less than the master plumbers are required to pay their men. This practice is possible because of lack of efficient plumbing laws, and inspection on the part of the municipal authorities.

The master plumbers were said to be responsible to the extent that they have no organization strong enough to deal with the situation, certainly not fully representative of the trade as a whole. No concerted action had been taken by them towards correcting present evils. Neither as a body nor as individuals have they supported concerns which are making an honest effort to do their business along legitimate lines, but have dealt with the jobber who is the worst offender in the sale of plumbing materials direct to the consumer, even to the extent of patronizing the small dealer working against the interests of the master plumber. Cases without number were enumerated where in the last few months this wholesaler had refused to sell direct to a consumer, but unfortunately the order had been accepted by a competitor, absolutely without difficulty or question.

Law Is At Fault

Another plumbing jobber expressed his views in much the same manner. Competition from quarters, which could not be classed as legitimate dealers of plumbing supplies, was a serious menace to the trade, but the opinion was given that the situation would gradually right itself. Although the article had dealt with the plumber not receiving support and protection from the wholesalers, certainly the blame could not be laid at the door of the larger supply house, as far as they were concerned. "If plumbers would organize an association more representative of the trade, matters would improve appreciably in a short while. At the present time, locally at least, it is only necessary for a journeyman to call at city headquarters, deposit a very small amount of cash, and he immediately becomes a master plumber, eligible to carry on his trade within the city, subject only to inspection of municipal authorities. This journeyman is oftentimes encouraged by the small jobbing house. He does not merchandise plumbing and heating goods, finding it much to his advantage not to be a proprietor of a showroom because he can find employment without the worry and expense of same."

Plumbing Goods In Department Stores

Another prominent Montreal supply firm makes the following statement:—

"We consider the conditions which are prevailing today in the marketing of plumbing supplies as deplorable: in fact, the situation might more properly be expressed by the use of the word 'rotten.' We have made quite a study of this, and believe that all concerned are responsible. First, the manufacturer is extremely lax in his classification of jobbers, selling almost anyone and everyone on that basis, and, in addition, most of them go direct to the trade. This means that the legitimate jobber, who has the desire to market his goods through proper channels, meaning the master plumber, is confronted with the situation where he must either sacrifice a considerable volume of business, or else must meet the com-

petition of small jobbers, and more particularly hardware dealers, both wholesale and retail, who find it possible to purchase and carry plumbing supplies, and who will gladly sell to anyone who will pay the price, which is usually the same figure that they would charge a legitimate master plumber for the goods. Further than this, these houses will also provide journeymen plumbers for their customers, who will install the goods, usually at an hourly rate less than the master plumbers are required to pay their men. This practice is possible because of lax plumbing laws and inspection on the part of the municipal authorities.

"Coming now to the master plumbers; they have no organization worth speaking of, and no concerted action towards correcting these evils, nor have we found that they will, either as a body or as individuals, support a concern which is making an honest effort to do their business along legitimate lines, as against a jobber who is the worst offender in the sale of plumbing material direct to a consumer, even to the extent of patronizing the small dealer, who is always working against the interests of the master plumber. We have had cases without number in the last few months where we have refused to sell material direct to a consumer, where, to our certain knowledge, it has been accepted by competing jobbing houses absolutely without difficulty or question.

"Unless some general action can be taken towards the correction of these evils, we are quite convinced that within a short time plumbing goods will be sold exactly as are drygoods, by department stores."

Tinsmiths Don't Need to Be Alarmed

Protection Will Continue to be Offered by Retail Merchants Ass'n of Canada—No Action Expected by Government Pending Appeal Case Before Supreme Court

By Special Ottawa Representative of Sanitary Engineer

THERE will be no occasion for tinsmiths to become alarmed if the Government renews its attempts to place them in the category of manufacturers and insist on the payment of the three per cent. sales tax, as a result of the recent judgment handed down in Ottawa, in the case of the confectioners, which is believed to have placed various lines of trade at the mercy of the federal tax collectors.

Protection is being, and will continue to be offered by the Retail Merchants' Association of Canada, the executive officers of which are watching developments closely.

As a matter of fact, Sanitary Engineer's Ottawa representative has it on pretty good authority that no action will be taken by the Government, pending the appeal of the confectioners' case, which is to be heard in the Supreme Court of Canada some time during March. While there is no definite understanding between the government and the R. M. A. as to the course to be followed by the government after a decision in this case has been handed down, officers of the association express themselves as confident that the ruling will be made to apply to all retail merchants, who are selling direct to the consumers.

R. M. A. Will Take Matter Up

Communications have been sent out from the head office of the Retail Merchants' Association in Ottawa to the various provincial secretaries advising them that if any actions are started by the government against any retail merchant, including tinsmiths, word is to be sent at once to the secretary of the Dominion Board who will proceed at once either to have the action delayed, or to fight it.

The confectioners' case referred to is one in which the government succeeded in establishing that an Ottawa dealer who manufactured candy for sale over the counter, was a manufacturer, and therefore came under the provisions of the Act which assesses a straight three per cent. tax on sales by manufacturers to retailers and consumers.

Justice Audette, who was the author of the judgment in the confectioners' case, not so very long ago rendered judgment in a similar action by the government against a certain Ottawa tailor, who because of the fact that he assembled clothing for direct sale to the consumer, was looked upon by the customs and excise authorities as a manufacturer; but the decision was different in that case. And therein lies hope for the tinsmith, whose mode of doing business is almost identical with that of the tailor. Referring to the first case, Mr. Justice Audette, in his recent judgment said:

"As a prelude to the consideration of the present controversy it is well to state that the present case is distinguishable and must be distinguished from the Pedric case—a case recently recited by me and cited at bar—for the obvious reasons that the facts are materially different and further that the law has since been amended and changed."

In spite of the above, the members of the Dominion Board Retail Merchants' Association of Canada, are uneasy, and are anxious to secure a ruling that will settle once and for all the question as to who is and who is not a manufacturer. In the meantime, however, the merchants have been busy making representations to the Government which may yet result in having the Act more clearly worded—worded in such a manner as to leave no room for dispute as to its exact intent and purpose.

PLAN TO BUILD WORKMEN'S HOUSES ON CITY LAND

Montreal.—A motion for submission to the city council is now being prepared, asking that the council approve a plan to borrow $2,000,000 from the province for the construction of workmen's dwellings. If the plan finds favor, the executive committee will be asked to proceed with the borrowing of the money and the preparation of plans. It is pointed out that the proposal offers a barrier to high rent in the matter of workmen's homes and also presents a solution of the housing shortage.

It is estimated that accommodations for at least 500 families can be provided at this cost and the plan, if found feasible, is capable of indefinite extensions.

Appreciate Sanitary Engineer Articles on Rural Water Supply

Sanitary Engineer has received from Prof. R. R. Graham, of the Ontario Agricultural College, Guelph, the following letter, which is self-explanatory:

The Sanitary Engineer,
Toronto.

I received marked copy of your valuable magazine, "Sanitary Engineer," February 1 issue, in which appears an article pertaining to rural water systems, page 9. I would appreciate very much any work that you may do along this line, namely, the stimulating of greater activity among the farmers in the installation of water systems, plumbing, etc., as the rural homes are sadly lacking in these necessary equipments. I am pleased to say that there is evidence of an awakening of the rural people in respect to this problem, if we are to judge by the large number of inquiries we receive every day asking for information on water systems, sewage disposal, etc.

Thanking you for your assistance in this valuable work,
Yours very sincerely,
(Signed) R. R. Graham, B.A., B.S.A.,
Lecturer in Physics, Ontario Agricultural College.

The Use of Ozone in Purifying Water

Application of Ozonized Air to Water to Act as Disinfecting Agent Requires Much Study—An Unstable Gas Requiring Large Amount of Energy for its Formation.

SO MUCH has been said about the growing importance of ozone as an element in connection with the purification of water, that Sanitary Engineer has secured for its readers the following article on the subject.

Ozone was first observed by the Dutch chemist Van Marum, in 1785, while operating a static electrical machine. In 1840, Schoenbein, while investigating the properties of the gases produced in electrolyzing water and electrifying air, noted the odor and oxidizing properties of the gas and gave it the name of "ozone," because of its peculiar odor. It was not until the result of Soret's work in 1865 were known, that scientists agreed that ozone was tri-atomic oxygen, although it had been generally held that it was some form of oxygen.

Ozone is an unstable gas requiring a large amount of energy for its formation (34,000 calories). It is but slightly soluble in water, and undergoes decomposition when heated. When strongly ozonized oxygen is liquefied and the product subjected to fractional distillation, a mixture of ozone and oxygen results, of which about 85 per cent. is ozone. The factors governing the "ozone-oxygen system" are none too well understood. The state of equilibrium which exists in a mixture of the two gases is dependent upon several factors, such as temperature, pressure, and electrical conditions that are extremely complex.

Great Oxidizing Agent

Ozone is an extremely energetic oxidizing agent. It attacks many inorganic oxidizable substances readily, and is particularly destructive of organic matter even at low temperatures. Its value as a bactericidal agent is probably due to this property, and is the reason for its use in the disinfection of drinking water.

For practical purposes, the production of ozone can best be effected by certain forms of electrical discharges through oxygen gas or through air, which, of course, consists in part of oxygen. It may be well to describe the nature of these discharges so that the technical difficulties of the practical production of ozone will be better appreciated.

The phenomena of an electrical discharge through a gas are complicated. Ordinarily gases are non-conductors, but may become conductors under certain physical and electrical conditions brought about by the flow of the current through them. When two electrodes are separated by a gas and connected to some source of high tension electricity, and between them the potential difference is being gradually increased, there is first produced an invisible electrical discharge which gradually becomes visible by a glow upon one of the electrodes. As the potential difference increases the corona effect is produced, which changes to the true brush discharge. It is the latter form of discharge that is regarded as the most effective in the production of ozone. By still further increasing the potential difference between the electrodes there is formed in succession the spark discharge, the flame and finally the well-known electric arc.

The brush discharge is of a dark blue violet color and is accompanied by a peculiar hissing sound and the "electric wind," which latter, according to J. J. Thomson, is due to a current of electrified ions that set the air in the vicinity of the discharge in motion. Brush discharges are readily formed on electrodes having sharp points or roughened edges. Alternating or direct current may be used, but usually the alternating current is preferable since it may be obtained more readily under high tension. A better production of ozone appears to be obtained with alternating currents of high frequency. A 500 cycle alternating current is more commonly used in ozone installations than one with lower frequencies.

Increasing the Yield

It has been found, as a result of much experimentation, that the use of a dielectric between the electrodes increases the yield of ozone. In other words, imposing even greater resistance than that offered by the air itself, effects a larger production of ozone by the discharge. Dielectrics are made from various substances, such as glass, mica, fused quartz and bakelite. While many other substances will act as dielectrics, the above named include the practical materials available in ozone work.

It will probably be appreciated from the little that has been cited of the complex character of the phenomena of ozone production that the pressure, temperature and humidity of the air being electrified, the form, size, spacing and material of the electrodes, the kind of current employed, the frequency in the case of an alternating current, the voltage, amperage and other secondary influences of an electrical nature in general, and the kind and arrangement of the dielectrics employed, are factors that must all be given careful consideration in an efficient ozone apparatus. A brief description of one or two of the ozonizers that have been developed and have been used may be of interest.

There are two general types of ozone apparatus. The Siemens-Halske ozonizers are of the vacuum tube type, in which air is drawn through an annular space across which high-tension electrical discharges occur. An inside metallic cylinder acts as one electrode. It is covered by a slightly larger tube of glass covered with tin foil. The electrodes are water cooled. The General Electric and the Gerard apparatus are of the tube type also. The Small-Linder, Abraham-Marmier and Vosmaer apparatus use plate forms of electrodes and dielectrics. In some cases their electrodes are hollow and water cooled, but in others this cooling is not attempted. Voltages varying from 2,000 to 3,000 to 50,000 or 60,000 have been used in various ozonizers, but from 10,000 to 20,000 volts are more commonly employed. The yield of ozone increases with an increase in wattage for any given area of electrodes, that is, with the density of the current per unit of area.

Much Study Needed

The application of the ozonized air to water, where the ozone is to act as a disinfecting agent, has been given considerable attention by investigators, but much more study of the problem is needed. In some cases the flowing water is used to suck the ozonized air through the ozone generator and into the water to be treated. This method is not susceptible of very close control. Another method consists in pumping the ozonized air into the bottom of towers down through which the water descends. A modification of this latter method consists in placing the air compressor back of the ozonizer, thereby avoiding handling the corrosive gas in the compressor. In this case the ozonizer must be in a container that will withstand the air pressure required to overcome the hy-

(Continued on page 16)

FARM PLUMBING

A standard plumbing system, including fixtures suitable for at least 80 per cent. of the farm homes of this province, and recommended by the Department of Physics, O.A.C., Guelph, is summarized as follows:

Fixtures—	
Bathtub with trimmings	$58.00
Bathroom sink with trimmings	25.00
Closet	35.00
Kitchen sink	25.00
Laundry tubs	55.00
30-gallon boiler	12.50
	$210.50
Roughing in, including water pipe, soil pipe, etc., and labor	200.00
Water system (electric)	190.00
Septic tank	50.00
	$650.00

Pointers on Profits and Turnover

The Siamese Twins of Successful Business—Plumber Can Take Some Lessons From the Newsboy and Others in Question of Rapid Turnover and Means Taken to Effect Quick and Profitable Movement of Goods—National Trade Extension Bureau Gives Some Interesting Facts.

NEARLY always when the turnover of a business is mentioned, it is intended to refer to the number of turnovers per year, and not to the volume or amount of turnover. It is frequent turnovers that bring the big financial returns on the money invested.

Consider the newsboy. He starts out in the morning with a quarter, invests it in the early morning edition, sells out his stock, goes back and gets the noon edition, sells it out, and comes back for the sporting edition in the afternoon, and again for the regular evening edition. At the close of the day it looks like he had worked the miracle of the loaves and fishes. He has made his original quarter earn several dollars in one short day.

When you consider that he does this day after day, and at the end of the year has his original quarter left, you can see that he is a veritable Ponzi. Bear in mind he is carrying on his business with a small investment. He knows his requirements, and by keeping to his original capital he cannot be tempted into overbuying in the face of tempting discounts for large quantities. This because he knows from experience just what he can dispose of in an ordinary day. He is handling an article that is in demand, that is a necessity, not a luxury. If he sells out, he can quickly renew his stock. It is better to re-order than to overbuy.

How He Does It

This is not all done automatically. First of all, he secures a good location to display his stock. Sometimes he selects a prominent corner, and puts his papers on a stand, trusting to the public to leave their money when they take a paper, while he goes elsewhere, and disposes of more by personal appeal.

Sometimes you find a boy who has overstocked, and is trying to sell the noon edition after the afternoon edition is on the street. Did you ever notice the extra effort this boy puts forth. He advertises by crying out in terse sentences, the important bits of news in his paper. Just enough to excite your curiosity. These papers are not left to sell themselves just because they are a little old. Neither can he afford to lose the cost of them, so he makes an extra effort to get rid of them. This is the boy who turns his stock over frequently, because he gets a good location, and advertises intensively.

While it is impossible to equal this large number of turnovers in any staple business, it is nevertheless surprising the big returns on capital invested that can result from frequent turnovers. The principles of the newsboy's methods of salesmanship can be applied to any business.

Let us assume that 10 per cent. net profit is averaged on the sales price. This would mean about 15 per cent. on cost exclusive of overhead. Suppose we sold out our entire stock five times a year, this would mean a net return on the amount invested in stock, of 75 per cent. Much like a Wallingford "Get Rich Quick" story, but true nevertheless. The figures used are conservative. Ten per cent. net on the selling price is far from an unreasonable profit. Turning stock five times a year is done by many plumbing and heating dealers. Many other lines secure a far more frequent turnover.

Turnover Completed When Payment Made

There is one point that must not be lost sight of. The turnover is not completed until payment is received in full. This is a matter too frequently overlooked. In order to operate on a small investment, close attention must be given to collections as well as to sales. The newsboy's rapid turnover is due to selling for cash, as well as to sales methods. Prompt rendering of bills and close following up of unpaid accounts within thirty days will take care of this end of it.

Did you ever stop to reason why the successful contractor figures a low net profit on a big job? It is because of the number of times he turns his investment in it where the contract is properly drawn, to allow him to collect 85 per cent. of the selling price every thirty days, on the goods installed and journeymen's services rendered. By this means he carries a large job with a small capital, using the same money over and over. In collecting 85 per cent. of the selling price, he is getting back about 90 per cent. of his cost, leaving but a very small amount of his investment, except profit, tied up in the job, and not earning any interest.

There is one point in this connection, however, that we desire to bring out strongly at this time. That is the ordering of excess quantities, where the material is to be shipped to the job direct. This is of more importance on jobs calling for fittings of a large size, or other than standard.

Importance of Quantities

Too many contractors do not pay close enough attention to quantities, in estimating. They often order a few, if not many, more of each fitting needed. When the job is completed they have a great deal of money tied up in material that is not readily saleable. This accumulates from job after job until a large portion of their stock room is occupied with it. In addition to the loss of income on the money invested, there is the expense of insurance and handling, to say nothing of the inconvenience and worry caused the stockman or those handling stock.

It would be far cheaper to return this material to the supply house, and receive credit for it less the charge usually made in such cases. This charge is never unreasonable, and is far less than the cost of handling in the stock room until it is sold. Another way of disposing of such surplus stock is to plan some job or sale to use it up.

How then is this frequent turnover, which gives such wonderful results, accomplished? Two things are necessary. "Proper purchasing" and "successful selling." By the first, we mean pur-

	2—Appliances Stocked Cost	2—Sets of Material Stocked	Amount Invested	Invested in Labor	Total Turnover Cost
Five Turnovers	296.00	20.00	316.00	10.00	326.00
One Turnover	296.00	20.00	316.00	10.00	326.00

	Selling Price	Overhead on Sale	Profit on Sale	% Profit on Sale	% Profit on Investment
Five Turnovers	2400.00	480.00	240.00	10%	10%
One Turnover	480.00	96.00	48.00	10%	10%

chasing those articles which will move off the shelves with reasonable promptness. This is done through a knowledge of what our customers need and want. This knowledge, coupled with knowing in what quantities to buy, gives the dealer a most excellent start on the road to frequent turnovers. Buying in proper quantities means taking into consideration the probable demand for an article based on figures compiled from available sources.

It means also that the buyer must guard against the temptation of quantity discounts. Too frequently an extra five or ten per cent. is offered for ordering a fifty or one hundred per cent. increase in quantity. This looks very tempting, but when you stop to consider that this extra quantity may stay on the shelves the balance of the year, and the money invested in it will not be earning a cent of interest, the fallacy of the argument for quantity buying can be readily seen. Stock purchased during normal times in quantities to last longer than sixty days is going to result in cutting down the number of turnovers per year from what is possible.

Another Danger

Another thing to guard against in buying is tying up money in untried and unknown goods. Stick to standard brands made by manufacturers who know the markets, and who co-operate with the dealers in moving their goods. Beware of the low priced, unknown brand, and its salesman, who paints a vivid picture of quick sales and big profits. It is a delusion, and a snare, and is manufactured to sell only to the easy dealer, who is misled by cheap price for cheap goods.

All the "proper purchasing" you may possibly do will not make a dollar for you unless you sell what you purchase. Profits come out of sales. So really when all is said and done, it is "successful selling" that brings many turnovers. This, then, will be the essential part of this article. To show how sales may be increased, and the results reflected in turnover and profits.

Everybody agrees that personal solicitation cannot be beaten as a means of selling something. Talking to the prospect; holding his attention, and influencing him through proper arguments while displaying the article before him have always been and will continue to be the best methods of selling.

Put a salesman on your staff; get someone; be it man or woman, who is interested in selling. Show them the selling points of the articles they have to sell, the uses they can be put to, and the added comfort and convenience they mean in the home. Then watch and see the results.

Can Decrease Stock

Before doing this, however, go over your stock very carefully, and see where you can cut down the quantities of items you are now carrying. Our experience with plumbing and heating dealers tells us positively that nine out of every ten can decrease their stock 25 per cent. without decreasing their efficiency. This because too little attention is paid to stocks, thereby allowing too large a quantity of many items to accumulate.

Take the money derived from this surplus stock, and reinvest it in a wider variety of articles that can be readily sold. Give considerable attention to this selection, using all available sources of information. The advertising pages of your trade papers, the current magazines, other lines of business, and many other places will suggest to your mind things that can be sold by the plumbing and heating dealer. The fact that some article never has been sold by you or your fellow dealers is no reason why it cannot be done. Be a pioneer, and go forth into untried fields. They offer a rich harvest to the one that will sell them consistently and earnestly. In this we urge conservatism; stock sparingly until the demand has been created.

We are giving you herewith an example of what may be conservatively expected from sales effort, intelligently directed, and its results on turnover and profits.

The following list represents a very substantial increase in any business, particularly in average shop of $25,000 annual volume. It is well within the possibility of any average salesman to sell these items, and more too, in twelve months.

In connection with the merchandising of plumbing equipment, suggestion plays a very important part. Thus a display such as this, showing the various pieces in the relative position they would occupy in the bathroom of the private home, is of interest. This shows the bath tub, pedestal and wall basin, toilet, bath accessories, stool, paper holder, towel rack, mirror, glass shelf, medicine cabinet, heater, etc. The combination of this group of articles conveys many suggestions to the prospect who views the display in the plumbing shop window or interior.

12 Gas Water Heaters @ $200 or 36 Combination Boilers and Heaters			$ 2,400.00
6 Heat Regulators	@	85.00	510.00
15 Coal Water Heaters	@	50.00	750.00
12 Range Boilers and Heaters	@	40.00	480.00
4 Bath Rooms Remodeled	@	400.00	1,600.00
6 Jobs Radiator Shields	@	75.00	450.00
12 Frost Proof Closets	@	50.00	600.00
3 Heating Plants	@	1,000.00	3,000.00
6 Pipe Covering Jobs	@	150.00	900.00
			$10,690.00

First, bear in mind, these are selling prices and include labor service, overhead and profit. To arrive at the amount of investment required, we will first deduct 40 per cent. which is a very conservative figure to cover the three items just mentioned. This amounts to $4,276.00, which deducted from our total selling price of $10,690.00, leaves $6,414.00 as the cost of the merchandise.

Now comes the important point. It is not necessary to purchase the entire stock as shown above. That would be very poor business judgment. You would have six thousand dollars tied up that was not earning a cent of interest, and in addition there would be insurance and handling charges. Let us assume that this entire lot was purchased one-sixth at a time. Two heaters, or combustion boilers and heaters, two coal heaters, two range boilers and two frost proof closets are ample stock of these items for the small dealer.

An investment therefore of one-sixth of $6,414.00, approximately $1,000, will enable the dealer to swing ten thousand dollars in sales. Granting he makes 10 per cent. net profit on the selling price, he has made $1,000.00 on an investment of $1,000.00 The most skeptical reader must admit that even though we have exaggerated the smallness of the investment and the per cent. of profit, and this we do not admit, even though such be the case, we say, these figures cannot be revised to show anything but an exceedingly large turnover on the investment.

Big Return Investment

The point we are trying to bring out, however, is the big return the dealer will get on his investment necessary to handle the appliances. In other words we are incorporating in this article the ideas advanced by many manufacturers of specialties and appliances, who contend that their list price provides a good margin of profit on the investment, if proper sales effort is put forth, and a sufficient number of turnovers are obtained. Let us take one item of the above list, and see the results of frequent turnover, as set out in the contentions of many manufacturers. For illustration, we will use an appliance selling, installed, for $240.00, and make comparison with one and five turnovers per year. We will assume that the dealer stocks two of these all the time.

The figures show that on five turnovers 74 per cent. is earned on the amount invested as against only 15 per cent. where there was only one turnover per year.

A further analysis of the figures pertaining to overhead brings out some interesting figures. Basing overhead at 20 per cent. of the selling price, we have $480.00 for overhead, on five turnovers, and $96.00 on one turnover. In view of the fact that our investment in both cases is the same, that we only carry in stock at any time two appliances, and that but very little additional overhead expense is required to handle five turnovers over that required for one, it would seem fair to show a saving on overhead through frequent turnovers, in view of the fact that our profits have increased from $43.00 to $240.00 on the same investment.

The difference gained on overhead as shown above is $480.00 compared with $96.00 or $384.00 gain. If this gain is apportioned over the ten sales, it would be about $38.00 on each sale. Deducting the $38.00 from the original selling price of $240.00 we have a revised selling price of $202.00 with the same amount of profit in dollars and cents.

The above example is based upon an appliance listed at $185.00. The dealers' discount is 20 per cent., and the cost of installing is based at $10.00 for material, and $10.00 for labor. Normal overhead is figured at 20 per cent. on the total sales of the establishment, and a 10 per cent. net profit is allowed on the selling price.

The above is a much discussed question. Many manufacturers contend that prevailing lists and discounts, as well as selling prices installed, afford ample profit for the dealer, if he will increase his turnover.

Novel Water Supply Equipment Installed

Beach Grove Golf Club, Windsor, Ont., Has Water Supply System for Watering its Greens—The Installation Described.

AT A COST of approximately $15,000 the Beach Grove golf club has installed a water supply system for watering the greens and fairways that is said to be unequalled in Canada and is as complete and efficient as the water plant of any American golf course. It covers all of the eighteen putting greens and the thirty-six tees.

Water is forced from Pike creek into two 5,000 gallon pressure tanks, 34 feet long and 60 inches in diameter, and from there forced through the underground pipes from where short hose lengths reach to above sprayers.

Both electrical and gas pumping equipment provides for a supply at all times, the gasoline engine to be used in case of interruption to the electrical plant.

By its complete water supply, the Beach Grove club is assured of splendid grass throughout the season; in fact below the covering to keep off the frost there is today a healthy growth to be seen, and early spring will see as clean a turf as anywhere in the country.

The machinery by which the water is obtained is contained in a frost-proof pump house. All units are in pairs, and are so arranged that the apparatus will continue to function in the event of a breakdown in any single unit. Two electric motors operate the two heavy-duty double-acting water pumps. An automatic apparatus switches on or cuts out either or both pumps, which can be cut in automatically in case of a severe drought. There is a working pressure of 75 pounds per square inch maintained ordinarily which can be increased to 125 pounds in emergency. When water is not being used, the pumps are stopped and as the pressure is reduced by drawing off water, the pumps automatically cut in until the pressure is brought up to normal.

Careful Method of Laying Pipe

From the pumps and tanks, a system of pipes underground carries the water to each of the 18 putting greens and the 36 tees. The main line, extending to the club house site, is 4 feet 6 inches deep, well below the frost line.

All the smaller lines were laid by a trench digging machine, which established an even grade from the surface to the main supply line. This method eliminates the usual low spots and drain cocks necessary when these lines are laid by hand, and eliminates the possibility of burst pipes when the water is drained off in the fall.

Control apparatus, valves, drain cocks, etc., were all of the highest quality. The system has been designed to function for 25 years without replacement.

Novel Installation at the Greens

At each point where the water is taken off at the surface a large-sized drain cock of vitrified tile is sunk into the ground so the top is level with the surface. Rising up through the center is the supply pipe. Sufficient room around this pipe is left to coil the long rubber hose used to throw the water to the greens. A wooden cover fits over the tile tightly, protecting the hose from the sun when not in use, and keeping the whole out of sight. All installations are located a sufficient distance from the putting surface so as not to interfere with play.

A new type of mechanical sprayer will be used, covering the large greens thoroughly and evenly with a minimum amount of attention.

Heating and Ventilating

Combination Heating Systems

An Important Series of Articles Dealing With Many Interesting Phases of Latest Developments in the Field of Heating Practice.

(Written exclusively for Sanitary Engineer by NORMAN A. KEARNS)

The series of articles on Combination Heating Systems, which were commenced some time ago in Sanitary Engineer, were unavoidably interrupted, but are being recommenced with this issue. This series has interested many readers of Sanitary Engineer who will be glad to know that it is to be resumed on a regular basis.

BECAUSE in the pages of the Sanitary Engineer descriptions of various systems of heating have appeared it, no doubt, has been at times assumed by some of our readers that we were advocating the use of certain types of apparatus to the exclusion of others equally as good, or, perhaps, better than any of those to which we were directing attention.

We do not wish any of these articles to be considered as a "boost" for some one thing and a "knock" for some other. In fact, it has been our aim to present these articles so that they might not only describe heating systems as heretofore installed, but, in addition, might also indicate the trend of more recent developments in this, the science of the heating and ventilating engineer.

The Best System?

It is not always easy to define that point where, in our opinion, a certain type of heating apparatus becomes no longer a thing of value, but rather a thing of nuisance and annoyance. The difficulty comes not necessarily by reason of the lack of merit in a peculiar construction—it frequently comes because the circumstances surrounding a particular installation might be such as would make those merits of no effect.

Each system of heating has in its own field certain advantages that may make it, at times, of considerable value for particular cases; yet we may safely state that there is no one system that is entirely without faults.

Combination systems of heating have their advantages and their limitations. No man can say off-hand—although some men can speak more readily than others—just where any system using warm-air as a partial, or entire heating medium is the ideal system for a particular installation. It may be taken, however, as a general principle that where many separate heating units are required that the use of any warm-air system is inadvisable.

A Wide Field

Our field is a broad one and there is room in it for everything of merit. And because of the breadth of his operations the heating engineer requires some knowledge of the principle on which the use of the details in some other system than that which he handles is based. The knowledge of the other fellow's methods is of value, not because we wish to do our work in exactly the same way in which he does his; but because we may find in his methods suggestions for the improvement of our own. It is by looking into those subjects with minds unbiased by commercial motives and prejudice that we can increase the resourcefulness of our own equipment.

Actua' Installation

In writing these articles we have tried at all times to use actual installations in the examples of how certain details of construction have been adapted for a peculiar circumstance, or as an illustration of some one of the general principles of the art of designing combination heating systems.

In some of the former articles of this series we have used in our examples the plan of a small house wherein a piped warm-air furnace was indicated. With that plan we were able to describe certain of the main points which should be considered in the lay-out of a piped furnace, and, in this way point to the essential details that, in principle, applied to a much larger plant.

In many houses of the same size as the one shown by the plan there has been recently installed the "pipeless furnace" system. We have not gone into any detailed description of that type of furnace setting, because the simplicity of the arrangement makes apparent, at a glance the principles on which it has been developed.

It has not been our privilege to see a pipeless furnace used in a combination system of heating, therefore we are unable to point to a specific instance of where such an installation is a proven success.

Combination hot-water and warm-air systems of heating present to the engineer difficulties not only peculiar to either of the two methods of heating which are to be combined, but present also difficulties of the combination. The greatest difficulty encountered is that of making provision for the uniform balancing of the system, and to which we have referred in a former article.

This matter of the balancing of combination systems has been brought to our attention again within the last month, through a circumstance when the writer in his private practice was asked to give a report on the design of a heating system suggested for a small public building.

In the design referred to, the specifications called for warm-air heating in certain of the very large and exposed rooms which were set at some considerable distance from the furnace. Parts of the lower floor and certain protected rooms in the basement were to be heated by direct hot-water radiators.

Had the plans as suggested been carried out, here is what would likely result:

During mild weather, when the fire would be run on a checked draft, there would be circulation of water sufficient to keep the temperature of the rooms where radiators were placed at about the desired point, and, no doubt, the circulation of air would be just as the designer of the system expected that it would be. However, when the cold north or west winds would beat down against the exposed walls and windows of those rooms wherein reliance was placed in the warm-air system only, the result would be something like this.

The fireman would start to force the fire in an attempt to offset the rapidly falling temperature of those particular rooms. With the forcing of the fire there would naturally come a raising in temperature of the water contained in the system. The radiators being situated in the least exposed parts of the building would overheat the rooms wherein they were placed. The occupants of these rooms would likely turn off the heat from those rads, and the water would start to boil out of the expansion tank.

An Example

This might appear to be a far-fetched example of the lack of balance in a combination system. Nevertheless, it is one taken from an actual instance and will serve to show why combination systems are sometimes condemned because of faulty design.

The majority of our readers will rightly assume that no proper design of a combination system would be laid out along such lines, and that it would be reasonable to place the radiators in the exposed rooms and the warm-air registers closer to the furnace. In this case, difficulties of a structural nature prevented the installation of a system to that advantage. Because of those structural obstacles to the proper lay-out of an efficient warm-air system, the idea of any system using warm-air should have been abandoned.

We must never lose sight of the fact that the two systems combined are inseparable in operation; they will not function independently. With this general principle in mind we should see to it that warm-air registers are placed wherever it is possible to conveniently arrange for such, and that the hot-water radiators are used as auxiliary units only.

In many cases we may find that there will be certain rooms that cannot be reached by warm-air feeders, and it will then become necessary to utilize direct radiators as the heating units for such rooms. If the lay-out should be such as will make necessary the installation of many of these separate radiator units, it would be best to no longer consider the combination system.

The Principal Factor

In these articles we have given much more space to the subject of the warm-air part of the system than we have to the hot-water part. We have done this because heating by warm-air must be the first consideration in the design of a combination system.

During the past year we have examined a number of heating systems when we have found their owners dissatisfied with the operation of their plants. In many of the cases we found circumstances of such a nature as would prevent any warm-air furnace giving satisfaction. A frequent experience was to find that the designers of the system had evidently forgotten that the main ideas in the design of a warm-air system are to reduce the air pressures in the rooms to which a current of warm-air is to be directed, and to increase the air pressure in the lower part of the space between the furnace and its casing.

A cold-air intake was sometimes set on one side of a building, and then on days when the wind was moving from an unfavorable quarter the pressure in the lower space between the furnace and its casing was reduced by reason of the partial vacuum resulting on the leeward side of the house.

We also found that in some cases vent flues were set so that the outer atmospheric conditions exerted a downward air pressure at times sufficient to reverse the current of air in a direction contrary to that anticipated by the designers of the system.

From examples like the foregoing, two general principles may be deducted.

First: Dependence for a supply of fresh cold air should never be placed on one intake set on one side of a building.

Second: Extraction, or vent ducts must be heated to a higher temperature than the rooms in the building, or they must be fitted with some type of automatic ventilator or a suction fan.

Where it is impossible to heat the vent ducts or to provide the automatic ventilators, the ducts should be connected to a common gathering chamber wherein there may be placed back-draft check dampers of muslin or silk, as described in a former article of this series.

In the next article of this series there will be illustrated a warm-air heating system laid out on the lines of the direct extraction of foul air from the rooms and the free admission of cold outer air to the heater chamber.

THE USE OF OZONE IN PURIFYING WATER

(Continued from page 11)

drostatic head of the water columns and the friction head resulting from the flow of the air through pipes and towers. A third but expensive method has been used in which the water has been sprayed into the atmosphere of ozonized air. Baffled towers, where the counter-current system is used, have not proven very successful. A great deal has yet to be learned regarding the proper method of distributing the ozonized air at the bottom of the column of water, so that a maximum absorption of ozone may be effected.

Since the expenditure of so much electrical energy in ozonizing the air creates more or less heat, and in consequence subsequent decomposition of the ozone formed, cooling and drying the air by refrigeration have been usually resorted to.

In small plants, passing the air over chemicals that would absorb the moisture, has also been successfully utilized. The yield of ozone apparatus naturally varies greatly, depending upon the manner in which the air is handled both before, during and after the passage of the gas through the ozonizer. Russell Spaulding, in a report to the New York State Department of Health in 1913, very concisely states the desirable features of a good ozonizing apparatus. He estimates the theoretical yield of ozone for an expenditure of 1 kilowatt of electrical energy to be 1, 386 grams. Since the actual yields of apparatus will vary all the way from 10 to 60 grams per kilowatt, it is evident that their efficiencies are very low. Mr. Spaulding summarizes his conclusions as follows.

To summarize, then, the main desiderata in generating ozone are:

1. A supply of alternating electric current at low cost.
2. An efficient transformer to obtain high tension.
3. Ozone electrodes that do not generate heat to
   (a) Disrupt the dielectrics;
   (b) Cause reversion of ozone to oxygen;
   (c) Require external means for cooling.
4. Ozone electrodes that will approach the theoretical efficiency much more closely than the various systems now in use.

To this the author would add, that unless the ozonized air is effectively applied to the water to be disinfected, that is, unless practically 100 per cent. absorption of the ozone by the water is effected, the over-all efficiency of the entire apparatus may still be far from satisfactory. This phase of the subject still warrants considerable investigation.

No Doubt of Disinfecting Properties

The ability of ozone to reduce the bacterial content of a water has been too frequently demonstrated to doubt its inherent disinfecting properties. Nevertheless, it has its limitations in this direction like other disinfectants. In waters containing too large an amount of organic matter some of the bacteria may escape being killed. Pathogenic organisms probably are more readily killed than the ordinary water forms, because of the unfavorable conditions imposed upon them in the water, as well as from the destructive effect of the disinfectant. Spore-forming bacteria may also escape destruction. Ozone, because of its strong oxidizing powers, has the merit of being able to oxidize and remove tastes and odors due to organic matter in suspension or solution, and to reduce the color due to vegetable stain. If ferrous iron exists in a water, it is able to oxidize the iron to the ferric condition, in which form it is practically insoluble, and hence may be removed by sedimentation and filtration.

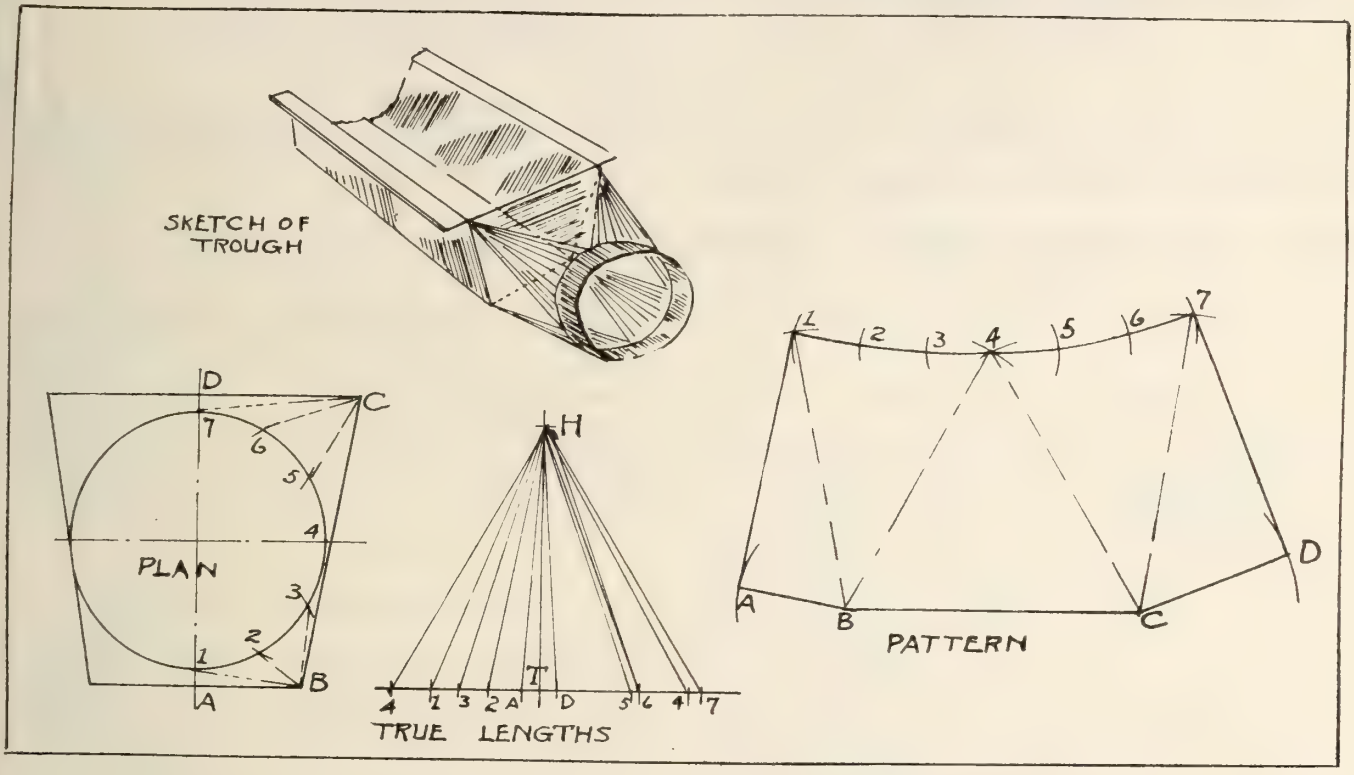
In conclusion, it may be well to point out that ozone used as a disinfecting agent is no more a cure-all for a polluted water supply than are other disinfecting agents that are at present more widely employed. As a supplement to filtration processes ozone can be used with good effect, and thereby render the water safer for drinking purposes. That the process needs investigation and scientific development in order to make it economical and efficient, cannot be denied by its most ardent advocates. When such a development is brought about, its use in the purification of water will become more general and its points of real merit better appreciated.

CONVENTION OF SASK. SOCIETY OF S. AND H. ENGINEERS

The fourth annual convention of the Saskatchewan Society of Sanitary and Heating Engineers will be held in Liberty Hall, Regina, on March 7, 8, 9, and 10. The first day will be a meeting for the Executive Committee only, the general convention opening on the 8th. Early indications are said to promise a good representation.

Patterns for Irregular Connections

By O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Missouri



PATTERNS FOR IRREGULAR CONNECTIONS

OUR SKETCH shows a trough which has a transition placed on each end of it. The idea is to catch the oils or substances running through machines.

Even though the bottom is smaller than the top, which gives the shape as our plan drawing, we can associate this evenly with a square to round transition treatment.

So, first draw the plan making the measurements of the base together with the height, and the flare of the sides, and the length of the top as specifications call for.

Then describe the round base wherever it should be and divide one-half of the circle in any number of equal spaces, drawing lines to the corner B and C as shown.

To set out the true lengths, draw a line as H—T to equal height or length of the transition and then pick the plan lines as B-1-2-34 and set them in diagrams as T-1-2-3-4.

Also pick the lines C-4-5-6-7 and set as T-4-5-6-7.

If desired, the top and lines as 1-A and 7-D can be taken and set in diagram as T-A and T-D. When lines are drawn to H we have the true lengths.

To set out the pattern, draw any line as B-C equal to that line in plan.

Then pick true length H-4 to the left and using B as center, strike arc as at 4.

Next pick true length H-4 to the right of diagram and using C as centre, cross arcs in point 4.

Now describe arcs 3 and 5 to equal the spaces 4-3 and 4-5 of plan.

Then pick true lengths H-3 using B as center, cross arcs in point 3.

After this, pick line H-5 from diagram and using C as center, cross arcs in point 5 as shown.

Repeat in this way until points 1 and 7 are established.

Then pick the bottom line A-B and also the top line C-D and set in pattern as shown.

Pick the lines H-A and set as 1-A in pattern and then pick H-D and set as 7-D in pattern and this gives the half pattern. Laps must be allowed for riveting.

NEW LIQUID CHLORINATOR PURCHASED

Chatham, Ont.—The Chatham Waterworks plant is to have a new liquid chlorinator apparatus, which is to be ordered and installed as soon as delivery can be arranged.

It is learned that the new apparatus was badly needed and a recommendation that it be purchased and installed was received from the superintendent. The new apparatus will be ordered from the Wallace Tiernan Company at Toronto, the only makers of this particular plant in Canada. Approximately, the price will be in the neighborhood of $3,000 installed.

Mr. Dallyn, of the Provincial Board of Health, will be asked to visit the city for an informal discussion of the whole waterworks supply system for the city. The discussion will involve an endeavor to determine on the best source of supply, and an entering into of the whole situation.

STEEL BUYERS REMAIN IN CONSERVATIVE MOOD

The iron and steel market situation has shown a little improvement during the past week or two. The general condition is that demand has not improved since last month to the extent generally looked for. However, the volume of inquiry, both on the foreign and domestic centres, is reported as slightly improving. Buying in general is in small lots. While it is sometimes said that distributors and manufacturing consumers are ordering in conservative fashion because they are somewhat doubtful as to the future of quotations, yet another judgment of the trade is that the chief concern of buyers affects their own selling ability or the stability of their distributing markets. It is inferred that if steel purchasers were assured that their requirements would continue, or if any increases in future demand could be calculated upon, much freer buying would result. Reports from American centres indicate that any order of moderate size is sufficient to draw forth a slight concession from the regular market level.

Ozone As a Purifier

THE SUBJECT of ozone in connection with heating and ventilating work has been much discussed recently by those interested in this branch of the industry. An article appears in this issue giving something of the history of ozone and giving the results of some experiments which have been made. There seems little question of the disinfecting qualities of ozone, but there are undoubtedly some types of bacteria which could not be killed by its action and it is therefore not a cure-all for a water supply which might be much polluted.

Recent developments indicate that ozone is likely to become an important factor in connection with standard ventilating equipment. Its history is interesting, as revealing a rapid rise to notice. Only as recently as 1913 there appeared the quotations of authorities which largely brought this new discovery to prominence, but it shortly afterwards lost some of its early glamour as some of its exponents lost some of their enthusiasm. Some even feared that ozone might supplant fans and blower systems, but the correct idea of recirculation of air was not then established. It was also thought that continued use of ozone would have harmful effect on human health. This was followed two years ago with a startling report of the use of ozone in the public schools of a large American city which reported as result a great decline in the number of cases of illness among pupils.

The question has assumed a somewhat new angle and importance of late, due to high costs of fuel and the pressing need for a solution of certain ventilating problems. Recent investigations have indicated that there are good grounds for imagining that ozone will, in future fill an important place in connection with heating, ventilating and water purification.

Should Stamp Out This Evil

PLUMBERS and other merchants of Brantford, Ont., have taken the lead in attempting to offset what has become a most unfair medium of reducing the volume of their business in local communities. This has to do with traveling carnival companies and carnival attractions. A campaign has been started because of some bitter experiences of that city in view of the fact that the number of these carnivals touring Canada has been gradually increasing in the past few years. There are several reasons why plumbers and other representative bodies should seek to have these aggregations kept out of Canada. It is a known fact that when they visit a city they take away with them thousands of dollars which otherwise would remain in the city to be spent in its stores and in a more useful manner than it can be spent at such carnivals.

An attempt is being made to right the wrongs which have existed for some years in connection with transient traders and hawkers who visit a community and solicit business while paying little or no portion toward the expenses of that community such as the permanent merchant must do. So, too the carnival is a transient affair which contributes but a small license fee and takes away a large volume of revenue which otherwise would go to enrich the inhabitants of the community who have their money and interest centered in that community.

Apart from the financial side of the question there is also the moral aspect. No one will deny that these carnival companies in most cases represent the scum of the theatrical world, who do their best to impoverish, both morally and financially, those who frequent their amusements. Steps are being taken by representative bodies in Brantford to stamp out the evil of travelling carnival companies. Already many sections of the United States have barred these traveling companies, and Canada is now looked to as a fertile field for exploitation. Plumbers and other representative bodies in other cities might well join Brantford in seeking some means of restraining these companies from coming to Canada.

Little Solace For Tinsmiths

TINSMITHS throughout Canada hardly know where they are at in regard to their status for taxation purposes, due to the many contradictory rulings and judgments handed out by those who should be authorities on the subject. Another turn has been taken in the case but the position of the tinsmith is not yet clearly stated. The Ottawa representative of Sanitary Engineer reports that on good authority, no action will likely be taken by the government to force tinsmiths to collect and return three per cent. sales tax as manufacturers pending the appeal of the confectioners' case which will be heard in March in the Supreme Court. Naturally there are many technical differences between the business of the tinsmith and the tailor and confectioner, and it is surprising that it has only now been discovered that the decision in either one or the two latter classes of business, does not apply to tinsmiths.

Briefs

GROUP selling is one of the solutions of the retailer's problem of stimulating business. The merchant might well look over his stock with a view to grouping lines which will carry more or less of a combined appeal to customers, and to mention such lines when the customer asks for any one of the group. It is surprising the increase which can be made in the total volume of trade by making such timely suggestions, and the customer frequently will be pleased with the suggestion in saving return trips to the store.

CHANGES which have taken place in the economic situation since the commencement of the year, are generally recognized to contain a larger degree of favorable developments, than otherwise. On the whole, therefore, basic conditions have continued to improve, one of the factors contributing towards this end being the current activity in construction. Prospects for an active year in the building industry are evident in both city and country districts; while acceleration in this direction is reflected in the basic metal industries and the various commodities required in construction work.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

Article No. 49 of Series; Illustration 60.

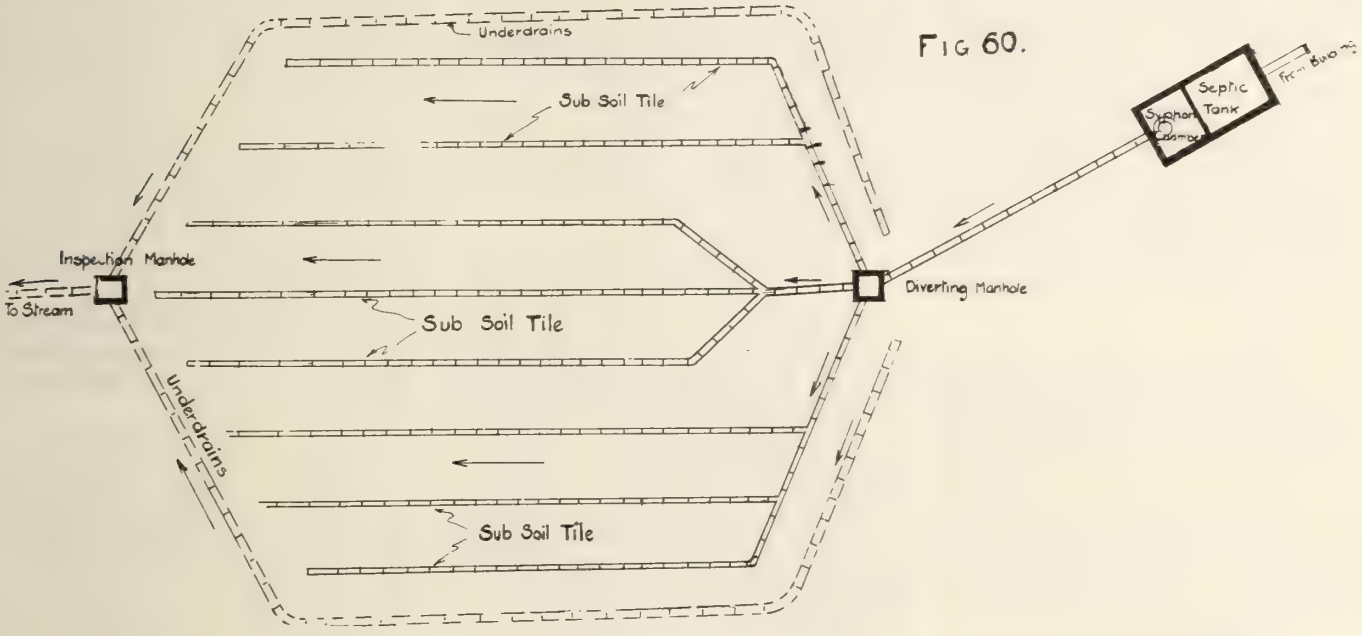

FIG 60.

FIGURE 60 shows a much larger filtration area carried out on a similar principle to the previous one with the exception that the under-drainage is carried around the outside boundary of the whole area whilst the distribution tiles are placed in three separate sections.

Figs. 61, 62, 63 and 64 give cross-sections of the cut and the best method of filling in same to increase the filtration process in the various soils, for if the subsoil drains were packed tightly around with clay or any other impervious soil the sewage would in time follow the pipe line and be discharged, without purification, into the outlet stream.

In laying the tile the main object is to arrange and provide for ample opportunity for the circulation of air, both through and around the pipe, which not only increases the absorption of water but hastens bacterial action and that is the main reason for laying and covering the pipe with cinders or coarse gravel and the depth and quantity varies according to the soil—the heavier the soil the greater amount of filling required.

The subsoil drains should be laid true to grade, and require little fall, with ¼-inch open joints protected with broken stone to prevent the earth, tree roots, etc., obtaining access to the pipes and blocking same up.

The temperature of the sewage in the tank in cold climates is generally sufficient to prevent the tank effluent freezing in the filtration area. Should any difficulty arise through this condition, and the outlet elevation will permit, the pipes should be kept 3 to 4 feet below the surface, but as the tank effluent requires all the aeration it can obtain the shallower the pipes are laid the better the chances are of it obtaining the oxygen from the atmosphere and no single case of frozen effluent has come under the writer's notice in his experience with pipes laid at 2 feet depth with the single exception of the pipe outlet in a Canadian installation. So that in very cold climates it would be advisable to place the outlet pipe 4 feet below the earth surface so as to protect same from frost.

The capacity of the tile drains should be nearly equal to the volume of tank effluent discharge at any one time so that the entire drainage system under filtration will be filled and emptied at the same time, allowing the intervals of rest needed between each discharge, in order that the land under treatment can have plenty of time to take up sufficient oxygen for the next application of sewage. This is best regulated in the design and capacity of the second chamber or dosing chamber with the automatic flushing syphon. In some cases, for the sake of economy, the syphon is not installed and a simple central pipe overflow connected to the drainage system is substituted, this is not good practice, however, as proper distribution is impossible and the sewage just trickles constantly in the pipes and only the first part of the filtration area or drainage tiles receive the tank effluent and in time becomes sewage sick and little purification then takes place.

Experience has given another good method of obtaining the amount of tile required for efficient filtration results and that is each foot of 4 inch tile drain will take care of each gallon of liquid discharge into the drains from the tank in open and porous soils. In heavy soils approximately two feet of 4 inch tile is required per gallon.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

NEW FIRMS

Montreal.—Robert & Hudon, plumbers, have registered partnership.

PERSONAL

Geo. Baird of Alexander & Baird, prominent heating and plumbing contractors of Moosejaw, Sask., spent last week in Toronto. Mr. Baird says that he has been in the plumbing and heating field for a number of years, and although it has been his expressed desire ever since he has been in business to visit the East and take a trip through the manufacturing plant of plumbing fixtures and enamelware business, this has been his first opportunity. We all hope that Mr. Baird enjoyed himself while here, and that he will make this a yearly event.

H. J. Sykes has taken over the position of Sales and Advertising Manager for the Ontario Wind Engine & Pump Company, formerly held by Mr. Fairbrother. Mr. Sykes has been with the above company ever since he graduated from High School thirteen years ago. For a number of years he was connected with the Sales Department and for five years was Purchasing Agent. Previous to taking over his present position he was Superintendent of Branches.

ONTARIO PLUMBING INSPECTORS' CONVENTION

The annual meeting of the Plumbing Inspectors' Association of Ontario will be held in St. Catharines, Ont., on March 22. The program is now being arranged under the guidance of Secretary W. Meadows, Toronto. Letters have been sent to the various municipalities throughout the province suggesting the importance of representatives being present to hear the papers to be given by authorities on various phases of this work.

PLUMBING FIRM PURCHASES PROPERTY

Stratford, Ont.—Dufton & Saunders, plumbers and pipefitters, have purchased what is known as the Dunwoodie property which faces the east side of Huron street, just north of the stone bridge. There is a frontage of sixty-five feet, extending from the north wall of the plant of Dufton & Saunders toward the bridge, and the lot is 182 feet deep. The firm plans to build a modern structure on this property.

OBJECTS TO LICENSING PLUMBERS

Hamilton, Ont.—D. Wark, city plumbing inspector, asked that the commissioners license plumbers. He stated that he had great difficulty with amateur plumbers doing "bum jobs." If they were licensed, stated the inspector, this would not happen.

"You'll make plumbing a closed corporation," suggested Judge Snider. Magistrate Jelfs was also opposed to the idea.

"I'm glad Judge Snider and the Magistrate agree with me," stated the mayor. "I've heard all about this and I don't like it."

This ended the matter.

PLANS WATERWORKS SYSTEM

Woodbridge, Ont.—Engineer E. A. James has presented plans and estimates for a water system, and as a result it is likely that the council will decide to bore test wells and see if a sufficient quantity of water can be obtained to make the scheme feasible. It is proposed to obtain the water from wells. The system would at first include only the business center and the main streets but the plant would be large enough to provide for extensions. The cost of a partial distribution plant, pumping station, standpipe and wells was estimated at between $25,000 and $30,000.

CONTRACTS ON MOUNT ROYAL HOTEL

The following sub-contracts on the new Mount Royal Hotel, Montreal, have been announced:

Crane, Limited, plumbing fixtures.

Garth Co., Montreal, heating and ventilating appliances.

Jas. Walker Hardware Co., pulleys, chains, etc.

Canadian Allis-Chalmers Co., Montreal, cast iron windows and balconies.

SEEK AMENDMENT TO DRAINAGE LAW

Taking the ground that the Ditches and Watercourses Act has outlived its usefulness, the Association of Ontario Land Surveyors, at a session at the Engineers' Club, asked that there be a general overhauling of the Provincial legislation relating to drainage and requested that the Act mentioned be either repealed or amended. As the law stands at present, the construction of extensive drainage systems comes under the Municipal Drainage Act, and that of smaller systems under the Drainage and Watercourses Act.

UNIFORM RULES TO BE ASKED OF GOVERNMENT

Windsor, Ont.—The Provincial Government will be asked to make a uniform set of plumbing regulations to govern all Ontario cities and towns, if a recommendation adopted by Windsor Council's Market and Property Committee is concurred in by Council. "Under present conditions," Mayor Wilson said, "plumbing regulations here are in a chaotic state. Each municipality has different regulations, the plumbers are inconvenienced, and the various councils do not know what to do to regulate matters."

The move for uniform regulations was endorsed by Abbott Ross, city plumbing inspector, and by leading merchant plumbers.

GIVES ADDRESS ON PLUMBING

Winnipeg.—Mistaken notions in plumbing were dealt with by J. Shepard, district inspector, in a recent address to the Manitoba branch of the Sanitary Inspectors' Association. The old-fashioned idea, said Mr. Shepard, was to enclose bath tubs, toilets, etc., in heavy woodwork in order to keep as much of the plumbing out of sight as possible. The result was that bathrooms were fine repositories for dirt and disease germs. The modern idea was to have the plumbing open and accessible.

Then the old-fashioned idea that drains should be large, so as to easily carry off night-soil, has been exploded. The modern idea was to have the drains no larger than absolutely necessary in order to permit as strong a scouring action as possible. In the wide drains solids were frequently left behind because of the sluggish flow.

Another mistaken notion was as to the heights of buildings. Disparity in heights of buildings caused disparity in the strain on plumbing and other fixtures. Big buildings created a correspondingly large draught and subjected the fixtures of smaller adjoining buildings to undue pressure. Arguments for and against the house trap, now compulsory, were stated. The chief argument against the house-trap was its tendency to obstruct the free flow of sewage. Its big advantage lay in its permitting ventilation from the street up the soil pipe.

WESTERN ONTARIO NEWS

W. G. Murray, Dominion Savings Building, London, Ont., is preparing plans for new $45.000 school at Springfield, Ont. Prices wanted on heating, plumbing.

John Putherbough, 1006 Wellington St. London, Ont., wants prices on hot air heating, plumbing and electrical work for new $6,000 residence.

The Board of Education at St. Thomas, Ont., plans improvements in connection with the heating system at Myrtle St. school and will want prices shortly, it is stated, on additional steam radiation and equipment.

J. A. Tennant of St. Williams, Ont. wants prices on heating and plumbing in connection with new $3,800 residence.

Wm. Copp, 51 Wortley Road, London, wants prices on hot air heating, plumbing and electrical work in connection with three new residences to cost $12,000.

Hayman & Mills, 280 Maitland St. London, want prices on heating, plumbing and electrical work in connection with $50,000 apartment they plan to erect in Spring.

Architect L. G. Bridgeman, Bank of Commerce Building, London, is calling for tenders for $25,000 addition to Musical Arts Society Building, hot water and steam heating, plumbing and electric lighting.

WANT PIPE LINE TO STOP POLLUTION

Welland, Ont.—Members of the Welland Water Commission, in conference with representatives from the Water Commission of the municipalities of St. Catharines, Merritton and Thorold, decided that representatives from these municipalities should wait upon the Minister of Railways of Canada, at Ottawa, and lay before him the urgent need of constructing the proposed pipe line from Port Colborne to St. Catharines, by reason of the building of the Welland Ship Canal and diverting the waters of the Chippawa Creek thereto, thus polluting the source of supply.

REORGANIZATION OF STEEL AND RADIATION, LTD.

Subject to the approval of formal meetings of bondholders and creditors which are to be held in the near future, arrangements have been entered into for the reorganization of Steel and Radiation, Limited, by the way of transfer of the undertakings and assets of that company to a new corporation to be formed and called the Imperial Radiation Company. The president of the new company will be J. E. McAllister, of Toronto, and the manager, E. T. Wingate. It is intended that the new corporation will come into operation in the immediate future. The new company desires to retain and carry on the business and connection of Steel and Radiation, Limited.

Contracts Awarded

Quebec.—John & Paquet, have plumbing and heating contracts for home costing $125,000 for L'Oeure de la Protection de les Jeune Filles.

Moncton, N.B.—Edgar T. LeBlanc, plumber, who had the contract for the plumbing and heating of the new Bathurst Hotel, was recently awarded two more contracts. He is now installing a hot water heating for John Legere and J. P Whealen.

Toronto.—Gurney Foundry Co., has hot-water heating contracts for 3 stores and apartments for A. Grossi & Bros; heating and plumbing contracts for two bungalows for A. Nelson are awarded to D. & G. Lynch; heating and plumbing contracts for residence for T. A. Entwistle are awarded to F. R. Maxwell & Co; heating and plumbing contracts for two residences for W. M. Bricknell are awarded to J. J. McClandish; heating and plumbing contracts for boathouses at Sunnyside for Dean Bros., are awarded to Bennett & Wright Co.

Halifax, N. S.—Plumbing contract for club house for Royal Nova Scotia Yacht Squadron is awarded to W. F. Craig.

Port Credit, Ont.—Wright Bros. have plumbing and heating contracts for alterations to residence, construction of new garage and swimming pool costing $30,000 near Mississauga Golf course for J. P. Bickell.

St. John, N. B.—J. P. Hennebury has heating and plumbing contracts for addition to epidemic hospital for General Public Hospital Commission. Byrne & McGeough have heating and plumbing contracts for construction for the Eastern Trust Co.

Montreal.—Laflamme & Courtemanche have plumbing and heating contracts for stores and residences for F. Dansereau; plumbing and heating contracts for two residences for C. F. Brown are awarded to Jno. Watson & Co.; Thos. J. Dyer, Ltd., have ventilating and heating contracts.

MONTREAL PLUMBERS ADOPT RESOLUTION

Montreal.—The following resolution was unanimously adopted by the Master Plumbers' Association of Montreal at the last regular monthly meeting:

"Whereas, for some years a serious condition affecting the trade has existed in Canada, in as much as Retail Hardware Stores have been placed by the manufacturers on their preferred list and sold at the same price as legitimate plumbing and steam supply houses who deal exclusively in that line, all of which is not in the best interest of the trade.

And whereas, it has been proved that few, if any, of the hardware dealers protect the plumber.

And whereas, to successfully conduct business a plumber must make a profit on the goods he installs principally because the margin on labor alone is not sufficient.

And whereas, it is the decision of this meeting that retail hardware houses should refer purchases of plumbing fixtures to the plumber, in the same way as the plumber would refer purchasers of hardware, locks, nails, etc., to the hardware store, both being merchants in their own particular line.

Be it therefore resolved, that the manufacturers of plumbing and steam supplies be advised that we strenuously protest against such action on their part and respectively submit that steam and plumbing goods should be sold only through concerns known as legitimate dealers.

And be it further resolved, that a copy of this resolution be forwarded to the secretaries of all sister associations in Canada, with the request that every effort be used by the members to make it effective.

Prices are wanted on heating system for new school for S. S. No. 6, Raleigh, by Gordon Drew, R. R. 1, Fletcher, Ont.

Catalogues and Booklets

HEAVY SHEET STEEL GOODS.

Catalog No. 32 covering heavy sheet steel goods has recently been issued and distributed by the Steel Trough & Machine Co., of Tweed, Ont. Included in the products listed in the booklet are galvanized tanks for various purposes, tank heaters, stable troughs. Culverts, sanitary closets, steel baths, wash stands and similar materials also occupy prominent places in this catalog. Welded steel pressure tanks, measuring pump outfits, lift and force pumps, and many other lines of manufacture are suitably illustrated and described.

BURNHAM BOILERS.

A very sensible and cleanly-illustrated catalog covering both water and steam type Burnham boilers has recently been distributed by Lord & Burnham Co., of Toronto and St. Catharines, Ont. This is their Catalog No. 61-C and it explains in a very logical and simple way, the various attributes and principles of the Burnham system of boilers. Various technical phrases are also made extremely clear by means of several typical illustrations. The methods of operation, the action when in actual service, the points of construction, advantages and economy features, are all things detailed in this booklet. The latter portion of the catalog is devoted to descriptions of the round sectional construction type of boiler. It comprises thirty-eight pages of very useful matter on this vital topic.

"Oyez - Oy

"Oyez - Oyez - Oyez" called the Town Crier—and then he'd proceed to give such news as he had been able to gather in a lusty voice that could be heard for blocks.

"Oyez - Oyez - Oyez" — Current events, local gossip — scandal — all these were part of the news items imparted to a breathless public each day.

Advertising in those days was an unknown thing. Turnovers were small in consequence and profits large.

Modern advertising has changed all this however and the 20th Century slogan is Big Turnover—Small Profit.

Plumbers Ask For Aid From Quebec Gov't.

Asked to Promote School or Aid Those Now Existing for Training of Apprentices—Master Plumbers Would be Instructors and Only Bona Fide Apprentices Would be Admitted to School.

MONTREAL.—Realizing the necessity of improved conditions in the matter of training apprentices, the Master Plumbers' Association of Montreal and employees have now arranged to ask the Quebec Government for assistance. Following meetings in this connection, it has been decided to make representation to members of the Government, and the Apprenticeship Committee of the Association, consisting of Messrs. Jos. A. Francoeur, P. C. Ogilvie, J. E. Walsh, and David K. Trotter, have drafted terms of a proposed resolution for presentation.

Arrangements have been made that the committee meet Premier Taschereau, the Provincial Treasurer and the Minister of Public Works at an early date, and the memorandum now being prepared includes the following points: That in view of the lack of apprentices in the plumbing and steamfitting trade, and the lack of suitable training for those to be engaged in these trades, the Provincial Government, through its Department of Public Works, and the Provincial Secretary, should either promote and maintain a school for the technical training of plumbers and steamfitters, or give more substantial grants to those already in operation. Also to have the curricula of these schools drafted more in consonance with modern practises.

It will also be suggested that all instructors in these classes should be master plumbers, and that no pupil should be admitted to any such classes unless they were bona fide apprentices to master plumbers.

May Be "A Wolf in Sheep's Clothing"

Unscrupulous Leaders of Soviet Russia Abandoning Murder-Rape Policy in Attempt to Win Sympathetic Co-operation of the World in the "Save the Children Famine Fund"

A large proportion of the contributions toward relief work in Russia, in connection with campaigns now under way, will undoubtedly be expected from business men. For the information and protection of these business men, Sanitary Engineer reproduces herewith an article, to be followed later on with another, outlining some data on the subject.

We have been under the impression that Lenine and Trotsky were a couple of extremely clever, unscrupulous hypocrites for whom the world was handpicked by the Germans and certain allies, which they officially admit, and sent to head a movement for which plans had been carefully made, to take Russia out of the war and to place that country's wealth and resources in the hands of the promotion syndicate. By slogans and popular theories of handing the properties of the classes to the masses they made a great hit. They themselves, of course, never believed in any such ideals. They got their rivals and opponents out of the way by a gigantic system of organized murder. They prolonged the war and in that way were responsible for the killing and maiming of thousands of Canadian boys. Since the war they have carried on a persistent campaign for creating discontent in Canada—particularly among the wage earners to prevent their working.

Having looted Russia to the limit they are throwing down their dupes, the Bolshevists, blaming them for the wrecking. They are just like groups of financial highwaymen with which trusting investors here are too familiar. They are asking the world to come in and assist them to re-organize the company, buy more bonds. The first offerings did not meet with success. The public was suspicious of the looters. They called back the proposals and proceeded to sugar-coat them; to put the public in a friendly frame of mind for their reception. Their new propaganda was designed to show that the looters were really very great, kindly, in fact, saintly, men; public benefactors who had suffered from the actions of unscrupulous employees. It is true, Lenine and Trotsky admit, thousands of good Russian men were murdered and many more thousands of gentlewomen and girls raped but that was an error of judgment. They are repentant. They are sorry. They are changing the system. The murder-rape policy is being gradually abandoned. The sugar-coating is the linking up of "Save the Children Famine Fund," with the whitewashing of Lenine-Trotsky. A big-hearted genial Canadian, Colonel Mackie, rancher, contractor, promotor, recently made a flying visit to Russia and has come back full of the saintliness of the reformed Lenine-Trotsky crew of murderous highwaymen and the good things they have done and are going to do for Russia—and the old story of prospects of big buying orders for Canada and Russian concessions for Canadians. Under the auspices of the "Save the Children Fund," the gallant Colonel has set himself the task of correcting Canadian beliefs in the unsavory characters of these men.

We would be sorry to misjudge Colonel Mackie, but the fact is that so far all his utterances in interviews are about one-tenth famine relief and nine-tenths rehabilitation of Lenine-Trotsky. It is rather a coincidence that over two months ago a propaganda sheet issued by the Berlin Bolshevik agency told of this plan—boasted of its success in developing the appeal for famine relief into a big campaign for the financing of Soviet Russia by western capital. Now they will boast the Canadian Parliament is giving them moral recognition. Is this fair to Canadians?

LIGHTNING ADJUSTMENT PIPE WRENCH

The Superior Wrench & Tool Co., of Widmer and Adelaide Streets, Toronto, Ont., announce that arrangements have been recently undertaken whereby they are now equipped to supply all five sizes of their pipe and general utility wrench. The manufacturers were previously engaged in making the small sizes only, but are now prepared to supply sizes ranging from 8 to 24 inches. It is named the "Lightning adjustment" pipe wrench, claim the makers, because of its easy and simple manipulation.

SOUVENIR SUPERHEATER

The souvenir superheater is the name given to the parlor type of heater by the Hamilton Stove & Heater Co., of Hamilton and Winnipeg. The manufacturers claim that the name is derived from the fact that the air is superheated by passing through the louvers, up around the fire pot and over the superheating fins. It is then distributed through the principle of re-circulation. As the superheated air rises from the heating chamber within the casing, a vacuum is created, thus automatically drawing the cold air into the louvers. The construction and specification features of the Souvenir include the following height overall, 48 inches; depth of fire pot, 15 ins.; size of body, 23 ins. square; size of feed door opening, 6½ x 8½ ins. It is made in the one size only and is designed on the same lines as a hot air furnace. In appearance, the makers claim that the Superheater will harmoniously blend with the furniture design in the home, being finished in gunmetal with rich copper trimmings. The complete design and effect is to resemble a modern piece of furniture.

WATER BOARD RESIGNS

Montreal.—Aldermen J. A. Brodeur, F. S. Fortin of the Department of Public Works and H. A. Perrault, Superintendent of the Water Works have been named to form the new Water Board of Montreal, following the resignation of the former members. R. S. & W. S. Lea and Walter J. Frances and Co. have been retained as Consulting Engineers.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

COMPRESSION goods, solder, bar iron, scrap materials, ingot metals, sheets and oakum, supply the current market developments in sanitary and heating materials. The easier tendency in lead products is reflected in lower prices on various grades of solder, this change indicating the trend in primary metals. Through a revision in discounts, standard brass compression work, brass steam cocks, compression bath cocks and basin cocks, are again reduced. Uncertain prices are also evident in some quarters on the heavier gauges of corrugated iron sheets. An easier tendency in copper is reflected in semi-finished goods such as sheets, rods and tubing. A change in galvanized sheets is recorded in eastern markets, while a similar recession appears on bar iron and steel base prices in other quarters. Depression again exists in the scrap material markets, with some lower prices available. The ingot metals are also dull, with reductions noted on copper, tin and antimony. There is still some uncertainty in such products as range boilers, enamelled ware and closet combinations, but a more stabilized market on these goods is looked for with the advent of increased activity during the prospective seasons.

MONTREAL MARKETS

MONTREAL, March 1.—The easier tendency in lead products, and further reduced solder prices, feature the current market reports on plumbing and steam-fitting lines. Tin on the primary markets is exceptionally weak, while both lead and copper also have slightly lower quotations. Further reductions in the finished products are said to be not unlikely if the present softer tone continues for any length of time in basic metals. Local sheet markets are again featured by slightly reduced levels appearing on all gauges of American galvanized sheets. The present reduction is only slight, and distributors look for little further declines of any marked proportions. A further recession is recorded in the prices on most scrap metals, these markets remaining very dull. Plumbers' oakum is reduced 35 cents per 100 lbs., bringing the present price down to $7.00 per 100 lbs. in 50 pound bales.

Prospects of future building operations lend encouragement to the increased activity in practically all lines of plumbers' supplies, and while business in different commodities is now described as quiet, there is every promise of a fairly active season ahead. There is still a certain amount of unsettlement on the local market, particularly on enamelled ware and range boilers, but it is felt that an improvement in this direction will be felt as soon as the volume of trade increases.

REDUCED PRICES APPEAR ON SOLDERS

Montreal.

The easier tendency in the market for lead products, owing to the softer tone in metals on the primary markets, is now reflected on current quotations, of solders in all grades. Guaranteed, strictly pure, commercial and wiping are all reduced one and one-half cents per pound. Wire solder also shows easier prices to the same extent, but owing to the differential on quantity buying, following quotations are increased, former levels being for orders of considerable weight. Solders are the only line yet quoted at lower figures, the reason, according to manufacturers, being because of the easier tone recently displayed in tin. Only this week this metal reached a new low point, the lowest that has been touched in the past ten years. Just to what proportions this downward tendency will reach before a recovery is made, is hard to determine, but it would seem likely that an improvement will shortly be forthcoming when the exceedingly low figures are taken into consideration. Revised quotations on the local market are as follows:

Lead pipe, per 100 lbs.	**12 50**
Lead waste, per 100 lbs.	**13 50**
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	**10% off**
Lead wool, lb.	**0 13½**
Lead sheets, 2½ lbs.	**0 10½**
Lead sheets, 3 to 3½ lbs., sq. Do., 4 to 8 lbs., sq. ft.	**0 09½**
ft., lb.	**0 10¼**
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 27
Do., strictly, lb.	0 25
Do., commercial, lb.	0 22
Do., wiping, lb.	0 23
Do., wire, lb.	0 35½
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

EASIER TENDENCY STILL IN SCRAP METAL MARKETS

Montreal.

An easier tendency has again crept into the market for waste materials, and both ferrous and non-ferrous metals are now quoted at lower figures. In sympathy with the rubber market, scrap is now reduced, automobile tires are quoted at 50 cents per 100 lbs. With the exception of malleable scrap and pipe scrap, all other iron and steel waste is reduced, while brass and copper in all weights have new lower dealer prices. Dealers state that very little activity is yet apparent, and while a little encouragement was lent a few weeks ago with an improvement in the German market, this has again fallen off, leaving very little outlet now for materials. The domestic market has been quiet all during the late fall and winter months, and little improvement is looked for in this direction until the open weather of spring. Following are revised quotations:

SCRAP—	
Automobile Tires	0 50
Rubber Shoes	0 05
Yellow brass	0 05
Red brass	0 08¼
Light brass	0 03
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 08
Heavy copper	0 10
Wrought iron, R. Rd., No. 1 per gr. ton	10 00
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 55
Heavy melting steel	6 50 to 7 00
No. 2 busheling	3 00
Boiler plate	6 50
No. 1 machinery cast	20 00

PRICES SLIGHTLY REDUCED ON GALVANIZED SHEETS

Montreal.

Local distributors have again slightly reduced their quotations on American galvanized sheets for the most part, although former higher prices are still given by some houses. The reduction, as stated is slight, only ten cents per 100 lbs. on all gauges and not to the

same proportion as other western markets have recently announced. Business in all lines continues quiet but this condition is only seasonal at this time of year. There is still a certain amount of optimism expressed toward future trade by dealers, and further encouragement is now given by the report that prospects now appear brighter at primary centres. A better tone is now evident in southern steel centres owing to more enquiries coming to hand. Larger corporations and manufacturing consumers are now a little more interested than for some time past, and this condition, with the anticipated increase in general dealer trade, affords a much brighter outlook for business commencing with earlier spring months. Distributors state that further slight reductions may develop, but the market in general will not show any marked price declines, present levels being well down when compared with productive costs. Following are revised quotation

BLACK SHEETS—

10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05
26-gauge	4 60	5 20
22-24 gauge	4 65	5 25
28 gauge	4 75	5 35

GALVANIZED SHEETS—

10¾ ounce	6 65	7 60
28 gauge	6 25	7 20
26 gauge	5 95	6 85
22-24 gauge	5 80	6 60
20 gauge	5 65	6 45
18 gauge	5 65	6 35
16 gauge	5 50	6 35
14 gauge	5 35	6 35
2 gauge	5 20	6 35
10 gauge	5 10	6 35

English Standard	Queen's Head.	Fleur-de-lis
28 gauge	7 50	7 00
26 gauge	7 25	6 75
24 gauge	6 5	6 35
22 gauge	6 30	5 90
18-20 gauge	5 60	5 75

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

COMPRESSION DISCOUNTS SHOW REVISION

Montreal.

Discounts on certain lines of compression goods now show a revision, bringing quotations on these lines slightly lower. Standard compression work is now quoted at less 45 per cent., former discount being 43 per cent. Bath cocks are reduced through the discount being changed from 30 to 35 per cent, while the gate or straight way are now less 25 per cent. There has been an easier tendency in certain raw material markets, now reflecting on the finished products. There is said to be only a moderate trade in these lines, but an improvement is looked for with the promising indications of more extensive building operations in the spring months. Following are revised quotations:

COMPRESSION WORK—

Compression work, standard	45%
Fuller work, standard	30%
Bath cocks, compression	35%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard.	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard.	40%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, std.	25%
Gate or straightway	25%
Emco Globe Valves	33%
Emco check valves	33%
Jenkins Globe, angle, check and swing check	19%
Jenkins gate or straight way	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body gate	33%

PLUMBERS' OAKUM IS AGAIN REDUCED

Montreal.

Plumbers' oakum again shows a reduction in price of 35 cents per 100 lbs., and is now quoted locally at $7.00 per 100 lbs. in bales of 50 pounds.

CLOSET OUTFITS ONLY NOMINALLY PRICED

Montreal.

Notwithstanding lower prices have appeared in other markets on certain closet outfits, local quotations on the various kinds still remain nominally unchanged. It is pointed out, however, that prevailing conditions in the local market, are such that where it is necessary to meet competition, or a fair-sized order, price concessions are offered without altering the general price levels. Business is described as only fair, but a general improvement is looked for, now that the month of February is closed. Following are unchanged nominal quotations:

CLOSET OUTFITS—

Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., Richelieu" bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25

Do., Vitrious China	20 00

FAIR ACTIVITY CONTINUES IN ENAMELED WARE

Montreal

Conditions in the enameled ware market are little changed, with a modern tone of activity reported by distributors. Buildings of the smaller class still demand these fixtures, and a continued improvement is looked for in this direction. Buildings that were commenced in the fall and earlier winter have required supplies during the following months and it is felt that operations, started after the opening of the year, will demand supplies from now on until the open spring weather, when a decided improvement should be felt. Quotations on all lines remain nominally unchanged at 33 1-3 per cent. off list prices, although there is a certain amount of unsettlement locally, with price concessions offered, especially for fair-sized orders.

Sinks, roll rim—

18 x 30	$23 00

Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 50	$ 7 40	$ 7 30

17x19 in. Roll rim, F241 or P4345	12 60

Less 33 1-3 per cent.

LITTLE FURTHER CHANGE IN RANGE BOILER MARKET

Montreal

There have been few developments on the local market for range boilers since the adoption of the new list some few weeks ago. While most distributors at that time adopted the new selling basis there are a few wholesalers who are still selling at net prices. It was thought that this condition would be remedied before this date, and the new list prices and discounts adopted by all concerned. Current trading in these lines is still quiet, this undoubtedly being the chief reason for the present unsettled condition. It is pointed out that there is little variation between the new list prices with the discount, and the older net quotations, especially on the standard size boilers, and the general adoption of the new prices would mean little or no difference to the distributor, but would have a settling effect on the trade in general.

RANGE BOILERS:—

Extra Heavy, 40 per cent.

GRADUAL IMPROVEMENT IN PIPE MARKETS

Montreal.

The anticipated improvement in sales of wrought iron and steel piping would seem to have set in, at least inquiries are now allowing dealers to expect increased trade in the near future. For some time past, current business has been described as very seasonal, only small sorting orders forming the movement. However, with the season now advancing, and indications that more interest is now being taken, the gradual betterment should continue. Quotations remain with list No. 54 the selling basis,

with conditions again somewhat unsettled owing to some price-shading in certain quarters, notwithstanding prevailing low levels.

BETTER FEELING NOTED IN TROUGH AND PIPE MARKETS

Montreal

There is now a better feeling among dealers in eavestrough and conductor pipe, although as yet there is little activity in forwarding dealer supplies. Booked orders have, to a great extent, been withheld over the winter months, but these are now coming to hand in satisfactory numbers. For the most part however, orders are somewhat smaller than in past years, but dealers are confident that a gradual improvement will be felt, and anticipate sales will continue over a greater period than is usual when the season opens. Prices on both products continue unchanged since the revision early in the New Year.

EAVESTROUGH—

O.G. Round and Half-round, per 100 ft., 8 in., $16.90; 10 in., $18.70; 12 in., $22.20; 15 in., $29.80; 18 in., $37.80.

O.G. Square bead, per 100 ft.: 8 in., $15.90; 10 in., $17.70; 12 in., $21.20; 15 in., $28.80; 6 in.. $36.80.

Discount 70|10 per cent.

Conductor Pipe, Round, Plain and Corrugated, per 100 ft.: 2 in., $18.40; 3 in., $23.30; 4 in., $29.60; 5 in., $40.00; 6 in., $49.00.

Discount 70|10 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz.
2 in., $5.25; 3 in., $6.00; 4 in., $10.50; 5 in., $24.00; 6 in., $29.00.
Discount 60 per cent.

AVERAGE VOLUME OF PIPE FITTING SALES

Montreal

Current quotations on the various lines of pipe fittings are unchanged since the revision of a few weeks ago. The volume of business is said to be of average proportions, but principally of small sorting orders. A steady improvement is now anticipated, dealer stocks being undoubtedly low and consuming demand should increase in the following weeks. Unchanged prices and discounts are as follows:

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30
Flange unions	30
Malleable unions	47
Dart unions, black	33

Do. 4½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods —	Blk.	Galv.
Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

SOMEWHAT LESS ACTIVITY IN HEATING SYSTEMS

Montreal.

In recent weeks business in radiators and boilers has experienced a slight falling off, the market being described as fairly active during the month of January, but quieter during the month just closed. According to a local manufacturer, this could be explained for the reason that in the opening month, buildings under construction in the fall and early winter required supplies at that time, while construction now under way would not be advanced to the stage where heating systems were required until later on. It was his opinion that little increased activity would now be felt until the earlier spring, when the summer building would also be a stimulating factor. Quotations on all lines are unchanged, at following prices and discounts:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60. Discount, 59% for hot water and 60% for steam.

Wall Radiators—5 ft., $1.15; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 64 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 20 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in. 20 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 20 per cent. Ontario Govt. trimmings, 10 per cent.

Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings, 25 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

NO FURTHER CHANGE IN COTTON WASTE MARKET

Montreal.

Cotton waste quotations remain at the revision of two weeks ago, when the cream polishing and the higher grades of white were slightly reduced. There also is little change in the raw cotton market, although a slightly easier tendency crept in after the opening of the New Year. The present season is said to be the quiet period for these products and sales continue in fair volume considering this. Unchanged prices are as follows:

COTTON WASTE—Cream polishing, 18c. per lb.
White—XXX extra, 16c.; XX grand, 15c., XLCR, 14c.; X Empire, 13c.; X press, 11½c.
Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.
Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.
Dominion Wipers—White cotton, 20c; colored cotton, 14c.

MODERATE TRADE IN SOIL PIPE AND FITTINGS

Montreal

There have been few developments recorded in the market for soil pipe in recent weeks. In the closing months of last year a reduction of quite substantial proportions was announced on these lines, bringing prevailing prices to a reasonably low level. Competition was at that time declared a deciding factor in reducing quotations, and during the following quiet months this has not played such a prominent part in the market. Distributors state that business is now quiet with little improvement looked for until the open weather in the following months a little later on. Following are unchanged discounts:

SOIL PIPE—	
2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%
Fittings—	
2 to 6 inch	50-10%

BOILER TUBE TRADE OF MODERATE NATURE

Montreal

Current quotations on boiler tubes remain unchanged, with trade described as seasonably dull. In the earlier weeks of the year, business experienced a slight revival owing to repair work under way for spring activities, but in the past few weeks this has fallen off to some extent. While quotations are for the present holding unchanged, it is felt in some quarters that prices are not yet down to a corresponding level with replacement costs. Prevailing quotations on raw products are now within reasonable reach of pre-war levels, while boiler tubes are still at least 100 per cent. in advance. Therefore further recessions in prices would not be surprising. It is further pointed out that lower prices at the present time would undoubtedly assist trade, especially in the direction of repair work.

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

IRON AND STEEL PRICES REMAIN AT RECENT REVISION

Montreal

With a noticeable improvement at primary steel centres, there is said to be little or no increased activity locally up to the present. In the opening weeks of February, there was a turn for the better, when inquiries were slightly more numerous, but these have again fallen off to an extent. There is, however, no reason for discouragement, according to local distributors, and the month of March is looked upon as the period when a gradual but healthy improvement will be felt. In primary markets, there is still a better feeling, the commencement of which developed a few weeks ago. Recent reports indicate that the turn has been reached, and operations should continue to increase from now on.

Quotations remain at revised levels of a few weeks ago, when prices on the local market showed a recession of 25 cents per 100 lbs., on the various lines of bar iron and steel. These prices are generally considered as low as might be expected with prevailing productive costs, and further recessions, if any, will in all likelihood be of a very minor nature, for some time at least.

IRON & STEEL—	
Common bar iron, 100 lbs.	2 65
Refined iron	3 15
Iron finished machinery steel	2 70
Mild steel	2 65
Single reeled machinery steel	4 75
Band steel	2 65
Spring steel	4 25
Sleighshoe steel	2 65
Tire steel	2 85
Toe calk steel	3 55
Harrow tooth steel	2 80
Mining tooth steel, per lb.	0 21½
Black Diamond tool and cast steel	0 21½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

EASIER TONE CONTINUES IN COPPER PRODUCTS

Montreal.

Brass and copper products still display little activity on the local market, with a somewhat easier undertone now recorded. Metals on primary markets still fail to recover from their recent easier trend, and while this, up to the present, has not reflected on the finished products, slightly lower prices in the near future would not be surprising. Although trade is at the present time on the quiet side, an improvement is looked for with the close of the month of February. Prevailing prices locally are as follows.

	Base
BRASS—	
Sheets	0 25
Rods, ½ to 1 inch, round	0 23
Tubing, seamless	0 32
COPPER—	
Rods, ½ to 2 inch	0 30
Soft sheets, plain, 16 oz. and heavier lb.	0 34
Plain tinned, 16 oz. and heavier, lb.	0 39
Polished and tinned, 16 oz. and heavier, lb.	0 43
Tubing, lb.	0 34

Above prices are for full sheets or bars. Cuts 5c. per lb. higher.

IMPROVEMENT EXPECTED IN CORRUGATED SHEETS

Montreal

There is little or no change on the current market for corrugated sheets, with business described by local distributors as still quiet. With the month of February now passed, however, the present month is looked upon as the period when a gradual improvement will be felt. A slightly easier tendency is now noted in some quarters, owing to the easier levels appearing on flat sheets in recent weeks, but with the present quiet condition of trade, dealers look for little recession in prices in the immediate future. Following are list prices and discounts:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

LITTLE STABILITY TO INGOT METAL MARKETS

Montreal.

The metal markets generally have not shown any improvement, and certain lines, such as tin and copper, have been decidedly weak. There is not much stability to the markets at present, but it would seem as though the declines in most cases had been slightly overdone.

TIN.—London market has been subjected to severe pressure owing to bear operations on the part of a Dutch syndicate, with the result that prices have touched a new low point in about ten years. At the moment it is impossible to say how far the decline will go, but at present the bears have it all their own way. Local market is naturally weaker with stock price 35 cents.

COPPER.—London has again declined and New York is also lower, owing to demand falling off and forced sales by second hands. It is now possible to buy at 13 cents delivered for prompt, with a slight premium for forward. Local market is dull at 16¼ cents for electro, and 16¼ cents for casting.

LEAD.—The American market remains quiet at $4.40 East St. Louis, but London is again lower owing to large arrivals of foreign lead. It is realized, however, that the price in London has been too high. Locally this metal is quiet and easier at 6¾ cents.

SPELTER.—This is the only metal in London which has not declined during the past week, and it speaks well for the strength of this metal, that it should have remained steady. East St. Louis remains firm at $4.50, but whether it will be able to maintain this level is impossible to say. Prices are unchanged at 7¼ cents.

ANTIMONY.—Antimony refuses to show any activity, remaining dull with very little demand. Quotations remain unchanged, Chinese being quoted at 6¼ cents, high grade English at 7¾ cents.

ALUMINUM.—This metal continues in an almost listless state on the market, it still being the dullest of metals. Quotations are unchanged at 25 cents.

TORONTO MARKETS

TORONTO, March 1. — Price developments on the current markets include another change in compression goods showing reductions on standard brass compression work, compression bath cocks, brass steam cocks and basin cocks. Discounts on other lines remain unchanged. Easier prices are also noted on various grades of solder, including guaranteed, strictly and wiping. This revision reflects the easier tone in the primary metals. A further reduction of ten cents per cwt. has been recorded in the base prices on bar iron and steel. Uncertain prices are now evident on heavy corrugated sheets, with nominal quotations being shaded on gauges heavier than 26c, according to specifications and delivery required. An easier tone is noticeable in the primary copper markets, which is reflected in semi-finished products in some quarters, although local quotations remain generally unchanged. Variable quotations attract attention on closet combinations, with the present range in prices being apparent during recent weeks. Prices on other sanitary and heating materials have recorded no additional change.

ANOTHER CHANGE IN COMPRESSION DISCOUNTS

Toronto.

Another revision in the discounts on certain lines of compression goods has been recorded. This current change affects standard compression work, compression bath cocks, brass steam cocks, and basin cocks. The extent of the reduction varies between 5 to 10 per cent. on the different products, being greater on such lines as basin cocks than on standard compression work. In announcing the revision, manufacturers state that some easing in price on the primary raw material markets has been taken into consideration, together with the decision to reduce quotations to the lowest possible point for anticipated future business. Following are revised discount levels:

VALVES—	Per cent.
Compression work, standard	45
Fuller work, standard	30
Bath cocks, compression	35
Do., Fuller	25
Flatway stop and wastecocks, stand'd	54
Roundway stop and waste cocks, std.	46
Brass steam cocks, standard	43
Globe, angle and check valves, std.	25
Mueller globe, angle and check	25
Mueller composition disc steam valves	33
J. M. T. valves, screwed	20|10
J. M. T. C., screwed	25|10
J. M. T. gate valves, screwed	25|10
Jenkins gate or straightway, screwed	25|10
Jenkins globe, screwed	19|10
Radiator valves, standard	58
Do., removable disc	58
Emco, J. D., rad. valves, screwed	33
Emco swing check, ⅜" and ½"	40
Do., Do., other sizes	33
Webber gate valves, screwed	30
Emco globe valves, std., screwed	25
Emco globe valves, J. D., screwed	33
Basin cocks—	
No. 0 and 1, Fuller pattern	30
Quick opening No. 3633	50
No. 3623, plain or index handle	34

EASIER PRICES NOTED ON GUARANTEED SOLDER

Toronto

Some easier prices have now developed in guaranteed and other grades of solder, the extent of the reduction varying several cents per lb. This places the average local quotation at 26 cents, and reflects the recent trend in the basic market conditions. Other lead and zinc product prices, however, remain at unchanged levels, with little variation having been recorded in prevailing conditions. Business is of a moderate character, but described as fairly good for this time of the year. Following are the revised price levels:

LEAD AND ZINC GOODS—	
Lead, pipe, list, per lb.	0 12½
Lead, waste pipe, list, per lb.	0 13½
Do., over 8 in., list, per lb.	0 14½
Lead pipe is subject to a discount of 10 per cent.	
Lead traps and bends,	10 per cent.
Lead sheets, 4 to 6lbs., sq. ft. in rolls, lb.	0.09
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.	
Solder wire, per lb.	0 32½
Do., commercial, lb.	0 22½
Do., strictly, lb.	0 21
Do., guaranteed, lb.	0 24
Do., wiping, lb.	0 21
Zinc sheets, per lb.	0 09 0 10

UNCERTAIN PRICES ON HEAVY CORRUGATED

Toronto

The situation in corrugated sheets is worthy of special attention. The quiet trade conditions have resulted in an easier market tone being recently apparent in these products, and while quotations and discounts nominally remain unchanged, yet it is noticeable that prices on the heavier gauges are now practical-

(Continued on page 30)

Mueller Drum Traps

If you could buy a better Drum Trap from a concern you know is reliable, for the same price as the ones you now use, you would be likely to consider the matter favorably at least.

Mueller for many years has been making Quality Goods only. When a new product is added to the line, certain tests have to be passed before the name "*MUELLER*" is allowed on it. In the case of Mueller Drum Traps, each one is tested under pressure before leaving factory.

4″x 8″ is fitted with brass cover with sunken square as shown above, or with raised square on cover if desired.

2″x 6″ size is furnished with extension cover as illustrated.

Your orders will be given preferred attention.

H. MUELLER MFG. CO., LIMITED, SARNIA, ONT.

Water, Plumbing and Gas Brass Goods and Tools.

American Factory at Decatur, Illinois, U. S. A. Branches, New York and San Francisco

Mueller Metals Co., Port Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; Die Castings in White Metal and Aluminum; also Screw Machined Products.

TORONTO MARKETS

(Continued from page 28)

ly open. The base price of $6.50 on the 28 gauge, with a discount of 10 per cent., is still in effect. The U. S. 26 gauge has been added to the list with a quotation of $8.00 per 100 square feet. Owing to competition, prices on 24 gauge and heavier, have been withdrawn in some quarters, while an open market is recorded in others.

Corrugated iron in heavier gauges than 26, is now being quoted according to specifications and delivery required. For smaller purchases, the following nominal price list generally prevails. Larger shipments, however, will now be governed by the above revised conditions:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

FURTHER RECESSION IN BAR IRON BASE PRICES

Toronto

Further price recessions are noted this week in the iron and steel market, the base price on bar iron having receded another ten cents per 100 lbs. This reduction is generally attributed to the current market situation where price shading to secure nominal business has resulted in this level having become more general.

Recent reports from the primary markets indicate that better buying in iron and steel is being sustained, with new business being recorded and the ratio of current mill operations both pointing to a reviving demand of a fairly general character. The local market is described as fair for this time of the year. Following are the average local quotations:

IRON AND STEEL	
Mild steel bars, base	2 75
Mild steel bands, 3 16 in. base	3 25
Bar iron, base	2 75
Angle iron, base	2 85
Horseshoe iron	3 60
Tire steel	3 35
Spring steel	5 50
Crucible cast sheet steel	30 00
Mining drill steel	18 50
Cast tool steel, medium	18 00
Cast tool steel, high grade	31 00
Sleigh shoe steel	2 85
Norway iron	12 50
Toe caulk iron	4 00
Hoop steel	3 75

SHEET TRADE MODERATE WITH BETTER OUTLOOK

Toronto

Trade in the domestic sheet markets continues to be of a moderate nature, and further price recessions are noticed in those centres where slightly higher levels have been prevailing. This change brings the average quotations on a more uniform level in keeping with the prices given below, which became effective locally following the recent announcement of these reduced levels. The outlook at primary steel centres in the south, is primed with optimism which is backed by an increase in the volume of inquiry and substantiated by keener buying interest. The sheet market generally, is therefore in a moderate position which is described as fairly satisfactory for this time of the year. The stimulation of activity in industrial fields is expected to reflect in future improved sheet business, while railroad, automobile and construction fields are already showing signs of betterment. The tin plate mills are reported operating at a high rate of output. Following are the current prices on the local markets:

BLUE ANNEALED—		
10 gauge, base	3 75	4 50
12 gauge	3 80	4 55
14 gauge	3 85	4 60
16 gauge	3 90	4 65
BLACK—		
18-20 gauge	4 30	5 05
22-24 gauge	4 35	5 10
26 gauge	4 40	5 15
28 gauge	4 50	5 25

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—	Queen's Head.	Fleur-de-lis.
28 gauge	8 00	7 50
26 gauge	7 75	7 25
24 gauge	7 35	6 85
22 gauge	6 90	6 40
18 and 20 gauge	6 75	6 25
Premier and Apollo—		
10¾ oz.	6 00	6 75

EASIER PRIMARY TONE IN COPPER MARKETS

Toronto

Current prices on copper and brass sheets, rods and tubing, at present remain unchanged. While it is stated that the weaker tone in the primary copper markets may affect semi-finished products, the market tendency is described as having been anticipated to some extent by manufacturers and distributors when announcing the prevailing quotations. Prices on certain finished copper goods have recently recorded slight recessions. The following are the average quotations on the local markets:

BRASS—	
Sheets base, per lb.	$ 0 23
Rods, base, per lb.	0 20
Tubing, base, per lb.	0 25
COPPER —	
Rods, base, per lb.	0 29
Soft sheets, plain, 1 oz. and heavier, lb.	0 30
Do., plain tinned, 16 oz. and heavier, lb.	0 37
Do., polished and tinned, 16 oz. and heavier, lb.	0 42
Tubing	0 29

BETTER TRADE NOTED IN BOILER TUBES

Toronto.

While the current condition of the boiler tube market is described as nothing extraordinary, yet an improvement in the volume of prevailing business has been recorded in some quarters. Boiler tubes are reported to be moving well, in the smaller sizes, with trade quite moderate in the larger sizes. This betterment has been evident since the recently revised prices on tubes came into effect, but is naturally expected to develop at this time of the year. Quotations are generally unchanged at the following levels:

BOILER TUBES

Size	Seamless	Lapweld
1 inch	24 75	—.
1-¼ inch	24 50	.....
1-½ inch	24 00	.....
1-¾ inch	26 00	.....
2 inch	24 50	20 00
2-¼ inch	27 75	23 00
2-½ inch	32 50	23 75

4 inch	65 00	43 50

LITTLE CHANGE NOTED IN ASBESTOS PRODUCTS

Toronto

The primary trend of the asbestos markets is described as showing very little variation from recent reports, with current demand of an average nature for this time of the year. Recently revised prices and discounts on these products are holding unchanged, at the following levels:

ASBESTOS PRODUCTS—

Pipe Covering—

Air cell, 4 ply..... 55 per cent. off list.
Air cell, 3 ply .....60 per cent off list.
Air cell 2 ply .....65% off standard list.
Boiler Covering .....$1.90 per bag.
Asbestos Sheathing .....$8.00 per 100 lbs.
F.o.b. Toronto.

EXPECT IMPROVEMENT IN ENAMELLED MARKETS

Toronto

A moderate demand for enamelled ware products such as sinks, bath, urinals, etc., is stated to be in evidence, owing to the finishing of many erections which were commenced last Fall. An early start has also been made in several districts on Spring building, and with the advent of seasonable weather, brisk activity in construction work is expected to be reflected more or less in the future enamelled ware market conditions. Prices and discounts are generally unchanged at the following levels:

ENAMELLED WARE—

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.			51 40
Do., 5½ ft.			57 10
Lavatories—			
17x10" Apron F139 or P4045			15 30
18x24" Apron F154 or P3845 or P3847			23 60
18x21" Apron F169 or P4205			17 60
18 x 21" Roll Rim, F197, F199 or P4655-6			15 40
17 x 19" Roll Rim, F241 or P4345			12 60
Sinks, Roll Rim, 16x24 in.			18 10

TORONTO MARKETS

(Continued from page 30)

REVISED PRICE LEVELS MAINTAINED ON WASTE

Toronto.

Conditions in the cotton waste markets generally remain unchanged, with the recently revised levels still in effect. The primary markets have recorded some slight fluctuations, but these movements are described as not being of sufficient momentum to reflect in cotton waste quotations. The recent reductions noted in previous issues of Sanitary Engineer, indicate the trend of basic conditions. Current trade is described as average for this season. Following are the prevailing prices:

Cream, polishing	0 18
White, XXX	0 18
XX	0 16
X	0 15
XC	0 14
XXX, extra	0 16
XX, grand	0 15

No. 1B	0 10
Fancy	0 13½
Lion	0 12
Standard	0 10½
Popular	0 09
Keen	0 07½

Above lines subject to trade discount for quantity.

ADD FIFTEEN GALLON RANGE BOILER TO LIST

Toronto.

There is very little variation to record in the range boiler markets, with current trade continuing of a quiet nature at this time of the year. While it is claimed that the recently revised list prices and discounts are not yet general in certain quarters, yet the net prices on these products are practically the same in each instance. The fifteen-gallon size has also been added to the list at a quotation of $14.00. The smaller sizes are said to be practically the only boilers showing any signs of activity. Following is the nominal list, with discounts for standard and extra-heavy weights:

RANGE BOILERS

Size.	List Price.
5-gallon	$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 50 per cent.
Extra heavy, 40 per cent.

VARIED QUOTATIONS ON CLOSET COMBINATIONS

Toronto.

As pointed out in the previous issue of Sanitary Engineer some variation has been noted on closet combinations. The higher figures are now being generally quoted, but it is, however, admitted that keen buyers or purchasers of fair sized orders, can generally obtain the lower range. Conditions are described as fairly satisfactory for this season of the year, but renewed activity in building circles is expected to reflect a better demand for combinations and fixtures with the advancement of the Spring and Summer seasons. Following are the local quotations, showing the variation on the market:

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	26 00 27 75
Do., with post hinge seat	26 75 28 40
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	28 75 30 25

CLOSET SEATS—	
Oak wood strip seat and cover	3 25
Oak post hinge seat and cover	4 00
Mahogany finish post hinge seat and cover	4 25

IMPROVEMENT LOOKED FOR IN SOIL PIPE TRADE

Toronto

While conditions are naturally of a moderate nature in soil pipe and fittings at this time of the year, renewed activity in these products is generally looked for in the near future. With weather conditions showing signs of improvement, preparations are now under way in many quarters for the commencement of moderately extensive building programs, and activity in this direction is naturally expected to reflect on the future demand for soil pipe. Primary market conditions remain unchanged, with the discounts on the domestic centres still showing signs of variation. Following are the average local quotations:

SOIL PIPE—	
2 inch	40 per cent.
3 inch	40 per cent.
4 inch	40-5 per cent.
5 and 6 inch	40 per cent.
8 inch	net
FITTINGS—	
2 to 6 inch	50|5 per cent.
8 inch	net

MODERATE TRADE NOTED IN RADIATORS

Toronto.

Trade in radiators and boilers is of a quiet nature at present, a condition which is ascribed to the fact that new buildings have not reached the stage where radiation is yet required. While general building is apparent in many centres, this early activity is centered around many erections which were commenced last Fall. Heating requirements in this direction have been generally taken care of during the past two months. However, with the anticipated stimulation in construction work, both manufacturers and distributors of radiation look for improvement in the future demand. Following are the unchanged quotations on the domestic markets:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

NOTHING REMARKABLE IN PIPE FITTINGS TRADE

Toronto.

The current demand for pipe fittings generally shows a fairly moderate number of small orders, which are chiefly of a sorting nature. The total volume however, is described as "nothing remarkable." Improvement is looked for in this direction, especially with any noticeable expansion in future building operations during the Spring and Summer periods. Following are the general average quotations which remain at the recently revised discounts on these products:

PIPE FITTINGS—	Per cent.
Cast iron fittings	30
Plugs, cast iron	30
Do., solid	30
Do., countersink	30
Bushings, malle.	32
Do., cast	32
Unions, ¼ in. to 2 in.	47
Do., 8 in., 2¼ to 4 in.	47
Flanged unions, std.	30
Flanged fittings	30
Dart unions, blk., ¼ to 2 in.	33½
Do., ⅛ in., 2¼ to 4 in.	23

Do., long, ⅛ in. to 4 in.	60
Do., 4½ in. and larger	50
Do., running thread	30
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—		
Class A	0 54	0 67
Class B	0 29	0 28
Class C	0 13	0 20

WROUGHT PIPE CONDITIONS RECORD IMPROVEMENT

Toronto.

Present conditions in the pipe markets are described as distinctly stronger than those which prevailed in the piping industry in general during the month of January. With the open season, there has developed a fair amount of current business and manufacturers state that the general situation now looks much improved. Owing to the remarkable variance in primary market conditions since last year, many distributors have now ceased to compare either business or values with last year's figures, and are content to refer to the previous month's records as a basis for gauging progress.

EASIER TONE AND LOWER PRICES FEATURE METALS

Toronto.

General conditions in the ingot metal markets are of a quiet nature and uninteresting from the lack of new developments. Easier price levels are now more generally noted, especially in copper, tin, and antimony. The copper market is described as dull and hopeless, while other metals record very little variations, a lack of both interest and demand contributing to the prevailing easy tone.

COPPER.—Dull and hopeless are the current phrases covering the condition of the copper markets. Large supplies of copper are still available, while the demand remains of a very moderate character. Price shading among producers in the south has recently developed, this condition reflecting the easier tone in general. The local quotation remains at 17½ cents.

TIN.—Fluctuations in exchange coupled with the waiting policy adopted by consumers have resulted in some easier price levels being announced on tin in the domestic markets. The average quotation is 35½ cents, and though some inquiries are evident, actual business is moderate.

LEAD.—The tone of the lead market is quiet at present, with little variation having been recorded. Prices remain fairly steady, while current buying is in small quantities. The local quotation is $6.75.

SPELTER—Quiet conditions also prevail in spelter, with the consuming demand being very light, and few sales having been recorded. The local average price is a little easier, now being quoted at $7.00, a decline of 25 cents.

ANTIMONY.—This market is dull and unchanged, with prices being a little lower than have recently been evident. Adequate supplies are stated to be on hand, with little demand now apparent. The average prices are between 7 and 9 cents.

ALUMINUM.—The aluminum market remains quiet, with the hope for improvement which was recently held out, now having abated. The local quotations are unchanged at 27 cents.

WINNIPEG MARKETS

WINNIPEG, March 1.—Price changes on the current sanitary and heating material markets are of a restricted nature this week. A more optimistic outlook now generally prevails regarding the prospects for increased activity in plumbing and steamfitting lines with the advent of seasonable weather conditions. A slight reduction is apparent in the quotation on the 30-gallon standard size range boiler, but the majority of other primary goods continue with unchanged price levels.

LOOK FOR BETTER DEMAND IN PIPING

Winnipeg.

Current trade in wrought piping is naturally of a moderate nature at this season of the year due to the unfavorable weather conditions for products of this kind. However, with bright prospects for brisk building activity, an improved demand is generally looked for in pipe markets. Following are the unchanged quotations:

BLACK PIPE

MODERATE TRADE IN ENAMELLED WARES

Winnipeg.

Quietness reigns in enamelled ware products, such as closets, lavatories, urinals, baths and sinks. Quotations on these various products are nominally unchanged, with distributors generally anticipating improved demands with the advent of the Spring and Summer seasons. The fact that extensive building programs are being outlined in many districts, naturally serves to reflect a brighter tone regarding future business.

REDUCTION NOTED IN RANGE BOILER PRICE

Winnipeg.

A slight revision has been made in the current prices on range boilers, this change being confined to the thirty-gallon standard size. This price is now reduced to $9.00. Quotations on other sizes generally remain at the following levels:

RANGE BOILERS

Size	Price each
30 gallon	9 00
35 gallon	13 25
40 gallon	16 25
52 gallon	23 45
66 gallon	33 15
82 gallon	40 60
100 gallon	62 50
120 gallon	75 00

QUIETNESS RECORDED IN SHEET MARKETS

Winnipeg.

Business is described as very quiet in sheets and plates, but a more optimistic tone is noted regarding future activities. The following unchanged prices prevail locally:

STEEL SHEETS, BLACK—	
10 gauge	5 70
12 gauge	5 70
14 gauge	5 80
16 gauge	5 90
18-20 gauge	6 30

24	7 05
22	7 05
18 and 20	6 90
16	6 75

OPTIMISTIC OUTLOOK FOR SHEET METAL TRADE

Winnipeg.

Although present trade in eavestrough, conductor pipe, corrugated sheets and similar products is of a restricted nature at this season, current developments lend encouragement to an optimistic outlook regarding increased future trade. An extensive building program has been prepared in many quarters, and activity in construction work generally is naturally expected to be reflected in the demand for products of this nature.

A VALVE for EVERY SERVICE

Naturally the Berliner People Chose JENKINS

Where Jenkins Valves are installed dependable and trouble-free service is assured.

It was but natural therefore that the Berliner Gramophone Co., should insist upon Jenkins Valves for their big new plant addition at St. Henri, Montreal.

Engineers or Plumbing & Heating Contractors will assure prestige to themselves and satisfaction to their clients by always installing genuine Jenkins Valves.

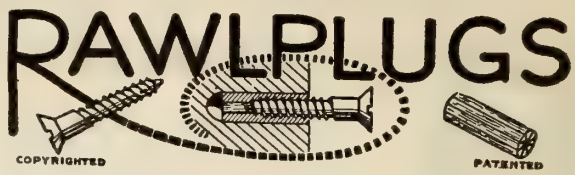
RAWLPLUGS



Enable Ordinary Screws to Hold In Any Material

The Rawlplug is a manufactured tube of fibre strands so cemented that when once in position it can never crumble or pulp and is impervious to decay through moisture or otherwise.

The Rawlplug expands as the screw is turned home. This results in a perfect grip by the Rawlplug in any material as its friction extends throughout its entire length and the Rawlplug thus forms an integral part of the surrounding material. The screw cuts a perfect thread inside the plug.

WHAT IS YOUR ADVERTISING DOLLAR BUYING?

High prices of materials and increased overhead have made necessary a stricter economy along mercantile lines.

Advertising should be considered as well as the commodities in which merchants deal.

By choosing only those publications whose circulation is accurately measured, you not only practise economy in your advertising, but are assured that your money is buying a definite quantity of circulation.

The Sanitary Engineer circulation is measured by the Audit Bureau of Circulations. Advertising placed in its columns is an economical investment.

Help Your Clients Save Coal

The West Furnace Carburetor or Smoke Abater is a simple device to burn the gas from coal and effect a great saving of fuel. With this device the gas that usually goes up the chimney is supplied with air at the right temperature to make the gas burn.

This economical device is **guaranteed** to save 10 to 25 per cent. of fuel bills.

This device can be installed for $30.00, giving a 75% profit to you.

Extending the Uses of Your Product by Informing Dealers

When the efficient, modern advertiser finds his reputation firmly established, the confidence of the trade firmly held, distribution ideal and his product and trade-mark thoroughly familiar, he directs the full force of his continuous advertising toward increasing the uses of his product by showing the dealer and his salesmen each week new uses for his goods that both stimulate sales and increase the consumer satisfaction with the product.

A message to the whole plumbing trade of Canada through Sanitary Engineer is productive, profitable and reliable "business insurance" for the future.

JARDINE

Pipe Threading Tools

REGISTERED J TRADE MARK

Range from 1/8" to 12"

All sizes threaded at one cut. Effective tools, in which the dies open out as the tool advances on the thread, so that the proper taper is made. This relieves friction on the pipe and conserves every ounce of power for cutting. The dies cut only with the cutter mouth.

Beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble; they work easily, smoothly, rapidly and accurately.

One Man Does the Work of Two

A. B. Jardine & Company, Limited, are the sole makers of "Jardine" pipe threading tools and the sole licensees to make and sell "Toledo" tools in Canada.

Anti Clinker Four Bar Triangular Grate (Simplest and Best Grate Ever Invented)
Deep Roomy Ash Pit
Cast Iron Ash Pit Bottom
Dust Damper

To the Dealer:—

The Pilot Superior is the leading Pipeless furnace on the market. It was conceived before other pipeless furnaces were made in Canada and our pioneer experience in this field enables us to place in the hands of the trade the most efficient and economical heating apparatus built. Note the red arrows shown in the illustration which describe the features of this furnace.

Dealers are making handsome profits handling the Pilot Superior. It is easy to sell. One installation sells another and good businesses are being built through them all over Canada.

Sectional View
of
PerfectO Flush Valve

showing the oil-chamber with the working parts completely cut off from contact with the water. The flow of water may be easily and quickly regulated to suit varying requirements.

Write for Catalogue

Why an Oil-Controlled Valve?

WHAT IS the logical medium for regulating a flush valve? Water? Water often contains impurities that obstruct the by-pass and interfere with the smooth working of the valve.

Oil! There is the answer. PerfectO Flush Valves are Oil-Regulated. Water can't cause any trouble—because no water can get into the by-pass—nothing but high-grade mineral oil.

This oil is contained in a sealed, cast-brass chamber. It cannot escape or evaporate and never needs replacing. Its density is unchanging—hence the action of the valve, once it is adjusted, does not vary. PerfectO Flush Valves are Oil-Controlled because an oil-controlled valve gives better service for a longer time. And that's why there is genuine satisfaction ahead when you install PerfectO Oil-Regulated Flush Valves.

A 415
China Side Lever Handle
Quick Opening, Compression
Basin Cock

The Pinnacle of Convenience

OUR "Emco" side handle basin cock is more than a mere tap.

It is a beautiful fixture—an embellishment to any bathroom. Not only is it attractive but it possesses two necessary qualifications—absolute shut off and durability.

This "Emco" A415 Quick Opening basin cock works on the compression principle—no drip, no waste.

"Emco" products are sold by the leading jobbers everywhere.

"Saves the water as it ought to."

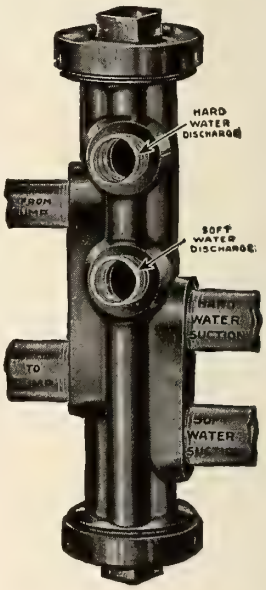
NEW WESTCO TANKLESS
(AUTOMATIC ELECTRIC)
WATER SYSTEM

We Have Had Our Troubles

With these two, used together, you can pump both hard and soft water AUTOMATICALLY WITHOUT ANY STORAGE TANKS AT ALL.

You know that some of the early Westco Systems gave trouble. We admit it. They were made for us by another company. The materials used were not right. The workmanship was poor. The design was faulty. Fourteen months ago we started our own Canadian factory. During that year we have permanently remedied every troublesome equipment brought to our attention. OUR NEW DESIGN has eliminated every source of possible trouble. We now make all parts (except the motor) in our own factory from the finest materials, with the most expert labor, under intelligent, interested supervision. We **know** these Systems are right before we send them out. When properly installed they do not require service. These facts and the following description tell why.

THE "DUAL"
(ALL BRONZE)
AUTOMATIC VALVE



Specifications of Our New Tankless Automatic Systems

All bronze pump, with S.K.F. ball thrust bearing. Designed to operate at standard motor speeds, which permits direct coupling to the motor shaft. In capacities from 180 to 1,000 gallons per hour. "Wagner" electric repulsion induction type motor. Westco-Made double-pole pressure governor switch. Dart unions on suction and discharge. Lunkenheimer brass swing check valve and strainer for intake. Welded steel compression chamber and one-piece cast iron base. Shipping weight of 300 gal. size, crated, 140 lbs.

No Belts—No Idlers—No Gears—No Valves—No Dead Centre—ONLY ONE MOVING PART.

These Systems Are Guaranteed

You who purchased earlier equipments know that we more than live up to our guarantee. Put in the **NEW WESTCO** on your next job. It will delight your customer. It will satisfy you. Write NOW for our literature and latest trade prices.

WESTCO PUMPS, LIMITED

The "A-1" Closet Combination

This closet combination might be described as the embodiment of dignified sanitary simplicity. The closet bowl is our No. 105 A-1 Syphon Action washdown—a bowl of substantial construction and weight, produced in Canadian solid vitreous ware, of pleasing design and with strong positive syphonic action.

The tank is our No. 503 Bellemeade Junior, also of Canadian solid vitreous ware, a tank which is steadily appealing to discriminating buyers of best sanitary fixtures.

Designed on simple, pleasing and dignified lines, and with the inimitable white lustrous surface of Canadian solid vitreous ware, the A-1 combination will furnish essential freshness, cleanliness and sanitation to any toilet-room.

Canadian solid vitreous ware is vitreous through and through—the glaze and body are burned together, so that chipping, cracking, peeling, discoloration or other developments of unsightliness are impossible, and the beautiful white glossy surface is so easily kept clean that the whole outfit should retain its original attractiveness after many years of usefulness.

The reasonable price of this outfit is but the final argument in its favor. We quote on the outfit complete as illustrated, including seat and floor flange.

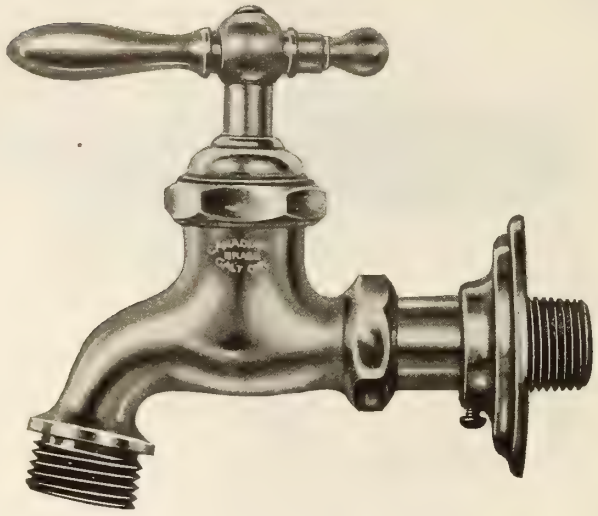
CANADIAN BRASS CO. LIMITED QUALITY SERVICE

A P P L E S

ARE BEST JUDGED BY THEIR TASTE

A BEAUTIFUL SKIN

DOESN'T ALWAYS COVER GOOD FRUIT



So it is with Water Taps. A first-class article must of course be highly finished with A-1 Nickel, but the important part is the mechanism.

Most Compression Work on the market to-day is of good appearance, but a large percentage does not give satisfactory service. A Tap may be defective even though it does not leak when installed. Sometimes poor metal or a thread short on the stem, but however small the defect, it will show itself after a few months' wear.

You see an illustration on this page, don't you? At first glance it looks just the same as dozens of other illustrations you have seen, doesn't it? Examine a little closer and you will find a Set Screw Flange Hose Sink Bibb of neat design and well proportioned which has a Square Threaded Stem, Strong Washer Encasements and Good Packing. Built for Service.

Our Galt and Toronto plants await your further commands.

What these

"Standard"
PLUMBING FIXTURES
Is Your Sink 36 Inches High?
The Centre of Home Health
A Comfort Every Home Should Have
Make Winter Bathing a Pleasure

THEY mean the education of the public to a realization of the comfort and value of modern plumbing fixtures.

They mean the opening up of vast untouched markets by the appeal which they carry to every man, woman and child in Canada.

mean to you

THEY mean the arousing of public opinion to the point of creating a desire to actually *see* these fixtures.
They mean, by accomplishing this, increased business for you.

LINK up with the "Standard" idea by putting your show room in order. Make it an attractive place—a place of beauty—that by its very attractiveness, will encourage people to come in and look things over.

BUT don't be content with this. Get out on the highways and byways in your district and sell the idea of modern plumbing fixtures personally.

CO-OPERATE with us in this way by boosting for all you're worth and the end of the year will close with a big balance in the books—on the right side.

OVER a million people in Canada read the advertising we are running every month to promote the sale of modern plumbing fixtures.

Read what this means to you on the opposite page.

Manufacturers Condemn Wholesalers Who Rob Plumbers of Legitimate Trade

New Phases of Question of Showrooms for Plumbers Outlined in Opinions of Two Manufacturers of Plumbing and Heating Goods —Quebec Master Plumber Answers Previous Replies of Manufacturers and Wholesalers

FURTHER enlightenment on the question of showrooms for plumbers and steps which should be taken to insure adequate protection for all concerned, are outlined herewith. Various opinions on this subject have been given in several recent issues of Sanitary Engineer, and any further communications on the subject will be appreciated by the Editor. In the following, two manufacturers of plumbing and heating goods outline their views on this subject and the master plumber of Quebec Province who brought up the subject answers some of the recent replies of other manufacturers and wholesalers:

An Ontario manufacturer of plumbing fixtures states:

"It is unfortunate that a concern of plumbing contractors should feel or be made to feel that their showroom is not a profitable investment.

"The sanitary engineer is a merchant. He sells and installs plumbing equipment. This is the regular channel recognized by manufacturers and jobbers for the proper distribution of such goods. Being a merchant, is it not reasonable to suppose that his merchandise should be displayed? Speaking generally we believe it is.

Some Local Condition

"The sanitary engineer in Quebec, who after many years of successful showroom operating, finds it necessary to discontinue that department of his business, must, in our opinion, be subject to some local condition that would not apply to the trade as a whole. We would not be in a position to discuss this particular case, because we do not know those local conditions. Our suggestion to you is that you write to about six prominent sanitary engineers in that same locality, and get an expression from them. If this one concern is seriously affected by conditions in their vicinity, the same thing would probably apply to others in the same business. The reports thus obtained would be of more interest than any comment made by someone not thoroughly in touch with conditions in that particular locality.

"We do know that as far as the trade as a whole is concerned, jobbers recognize that the contracting sanitary engineer must have profit on the goods he installs, and the manufacturers of plumbing equipment are of this same opinion."

A manufacturer in the Maritime Provinces states:

"In reference to an article entitled "Another Phase of the Showroom Question," which appeared in a recent issue of your journal, you ask us to express to you our views, as to whether or not it is a fair proposition to the plumber for wholesalers to sell direct to the consumers at prices about the same as those which the plumber has to pay.

Not Just Treatment

"We certainly do not think that this is a fair or just way to treat the plumbers and we can assure you that in our business we are very careful to look after the interests of the plumbers in this respect. We, of course, are manufacturers and sell to the wholesalers and we do not know to what extent some of them may sell goods to the consumers direct. We did not think, however, that there was much of this done among the wholesalers in enamel goods. It is certainly impossible for a plumber to do a successful business if the wholesalers are supplying those who would be his customers, with goods at prices about the same as they would charge to the plumber."

In replying to the opinions expressed in recent articles on this subject, the master plumber of Quebec Province, who says he is forced to close his showroom due to lack of protection on prices from wholesalers, has made the following statement to Sanitary Engineer:

"In your February 15th issue, page four, I read very carefully some expression of opinion on the subject of "Should Plumbers Run Showrooms," and I noticed that a Western Ontario manufacturer said I overlooked a very important fact, that 'The price from the wholesaler to the consumer covers the material only, and that the consumer would be forced to secure an installation price from the master plumber.'

Would Have to Close Shop Too

"My reply is, that I did not overlook this; I knew it, you know it and everybody knows that if the plumber could not at least secure the installation of plumbing goods sold to consumers by the jobbers, he would not only be compelled to close his showroom but also his shop.

"He also admits that in certain rare cases the material purchased is of such a nature that it could be installed by the consumer. Yes, but not in rare cases, as he says, but in many cases when the jobbers or manufacturers furnish the consumers with full plans and specifications and give him all the necessary informations so as to enable him to hire a workman plumber and do the job himself. Of course this mostly applies to heating, not much to plumbing, however, it affects the master plumber as well.

"He also adds: 'More aggressive merchandising policies supplemented by a well appointed showroom are the contracting plumbers' best guarantee and assurance that he will receive the preference over quotations for material only furnished by wholesale distributors.'

"This would be all right if the wholesalers would sell at retail prices to consumers, no matter if they would not give any commission to the plumber, and the plumber who has a showroom could compete with him; but when the wholesaler sells to consumers at the same price he sells to the master-plumber, what's the use for us to keep a showroom?

"The statement of a Central Ontario manufacturer is correct, in my humble opinion; this is the only way to make the majority of plumbers prosperous, and I regret to say that although it is the only good theory, it is not much practised.

(Continued on page 16)

Questions and Answers Regarding Plumbing and Heating Practice

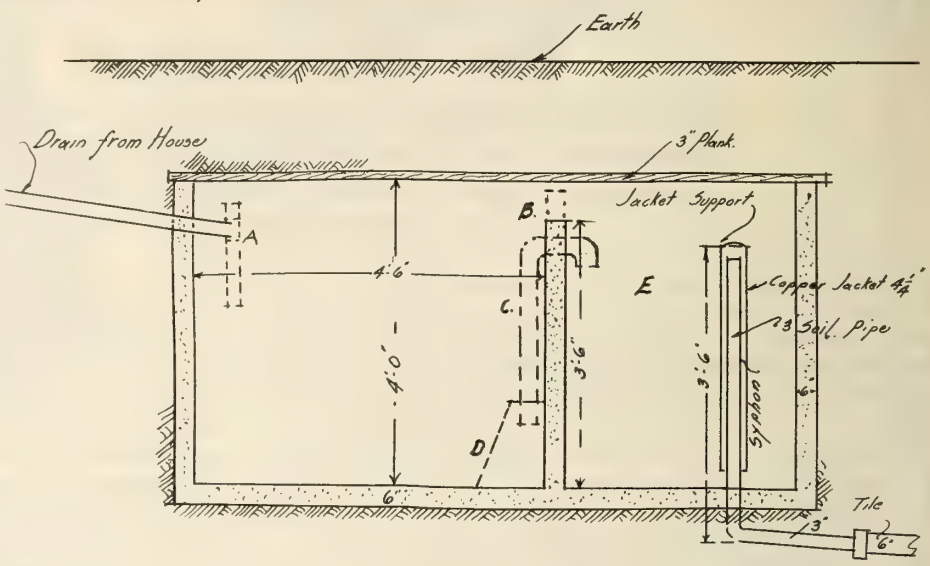
WHAT BREAKS SYPHONING?

Editor, Sanitary Engineer

Please tell me if Septic Tank "Plan No. 1 and 2" would work all right in a sandy soil, for a cottage of six persons. If not what shall I do?

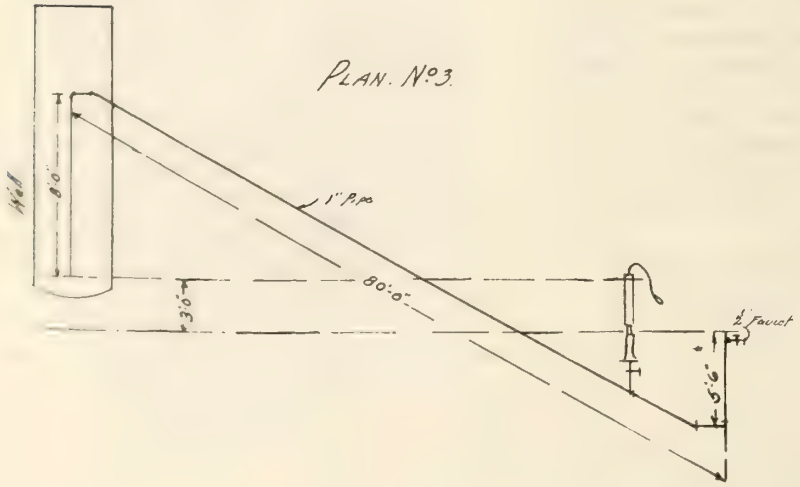
In plan No. 3, I am trying to supply another cottage with water from a well by means of syphoning. In the spring when water in the well is above the top of the pipe it seems to work all right, but when the water is getting lower, say about 3 ft from bottom end of the pipe, the syphoning stops. I start it again with a pump and valve, and it works for four or five days and stops again. Will you tell me what you think is the cause of breaking syphon?

PLAN No 1.



PLAN #2

PLAN. No 3.



Answer:—The septic tank illustrated by your drawings should give satisfactory service if a few minor changes were made in the design.

First: We might suggest that the drain from the house be fitted with a tee connection at "A," as we have marked on the plan. The top of the tee should be left open, so that the drain pipe may be relieved of the air which will come down this pipe ahead of the drainage. The lower opening of the tee should extend down to some depth in the tank, so that the scum, or "mat" will not be broken by the incoming drainage.

The bridge wall should be continued up at "B" to within about 4" of the cover.

A pipe with elbows "C" should be set so that the effluent entering the "dosing chamber" may be taken from well down in the reducing tank. A wire screen, as at "D" should be placed in such a way as will prevent solid matter from entering the pipe "C".

If there is an intercepting trap set in the drain from the house, it will be necessary to provide a fresh air inlet to the dosing chamber, otherwise the syphon will not work.

The tank is something larger than is necessary. The depth of the tank could be made 3 ft. 6 in. and 4 ft. 6 in.

This tank will require about 260 lineal feet of porous field tiles, as laterals, set about 18 in. from the surface of the earth.

Re Well Syphon

The conditions here point to the trouble coming by reason of air entering the syphon. It may be that the water level in the well becomes at times low enough to clear the bottom of the

inlet pipe, or it may be that air leaks into the system because of faulty joints.

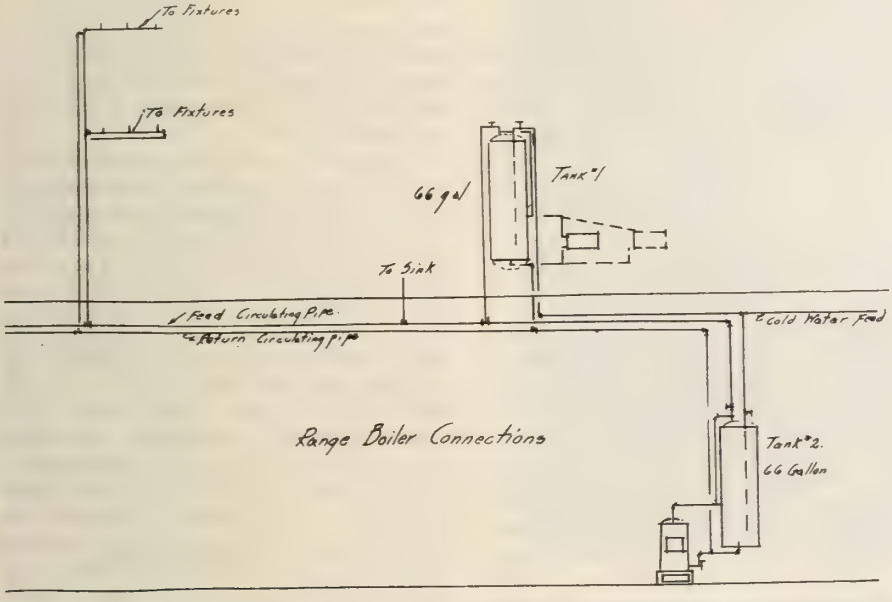
If the cause lies in the former reason, the only way to offset this trouble is to provide some means of sealing the inlet when the water drops below a certain level. This might be conveniently arranged for with a float valve.

If the trouble is due to leaky joints these joints should be made tight. It might be well to examine the valve chamber of the pump so that you might be sure that there is no leakage here.

RANGE BOILER CONNECTIONS

We are in receipt of the accompanying sketch with the request that we pass some comment on the arrangement illustrated thereon.

First: We do not think that it is necessary to connect both the side and top



outlets of each boiler to their separate tanks. We believe that the purpose might be better served by making a top connection for the higher tank and a side connection for the lower.

Second: It would be a better arrangement than is shown, if the feed circulation pipe could be run above the upper tank.

REFERENDUM FOR PUBLIC WORKS IMPROVEMENT

Montreal.—Failing to obtain the consent of the Quebec Legislature to raise money by loans without the approval of the property owners in Montreal, the city authorities, it is learned, will shortly submit to the electors a list of public works on which it is proposed to expend $3,000,000 this season. The stand taken by the legislature is that the realty electors of Montreal are the best judges as to whether public works of the kind described should be carried out or not. The administrators of the City, then, have no alterative but to submit to the question of the proposed expenditure to a referendum vote. The project will be fully studied within the next week or so and it is thought that all details will be completed for taking the vote next month.

While it is admitted that it may be no easy task to submit lists of public works that would win the support of all sections of Montreal, and while there may be a disposition on the part of some proprietors to vote only for such improvements as would benefit the locality in which they reside, it is thought that a well selected list of public works, showing general advantages for the city in general should have a good chance of getting the support of the majority.

The suggested list of improvements includes a trunk sewer at the North end of the city at a cost of $1,000,000; Park Terminal sewer, $340,000; Cote des Neiges sewer $200,000; Ville Emard sewar $300,000; these apart from other improvements in connection with subways and three new incinerators.

SEWERAGE SYSTEM PLANNED FOR SWANSEA

Swansea.—York township's plans for installing a complete sewerage system for the thickly populated areas were outlined at a meeting here by Township Engineer R. O. Wynne-Roberts. If the Legislature passes the required legislation work on the new sewerage system will likely be commenced this summer.

The inability of Toronto to look after township sewerage forced York to prepare a comprehensive scheme of its own, Mr. Wynne-Roberts stated. The plans called for a system constructed on such a basis that more units could be added as the population increased.

To look after Swansea and Runnymede a separate system would be built if the residents voted for it, he stated. The estimated cost for the two districts on the present assessment was $121,000 a year for 30 years.

LONG BRANCH PEOPLE WANT WATER SYSTEM

Long Branch.—A large deputation from this district will present a petition signed by practically all the residents, urging Etobicoke Council to create a new water area at Long Branch, and proceed immediately with the installation of a water system. The new area is practically the same as the one thrown out by the Ontario Railway and Municipal Board, with the exception that Eastwood and O'Connor subdivisions have been left out.

It is practically certain that the Township Council will accede immediately to the request of the ratepayers and proceed at once to draw up plans for the system. Water will likely be obtained from New Toronto as the Railway Board announced some time ago that it would not sanction the construction of another intake plant in this section.

LETTER BOX

HUMIDIFIERS

J. S. Mitchell & Company, Limited, Sherbrooke, P. Q.—There is a firm in Toronto who manufacture moisteners to hang on the side of a radiator. Will you please furnish us with their name and address.

Answer—These humidifiers can be procured from G. Ormsby Co., 175 Adelaide Street West, Toronto.

NON-CORROSIVE FLUX

D. H. Jackson, Chesterville, Ontario—Will you please advise where I can secure non-corrosive flux for soldering tinware.

Answer: We would refer you to the following: Canada Metal Company, Fraser Avenue, Toronto, Ont.; The Chicago Solder Company, Chicago.

SHEET BRASS

H. F. Prelipp, 316 King Street West, Hamilton—Please advise where I could obtain a sheet of hard brass, 27 in. x 4 ft. 6 in.

Answer—This is a special size and the distributors of sheet brass do not usually carry this product in larger sizes than 24 in. x 48 in. The fact that you want 27 in. wide would necessitate special rolling by the mills. We would refer you to the Brown Rolling Mills, New Toronto.

"DESOLVO"

Messrs. Rice Lewis & Sons, Toronto—Could you give us the name of the manufacturers of "Desolvo"?

Answer—The Chamberlain Desolvo Co., 109 Church Street, Toronto.

CLOSET SEAT HINGES

Hurtubise Ltd., Montreal—Will you kindly give us the names of some manufacturers of closet seat hinges.

Answer—The Canadian Brass Company, Galt, Ont.; The Stratford Brass Company, Stratford, Ont.

TILE PIPE

W. D. Edge, Ltd., Toronto—Could you kindly give us the name of the firm in St. John's, Que., who manufacture tile pipe?

Answer—No doubt you have in mind the Dominion Corrugated Steel Pipe Company, St. John's, Que.

HUMIDIFIERS

Messrs. Hope & Son, Sanitary Engineers, Perth, Ontario—Will you please advise the name of the firm where we may secure the small type of "Humidifier"?

Answer—There can be procured from C. Ormsby Company, 175 Adelaide treet, W. Toronto.

Heating and Ventilating

An Interesting Heating and Ventilating Plant

Our Readers Are Taken Into the Basement and Inner Workings of the Heating and Ventilating Equipment of the Large New King Edward Hotel, Toronto—How House Service Water is Supplied in Adequate Quantity

By T. H. FENNER

THE CITY of Toronto has a habit of being proud of its features, and of itself as a whole. When hotels are mentioned in Toronto the King Edward is naturally thought of as being the biggest thing of its line in the city, and its new eighteen-story building is a prominent feature of the landscape, or rather skyscape, for visitors entering Toronto by boat.

A hotel like this, which contains within its walls between guests and staff, enough people to make a little country town, has to be able to attend to their needs and fancies in a pretty wholesale way, and its services must never be allowed to slack off, on any excuse whatever. It must be lighted, heated, ventilated, and cooled, every minute of every hour of every day in the year.

A factory can be closed down at night, and at week ends, and any needed repairs or alterations carried out with some reasonable allowance of time. A hotel can never close down for a minute. The demand therefore on the machinery and staff that are responsible for its upkeep, is a never ceasing one.

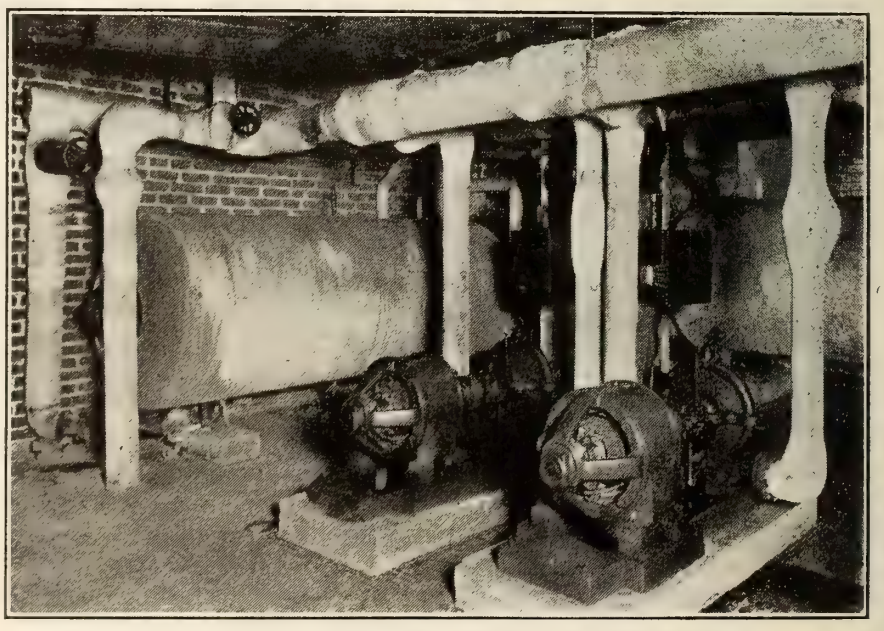
Day in and day out, year to year, the ever-ready current must be on the wire to flash into light when the impatient guest turns a switch, the water must be hot in the tap when he turns on his bath, the ice must be ready to cool off his drinking water, the elevator must be running to take him upstairs or down.

In addition to these things which are apparent to the sight and touch, there are many others which are necessary to his comfort, but with which he never comes in contact. His room is cleaned and swept by the same willing current which lights his lamp, and operates his telephone. His food is kept fresh and sweet in refrigerated store rooms, his ice cream is frozen by brine from the same refrigerating machines, and the ice for his ice water is another product of the plant. There are the freight elevators which bring up his baggage, the existence of which he is probably not aware, but they also are driven by the current which comes from the lowest depths of the building. The guest takes all these things as a matter of course, and it is safe to say that perhaps not one half of one per cent. of them ever give a single thought to the means by which all these things are provided to their hand.

The Hidden Power

Down below the level of the street, part of it even forty-five feet below, is the plant which daily performs these miracles. One could be in the kitchen next door to it and not know of its existence for there is neither sound nor smell to tell that there are engines producing power and light, and refrigerating machines making ice, and boilers generating steam to supply power and heat, just through an ordinary door. The thing that cannot help striking the observer, is that this same note of quiet efficiency pervades the whole plant. No one seems to hurry, no one raises his voice, and the work goes on with a great deal less fuss than can often be seen in the boiler room of a one-horse saw mill.

It can readily be understood, that the provision of an entirely new building, with all these services to be installed, the while all the functions of the old building went on undisturbed, was somewhat of a problem. However, by ample foresight, and careful preparation for every move, the entire new installation was installed and connected up without any one outside of the staff knowing it was going on. No guest suffered a moment's inconvenience, and the fact that the new building was just about ready by the time the heating season came on made it all the more important that the system should be ready to function immediately it was called on. It was able to fulfill this condition, through the efforts of all concerned, contractors and staff alike.



The hot water heaters and motor driven centrifugal pumps.

The original plant of the hotel, which is operating to-day, consists of three watertube boilers, of 250 h. p. (rated) each. These boilers supplied steam to the engine room, the kitchen, and heating system, and to some extent are doing the same thing at present. Eventually these boilers will be discontinued, when the new plant is completely installed, but just now they are doing business as required.

In the old boiler room are the original vacuum pumps and boiler feed pumps, and the original heater. The vacuum pumps are of the Burnham type and are two in number. One of them is 10 x 14 x 16, the smaller one being 8 x 10 x 12. These pumps are so arranged that either of them can operate on the heating system alone, while the other handles the kitchens and laundries, or they can either of them handle the whole thing.

The main steam header from the boilers is arranged to supply the engines and refrigerating machinery, and can also supply the heating services. In addition to this there is a 4 inch auxiliary line, which is also connected, as a loop leaving the main header free for any necessary repairs.

We had the pleasure of looking in the top drum of one of these boilers, which was down for cleaning, and we can safely say that never have we seen a boiler in better condition after eighteen years of service. The plates were smooth and showing just a suspicion of shine, due to the judicious use of graphite. There was no sign of oil, which might easily be apparent after such long service in a plant using exhaust steam for heating. Mr. Pike is very proud of his boilers, and has good cause to be.

House Service Water

At the east end of the engine room, after passing the ammonia condensers and the new distributing board for the new building, one reaches the hot water heaters and also the house service pumps.

It is necessary in a building of this height to provide other means than the ordinary city water pressure to supply the upper floors, otherwise they would go without. The height from the engine room basement to the gallery where the water tanks are situated is approximately 220 feet, and as this corresponds to a pressure of 95.48 lbs., it can be understood that it is beyond the reach of the ordinary city water works pressure.

In order to insure a constant supply of water to the rooms, two house service pumps are fitted in the basement which are controlled automatically by the water level in the tanks on the roof. These pumps are of the type known as centrifugal, direct connected to motors. The illustration shows the arrangement plainly. These pumps are designed to deliver not less than 200 gallons per minute each under the conditions prevailing, which are, of course, a suction pressure corresponding to the pressure in the city mains, and the discharge due to the head water. The float controls are so arranged that the higher float will first start one pump, and then if the water still drops, a second float will start the second pump. As the water gains the pumps will be cut out in the reverse manner the lower float cutting out the second pump started, and the upper one cutting out the first pump when the water level is regained. It may be mentioned here that the consumption is over 200,000 gallons per day. It has been observed by actual timing, that from the time the float trips the control until the water is being delivered into the tank, is exactly eleven seconds. This is pretty nearly as quick as thinking.

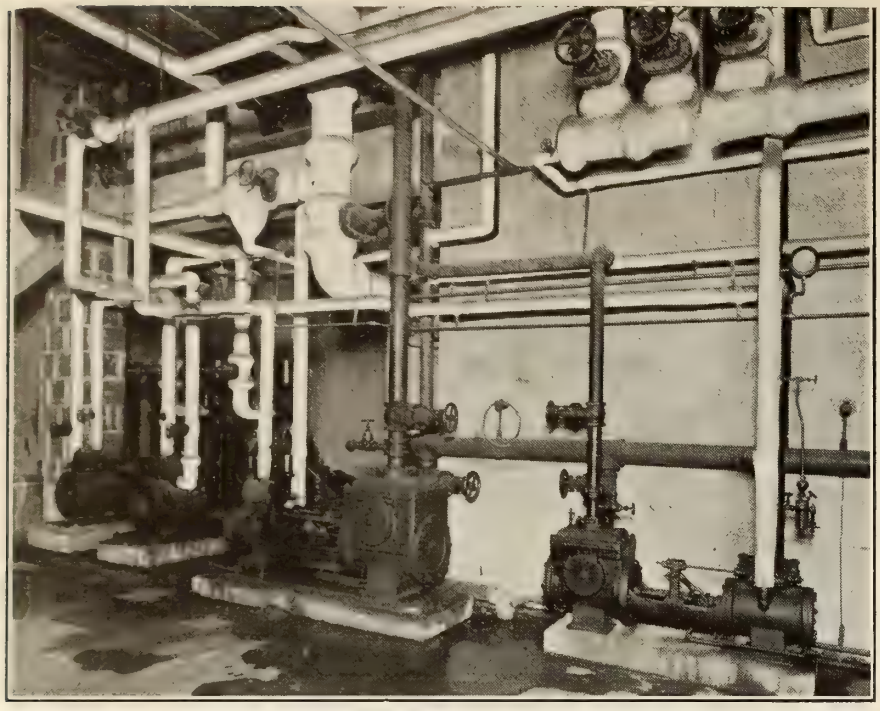
The hot water heaters contained in the same room as the house service pumps are also shown in the photograp. The large one is a combined hot water heater and storage tank, 48 inches in diameter by 168 inches long, inside measurement, with a storage capacity of 1,350 gallons. The shell is of steel ⅜-in. plate, the longitudinal seam being double riveted. The heating surface is provided by 450 feet of 1¼ in. outside diameter No. 16 gauge seamless drawn brass tubing. The tubes are U shaped, and both ends are expanded into a forged steel header, which is bolted to the steam expansion chamber. The overhanging ends of the tubes are supported in such a manner as to take the strain off the neck where they are expanded into the header.

The steam connection to this header is 5 in. and a 2-in. drip is provided for the condensation. The tank is fitted with relief valve, thermometer, automatic regulator, etc.

In addition there is a smaller heater for supplying the laundries and kitchens, 42 inches diameter by 120 inches long, and containing 720 gallons storage capacity. The heating surface in this heater consists of 300 feet of 1¼ brass tube No. 16 gauge, and the same fittings as the larger one.

The drips are arranged to be carried either to the vacuum pumps or to the sewer, as may be required.

Front view of new 400 h.p. boiler and stoker.



Feed and vacuum pump. The air-eliminating tank is in the corner above feed pumps.

The New Boiler Room

Leaving the pump and heater room, we journey through a corner of a kitchen, absorbing an odor of savory soup in the process of boiling in huge copper kettles, along a corridor, round two or three more corners, meekly following our guide, until we arrive at the head of a staircase. As we are already in the basement, it looks as though there must have been some considerable excavating done when we have more stairs to go down.

This is the case, as we find. The new boiler room floor is just forty-five feet below the level of the sidewalk, and quite a long way from the engine room and the original boiler room. If the plans had been carried out as originally conceived, or as they will eventually be carried out, this isolated position would not matter, but as things are, it involved a good deal of trouble.

The new boiler room was designed to contain four boilers, and these four boilers were to take off all the load from the boiler plant, which would then be obsolete.

The new plant when complete will consist of three 250 h.p. boilers and one 400 h.p. At present the 400 h.p. is the only one installed. This is a case where the engineers propose, but the financiers dispose, and for the time being these gentlemen decreed one boiler only.

Had the original plans been carried out immediately, it would have meant that one day the new piping could have been connected to the old main steam pipe in the engine room and the old boiler room and its connections from the engine room back could have been cut off, and dismantled at leisure.

As it turned out, the two plants have had to be interconnected, so that the new 400 h.p. boiler at one end of the building is working in connection with one of the old 250 h.p. boilers at the other end of the building. The new boiler is considerably below the level of the old boiler in addition to being so far away from it. This of course involves operating difficulty, when the vacuum return system is remembered. If the operators in the new boiler room do not observe good care, they will take all the returns from the whole building, and leave the higher boiler with no hot water for feed purposes. However, the men in the new boiler room manage very nicely to check off their pump sufficiently to keep the other fellows going without any trouble.

The piping arrangement in the new boiler room, installed for the heating contractors by W. J. McGuire, Ltd., can be fairly well seen by the illustration herewith. There is one showing the main steam pipe leaving the boiler top and coming down in two very nice expansion bends to the header, which goes across the boiler room to the main riser.

From the boiler the main steam also goes across to the engine room, where it connects to the header supplying steam to the engines, and also by a branch through suitable reducing valves to the heating main. In this way steam can be supplied to the engine room or the heating system from either boiler room.

The main riser which is fitted with expansion joints goes right up to the sixteenth story, to a pipe gallery. Here it connects into a horizontal main on the ceiling, from which branches are dropped to each floor to supply the radiators. This overhead distribution system is used entirely in the new building.

The returns from the radiators come back through risers into a four-inch main which connects with the vacuum pumps. The vacuum pumps discharge into an air eliminating tank which is situated on a gallery above the feed water heater. This tank is 36 inches diameter by 84 inches long. From this tank the water discharges through a water seal into the feed water heater, an automatic float being fitted to keep the water level constant. From the top of the tank an air pipe is led to the roof to discharge the air which is separated from the return water.

The feed water heater in the new boiler room is a "Star Vacuum" type, to supply 1,500 h. p. It is approximately 49 inches square by 8 feet high, and is furnished with an oil separator and water softening and purifying medium. There is a 6 inch connection to the feed pump suctions, which branches off to a 5-inch to each pump suction.

The feed pumps of which there are two, are of the outside packed type. They are of the simplex type, 14 inches by 9 inches by 16 inches.

There are also two vacuum pumps in this boiler room one of 10 x 14 x 16, and the other of 8 x 10 x 12. It will be noticed that these pumps are a duplicate of those in the old boiler room. It is the intention when the new plant is completely installed, to have both the large vacuum pumps in the new boiler room, but as the arrangement exists at present, each boiler room presents a completely independent unit if so required. The new boiler is fitted with a three retort standard type underfeed stoker. There is a blower engine and fan for furnishing forced draft.

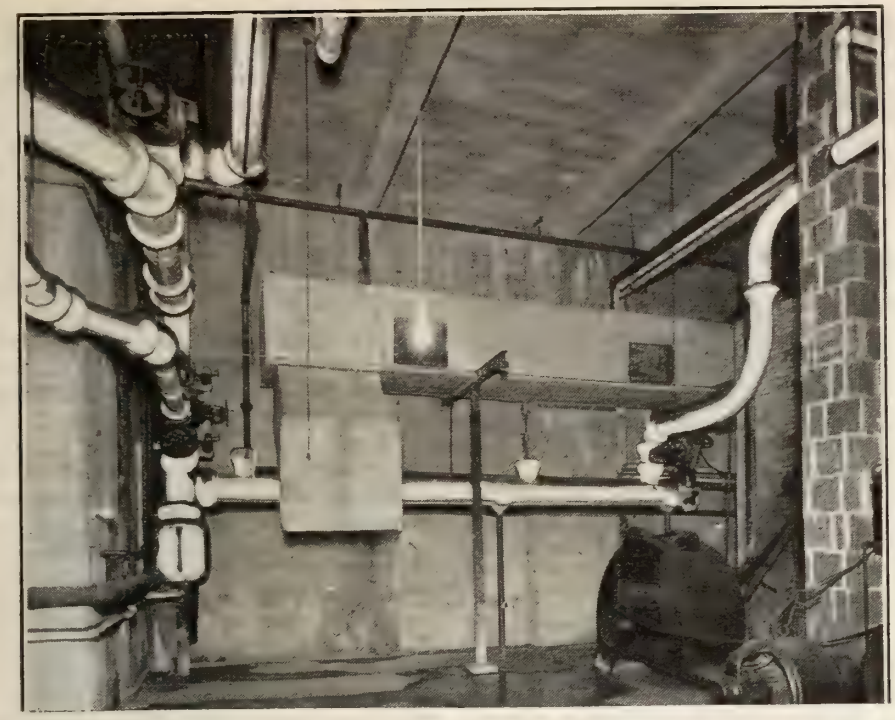
For the present coal is dumped down a chute from the street level, and fed into the stoker hopper by hand, but when the plant is complete, there will be a conveyor from the bunker to the hoppers, eliminating the hand work.

The pressure carried on the main steam piping (high pressure) is 125 lbs. and this is reduced where required through reducing valves to supply cookers, washers, laundry, and heating system.

The main steam header is carried over to join the present header in the engine room, and from this header are carried all the necessary connections to pumps, etc., as well as a reduced steam connection to the heating main, and a reducing bypass to the heater.

The exhaust piping and heating mains are so arranged that there is no possibility of a high pressure being developed in the low pressure lines, an atmospheric relief valve guarding against any possibility of such an occurrence.

All the heating arrangements above the basement in the old building are taken care of by the main return system, but the heating apparatus on the basement level is provided with a separate line. This was found necessary some years ago before the new building was ever thought of, and considerable



This view shows steam connection from new boiler crossing to riser and bypass.

trouble was experienced with one section of the old building.

It was discovered that this trouble was due to what practically amounted to a water seal on the return piping, which dropped below the level of the vacuum pump, and then rose again to the pump suction, forming practically a U bend and holding up the returns from this particular point.

This bend was straightened out by the introduction of this special basement line, and the trouble was forever eliminated.

Boiler Room Drainage

Owing to the fact of the new boiler being so far below the street level, it is also below the sewer level. Provision has therefore to be made for taking care of the surface water which would otherwise lodge on the boiler room floor. To handle this there is fitted two No. 2 grade sum pump and sump.

The sump consists of a 48-inch by 48-inch by 6 feet deep brickwork well, and the pumps are two vertical centrifugal two-inch, direct connected to 240-volt direct current motors. These pumps will deliver 75 gallons a minute when discharging against a twenty foot head. They are automatically operated by floats in the sump, and a second one if the first pump cannot overcome the water. Auxiliary steam pumps for this purpose are also fitted as a standby.

Pressure on System

The heating system carries a pressure varying from atmospheric to 1 lb. per square inch on the feeding side, and the vacuum pumps maintain a vacuum of about 15 inches on the return side. This gives a total difference of pressure when the syphon traps on the radiators open of about 8 lbs. per square inch, so that there is little possibility of any holding up of the system.

It is absolutely necessary that the radiators should function without any hammering or gurgling noises and the high vacuum maintained materially assists in this result. There is an entire absence of any noises throughout the whole system, which speaks well for the general workmanship and arrangement of the installation.

When the heating is taken care of there is another most important feature remaining, and that is the ample ventilation of the rooms and public assembly halls, of which there are quite a number.

This is taken care of by a number of fans, each caring for a different department. The large ballroom on the top floor requires a fan all to itself, as may be supposed, when it is remembered that there may easily be from 600 to 800 people dancing there at one time.

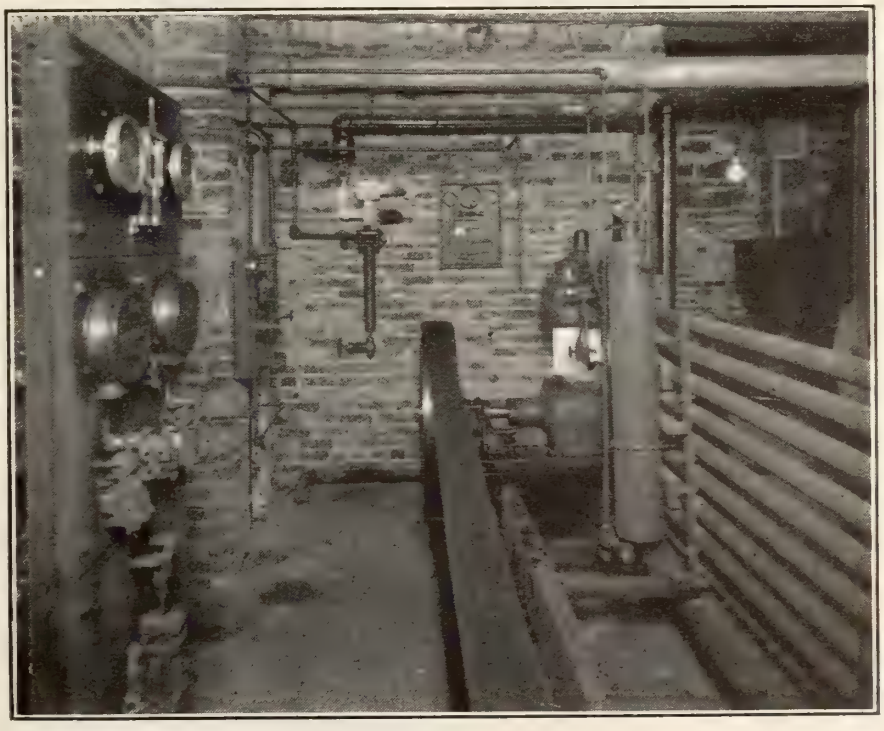
The fan supplying ventilation for this room has a capacity of 15,800 cubic feet per minute against a static head of ⅞ inch, and an outlet velocity of 1,700 feet per minute. This fan is driven from a motor by a belt drive.

There is also an exhaust fan for the ballroom with a capacity of 13,000 C. F. M. against a static head of ¾ inch, and a velocity at outlet of 1,400 cubic feet per minute. These two fans are arranged so that the direction of the air current can be diverted in the following manner. In ordinary weather, the supply fan draws in air from the louvres in the side of the building, and the exhaust fan takes the air from the room and discharges it outside.

When the weather is exceptionally cold, the dampers communicating with the outside air are closed off, and the damper between the exhaust fan duct and the supply fan duct. The air is then taken from the ballroom, passed through the air washer, with its tempering and reheating coils, and returned to the ball room at the proper temperature and humidity for the comfort of the occupants.

There are two fans with a combined capacity of 29,600 feet per minute for exhausting the bathrooms, and for the kitchen on the top storey there is also

(Continued on page 16)



Refrigerating machine working automatically for upstairs kitchen.

Reduction In Pay For Montreal Plumbers

Master Plumbers' Association and Local Unions Now Negotiating—Five Cents an Hour Less—Cut Generally Acceptable, But Men Object to Abolition of Double Time for Sundays and Holidays

MONTREAL.—If the negotiations now on foot come to an amicable conclusion, between the Master Plumbers' Association and the local Unions, the rates of pay for Montreal plumbers will be lowered five cents an hour. The only drawback now appearing between the two forces is the abolition of double time for Sundays and holidays, and time and one-half for Saturday afternoons and overtime work.

The proposal submitted to the Master Plumbers by the local Unions was that a rate of pay for the coming year of 70 cents an hour for the highest class men, and 65 cents an hour for the next qualified, be paid, with time and a half for Saturday afternoons and overtime work, and double time for holidays, such as was the arrangement last year. It is also asked that in view of the lower scale of wages, a preference be given to the members of the National and Catholic Unions.

This was taken up by the Master Plumbers' Association, who made a counter proposition, providing for a general decrease in the wages of plumbers of five cents an hour all around. The proposition submitted by the Master Plumbers provided for the division of the plumbers into three classes, the first to get 70 cents an hour, the second 65 cents and the third 60 cents. The idea of allowing time and a half for Saturday and overtime, and double time for work on holidays was rejected.

The matter is now being taken up by the Plumbers' Section of both Unions and will be considered at a general meeting in the near future.

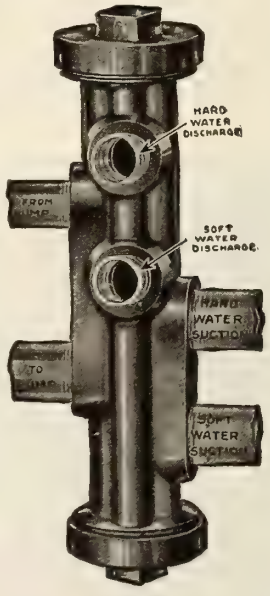
New Plumbing Goods

DUAL AUTOMATIC VALVE

The Westco Pumps, Ltd., of Toronto, Ont., are placing particular emphasis on the Westco tankless water system, at the same time drawing special attention to the dual automatic valve installed in connection with these pumps. The Westco product is described as a tankless electric automatic water system consisting of a pump directly connected to an electric motor, a suction chamber and a pressure governor switch, all mounted on a base ready for linking up with plumbing service and electric wiring. One of the features outlined by the makers is the fact that fresh water is pumped direct from the well without any intermediate tank. The action of the pump is described as instantaneous, commencing with the turn of the tap, and stopping when closed.

The dual automatic valve enables the ready acquisition of either hard or soft water, without the preliminary closing of hand valves or similar changes. It can be used in connection with two-tank, single tank or tankless systems. The methods of operation described by the manufacturers follow:

There are six openings. Two are connected to the inlet and outlet openings of the pump; two are for the suction lines to well and cistern; and two are for discharge into tanks or to faucets. Three pistons traveling in a cylinder are so spaced that when the soft water suction port or opening is closed, the hard water suction port will be open; and the two corresponding discharge ports will be closed and opened. (The ports connected to pump suction and discharge are always open). The pistons which slide up and down, opening and closing the ports, are actuated by pressure. Drawing off water at any soft water faucet causes the pressure on the soft water line to reduce. Then the greater pressure on the hard water line. exerted against the pistons, moves them into position to close the hard water openings.



Dual Automatic Valve

MANUFACTURERS CONDEMN WHOLESALERS

Continued from page 9

"Under the heading 'plumbers should have show room.' another gentleman states that every plumber ought to get a show room and that only those who want a better class of goods would go to a jobbing house where they can get a larger selection. Well, this is not our case. We have a large selection in our show room, but every time we lose a sale to the wholesaler it is on account of the price not because we have not the goods.

"Mr. Editor, it is no use to try to escape from this fact; the plumbers are not protected by the jobbers, especially throughout the Province of Quebec and Maritime Provinces. I do not know much of the Western Provinces neither the Province of Ontario, but I presume they are not much better in that respect."

AN INTERESTING HEATING AND VENTILATING PLANT

(Continued from page 15)

a fan having a capacity of 10,700 cubic feet.

There is a boiler room supply fan, with a capacity of 15,000 C. F. M., and a boiler room exhaust fan with 23,600 cubic feet capacity.

There is in addition in the engine room an air washer and fan with tempering coils for supplying air to the basement. The tempering coil and reheating coil have between them 960 square feet of heating surface, and they are guaranteed to provide absolutely pure air. This air is first relieved of all its moisture in the tempering coils, cleaned of all impurities, and then passed through the reheating coils at a definite temperature and relative humidity, which can be controlled to any desired point.

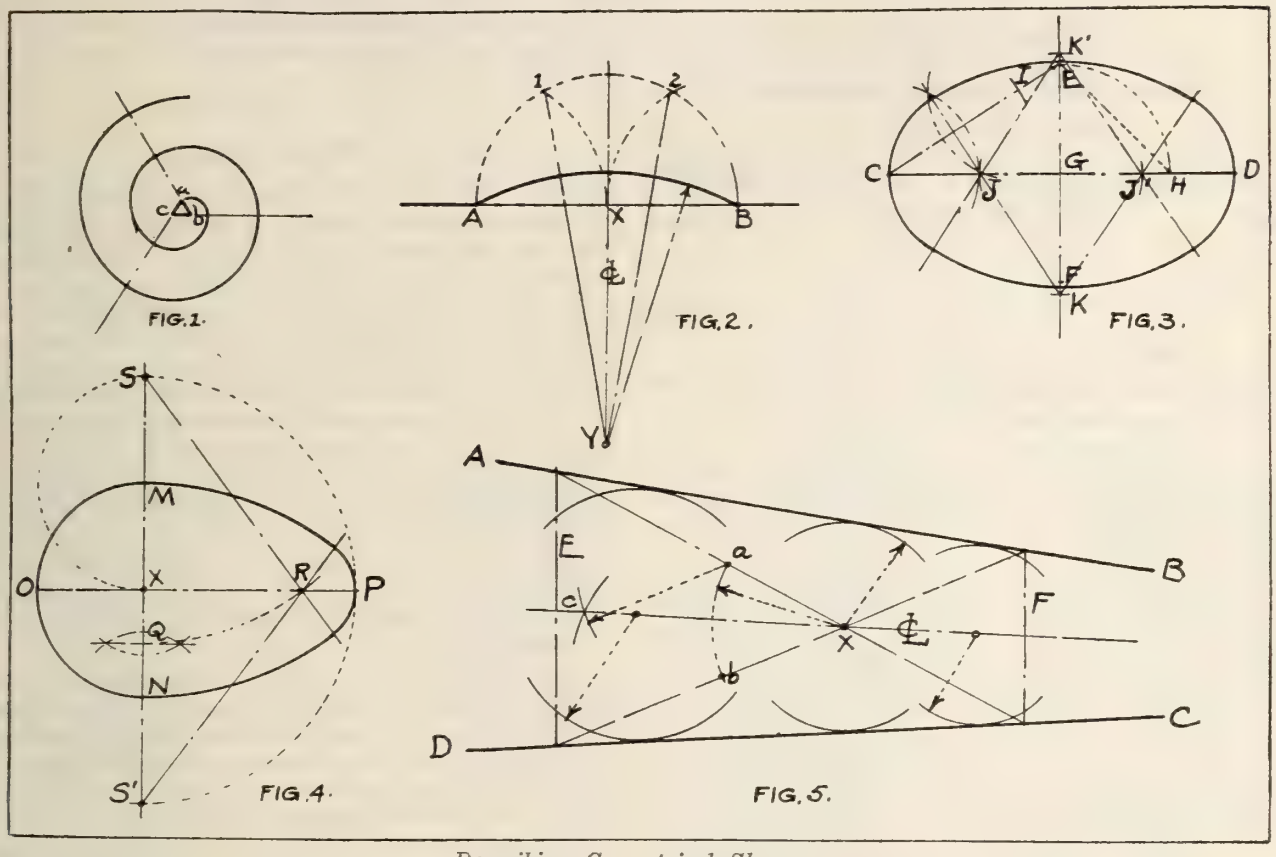
FAMINE COLLECTIONS

Canada is being intensively organized and solicited for aid to the starving Russians. The strongest pressure for contributions will be on financial institutions primarily, and then on manufacturers, merchants and business concerns generally. They have, therefore, a very vital interest in the question. We have pretty well all we can do taking care of our own destitute at this time. But we can do that and still have some to spare for less fortunate foreigners and particularly for suffering but deserving Russians.

The fact that these people have been so fearfully exploited by, and are still under control of a group of grafting foreigners, is no reason why we should withhold our aid. We should have no sympathy with those who suggest they should be allowed to suffer. The difficulty is to know how we can get our contributions to the real sufferers. We do know that during the last year or more large sums have been collected in Canada which never went beyond the Soviet propagandists within our own borders. Of the many so-called Russian Relief funds, we know of but two that are perfectly legitimate. So crooked are Soviet conditions that persons in this country desirous of sending money to their families in Russia are advised not to do so as only a small per cent., if any, will get to them even through British and United States official channels. The real Russian Red Cross of the war days, still in existence, advise their British colleagues against supporting any of the Soviet schemes and go so far as to say that internal conditions in Russia are morally as bad as in the worst days.

Rudiments of Pattern Making

By O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Missouri.



Describing Geometrical Shapes.

MUCH of pattern drafting or, we should say, all of pattern drafting, and all other kinds of drawing have their outgrowth directly from descriptive geometry.

Now these rules of treatment are not always easy to decipher and even though they may be understood by workmen and even distinguished draftsmen, still at that it is very easy to make a slip.

So in this drawing we have a few problems of interest in which figure 1 is describing a volute from the vertices of a triangle. To describe this volute, draw a triangle as at a-b c, making all sides equal and then extend the side lines their different directions as shown.

Now for using each one of these points as a center, b-c-a, we describe a third of the volute from each point. Then by changing centers and lengthening the radius, the volute is automatically produced.

As many spirals can be made as you desire, always leaving the same center. This, of course, makes the rest of the volutes of the spiral lay parallel to one another, and is not always the exact treatment sought for.

There are other volutes developed by different methods, and some of these give us a graduating distance, as the volute progresses, so that the lines are not parallel to one another as in this case.

Figure 2, we have a drawing showing the tri-section of an arc, as was recently discovered, by a senior scholar of a Massachusetts High School.

Its geometrical construction is very simple, although it is only approximately accurate. It would seem at first thought that it would be geometrically accurate, but this is not possible under this construction.

However, the present treatise may be used and after checking up the small variation can be adjusted. Later reports have it that still another treatment is found for tri-secting an arc, which should be geometrically and mathematically correct.

By this figure 2 we let A-B be the arc and then we draw a chord line as A-B through the arc. We bisect the line which gives us X, and from this center we describe the semi-circle A-1-2-B. Now with the same radius and using the points A and B as center, we describe arcs from X to intersect the semi-circle in points 1 and 2. Then by drawing lines from points 1 and 2 to Y, the center for the arc A-B, these lines are supposed to tri-sect the arc A-B. By an inspection it will be observed, the sector 2-B is somewhat fore-shortened over the center zone 1-2, where the lines pass over the arc, and herein their discrepancy occurs. It is, however, approximately correct, and by re-checking with one of the spaces the spaces can be quickly adjusted.

In figure 3 we have described an oval, where T-F is the short diameter and C-G is the long diameter. We use G as center and describe the arc E-H. Then use H-E as the radius and use C as the center; cross the line G-F in point 1.

Next bisect the line C-I, extending your line to intersect the 2 axis lines in points J and K. These 2 points will then be the centers for describing the end and side arcs.

By lifting these points over from the center G as J′ and K′, we can then describe the arcs for the oval using J and J′, also K and K′ as centers. Divisional lines can be drawn before describing arcs, so you can see where to stop and start your arcs.

In figure 4 we have a treatment for describing an egg shaped oval. Let M-N be the diameter of the large end, and so from X we describe the semi-circle M-O-N. Then using the full diameter as M-O and X as center, we mark points P, also S and S′.

Now bisect the radius X-N in point Q, and pick this distance and set as P-R, which gives the center for the small end arc. Draw the divisional lines and describe the arcs, using R and S and S′ as centers.

In figure 5 we have a treatment for finding the center line so that tangent arcs may be described to certain given slant lines. Let A-B and C-D be the given lines. Then at any place square the

Where The Plumber Stands

A GREAT DEAL has been heard at various times concerning the comparative wages paid plumbers and others engaged in various branches of the building industry. The remark has frequently been heard that plumbers have been in the forefront as opposing any wage reductions and that their demands have been such as to be a big obstacle to a resumption of normal building.

A comparative scale of wages paid to various trades in an Ontario city has been taken by Sanitary Engineer as a basis for the following information. Plumbers were paid 29 cents an hour in 1901, increasing as follows each year since: 31¼, 32, 33¼, 34¼, 38, 40, 40½, 40¾, 43½, 44¾, 47, 47, 47 1-3, 51, 51, 51¼, 60, 69, 83, 80 cents in 1921. Other trades have increased in that time as follows: Bricklayers from 40 cents in 1901 to $1.00 in 1921; carpenters from 25 cents to 78 cents; electricians from 22 2-3 cents to 80 cents; painters from 22½ cents to 73⅛ cents; builders' laborers from 18¾ cents to 52⅛ cents. It is evident from these figures that plumbers' wages have not increased as rapidly in the past twenty years as have those of other trades and to-day are no higher than electricians and not as high as bricklayers.

A Big Field For Business

A RECENT survey made of conditions in farm homes in America indicates the extensive possibilities that exist for business in modern sanitary and heating equipment in the rural districts. An average of nine thousand records were secured to form the following survey.

As to the work the farm wife is called upon to do, it was shown that on the average she has 7.8 rooms to look after and 1.6 stoves to care for; 79 per cent. have kerosene lamps, 61 per cent. have to carry water an average distance of 39 feet; 96 per cent. of them wash and iron and 92 per cent. do sewing, spending a daily average of 6 hours in mending; 94 per cent. engage in bread making.

Now for the facilities which those farm wives have to do this work; 32 per cent. have running water; 22 per cent. have power machinery; 48 per cent. have water in the kitchen; 60 per cent. have a sink and drain; 57 per cent. have washing machines; 47 per cent. have carpet sweepers; 95 per cent. have sewing machines; 96 per cent. have screened windows and doors; 90 per cent. have outdoor toilets, and 20 per cent. have bath tubs.

It is evident from the foregoing that while the farmer has invested in certain labor-saving equipment for his barn, that he has grossly neglected the home in even necessary sanitary requirements. The need for education along the lines of labor saving equipment is quite apparent. The U. S. Department of Agriculture says, "What the farm woman needs and what she can be taught to buy is more labor-saving equipment. In equipment the farm home is far behind the field or even the barn, with the result that the farm woman's task is no easy one. The department looks to manufacturers and advertisers to do their share in improving conditions in the farm home just as they have in other parts of the farm."

Manufacturers of such equipment do not need any urging for greater effort to educate the farm wife, but where the need lies is for the plumber with prospects in the rural districts, to connect up with the national sentiment which is being encouraged and turn this sentiment into actual business for himself.

The Census

THE CANADIAN Census returns which have just been completed, give an opportunity for some interesting comparisons. Our present total population of 8,769,489 persons represents an increase of 21.5 per cent. during the past ten years, and an increase from a population of 3,689,257 fifty years ago. The increase in population in the last ten years amounts to 1,475,988, which is very small compared with the advances which the country has made in other directions. The debts which Canada carries representing development of the country, and the natural resources which exist in the Dominion make advisable the securing of more population of a selected nature to help develop our resources and carry the load of taxation.

Immigration in the past eight years has been greatly interrupted by the war. It is but a few years ago that under the stimulus of a tide of immigration the West was asking for a census every five years instead of ten.

A peculiarity of this unevenly settled country is that Nova Scotia with an area of 21,068 sq. miles, has a population equal to that of British Columbia with an area of 353,416 sq. miles. Ontario with 2,929,054 is the home of almost exactly one-third of the people of the Dominion. Ten years ago Ontario boasted 35 per cent. of the population of the Dominion, thus its proportion has decreased. Quebec's share has also declined from 28 to 27 per cent. of the total for Canada, in the ten years. All provinces except Prince Edward Island have shown steady growth. The weight of population has moved westward, the West showing an increase from 24 per cent. of the population of Canada in 1911 to 28 per cent. in 1921.

ONE OF THE barometers of conditions in general is the question of employment. In this connection it is significant that employment during January represented a marked increase compared with a year ago. Returns from 5,800 firms in Canada with a total payroll of 641,146 persons show that increases in staff gave employment to approximately 19,000 more workers. The gains represented approximately 7,000 workers in Quebec, 5,000 in the prairie provinces and 4,600 in Ontario. The nature of the employment represented indicates partial recovery in the textile and iron and steel industries.

For some years past the principle has been laid down that business success or failure was largely personal—in other words that the individual himself was chiefly responsible for failure to succeed. In 1918 the proportion of failures credited to causes originating within the individual himself rose to its highest point, 86 per cent., while outside influences were credited with causing 14 per cent. The 1919 returns were almost identical with this, 85.9 per cent. In 1920 the proportion due to personal causes fell to 83.1 per cent. In 1921, however, the trader who failed was comparatively speaking "a child of circumstances," only 74.8 per cent. of the 1921 failures being due to cause inherent in the individuals, while 25.2 per cent. were beyond his control. Lack of capital covered slightly over one-third of the failures in both 1920 and 1921.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

Article No. 50 of Series; Illustration 61-64

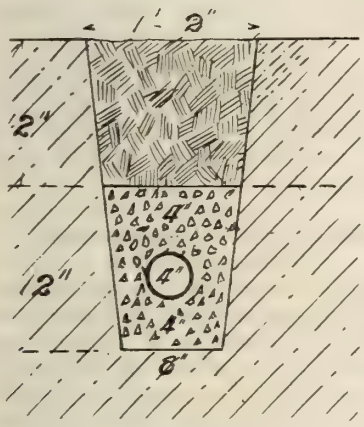

FIG 61.

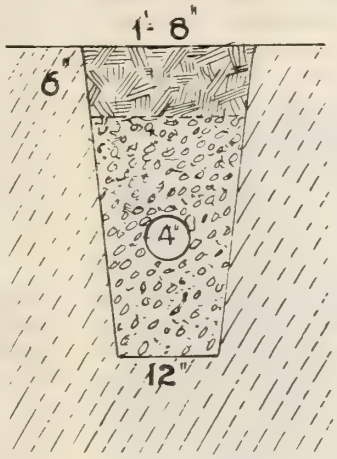

FIG 62.

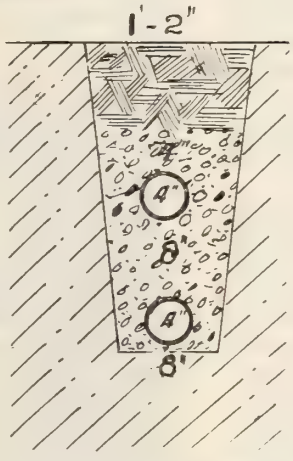

FIG 63.

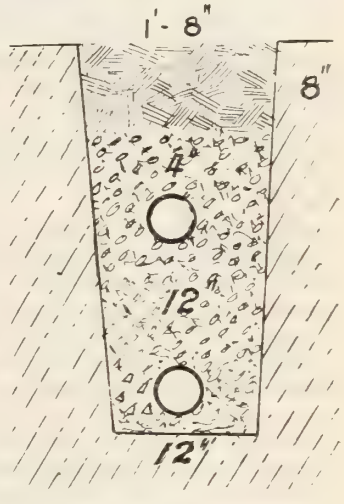

FIG 64.

FIGS. 61, 62, 63 and 64 give cross-sections of the cut and the best method of filling in the same to increase the filtration process in the various soils. for if the subsoil drains were packed tightly around with clay or any other impervious soil the sewage would in time follow the pipe line and be discharged, without purification, into the outlet stream.

In laying the tile the main object is to arrange and provide for ample opportunity for the circulation of air, both through and around the pipe, which not only increases the absorption of water but hastens bacterial action and that is the main reason for laying and covering the pipe with cinders or coarse gravel and the depth and quantity varies according to the soil—the heavier the soil the greater amount of filling required. The subsoil drains should be laid true to grade, and require little fall, with ¼-inch open joints protected with broken stone to prevent the earth, tree roots, etc., obtaining access to the pipes and blocking same up.

The temperature of the sewage in the tank in cold climates is generally sufficient to prevent the tank effluent freezing in the filtration area. Should any difficulty arise through this condition, and the outlet elevation will permit, the pipes should be kept 3 to 4 feet below the surface, but as the tank effluent requires all the aeration it can obtain the shallower the pipes are laid the better the chances are of it obtaining the oxygen from the atmosphere and no single case of frozen effluent has come under the writer's notice in his experience with pipes laid at 2 feet depth with the single exception of the pipe outlet in a Canadian installation. So that in very cold climates it would be advisable to place the outlet pipe 4 feet below the earth surface so as to protect same from frost.

The capacity of the tile drains should be nearly equal to the volume of tank effluent discharge at any one time so that the entire drainage system under filtration would be filled and emptied at the same time, allowing the intervals of rest needed between each discharge, in order that the land under treatment can have plenty of time to take up sufficient oxygen for the next application of sewage. This is best regulated in the design and capacity of the second chamber or dosing chamber with the automatic flushing syphon. In some cases, for the sake of economy, the syphon is not installed and a simple central pipe overflow connected to the drainage system is substituted. This is not good practice, however, as proper distribution is impossible and the sewage just trickles constantly in the pipes and only the first part of the filtration area or drainage tile receive the tank effluent and in time becomes sewage sick and little purification then takes place.

Experience has given another good method of obtaining the amount of tile required for efficient filtration results and that is each foot of 4 inch tile drain will take care of each gallon of liquid discharge into the drains from the tank in open and porus soils. In heavy soils approximately two feet of 4 inch tile is required per gallon.

PUMBERS AGREE TO REDUCED PAY

Winnipeg, Man.—A ten per cent. reduction in wages has been accepted by the Plumbers' union of Winnipeg, as an evidence of the union's desire to co-operate in the revival of building activities, R. C. Neill, business agent, announced.

According to the agreemnt which has be concluded with the master plumbers, the union wage will be 90 cents an hour. Last year it was $1 an hour. The eight hour day will remain in force, and there are no other important changes from last year's agreement.

The new wage scale will become effective May 1, simultaneously with all agreements made by the building trades unions.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Stratford, Ont.—McDonald & Henry, plumbers, have dissolved partnership.

Montreal.—Westmount Plumbing Co. has dissolved.

OCCUPY NEW PREMISES

Moncton, N. B.—E. H. Hayward, has opened a plumbing shop at 48 Peare St.

Comber, Ont.—Harold Callwood has opened a new tinshop and plumbing shop here.

North Bay, Ont.—Mason & Campbell, plumbers, have moved to new premises at 97 Main St., East.

Moncton, N. B.—T. Johnson & Co., sanitary engineers, will occupy new premises in the Roy building.

Sandwich Plumbing and Heating Co., Sandwich, Ont., have recently moved into their new premises over the Acme Hardware Store on Sandwich St.

PLUMBERS HOLD LUNCHEON

Halifax, N. S.—The fortnightly lecture luncheon of the master plumbing and steam heating engineers was held at the Green lantern when Prof. Hunt, of the Dalhousie Chair of Commerce, lectured on book-keeping for the trade. There was also music and trade motion pictures.

NEW FILTRATION PLANT PARTLY IN COMMISSION

Peterborough.—Peterborough's new $300,000 filtration plant is in partial operation, and the improvement in the quality of water is distinctly noticeable. The plant is being tested out each night, and the day requirements are taken from the two-million gallon reservoir. This plan will continue until the tuning-up process has been completed to the satisfaction of the contractors and engineers.

DRAFTS NEW BY-LAW

Birch Cliff, Ont.—The final draft of the plumbing and building by-law was drawn up at a special meeting of the council. The new by-law will protect the purchasers of residences in the township, as no contractors will be able to erect any house or other building without submitting their plans to the council. This eliminates the practice of placing cheap plumbing in houses for sale, and will help to maintain sanitary conditions as the new by-law carries its penalties for those who do not comply with the future standard materials when building. The object is to avert any trace of infection by inferior plumbing methods.

INCOMPLETE PLUMBING

Toronto.—J. Alliston wanted ten dollars from W. Madge because the plumbing wasn't completed at the time promised. Counsel for defendants wanted to call the plumber to show he was sick and couldn't the work. "The tenant," observed the judge, "has nothing to do with the reasons why a contract has not been carried out."

PLUMBERS CURL AT MONTREAL

Montreal.—An exciting curling match was staged at the Montreal West Curling Rink between a select team from the staff of James Ballantyne, skipped by Jas. Ballantyne, and the Montreal Master Plumbers, skipped by John Watson of Caledonia fame. The game was a ten end match and at the tenth end the score was ten all, the usual course to decide a tie is to play an extra end, but being plumbers, they decided to make the match a twelve end affair which again resulted in a tie, twelve all.

The Mayor of Montreal West, James Ballantyne, saved his rink from defeat on seevral occasions. In the first stages of the game Montreal West stood eight to Caledonia nil. Caledonia then sat up and took notice and made the score ten all at the close of the tenth end. In the eleventh end Caledonia made one shot and on the twelfth end the score was again tied. On the twelfth end Caledonia was laying five shots with one stone to play by Ballantyne, he making a beautiful shot with a well directed runner cutting off the three irons on the button and his own iron laying shot, making the tie at the twelfth end.

After the game refreshments were served and the visitors entertained in a manner known only to the Mayor of Montreal West. Music, songs and stories prolonged a very pleasant evening.

Teams

Montreal West—W. Wilson, F. G. Loranger, D. M. Ballantyne, Jas. Ballantyne—Skip.

Caledonia—W. U. Hughes, P. C. Ogilvie, Jas. Griffin, John Watson—Skip.

John Watson wound up the evening with his favorite ditty, "The Cat Came Back" rendered in his own inimitable style. Auld Lang Syne and the National Anthem brought to a close a memorable evening.

SCARBORO'S PLUMBING BY-LAW

Scarboro Township Council held a busy session in the Council Chamber, Birchcliffe, with the Reeve, E. M. Croker, in the chair. The plumbers' by-law received its first reading, and will be passed at next meeting of Council.

SURPLUS OF WATER FUNDS

Brighton.—Brighton Water Commissioners expect to have a surplus of some $900 or $1,000 over and above debenture rate and the upkeep of the Water Works System, and have been given permission by the Village Council to expend it in laying additional water mains where most needed in the town.

SURPLUS IN BELLEVILLE WATERWORKS

Belleville, Ont.—Waterworks Department operated last year at a net profit of $8,690.13. Manager E. T. Austin has so conducted the affairs of the department that while other cities have had increases in their water rates Belleville consumers have been supplied at the old rate and money made for the department.

SERIES OF LECTURES FOR HALIFAX PLUMBERS

Halifax, N. S.—A series of lectures is being conducted by the Master Plumbers of Halifax City, these lectures are along the lines of better business conditions for the merchant plumber. The lectures are given by well-known professional men, who, through economic studies, are well able to give very profitable information along these lines. They are attended by a very large number of prominent merchant plumbers of the city.

CONVENTION ONTARIO SOCIETY D. S. and H. E.

The Eleventh Annual Convention of the Ontario Society of Domestic, Sanitary and Heating Engineers, will be held in Hamilton on April 6th, 7th and 8th.

The Hamilton Society of Domestic, Sanitary and Heating Engineers, will entertain at a banquet to be held on Friday evening, April 7th. Invitations will be forwarded as follows: To members of the Ontario Society of Sanitary and Heating Engineers, members of the Hamilton Society of Sanitary and Heating Engineers, Unaffiliated Sanitary and Heating Engineers of Hamilton and District, and Representatives of Ontario Manufacturers and Wholesalers.

WESTERN ONTARIO NEWS

Thos. Herron, 429 Ridout St., London, wants prices on heating, plumbing and electrical work for new $3,000 residence.

Ray Crosby, Highgate, Ont., wants prices on heating, plumbing and electrical work for new $4,000 residence.

Mrs. J. D. McDonald, Box 177, Ailsa Craig, Ont., wants prices on hot air heating and plumbing in connection with remodelling of residence.

The Wright, Teale Co., were awarded contract for heating and plumbing in connection with extensive alterations to the store of J. A. Nash at London.

Daniel Yeowood, of Shakespeare, Ont., is preparing plans for new $4,000 residence and wants prices on hot air heating, plumbing and electrical work.

Plans are being prepared by Dr. Scallon, Amherstburg, Ont., for residence to cost $5,000. Prices wanted on heating, plumbing and electrical work.

Fred Goring, 109 Briscoe St., London, Ont., wants prices on hot air heating, plumbing and electrical work, for new $4,000 residence he is starting.

James Long, of Seneca, Ont., is moving to Canfield, Ont., where he will shortly open a plumbing and tinsmithing shop.

The Board of Health, at Listowel, Ont., will obtain estimates immediately on the cost of installing a sewerage system for the town. J. W. Sangster, chairman.

Architect W. G. Murray, London, Ont., in preparing plans for a new six roomed school at Hensall, Ont., to cost $35,000. Prices wanted on steam heating plumbing and electrical work.

Plans are being prepared for new residence to cost $25,000, for John E. Smallman, Elmwood Ave., London, Ont. Prices wanted on heating, plumbing and electrical work.

Watt and Blackwell, architects, London, Ont., are preparing plans and will call for tenders shortly for all trades in connection with $250,000 sanatorium building at Preston, Ont.

F. E. Burke, plumber and tinsmith, St. Thomas, Ont., has purchased the three story brick building at 288 Talbot St., and is moving there in order to secure more accommodation for his steadily expanding business.

Plans for new six roomed school to cost $45,000 are being prepared by Architect W. G. Murray, Dominion Savings Bldg., London, for the school board at Springfield, Ont. Prices wanted on heating and plumbing.

James A. Charlton, who for several years has been manager of the retail store of the Gas Appliance Co., London, has been appointed sales manager of the Hydro store at London, and takes over his new duties on March 20.

Tenders are now being called for the new $100,000 hardware store at London, Ont., for the Cowan Hardware Co. Steam heating, plumbing and electrical work. John M. Moore, 489 Richmond St., London, architect.

The Death of Senator John Milne

President and Managing-Director of Burrow, Stewart & Milne, Hamilton, Ont., Dies After Sixty-eight Years Association With Metal and Foundry Trade—One of the Founders of the Steel Co. of Canada

THE DEATH of Senator John Milne, president and managing-director of the firm of Burrow, Stewart and Milne, Hamilton, Ont., removes a figure which was for years prominent in the stove and foundry business of this country. Senator Milne had been ill since last October and when complications set in he was too feeble to undergo the necessary operation and his death was therefore not unexpected. He was eighty-five years of age and had been identified with the iron foundry trade since 1854 when he commenced business with Charles Stewart and William Burrow, later forming the present firm. Both of his partners died several years ago.

LATE SENATOR JOHN MILNE

President and Managing-Director of Burrow, Stewart and Milne, Hamilton, and for many years connected with the metal and foundry trade, whose death is announced.

The late Senator Milne was born in Aberdeen, Scotland in 1838, and after receiving his education in his native parish began to learn the trade of a molder. Before he finished his trade he came with his father, the late John Milne, to Canada and the family settled in Hamilton. Here he continued to work at the molding trade in the foundries of the Gurney Company and shortly after he had completed his apprenticeship he and his friend the late Charles Stewart went to the United States where they both worked for a time. In 1864 they returned to Hamilton and in company with the late William Burrow the firm of Burrow, Stewart and Milne was formed and business begun in a small frame building on Carolina St., North.

The business grew under the management of the three men who were all experienced mechanics and it was but a short time until an enlargement was found necessary and new buildings were constructed at Hughson and Cannon Sts., which were occupied in November, 1871. Extensions were made from time to time and in 1898 the firm was reorganized and Mr. Milne was made president.

Mr. Milne had many other important business connections. He was one of the founders of the old Hamilton Steel & Iron Co., which has since developed into the Steel Company of Canada. He was also interested in the shipping interests and for a time served as president of the old Hamilton and Ft. William Steamship Company. This was later merged into the Inland Lines and later into the Canada Steamship Lines in which Mr. Milne had large interests. He always took an active interest in the welfare of the city and more especially in educational matters, having been for years a member of the board of library governors. He was also one of the first commissioners of Hydro in Hamilton. He was a Conservative in politics, having served as president of the Hamilton Conservative Association for nearly 25 years, and was appointed to the Senate during the government of Sir Robert Borden in 1915. He is survived by his wife and two sons, Charles K. and William M.

MILDMAY TO VOTE ON WATERWORKS BY-LAW

Mildmay, Ont.—The Mildmay council at its meeting gave the waterworks by-law its first and second reading, and it will be submitted to a vote of the ratepayers. The by-law provides for raising $1,114.12 each year for ten years.

The town has decided to lower the water rates to $6 per annum. The town gets possession of the system and the lands connected with it on April 1. The purchase price is $8,200.

WATERWORKS APPROVED

Port Credit, Ont.—Word was received here that the Provincial Board of Health has approved of the proposed local waterworks system, and the board preferred the intake pipe from the lake west of the town instead of from the east as formerly planned. The water to the west reaches a greater depth. There is a depth of 16 feet 1,000 feet out from the west end and only 10 feet out from the east. The new site for the intake is off Haney's Point. Under the new plan the system will serve the town more advantageously.

Let this Salesman Work for You

This attractive well printed 72 page booklet should be placed in the homes of every prospect in your locality.

Everybody is interested in pictures and there are lots of them in this booklet. Bath room scenes showing different combinations of equipment are shown and these are followed by descriptions of each fixture in detail so that Father and Mother can choose whatever they need right in their own home.

Get the habit of leaving one of these booklets with each prospect you talk to. It will be read and re-read and all the time it is driving home its message that will result in a great many cases in business for you—business that you might otherwise have missed.

When the Grown Ups have finished reading the booklet Baby is likely to come along with a big pair of scissors and put a picture of a bath in every room in the house.

A supply of these will be gladly forwarded on request at no charge to you.

The Port Hope idea is to help you sell more plumbing fixtures. We want to co-operate with you in making 1922 a banner year and the above plan is only one of the methods we have adopted to help you in your sales.

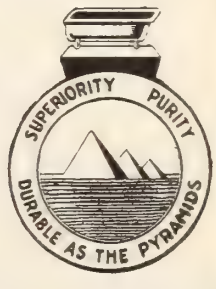
Let's co-operate!

Port Hope Sanitary Mfg. Co.

Limited

Head Office :

TORONTO



MORE DRINKING FOUNTAINS

Woodstock, Ont.—More sanitary drinking fountains for the city is the boon promised this year by the Board of Works and the Parks Board. The fountains are receiving various coats of white enamel and the final coating is being made a permanent one by a process of baking. A sample of the work was on view at a special session of the city council and the finished job is one which the citizens can hardly fail to appreciate.

BILL TO AMEND PUBLIC HEALTH ACT

Wilson Crockett, South Wentworth, introduced a bill in the Legislature to amend the Public Health Act. A contaminated well in Barton township is the cause of the bill, which provides that where a municipality desires to build a water system and the outlet is in or through another municipality the other municipality must "come in" on the deal, and if terms cannot be arranged the Railway Board will arrange the contract.

INCOME TAX BOOKLET

The Canadian Debentures Corporation, Ltd., have issued a booklet entitled "Dominion Income Tax Questions and Answers," the work of a tax specialist which simplifies for any individual, company or estate the preparation of the necessary income tax return slip. The booklet should prove of particular interest to business men, who may secure copies of booklet by writing to Canadian Debentures Corporation, Limited, 36 King Street, East, Toronto, and asking for booklet No. 37A.

PEREMPTORY ORDER TO SMITHS FALLS

Smiths Falls, Ont.—Smiths Falls Town Council has received a peremptory order from the Provincial Board of Health to begin proceedings on the installation of a filtration plant in connection with the waterworks system or suffer a fine of $100 per day for every day that the town remains without such a plant.

The estimated cost of filtration is $75,000, with cost of upkeep reaching $10,000 per year. Council will first see whether water can be brought by a pipe line from Otter Lake, seven miles away.

The town feels that it is being discriminated against by the Provincial authorities in this matter, as there are other towns and cities in Ontario with no better source of supply which get along without filtration plants. The Provincial Board of Health has told the Council that a seven-mile pipe line is impracticable, and Council, after investigation finds that a number of western Ontario towns have lines of greater length than seven miles.

Smith Falls has no sickness arising from impure water, and feeling against the Provincial health authorities is strong.

Contracts Awarded

Niagara Falls, Ont.—W. Edwards has heating and plumbing contracts for store and residence for Nelson Bros.

Amherstburg.—Palumbo Bros., Windsor, have contract for sewer construction on Alma St.

Montreal.—Selkirk Bros., have plumbing and heating contracts for store and flats for estate of J. H. Peck.

Wellington, Ont.—Miller & Libby, Oshawa have plumbing and heating contracts for consolidated school costing $15,000 for the School Board.

Montreal.—General contract for construction of sewers on Broadway West and Oak Sts. was awarded to Frascorelli Ltd.

Vancouver, B. C.—General contract for waterworks extension costing $6,526 for city is awarded to Vulcan Iron Works, Ltd.

Fletcher, Ont.—Gordon Drew, R. R. No. 1, Fletcher, Ont., will receive separate trade tenders for erection of school, plans with E. W. Courtice, Scane Bldg. Chatham.

Walkerville, Ont.—C. E. Greenan, 344 Ellis Ave., has plumbing and heating contracts for erection of office and sales room costing $75,000 for Walkerville Hydro Electric System.

Brockville, Ont.—Contracts for plumbing and steam heating for factory costing $50,000 for J. R. Baxter Co., Montreal, are awarded to H. Brown and H. Bedard.

Toronto.—J. L. Bloomer & Co., 6 Juniper Ave., have plumbing contracts for store and apartments costing $18,000 for Wyckham Hardware Co., Danforth Ave.; C. C. Bradley, 148 Essex Ave., has plumbing and heating contracts for residence for N. E. Severs.

Toronto.—W. M. Sutherland Co., Ltd., Lumsden Bldg., will receive tenders for office building costing $500,000 at corner Bay and Temperance Sts., for General Accident Insurance Co., of Canada; Jones & Co., 314 Clinton St., have general contract for alterations and additions to automobile showroom for Claude Pearce.

Bruce Mines.—Tenders will shortly be called for erection of school and hall costing $10,000 for School Board. Thos. Wilks is the architect, Saulte Ste. Marie, Ont.; Tenders will be received by J. A. Armes, 67 Charles St., Hamilton, Ont., for erection of school costing $50,000 on Baldwin St., Burlington, Ont.

Toronto.—F. O. Swann has plumbing and heating contracts for tabernacle costing $20,000 for Christian and Missionary Alliance; David Clark, 776 Dundas St., has plumbing and heating contracts for two stores and apartments costing $15,000 each for David Lavine, 61 Gloucester St.

Vancouver, B.C.—Plumbing contract for addition to factory for James Reid is awarded to Orr Bros.

Montreal.—D. Binet has plumbing contract for two residences for J. B. Ravary.

Gravenhurst, Ont.—Additional contracts for Muskoka Free Hospital for Consumptives include roofing and sheet metal, Douglas Bros., Toronto.

Winnipeg, Man.—Heating contract for garage and stores for Northern Motors Ltd., is awarded to Townsend Plumbing and Heating Co.

Montreal, Quebec—Plumbing contract for store and flats for T. Lefebvre is awarded to A. Huot; general contract for sprinkler system for building for Henry Morgan Co. is awarded to Worcester Fire Extinguisher Co.

Edmuston, N. B.—The Edmundston school board has awarded the contract for the erection of a central school building to L. A. Dugal, plumber and contractor, of Edmundston, on a cost plus percentage basis of eight per cent. with a guarantee that the cost shall not exceed $115,000, including commission.

Contracts for sprinklers, heating and plumbing for warehouse costing $120,000 for Barber-Ellis Ltd., are awarded to Purdy Mansell Ltd.; A. Miller has heating and plumbing contracts for two stores and apartments costing $22,000 for H. W. Ormerod; Robert Whitton has plumbing and W. Howard has heating contract in connection with four apartment duplex residences for Simmon & Steadman; Robert Jordan has plumbing and John McClandish has heating contract for club house for Oakwood Lawn Bowling Club.

TENDERS FOR PIPING

Montreal.—The City Purchasing Department are asking tenders for 731 tons of piping for the new aqueduct, to be delivered within six weeks of the signing of the contract, delivery paid at municipal yards. The pipes are needed in the following sizes: 1,017 pipes 12 feet long and 12 inches diameter; 100 pieces 12 feet long and 10 inches diameter and 300 pieces 12 feet long and 8 inches in diameter.

Peterborough's new $300,000 filtration plant is now in partial operation, and the improvement in the quality of water is distinctly noticeable. The plant is being tested out each night and the day requirements are taken from the two million gallon reservoir. This plan will continue until the tuning-up process has been completed to the satisfaction of the contractors and engineers.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

SANITARY and heating market developments include lower quotations on galvanized sheets, copper and brass semi-finished products, solder in various grades, light general purpose and engineers' wrenches, the Wiss line of tinners' snips, chain pipe wrenches, and everlasting blow-off valves. A further downward revision has also been made in quotations on chain pipe vises.

The reduction on rods, tubing and sheets in copper brass, reflects the easier tone recently apparent in virgin metals. Eastern markets record another recession on all solder grades, this being the second decline during recent weeks. The easier price levels on sheets and plates affect galvanized, black and annealed, as well as the imported sheet products. Bar product markets in iron and steel, appear with a slightly firmer undertone, this being attributed to the effort of certain southern producers to eliminate price shading for attractive orders. On the other hand, easier nominal levels are now generally noted on tin plates in certain primary circles. Quiet conditions are still reported in scrap materials, with the slight recovery in copper prices serving to stem the sagging movement previously recorded on yellow scrap grades. In the ingot metal markets, current conditions provide a series of minor developments, without any marked changes being featured.

Under the stimulant of favorable weather conditions, an early commencement has been made in building circles generally, and this movement is naturally reflected in the Spring demand for many sanitary and heating products. Such materials as pipe fittings, soil pipe, brass compression goods, closet outfits and fixtures, enamelled ware products, corrugated sheets, as well as eavestrough and conductor pipe, all principally depend upon brisk activity in construction work for improvement in the volume of future business. Both manufacturers and distributors are generally hopeful when expressing opinions regarding the trade outlook during the ensuing months.

MONTREAL MARKETS

MONTREAL, March 14.—Solders again feature the current markets, where a further revision in all grades is announced. Guaranteed, strictly, commercial and wiping is again reduced one and one-half cents per lb., while wire solder shows a further price decline of two cents per pound. Brass and copper sheets, rods and tubing also record another important change, sheet and tube prices being reduced 2 cents, and rods one cent per lb. The sheet markets are again included in the price developments, Queen's Head brand galvanized sheets showing a reduction of 25 cents per 100 lbs. on all gauges. Chain pipe wrenches and vises are both recorded with lower prices, also tinners' snips.

With the milder weather of the past two weeks, and the approach of Spring, business in plumbers' and steam-fitters' supplies in general shows signs of improvement. As practically all lines depend, for the most part, on building construction, it is felt that a continued improvement will be noted with the advancing season. Such lines as enamelled ware, soil pipe, corrugated sheets, eavestrough and conductor pipe, boilers and radiation, are reported as showing a slight impovement in sales.

CHAIN PIPE VISES AGAIN RECORD EASIER PRICES

Montreal.

A further revision is made in the quotations on chain pipe vises, No. 1 is now quoted at $4.00, No. 2 at $8.55.

WIRE NAILS REDUCED TO $3.75 BASE

Montreal

The easier tendency in the market for wire and wire products generally is now reflected on wire nails. The base price is reduced 15 cents per keg, bringing the quotations down to $3.75 base.

CHAIN PIPE WRENCHES HAVE REDUCED PRICES

Montreal.

Quotations on chain pipe wrenches show a reduction, with the following prices now quoted:

No. 31, $3.10; No. 32, $4.30; No. 33, $6.00; No. 33½, $7.75; No. 34, $9.50 each.

LOWER PRICES ON BRASS AND COPPER GOODS

Montreal.

The trend of copper in recent weeks on primary markets is now reflected in such products as brass and copper sheets, rods and tubing. Sheets in both metals are reduced 2 cents per lb., rods one cent and tubes 2 cents per lb. Lower quotations on these products is not surprising as the ingot metal has been decidedly easier in tone recently, although in the past week an improvement is in sight. Following are the revised quotations:

	Base
BRASS—	
Sheets	0 24
Rods, ½ to 1 inch, round	0 22
Tubing, seamless	0 30
COPPER—	
Rods, ½ to 2 inch	0 29
Soft sheets, plain, 16 oz. and heavier lb.	0 32
Plain tinned, 16 oz. and heavier, lb.	0 36
Polished and tinned, 16 oz. and heavier, lb.	0 41
Tubbing, lb.	0 32

Above prices are for full sheets or bars. Cuts 5c. per lb. higher.

SLIGHT REDUCTION IN QUEEN'S HEAD SHEETS

Montreal.

Minor reductions continue to feature the local sheet markets, and a slight revision in quotations on Queen's Head galvanized sheets is announced. Easier prices in this direction were anticipated, distributors claiming that while the tone of the market on the other side is little changed, conditions on this market warranted slightly lower levels to bring these sheet to a comparative basis. This revision again substantiates the prediction of dealers who have for some weeks past expressed the opinion that sheet markets in general would in all probability continue to show gradual decline, but reductions of any marked proportions were altogether unlikely. There is little change at primary centres in the

tone of these products, the improvement being slight up to the present, but with indications of a continued betterment as the weeks pass. Prevailing nominal quotations are as follows:

BLACK SHEETS—

10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05
26-gauge	4 60	5 20
22-24 gauge	4 65	5 25
28 gauge	4 75	5 35

GALVANIZED SHEETS—

10½ ounce	6 65	7 60
28 gauge	6 25	7 20
26 gauge	5 95	6 85
22-24 gauge	6 80	6 60
20 gauge	5 65	6 45
18 gauge	5 65	6 35
16 gauge	5 50	6 35
14 gauge	5 35	6 35
12 gauge	5 20	6 35
10 gauge	5 10	6 35

English Standard—	Queen's Head.	Fleur-de-lis
28 gauge	7 50	7 00
26 gauge	7 00	6 75
24 gauge	6 40	6 35
22 gauge	6 05	5 90
18-20 gauge	5 35	5 75

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

CANADA PLATES—

Dull.

18 x 24 x 52s	5 60
18 x 24 x 60s	5 80
18 x 24 x 75s	6 10

WELSH CANADA PLATES—

Polished.

18 x 24 x 52s	7 75
18 x 24 x 60s	8 00

BRIGHT TIN PLATES—

20 x 28 x 100 lbs., bases	16 00
20 x 28 IC., 112s	16 50
20 x 28 IX., 112s	18 50
20 x 28 IXX, 56s	10 50
20 x 28 IXXX., 56s	11 25

TERNE PLATES—

20 x 28 IC, 112s	16.00

NEW PRICES RECORDED IN TINNERS' SNIPS

Montreal.

Revised prices are given in Wiss tinners' snips, a reduction of varying extent being recorded on the various sizes. New net prices are as follows:

WISS SNIPS—

No. 6½—$3.80; No. 7—$3.15; No. 8—$2.50; No. 9—$2.25; No. 10—$2.05; No. 11—$1.50; No. 12—$1.35; No 13—$1.20 pair.

FURTHER REVISION IN SOLDER QUOTATIONS

Montreal.

A further reduction is made in solder quotations, all grades, with the exception of wire solder, being reduced 1½ cents per lb., the latter showing a decline in price of 2 cents per lb. This is the second revision on solders in recent weeks, a reduction of 2 cents per lb. being recorded only two weeks ago. One manufacturer stated that quotations on these products were simply following the trend of metals on primary markets, where in recent weeks tin, copper, lead and spelter have been displaying an easier tendency. There is now, however, a slight stiffening noted in these metals, and it is thought that the downward trend is over, for the present at least. Trade in lead products in general shows a slight improvement, although a further general betterment is anticipated from now on. Following are prevailing quotations, showing the revision in solders:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq.	
Do., 4 to 8 lbs., sq. ft.	0 09½
ft., lb.	0 10¼
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.	0 21½
Do., wire, lb.	0 33½
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

CEMENT BUSINESS SHOWS SLIGHT IMPROVEMENT

Montreal.

Current business in cement is reported as showing a gradual improvement from week to week. The recent milder weather has stimulated sales to quite an extent construction work being allowed to commence in different quarters. Quotations remain unchanged since the revision earlier in the year, and local prices are the following:

CEMENT—Car load lots—

Per bag, f.o.b. cars	0 92
Per bag, delvered	1 00
Less car lots—per bag, f.o.b. yard	1 00
Per bag, delivered	1 10

Less 5 per cent.
Rebate of 20 cents for empty bags.

MORE INQUIRIES IMPROVE WASTE MATERIAL MARKETS

Montreal.

Dealers in scrap metals and waste materials report a slight improvement, inasmuch as inquiries are now coming to hand in better numbers. Although the actual dealing in these materials is still light, encouragement is lent, as it would appear that more interest at least is now being taken on the part of consumers. Quotations on some lines have been forced to an extremely low level, and dealers are convinced that they must quote still lower before actual business can be obtained. However, a gradual improvement in this direction is anticipated as soon as the first indication of activity becomes evident, as stocks are by no means heavy, notwithstanding the utter lack of demand in past months. Following the local nominal prices:

SCRAP—

Automobile Tires	0 50
Rubber Shoes	0 03
Yellow brass	0 05
Red brass	0 08¼
Light brass	0 03
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 08
Heavy copper	0 10
Wrought iron, R. Rd., No. 1 per gr. ton	10 00
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 55
Heavy melting steel	6 50 to 7 00
No. 2 busheling	3 00
Boiler plate	6 50
No. 1 machinery cast	20 00

TRADE IN COTTON WASTE OF AVERAGE VOLUME

Montreal.

There is little or no change in the cotton waste market, raw cotton now being fairly steady, following the recent fluctuations. Trade is described as being of average volume for this season, and quotations remain at revision of a few weeks ago. Prevailing prices are as follows:

COTTON WASTE—Cream polishing, 18c. per lb.
White—XXX extra, 16c.; XX grand, 15c., XLCR, 14c.; X Empire, 13c.; X press, 11½c.
Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.
Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.
Dominion Wipers—White cotton, 20c; colored cotton, 14c.

SOMEWHAT BETTER TONE IN BAR IRON AND STEEL

Montreal

Bar iron and steel is little changed on the local market, sales being limited, although there are indications of a heavier buying movement in the near future, and inquiries are still coming to hand in fair volume. Quotations remain at former figures with little changes. It was predicted some months ago that a buying movement in the spring would tend to stiffen the market, it being recognized at that time that prevailing price levels were well near the bottom in comparison with producers' costs. Since then revisions have been made, but in each case of minor proportions. Whether the increased activity, which is usual in the following weeks, will have a tendency to stiffen prices is yet hard to determine. Conditions at the mills also point in this direction, quotations of certain independent producers showing a recent slight advance. For the present however, following are local quotations.

IRON & STEEL—

Common bar iron, 100 lbs.	2 65
Refined iron	4 15
Iron finished machinery steel	2 70
Mild steel	2 65
Single reeled machinery steel	4 75
Band steel	2 65
Spring steel	4 25
Sleighshoe steel	2 65
Tire steel	2 85
Toe calk steel	3 55
Harrow tooth steel	2 80
Mining tooth steel, per lb.	0 21½
Black Diamond tool and cast steel	0 21½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.
Band steel in scroll bundles, 50c per 100 lbs. extra.

REPAIR WORK DEMANDS BOILER TUBES

Montreal

With the advancing season, an improvement in the volume of current business in boiler tubes is recorded. This, however, is only slight up to the present, but promises well for the coming weeks when increased business is usually apparent, developing from new factory construction. In this connection, some dealers offer the opinion that the movement will not be as active as in other years owing to the lack of larger construction work. The sale of these tubes for some time past has depended almost entirely upon repair work, and it is felt that the future movement will be largely dependent on this, rather than new work. Quotations remain unchanged at the following levels:

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

SHIPMENTS OF TROUGH NOW BEING FORWARDED

Montreal.

There is now a noticeable improvement in the movement of eavestrough and conductor pipe, shipments being commenced to the dealer trade. Although current business is still light, distributors are well satisfied, claiming the opening of the season is fairly early. With stocks undoubtedly low in all sections, there is a continued improvement looked for, as the weather will soon permit the use of these products. Quotations are unchanged, and dealers look for little or no revision for some little time, as prevailing prices compare favorably with flat sheet levels, and a more active market will also assist towards a steady situation.

EAVESTROUGH—

O.G. Round and Half-round, per 100 ft., 8 in., $16.90; 10 in., $18.70; 12 in., $22.20; 15 in., $29.80; 18 in., $37.80.

O.G. Square bead, per 100 ft.: 8 in., $15.90; 10 in., $17.70; 12 in., $21.20; 15 in., $28.80; 6 in., $36.80.

Discount 70|10 per cent.

Conductor Pipe, Round, Plain and Corrugated, per 100 ft.: 2 in., $18.40; 3 in., $23.30; 4 in., $29.60; 5 in., $40.00; 6 in., $49.00.

Discount 70|10 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz.
2 in., $5.25; 3 in., $6.00; 4 in., $10.50; 5 in., $24.00; 6 in., $29.00.

Discount 60 per cent.

MODERATE MOVEMENT IN RANGE BOILERS

Montreal

Distributors of range boilers are little changed in their attitude towards selling, the newer list prices and discounts being quoted by some firms, while others are still maintaining the older net prices. The volume of business in range boilers is still limited, and for this reason less attention is paid to current quotations than would be the case if activity was more pronounced. Stocks in jobbers' hands are now comparatively light in most cases, and it is unlikely that dealers will replenish their stocks until the market is on a more stabilized basis. In the meantime purchases from the manufacturers are only made for immediate requirements. Following are list prices and discounts:

RANGE BOILERS:—

5	Gallon	$13.50
12	"	14.00
18	"	15.00
25	"	16.00
30	"	17.50
35	"	20.50
40	"	22.75
52	"	38.00
66	"	60.75
82	"	74.00
100	"	103.00
120	"	117.00
144	"	164.00
168	"	187.00
192	"	210.00

Discounts, Standard weight, 50 per cent.
Extra Heavy, 40 per cent.

IMPROVEMENT EXPECTED IN ENAMELLED WARE ORDERS

Montreal

Inquiries are now commencing to feature in enamelled ware market, and during the past week a noticeable improvement has been evident in this direction. There is a program of quite extensive building operations ahead, both locally and in surrounding territories. This reflects directly on enamelled ware sales, and dealers anticipate a continued improvement in sales as the season advances. Quotations are nominally unchanged at 33 1/3 per cent. off list prices for ordinary sized orders, with a further slight concession named for attractive sized inquiries.

Sinks, roll rim—

18 x 30	$23 00

Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 60	$ 7 40	$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70

Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide	51 40
Bath tubs, 5½ feet	57 10
Lavatories—	
17x19 in. Apron F139 or P4045	15 30
18x24 in. Apron F154 or P3845 or P3847	23 60
18x21 in. Apron F169 or P4205	17 60
17x19 in. Roll rim, F241 or P4345	12 60

Less 33 1-3 per cent.

PRICES ON CLOSET OUTFITS NOMINALLY UNCHANGED

Montreal

With renewed activity in building circles expected in the near future, a better buying movement will undoubtedly follow in closet outfits, as in enamelled ware in general. Sales up to the present have only been of a moderate character, although smaller construction work has required supplies all through the winter months. Quotations locally remain unchanged, while it is admitted that purchases of fair sized orders can obtain a price slightly lower. Following are local nominal quotations:

CLOSET OUTFITS—

Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., Richelieu bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitreous China	20 00

BETTER BUYING MOVEMENT IN CORRUGATED SHEETS

Montreal.

Earlier spring trade in corrugated sheets is now commencing, and there is a fairly optimistic tone among dealers for future activities in the following months. With the first indications of a better buying movement appearing comparatively early, it is thought a good season for this product is forthcoming. This opinion is encouraged by reports of considerable building and repair work, especially of the smaller class, contemplated at a later date. There is now a more settled feeling in the market locally, and quotations are steadier than they have been in recent months. Although prices on the heavier gauges are reported as being unsettled in other markets, local distributors claim the movement of these heavier sheet is very slow, due to inactivity in manufacturing circles where the demand is almost entirely confined. Unchanged quotations are the following:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

NO FURTHER CHANGE IN COMPRESSION GOODS

Montreal.

There is no further change in the discounts on compression goods since the revision in certain lines two weeks ago. Prevailing prices, however, in many lines are considered purely nominal, with slightly lower quotations obtainable in some quarters. Trade in the various lines is still described as being of a limited nature, and mainly consisting of small sorting orders. Local discounts quoted are as follows:

COMPRESSION WORK—	
Compression work, standard	45%
Fuller work, standard	30%
Bath cocks, compression	35%
Basin cocks, Fuller No. 0	30%
Do., Nos. 1 and 2	30%
Flatway stop and waste cocks, standard.	54%
Roundway stop and waste cocks, std.	46%
Brass steam cocks, standard	43%
Radiator valves, standard	58%
Do., removable disc	58%
Globe, angle and check valves, std.	25%
Gate or straightway	25%
Emco Globe Valves	33%
Emco check valves	33%
Jenkins Globe, angle, check and swing check	19%
Jenkins gate or straight way	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body gate	33%

SORTING TRADE CONTINUES IN PIPE FITTINGS

Montreal

Sorting orders continue to form the greater part of the movement in pipe fittings, dealers apparently still willing to take care of prevailing demand only. Quotations on the various lines are unchanged, with the following discounts still quoted:

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30
Flange unions	30
Malleable unions	47
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	50
Do., long	60
Do. 4½ to 8" close and short	40
Do., long	50
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods—	Blk.	Galv.
Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

BETTER TRADE EXPECTED IN SOIL PIPE

Montreal.

Depending for the greater part on building construction, sales of soil pipe and fittings have been seasonably light for some time past, but increased activity is expected to soon develop, as a fairly extensive building program is promised as soon as the weather permits. Current quotations are remaining unchanged, at the last revision in discounts. The opinion in some quarters is expressed that revision in an upward

direction would not be surprising when a more active turn in trade becomes evident. Prevailing prices were quoted at a time when competition had to be met, and are not representative of productive costs. However, for the present there is no definite indication of such a revision, and following are present quotations:

SOIL PIPE—	
2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%
Fittings—	
2 to 6 inch	50-10%

SLIGHT IMPROVEMENT NOTED IN INGOT METALS

Montreal.

Changes in the ingot metal markets are not very great, although there is a slight tendency towards improvement, which it is hoped may be the commencement of a more staple market. The London market is largely dominated by fluctuations in exchange and the decline in Sterling tends toward improvement in prices.

TIN.—This metal continues irregular with little actual change in price, and there seems little chance of any great change at present. With such heavy stocks hanging over the market, consumption will have to increase before any market improvement is possible. Local market is steady at 34 cents.

COPPER.—Copper is firmer both in London and New York, and producers are firmer in their ideas at 13 cents for refinery. The London market has advanced about £3 per ton over the low mark, but this is partly due because of the decline in exchange. Locally there is little demand and the market is dull at 16¾ cents for electro, and 16¼ cents for casting.

SPELTER.—London continues to advance and this is the strongest metal there. East St. Louis is also firmer at $4.62½, and it would not be surprising to see the advance go sightly farther. Quotations locally remain at 7 cents.

LEAD.—There is no new feature to this metal, the market being quiet both in London and East St. Louis. Production is just about in line with consumption, and there seems little likelihood of much change in price. Locally this metal is a little quieter at 6¾ cents.

ANTIMONY.—Although present quotations are considered to be at a very low level, this metal does not produce much activity on the market. Stocks are still quite ample to take care of demand, and Chinese is quoted at 6¾ cents, high grade English at 7¾ cents.

ALUMINUM.—Still continuing very quiet, aluminum remains featureless, with quotations unchanged at 24 cents.

TORONTO MARKETS

TORONTO, March 14.—Another recession in prices on galvanized sheets, with lower quotations on copper and brass products, supply the feature changes in the current sanitary and heating material markets. The change in sheets and plates affects black and annealed, as well as galvanized, and is generally around twenty-five cents per cwt. Copper and brass rods, tubing and sheets, reflect the easier tone recently apparent in virgin metals. The manufacturers of light general purpose and engineers' wrenches have announced a decline in prices, and similar recessions are noted on the Wiss line of tinners' snips, and also everlasting blow-off valves. The scrap material markets still report quiet conditions, with the slight recovery in copper serving to stem the sagging movement previously evident on yellow scrap grades. The ingot metals continue to provide a variety of minor developments, with nothing of a startling nature having been recorded. Domestic prices are unchanged. With favorable weather conditions, the seasonal activity in construction work is generally away to a fair start, and with many sanitary and heating lines depending upon the volume of new erection for future trade, the impetus in building circles remains of particular interest.

EASIER PRICE LEVELS ON WISS TINNERS' SNIPS

Toronto

Quotations on the Wiss line of tinners' snips have again been revised, the latest change affording a reduction of approximately ten per cent. on the various sizes.

REVISED DISCOUNTS NOTED ON EVERLASTING BLOW-OFF VALVES

Toronto.

Everlasting blow-off valves have been reduced approximately ten per cent., through a revision in the discounts. This change applies to both screwed and flanged valves. The quotations on screwed are now 15 and 10 per cent off, compared with the previous discount of 5 and 10 per cent., while the new quotation on flanged is now 10 and 10, instead of merely 10 per cent. as before.

PRICE REDUCTIONS ON COPPER AND BRASS

Toronto

As outlined in recent market reports, the easier tendency in the basic copper markets has now resulted in similar price changes to correspondingly lower levels on copper and brass products. Such semi-finished lines as sheets, rods and tubing now record varying reductions between one and a half and two cents per lb. This change places quotations on a well-liquidated basis, and according to distributors is expected to reflect stimulated trade improvement during the ensuing months. Following are the revised price levels on these products:

BRASS—	
Sheets base, per lb.	0 21
Rods, base, per lb.	0 19
Tubing, base, per lb.	0 23
COPPER —	
Rods, base, per lb.	0 27
Soft sheets, plain, 1 oz. and heavier, lb.	0 28
Do., plain tinned, 16 oz. and heavier, per lb.	0 35
Do., polished and tinned, 16 oz. and heavier, lb.	0 40
Tubing	0 27

BETTER FEELING NOTED IN IRON AND STEEL

Toronto

There is a better feeling now generally in the iron and steel markets. Current local business is reported to have been fairly brisk in certain quarters, while the general undertone has registered improvement. Orders are not of a large character, but dealers report purchases on the domestic centres as noticeably more numerous. Inquiries also feature the prevailing attitude in larger volume. The prices recently in effect are being maintained, with some doubt being expressed in certain quarters as to what ultimate effect a coal strike in southern field would have upon the primary market quotations. The following price levels, however, represent the average now appearing on the local markets:

IRON AND STEEL—	
Mild steel bars, base	2 75
Mild steel bands, 3 16 in. base	3 25
Bar iron, base	2 75
Angle iron, base	2 85
Horseshoe iron	3 60
Tire steel	3 35
Spring steel	5 50
Crucible cast sheet steel	30 00
Mining drill steel	18 50
Cast tool steel, medium	18 00
Cast tool steel, high grade	30 00
Sleigh shoe steel	2 85
Norway iron	12 50
Toe caulk iron	4 00
Hoop steel	3 75

FAIR BUSINESS IN LEAD AND ZINC PRODUCTS

Toronto

The market in lead and zinc products remains just about the same as in recent weeks with the exception that the easier tendency recently evident in certain primary metals, now shows signs of recovery.

LEAD AND ZINC GOODS—		
Lead, pipe, list, per lb.		0 12¼
Lead, waste pipe, list, per lb.		0 13½
Do., over 8 in., list, per lb.		0 14½
Lead pipe is subject to a discount of 10 per cent.		
Lead traps and bends.	10 per cent.	
Lead sheets, 4 to 6lbs., sq. ft. in rolls, lb.	0.09	
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.		
Solder wire, per lb.		0 22½
Do., commercial, lb.		0 22½
Do., strictly, lb.		0 21
Do., guaranteed, lb.		0 24
Do., wiping, lb.		0 21
Zinc sheets, per lb.	0 09	0 10

EXPECT BRISK ACTIVITY IN CEMENT MARKETS

Current business in cement is described as picking up a little, especially during the last week or two. The marked improvement in demand, however, is not generally looked for until the spring

Mueller Metals Co., Port Huron, Mich., Makers of "Red Tip" Brass Rod; Brass and Copper Tubing; Forgings and Castings in Brass, Bronze and Aluminum; Die Castings in White Metal and Aluminum; also Screw Machined Products.

(Continued from page 28)

season is more mature. Prices are still steady at the revised levels announced in January. Production of cement is stated to be on a fairly high ratio of capacity, and distributors naturally anticipate a brisk season in construction activity generally. Following are current quotations:

CEMENT—

Car load lots.	Toronto.
Per barrel, delivered	3 70
Less car lots	
Per barrel, f.o.b. yard	4 30
Per barrel, delivered	4 50

Single bags, $1.15 each; 4 bags to barrel.
Extre charge of $1.50 per load on less than 24 bag lots.
Rebate of 20 cents for empty sacks.

ENAMELLED WARE ON ROAD TO IMPROVEMENT

With such sanitary materials as enamelled ware and similar lines principally depending upon the amount of new construction work for future trade activity, the outlook in these markets is undoubtedly on the road towards improvement. Already, commencement has been made in many districts upon a brisk program of building, which gives promise of being continued throughout the spring and summer months, if not into the late fall. Manufacturers and distributors of enamelled ware, therefore, look for a fairly good season, and while the current movement is described as moderate, improvement in this respect is generally expected. Quotations are unchanged at the following levels:

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F154 or P3845 or P3847	23 60
18x21" Apron F169 or P4205	17 60
18 x 21" Roll Rim, F197, F199 or P4655-6	15 40
17 x 19" Roll Rim, F241 or P4345	12 60
Sinks, Roll Rim, 16x24 in.	18 10
Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70

Sinks, Flat Rim—	3 only	2 only	1 only
16 x 24	$7 60	$7 70	$7 80
18 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90

Above prices list, less 33 1-3 per cent.

All steel enamel baths, 4 and 4½ ft.	$14 00
Do., 5 ft.	15 00
Do., 5½ ft.	16 75

These quotations are net.

REDUCED PRICES ON ENGINEERS' WRENCHES

Toronto.

A reduction of approximately ten per cent. has been announced by the manufacturers on the Williams' line of light general purpose and also engineers' wrenches.

MORE UNIFORM PRICE ON STANDARD CLOSET

Local quotations on the standard closet combination are now more uniform at the level of $27.75. This price is now stated to have been generally adopted, distributors indicating that the previous easier price was a sign of weakness in the markets, and that with an improved demand and brighter outlook regarding future trade, conditions have been primarily strengthened. The current volume of trade is described as gradually getting better, with more interest in the shape of inquiries being received by distributors. It is naturally expected that any pronounced activity in construction circles will be reflected in the current demand for closet combinations and fixtures. Other quotations remain generally unchanged at the following levels:

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	27 75
Do., with post hinge seat	28 40
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	30 25
Do., vitreous china, with oak post hinge seat and cover	30 75
Do., vitreous china, with mahogany post hinge seat and cover	31 00
Do., white Vitro or Pussyfoot, with maoak post hinge seat and cover	30 75
Do., white Vitro or Pussyfot, with mahogany post hinge, seat and cover	31 00
Do., enamelled iron tank with oak post hinge seat and cover	30 75
Do., enamelled iron tank with mahogany post hinge seat and cover	31 00
Additions or reductions to above	
Add for reverse trap bowl	1 25
Add for syphon jet bowl	7 00
For ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 80
CLOSET BOWLS—	
Washdown bowl, less spud	10 00

Oak wood strip seat and cover	3 25
Oak post hinge seat and cover	4 00
Mahogany finish post hinge seat and cover	4 25

DEMAND FAIRLY GOOD FOR RANGE BOILERS

Toronto.

The situation in the range boiler market is practically unchanged, with the current demand stated as fairly good. When compared with last year's records, distributors state that the present volume of trade is something to be thankful for, although it is nothing exceptional. Prices are unchanged, with the recent list quotations and discounts being generally adopted. The tendency in the raw material markets is difficult to gauge, and with these conditions evident, it is stated that a careful buying policy is required to restore the trade to a stabilized basis. Following is the current list:

RANGE BOILERS

Size.	List Price.
5-gallon	$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 50 per cent.
Extra heavy, 40 per cent.

QUIET SITUATION STILL PREVAILS IN SCRAP

Toronto.

Cast iron scrap still remains firm and the demand is fairly brisk. Steel scrap, however, is very quiet and shows no signs of immediate development. There is no change in prices, but those quoted are purely nominal.

The copper scrap market is exceedingly dull. There are large stocks held by dealers who will not sell at present values, and these stocks prevent dealers from purchasing other material which comes in the market. Other metals also have been dull, the tendency being to await developments in the virgin field. The rubber business is stagnant, and practically no sales have been made recently. Following are average local quotations for fairly large quantities:

SCRAP MATERIALS—

Scrap Iron		
Gross Tons—		
Heavy melting steel (Hamilton)	11 50	$12 00
Borings and turnings	2 00	3 00
Rerolling rails	10 50	11 50
Scrap pipe	6 00	7 00
No. 1 railroad wrought	10 25	11 25
Steel turnings (Hamilton)	6 50	7 50
Agricultural malleable	10 00	11 00
Railroad malleable	11 00	12 00
Net tons—		
No. 1 cast	15 75	16 75
Stove plate	11 50	12 00
Grate bars	10 50	11 00
Standard car wheels	13 50	14 00
Scrap Metals.		
Heavy copper and wire	10 50	11 00
Light copper	8 00	9 00
No. 1 composition	9 00	10 00
No. 1 comp. turnings	6 00	7 00
Light brass	3 00	3 50
Heavy yellow brass	5 50	6 00
Heavy lead	4 50	4 75
Tea lead	2 00	2 50
Scrap zinc	4 00	4 25
Scrap Rubber.		
Boots and shoes	2 50	2 75
Lumbermen's rubber boots	1 50	2 00
Auto tires	0 50	1 00
Solid tires	0 75	1 25

STEADIER PRICES NOTED ON COTTON WASTES

Toronto.

The situation in cotton wastes remains unchanged, with the present demand described as fairly good. Prices are holding fairly steady at the recently revised levels, and while some fluctuations have been apparent in primary cotton circles, yet these movements are stated as not of sufficient extent to reflect in cotton waste prices. The following levels prevail on the local markets:

MINOR DEVELOPMENTS IN INGOT MARKETS

Toronto.

Conditions in the current ingot metal markets continue to provide a variety of minor developments. Virgin copper has recovered to some extent from the recent depression. Tin continues a see-saw movement, with prices however, showing more reductions than increases, Prices on lead are steady, with the primary conditions continuing firm. Spelter is slightly firmer, with buying restricted owing to the heavy stocks on hand. Antimony is again a little weaker, with aluminum dull and unchanged.

COPPER.—Recent buying of copper on the primary markets has lately been a little more active, with the result that the sagging price movement has recovered to some extent. Southern reports indicate that the export trade to European countries has increased somewhat, a condition which has reflected in the general tone. The domestic markets contin-

TORONTO MARKETS

(Continued from page 30)

ue quiet, with both consumers and distributors keeping in close touch with the situation. The average local price of 17½ cents still remains.

TIN.—The tin markets have seemed to continue in a regular see-saw movement with varying fluctuations recorded almost day by day. The fundamental situation, however, shows that the declines have been more drastic than the advances, as prices in the primary stage are now lower than at the corresponding period last month. Local quotations continued around 35½ cents.

LEAD.—This market is practically unchanged, and a firm condition continues in evidence. There is very little new to record, with the general situation unusually steady. Prices are about the same, with the local level at $6.75.

SPELTER.—The spelter market is reported steadier, but buying is still on a somewhat limited scale. Consumers are not purchasing very freely, although the market cannot be described as dull. The conservative attitude is taken as indicating the slowness of recovery in the demand for various manufactured products. Local quotations continue at $7.00.

ANTIMONY.—The market for prompt is quoted a little easier on account of recent fresh supplies. There has been a slightly better demand, but consumers' stocks are generally described as heavy. Quotations on the local market remain unchanged at 8 and 9 cents.

ALUMINUM.—A variety of opinion is again evident with regard to the price trend of aluminum in the near future. Some improvement in demand is looked for in certain quarters, with a consequent slight firming up in quotations. Prevailing prices however, continue unchanged, with no fresh developments recorded. The local quotations is still in the neighborhood of 27 cents, with some easier levels having been noted.

WINNIPEG MARKETS

WINNIPEG, March 14.—The number of price developments on the current sanitary and heating markets has recently been smaller than during the early months of the year, and this is generally taken as an indication that quotations on many plumbing and steam-fitting lines are now getting down to a substantial basis for future trade, representing a fair share of liquidation in comparison with prevailing replacement costs. The movement of Spring goods, usually evident with the revival of building activity at this season of the year, is now commencing, and while present orders are small, yet jobbers generally report business on the road to improvement and of a fairly satisfactory volume.

BUILDING IS STIMULANT TO CURRENT TRADE

Winnipeg.

The movement of plumbing and steam fittings materials is now commencing to register the seasonal Spring activity. Much stimulation has been given to an early start in this direction by the more or less extensive program planned in building circles generally. While the number of commitments is described as fairly satisfactory, yet the size of orders is generally of a moderate nature. However, the general feeling in the trade is that an improvement has now commenced, and with repeat orders anticipated owing to the fact that dealers' stocks are generally in a low condition, a fairly creditable volume of activity is expected to materialize, and a total which will compare favorably with the records of previous seasons.

SPASMODIC CONDITIONS IN SHEET MARKKETS

Winnipeg.

The market in sheets and plates is described as spasmodic, with current trade of a moderate nature. Prices are fairly steady in the domestic markets, distributors stating that there have been no exceptional or attractive orders appearing which might influence price shading. However, some easier levels are recorded in other quarters, and it is generally expected that this tendency will be reflected in the local quotations in the near future. Primary markets report that the reductions are only slight, and do not indicate any sign of weakness. On the other hand, recent reports are optimistic and herald a more or less general return of activity, both as regards production and distribution.

TRADE IN BUILDING MATERIAL HELPED BY SEASONABLE WEATHER

Winnipeg.

Current trade in many lines, such as eavestrough, conductor pipe, bar iron and steel, corrugated sheets, closet outfits and fixtures, enamelled ware products, and radiators, which depend upon seasonable weather conditions is still moderately quiet. An improvement in this direction, however, is generally expected with the advent of Spring weather during the ensuing weeks. Similar circumstances surround practically all building materials, as well as many other seasonal lines. With a fairly extensive construction program outlined during the coming months, activity in these products is expected to reach more satisfactory proportions.

SOUTHERN PIPE MARKETS RECORD EASIER TONE

Winnipeg.

While there has been no change in the current quotations on wrought piping, yet an easier tendency is reported from southern primary markets, where price shading between opposing interests has been recorded. This condition, however, has not affected the domestic centres, the point of interest being as to the future trend of price developments. It is claimed that producers are not making profit at present levels, and it is difficult to see where additional recession can be made. On the other hand, the domestic tendency has usually followed and revision on the southern markets, and for that reason alone, the current developments are outlined.

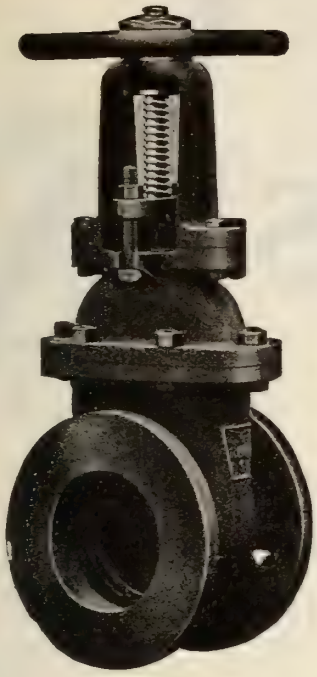
RUDIMENTS OF PATTERN MAKING

(Continued from page 17)

ners just established and draw the diagonal lines. Where they cross in point X, set dividers to any radius and strike an arc as a-b.

Now change a radius to something larger, and using the new points a and b as centers, strike and cross arcs as in point c.

After this draw center line through points c-X and from this center line you can set your dividers and describe arcs in any place you wish and they should be tangent to the given lines.



Kerr Valves

Give

Character to Work

They reflect credit on the man who specifies them, the man who installs them, and they give complete satisfaction to the men who use them.

Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face to face dimensions; observe the accessibility of the stuffing box; the strong, generous flanges and the properly spaced bolting.

KERR VALVES ARE GOOD VALVES

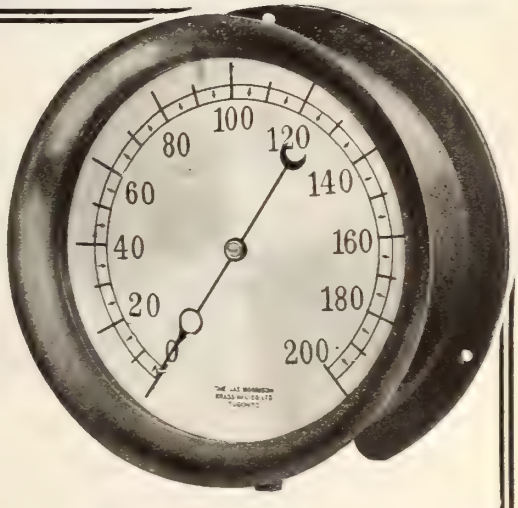
Valve Manufacturers - Walkerville, Canada

Sales Built on Confidence

Morrison Gauges



include gauges for every conceivable purpose—for indicating or recording:—pressure, temperature, altitude, revolutions, etc.

These well-known, reliable gauges sell well because they are regarded by mechanical men as standard.

There is hardly a requirement for gauges that you cannot supply with Morrison Gauges. With the Morrison line you can make a sale out of inquiries.

James Morrison Brass Mfg. Co., Ltd.

93-97 Adelaide Street West, Toronto

Write to-day for catalogue of the reliable Morrison products. It will pay you to stock and sell the famous Morrison line.

Markets

Sanitary Engineer Marketing Reports are eagerly looked for by progressive plumbing and heating Engineers of Canada.

A thorough knowledge of prevailing prices and tendencies in the trade is an absolute necessity for the conduct of any business in these days of frequent price fluctuations.

Sanitary Engineer Marketing Reports are compiled at considerable expense. We are determined to keep them reliable, complete, and up-to-date.

Sanitary Engineer
Plumber and Steamfitter of Canada

No. 1 "C & H" Blow Torch

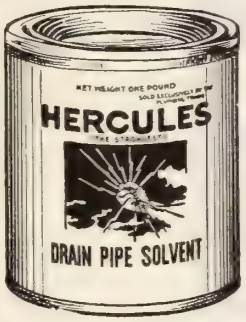
A handy size Torch, powerful blue flame. No pump to get out of order. Generates its own pressure. Safe, reliable and economical. Supplied with wood handle as shown or with reed handle.

"C & H" Cone Top Tank Bulbs

Specially designed for Canadian pattern syphons. Heavy vulcanized reinforced tops. Bottoms soft and pliable. Spuds will not pull out. "C. & H." bulbs are guaranteed to give satisfaction.

"C & H" Pipe Joint Cement

is made according to special formula, goes three times as far as Red lead. Does not bake or flake off. Sets at once, joints easily separated after long service.



HERCULES Drain Pipe Solvent

Positively (No Fumes Non Explosive

quickly clears clogged sinks, baths, closets, drains, etc. Will not injure piping but certainly "Hercules" clears stoppages.

The Very Heart ANTHES

The foundation of success for the sewage disposal system lies in a satisfactory and efficient syphon.

The rural plumber who appreciates the great profit-making opportunity in this line of work will want his job to make good. Two factors will contribute especially to this: the use of the reliable Anthes Syphon for one and the use of our free blue prints and specifications for the other.

Anthes

Toronto

Manufacturers of Cast

of the System is the SYPHON

Anthes Syphons operate according to purely natural laws. There are no moving parts to stick or cause trouble.

Anthes Syphons are seamless and made in one piece. Their construction makes them very easy and simple to install. We also make superior cast iron Soil Pipe and Fittings. When you specify, specify Anthes Soil Pipe and Fittings.

Expansion means Grip!

RAWLPLUGS

The screw or the material will give way before the Rawlplug.

Rawlplugs are plugs that may be inserted into concrete, brick, plaster, slate, metal, stone, tile, marble, glass or hard rubber.

They are manufactured tubes of fibre strands, stiffened lengthwise. The strands are so interwoven and cemented as to withstand weather and wet. They will not decay. Rawlplugs expand as the screw is turned in, becoming an integral part of the material in which they are inserted.

Samples and price list on request.

JARDINE AND TOLEDO

Pipe Threading Tools

MADE IN CANADA

REGISTERED J TRADE MARK

One Man does the Work of Two

Because all the power is concentrated on cutting the thread. The friction is greatly lessened because in this effective tool the dies open out as the tool advances on the thread. This gives the proper taper and puts the power available to the best use. These are beautifully designed machines in which there are no complicated contrivances to get out of order and make trouble and loss of time. They work easily, smoothly, rapidly and accurately.

JEWEL

The Name of a Service of comfortable, genial warmth for households as well as the name of

A Pipeless Furnace Second to None

When you sell the Jewel the selling points in detail will interest and convince your prospects, making it comparatively easy to close the sales.

The paramount idea—the one to keep before your prospects all the time—is the service and satisfaction that they receive from the Jewel.

Your customer's ideal is a warm, comfortable house that he can keep at 68° of temperature no matter what the outside weather may be.

Keep it before them, that where the Jewel is installed, it is warm enough to sit and sew comfortably, warm enough for the canary to sing, and the geranium to bloom in a sunny window sill.

The Points That Close Sales

Founded first, on an incomparable design, then made from unexcelled material, and finally constructed by selected, skilled workmen, who are supervised by experts, it is small wonder that the Jewel leads the pipeless furnace field.

Hamilton - Ontario

Only a VITRO Tank Can Give VITRO Profits and Satisfaction

THE material alone hasn't made the VitrO Tank what it is to the public and the plumbers of Canada.

In fact, a lot of the folks who know VitrO as the name of "the high-class tank," don't even know what it's made of.

They expect a square deal from a VitrO Tank, just as the plumber does, because VitrO Tanks have taught them to expect it.

They expect better service—because the VitrO has always given better service. So that VitrO is not only the name of a material from which a tank is made. It means:

—The **quality** of that material
—the **way** that tank is made
—the sort of **fittings** inside the tank
—the **service** those fittings give
—the **satisfaction** the tank brings to the buyer
—the clear **profit** it brings to the plumber.

The tank that has made thousands of dollars for Canadian plumbers, and won the confidence of Canadian people, is the VitrO—

And the VitrO is made exclusively, in Canada, by

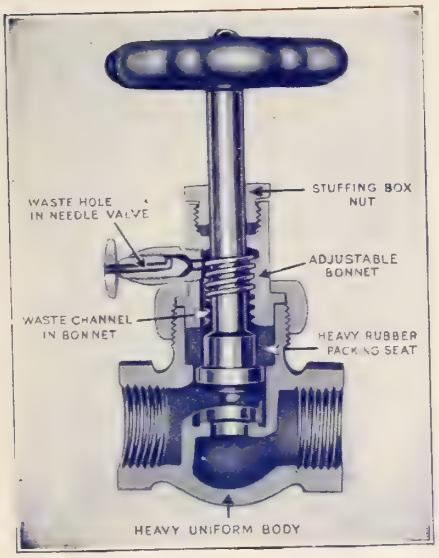
EMPIRE

An Adaptable Fixture



A-332

Our "Emco" A332 Stop and Waste Cock possesses certain features that make it an exceptional and desirable fitting.

It can be used either as a straight Stop Cock or a Stop and Waste Cock.

The adjustable bonnet allows the needle waste valve to be placed in proper position for catching waste water. The needle valve may be shut off independently when turning water on or off—this prevents a rush of water out of the waste tube.

Leading jobbers throughout the country handle "Emco" plumbing supplies and sanitary fixtures.

HANDLING CONDENSATE

Dunham Return Trap:

The problems encountered in heating of different sizes and types of buildings are so varied that the apparatus used for one condition is not suitable where a wider range of pressures are required or imposed.

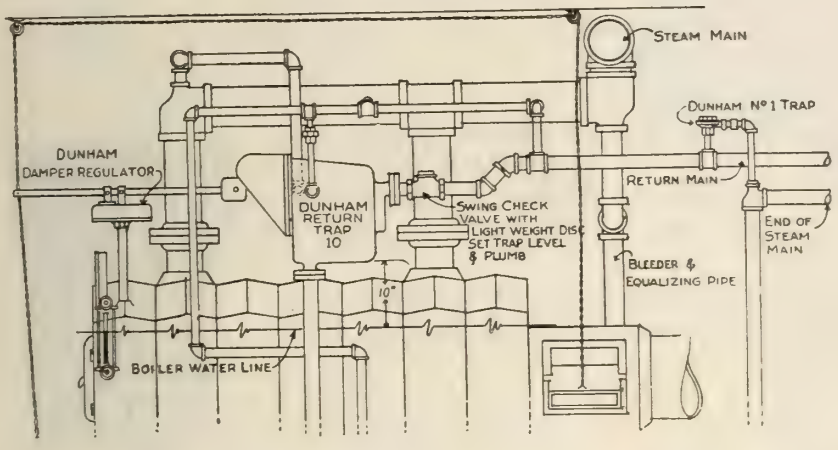
Buildings of moderate size, such as apartments, schools, office buildings, etc., very often have janitors or firemen that have other duties besides the care of the heating plant. As a rule, the pressure is permitted to vary over a considerable range.

The Dunham Return Trap is a very necessary addition to such an installation.

It should always be installed ***level*** and ***plumb*** and with at least ten (10) inches between bottom of trap body and waterline of boiler—greater height if possible.

The trap is especially built for low pressure heating service, with liberal piping connections, and with no obstruction to the free venting of the air from the radiators.

Its principle of operation is: to fill with condensate, then the steam valve opens and air valve closes, equalizing pressure between boiler and trap so that condensate flows back to boiler by its own weight. As trap empties, the steam valve closes and air valve opens again, permitting free vent of all air from the radiators as condensate accumulates.



Built in three sizes, capacities 3,500 to 10,000 square feet of direct radiation.

Complete data on request.

* This is the eighth of a series of talks on steam heating, appearing monthly in this magazine.

You will find them all very interesting and of help in your daily work.

What Greater Recommendation can be desired of the

Pease Pipeless FURNACE

Opinions expressed by others regarding the Pease **"Made-in-Canada" Pipeless Furnaces:**

ALLANDALE, Ont. (Mr. R. R. Bothwell):
"It has given entire satisfaction."

BEAMSVILLE, Ont. (Mr. Frank Eckhart):
"We are quite satisfied."

BELMONT, Ont. (Mr. W. C. Barons):
"Has given me good service. It is O. K."

BONARLAW, Ont. (Board of Education):
"Is giving perfect satisfaction in every way. Would advise any school or suitable building to install one."

BRITTON, Ont. (Mr. T. J. Sproule):
"We have a large house but this furnace heats it well; and the upper floor beyond our expectations."

BRUSSELS, Ont. (Mr. Fred Cardiff):
"We like the Pease Pipeless Furnace all right."

BRUSSELS, Ont. (Mr. Arthur Kerr):
"Has worked perfectly satisfactory and it was very easy on fuel. We only burned three tons of coal from the middle of November to the first of April."

CHIPPAWA, Ont. (Mr. T. D. Greenwood):
"Am more than pleased. Propose putting another one in."

COALHURST, Alta. (Mr. L. G. Thomas):
"Are quite pleased with same and it has given entire satisfaction."

COOKSVILLE, Ont. (Mr. G. H. Crump):
"Has given us more comfort and satisfaction than we expected."

FERGUS, Ont. (Mr. F. W. Ham):
"Can recommend this furnace as being superior to the old style; doing away with pipes all over cellar."

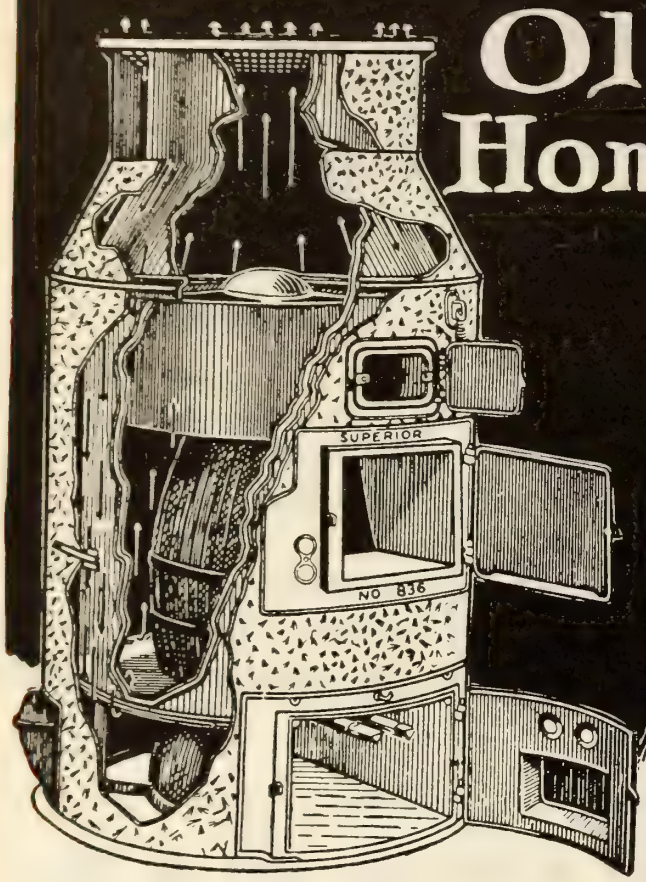
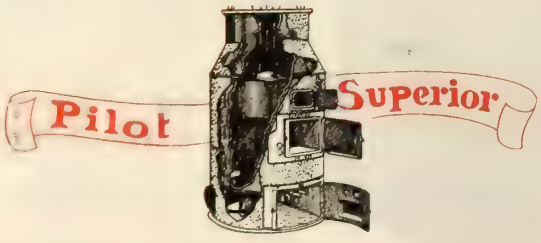
Put a Pilot Superior Pipeless Furnace in the Old Home



The Pilot is—

Easily installed.
Gives an abundance of heat.
Effects a saving of twenty-five per cent. in fuel.
A more sanitary method of heating.
A very profitable line for the dealer.



"Superior" in Name and Operating Efficiency is the Pilot

NOW is the time to get after the far-sighted building owner to put in a Pilot Superior Pipeless Furnace in his old building. Now is the time to get after the heating contracts for new buildings.

A glance at the opposite page will show you the reasons why the Pilot should be installed.

Take the Pilot piece by piece, compare its many features with those possessed by any other pipeless furnace on the market and you will agree that the Pilot is in very truth the most up-to-date and satisfactory heating system in existence to-day.

When you install a Pilot you know there will be no come-back. The Pilot Superior Pipeless Furnace is built up to a high standard and is subjected to a rigid test before leaving our factory.

A Pilot installed in your customer's home is a constant advertisement for you.

There is still some valuable territory open for dealers. Write for particulars to-day.

KITCHEN SINKS

When we stop to consider that a woman spends 700 hours a year at the kitchen sink, we realize that nothing should be left undone to make those hours as easy as possible for her

One of the commonest faults with the old-fashioned sink is that a great many of them were installed too low, necessitating constant stooping that results in backache. This can be quickly remedied and we know you'll agree that the result is worth while.

Space for Name

No. 2

APPLES

ARE BEST JUDGED BY THEIR TASTE

A BEAUTIFUL SKIN

DOESN'T ALWAYS COVER GOOD FRUIT

So it is with Water Taps. A first-class article must of course be highly finished with A-1 Nickel, but the important part is the mechanism.

Most Compression Work on the market to-day is of good appearance, but a large percentage does not give satisfactory service. A Tap may be defective even though it does not leak when installed. Sometimes poor metal or a thread short on the stem, but however small the defect, it will show itself after a few months' wear.

You see an illustration on this page, don't you? At first glance it looks just the same as dozens of other illustrations you have seen, doesn't it? Examine a little closer and you will find a Set Screw Flange Hose Sink Bibb of neat design and well proportioned which has a Square Threaded Stem, Strong Washer Encasements and Good Packing. Built for Service.

Our Galt and Toronto plants await your further commands.

CANADIAN BRASS CO. LIMITED QUALITY SERVICE

Quick as a Cat

Silent as a Pussy's Foot

Oak, Mahogany or White

Ever Growing in Public Esteem

The little things we did, made "Pussyfoot" perfect. For instance:

Supply Pipe—the flange is swedged from the solid brass.

Annealed Brass Tube in tank overcomes contraction cracks.

Pussyfoot Valves have that large silence chamber, weigh more than any other valve, therefore are silent and strong.

The deep red of our bronze shows more copper. Seats made to order, and finished in color to match "Pussyfoot" Tanks.

Bowls are standard.

The word "Pussyfoot" on valve and rubber Douglas float is your guarantee that we have searched and obtained the best.

Last, but not least, is the guarantee for life which this Perfect Tank allows us to give. Mr. Plumber, order "Pussyfoot" from your jobber, and insist on getting it. **They cost no more, and are silent, efficient, durable.**

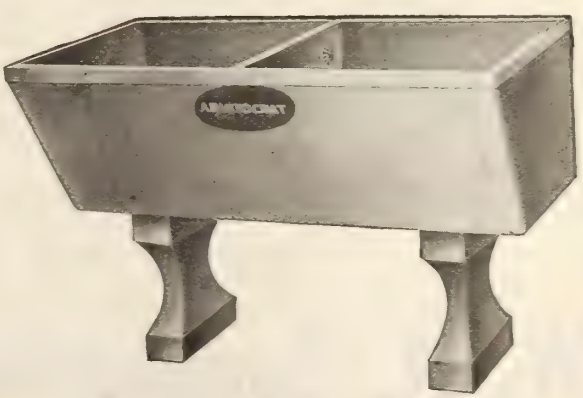
The Aristocrat Laundry Tub

The "Aristocrat"—the Prince of Laundry Tubs. Substantial, durable and good-looking, the "Aristocrat" makes a visible impression upon people, whether they know anything about laundry tubs or not.

The "Pussyfoot" Closet Tank and the "Aristocrat" Laundry Tub are worth while displaying and selling. They make friends for you—lasting friends—the kind of friends who are glad to come back to you.

We make, for the plumber, lead waste and coil pipe, sheet lead, closed end bends, easy wiping solder, and traps (special long lengths).

Specify "Pussyfoot" Closet Tanks and "Aristocrat" Laundry Tubs to your jobber.



Made in One, Two and Three Part, Also Combination Sink and Tub.

BEAVER

These are reliable, effective tools that help materially to make your contracts pay. All Beaver Tools are self-contained and have no loose parts to complicate matters. No dies to change—One man with one hand can pull any Beaver Tool.

Other Easy Working Beavers

No. 3, Jr., ⅛ to 1 inch (Ratchet).
No. 4, Beaver, 1 to 2 inch, or ½ to 2 inch (Ratchet).
No. 26, Beaver, 1 to 2 inch (Ratchet).
No. 61, Beaver, 2½ to 6 inch.
No. 80, Beaver, 4½ to 8 inch.
No. 90, Beaver, 9 to 12 inch.
These three are similar to No. 41.
No. 23, Beaver, 1 to 2 inch, or ½ to 2 inch.

Square End Pipe Cutters

No. 1 cuts ⅛ to 1 inch.
No. 5 cuts ½ to 2 inch.
No. 10 cuts 2½ to 4 inch.
No. 15 cuts 2½ to 6 inch.
All four cut pipe without burrs—with knives feeding automatically.

By a twist of the wrist you convert one set of dies into four sizes. When you want new dies "Beaver" means only one set to buy instead of four.

Why pay one man to look on while the other man sorts out the right dies and bushings and solves the puzzle of putting them in right—maybe—if they are not lost. You don't have these costs or troubles with Beaver Tools—four sets in one and no loose parts.

Small Towns Need Better Sanitation

So Says President G. Bloomfield at Third Annual Convention of the Association of Plumbing and Drain Inspectors of Ontario—Wants Regulations Governing Location of Septic Tanks and Laterals—To Admit Master and Journeymen Plumbers to Future Meetings—Ask Adoption of Provincial Plumbing By-Laws

By Special Representative of Sanitary Engineer

ST. CATHARINES, Ont.—The majority of Ontario municipalities were represented at the third annual convention of the Association of Plumbing and Drain Inspectors of Ontario, held in St. Catharines. The objects for which the convention was held were accepted as follows:—1. To suggest plumbing regulations which would govern the design and installation of plumbing systems and to encourage the adoption of such regulations. 2. To advance the standard of plumbing, drainage and hygiene by reading and discussion of papers, and interchange of practical and theoretical knowledge and experience. 3. To encourage and promote Drainage Inspectors, after an examination as to qualifications, Plumbing and Drainage Inspectors.

In his annual address, President G. Bloomfield of Brantford welcomed the delegates and spoke as follows:—

"Another year has rolled around and I want to thank all of you for the interest you have taken in coming here. I want to thank the executive for their assistance and above all the secretary for the good work he has done. I would like to see the association adopt a plan by which we could get the other provinces organized so a Dominion organization could be formed. At future meetings we could exchange a speaker with some other province. If it is the will of the association I would like to see some move made to have the bill drafted by the Provincial Board of Health, put on the Statute Books.

Regulate Septic Tanks

"If this is not possible I would like to see one drafted that would regulate the location of septic tanks and laterals and appoint inspectors to see that they are kept from polluting the water supply with the sewage.

"It is an improvement to have our meetings in March as it gives us a better chance to get in touch with the new city councils who have hardly warmed their chairs by the end of February and are more likely to take more notice of our recommendations than later. I would like to see a short report of this meeting sent to each city council in Ontario. If it would be practical I would like to see a delegate sent to the masters' meeting asking for a resolution to hasten the Ontario Government's action in connection with sanitary regulations. I would like to see an educational campaign started to let the man on the street know that the only people interested in cheap plumbing are the cheap contractors and real estate men who want to get rid of their speculative properties and leave a legacy of disease and trouble to the buyer.

F. C. PALMER

Sanitary inspector of Oshawa, Ont., elected president for 1922-23 of the Association of Plumbing and Drain Inspectors of Ontario.

"Every opportunity should be used to educate the public that good work is necessary and the smaller towns should get the most of our attention as the larger ones are in beter shape. If we can bring the rest of the province to the same standard as Toronto we will be doing grand work."

Keep Record of Problems

Secretary W. H. Meadows, Toronto, reported that he had secured printed constitutions which had been forwarded to all members, and that many questions had been answered by him during the year. W. Bush, Toronto, felt that records should be kept of the problems referred to the secretary during the year and presented for general discussion at the next convention. S. Daugherty, Ottawa, felt that if such a record were kept it would be of great interest to the members and should be productive of big results in the ideas that would result from a general discussion. The treasurer's report was referred to the auditors and owing to the absence of two auditors, Messrs. W. Bush, Toronto, and D. Kirk, Toronto, were elected to fill their places.

M. M. Maxwell. secretary of the Chamber of Commerce extended the good wishes of that body in welcoming the delegates. He pointed out that the convention was particularly of interest in that work which the delegates direct so intimately affected the health and welfare of the communities which they represented. It was necessary to get together for interchange of ideas. The trend of the time was toward community activities and ideals.

Other local representatives included, Dr. D. V. Currey, M. O. H. of St. Catharines, Mayor Graves, Aldermen Wright and Taylor. The delegates were entertained by the city at luncheon.

In his address, Dr. D. V. Currey pointed out that St. Catharines was fortunate in that there had been no serious epi-

demics and that the foreign section had not caused any serious trouble. The effort of the community was to prevent colonies of foreigners living under Central European conditions, and to bring them to a realization that cleanliness, fresh air and sanitation was necessary to healthy conditions.

Ask Adoption of By-laws

The report of the executive committee as presented was taken up. The question of places without inspectors was dealt with and after discussion it was moved by D. Kirk, Toronto, and seconded by J. C. Young, London, that the secretary secure copies of local papers which report proceedings of the meeting and send copies to each municipality together with a circular prepared by the secretary asking that they appoint a plumbing inspector and pass a plumbing by-law.

G. BLOOMFIELD

Brantford, Ont., retiring president of the Association of Plumbing and Drain Inspectors of Ontario

On motion of D. Kirk, seconded by A. G. Metherall, Peterboro, it was recommended that master and journeymen plumbers of the city in which the convention is being held, be invited to attend future meetings of the association.

In connection with the matter of sending a copy of a resolution from the association to Hon. W. R. Rollo requesting that the proper provincial law governing plumbing, etc., be passed and put into force, it was found that while his letter to the association under date of September 29, 1920 expressed his determination to have it adopted by the government at the first opportunity it had not yet been acted upon. It was moved that a second letter be sent to that official asking the adoption of the plumbing by-law. In this connection it was moved that the members be asked to send in a statement of the difficulties they have encountered through lack of an adequate by-law.

The following officers were elected for 1922-23:—President F. C. Palmer, Oshawa, vice-president, A. G. Metherall, Peterboro; secretary, W. H. Meadows, Toronto; treasurer, S. Daugherty, Ottawa; executive committee, D. McNamara, Fort William, G. W. Bloomfield, Brantford, P. McPherson, St. Catharines, J. C. Young, London, W. Hughes, York Township.

Brief papers were read by J. W. Trotter, Toronto, A. G. Metherall, Peterboro, D. Kirk, Toronto, F. C. Palmer, Oshawa and W. Hughes, York Township, the latter condemning misfit architects and carpenters who launch into the building trade and are responsible for much of the botched building work and inadequate sanitary and heating arrangements in them.

In his address following the election, President Palmer drew attention to the advisability of uniform regulations governing plumbing. He took the stand that the uniformity should be Dominion-wide and if all the legislators could not be gotten into line that each municipality in every province should do it individually with the assistance of the association.

In choosing the next city of meeting, invitations were read from London, Oshawa and Fort William, the first-named being finally decided upon.

Among those attending the convention were the following: G. W. Bloomfield, ex-president, Brantford; W. H. Meadows, secretary, Toronto; P. McPherson. St. Catharines; J. W. Trotter, Toronto; S. Daugherty, Ottawa; W. Hughes, York Township; H. Webber, Niagara Falls; F. McCann, J. T. Pepper, W. Bush, D. Kirk, all of Toronto; D. S. Wark, Hamilton; A. G. Metherall, Peterboro; S. McNamara, Fort William; J. C. Young, London; F. C. Palmer. Oshawa; F. J. K. Norris, Toronto; Jas. Cluny, Galt; J. Scroggie, Guelph.

Civic Banquet

The city entertained the delegates at a civic luncheon at one o'clock yesterday, after which they were taken on trips of inspection to the Kinleith Paper Mills and the Barnesdale Wineries.

Messrs. A. H. Jones, of Port Dalhousie, and George Scroggie of Guelph were elected to membership.

The four new members, Messrs. Scroggie, Jones, Norris and Cluney, spoke briefly of the good work the association should be able to do in backing their efforts.

Mr. Meadows sought to decline the position of secretary for another year and Mr. Palmer, however, felt that no one member was so well capable of meeting the requirements of the position in aiding the various inspectors with advice on their troubles.

Mr. Kirk, in highly appreciative terms, referred to Mr. Meadows' long service as a sanitary inspector and Mr. Bush, on behalf of the Association, presented the secretary with a pipe as a token of the esteem of his fellow members. In Mr. Kirk and Mr. Meadows were present the two first plumbing inspectors appointed in any city in Canada.

It had been a pleasure to work in the association, Mr. Meadows declared, in reply, with the able assistance of Mr. Bloomfield, and the close co-operation of all the members of the Association. He thanked them for the assistance they had rendered him.

A paper on Sanitary Developments in York Township, was followed by a general discussion.

Industrial Hygiene

J. W. Trotter, of Toronto, read a paper on what had been done in connection with the division of industrial hygiene in Toronto, where two plumbing inspectors were engaged in investigating conditions in the different industries,

A. G. METHERALL

Sanitary Inspector of Peterboro, elected vice-president for 1922-23 of the Association of Plumbing and Drain Inspectors of Ontario.

of which there were over 2,000 in the city. The inspector, in addition, to plumbing and drainage work, had to take into consideration all conditions in the several industries which were likely to affect the health of the workers, such as gases, chemicals, trade dusts, lighting, ventilation, temperature, air space, overcrowding, expectoration, etc.

A. G. Metherall spoke on problems in Peterboro's drainage system which have given considerable trouble and expense. Tile pipe, they discovered, was liable to chokage by roots. To overcome this problem iron pipe is now being installed to the street line, and farther where necessary.

How Toronto is abolishing privy pits was shown in detail by Benjamin Kirk, who illustrated his address with lantern views showing the conditions met and overcome.

F. C. Palmer spoke on the good of the association. He thought it should spread out. The object was not alone to help

Delegates to Plumbing and Drain Inspectors' Convention

From left to right, Ald. C. Taylor, St. Catharines; M. M. Maxwell, Manager St. Catharines Chamber of Commerce; J. W. Trotter, Toronto; H. Hughes, York Township; H. Webber, Niagara Falls; D. S. Wark, Hamilton; S. Daugherty, Ottawa; J. C. Young, London; S. McNamara, Fort William; E. J. K. Norris, Toronto; F. C. Palmer, Oshawa, (new president); J. T. Pepper, Toronto; A. G. Metheral, Peterboro; James Cluney, Galt; D. Kirk, Toronto; P. M. MacPherson, St. Catharines; J. C. Bonham, St. Catharines; J. R. Lewis, New York; W. Bush, Toronto; F. McCann, Toronto; G. W. Bloomfield, Brantford; W. H. Meadows, Toronto (Secretary).

themselves, but to help the association at large. It should be noted that the association existed to help the master plumbers not to buck them.

He thought inspectors could solve many of their problems better by writing to the association, and having the members give their opinions as to their solution. Then the inspector could go to the Board of Health, or engineer, with a recommendation that was backed by the Ontario Association of Plumbing and Drainage Inspectors. It is well to get the opinion of the association, and let the councils know there is an association ready to help.

He felt that it was essential to have a uniform by-law governing inspection common to the whole of Canada, not Ontario alone. If it could not be put through in the province, each inspector should try to put it through his own municipality.

"If the standard of plumbing is not kept up, plumbing inspection will go to the dogs," Mr. Palmer declared. He thought the time was coming when the plumber would boost the job—"the better the job, the better the price."

Mr. Palmer called attention to the fact that inspectors not only had the power to make a house to house inspection, but the Health Act stated "an inspector shall make a house to house survey of his district."

Mr. Palmer pleaded for co operation of trades, and the doing away with misfit architects and carpenters not consistent enough to work for a builder, but who went after contracts for himself and made a botch of them.

Mr. Bush referred to the executive committee the matter of simplified plumbing and standardization of inspection.

Mr. Bloomfield was chosen as delegate to the Master Plumbers' Convention in Hamilton next month.

In installing Mr. Palmer as president, past president Bloomfield declared himself as tickled to death that he should be retiring in favor of a man so active and able as Mr. Palmer.

Dr. Curry's Paper

Dr. Curry spoke as follows:

It has often been said that "Cleanliness is next to Godliness," and certainly plenty of water used inside and outside the human body tends tok eep people healthy.

On account of pollution of the water, nearly every municipality nowadays, treats the drinking water with chlorine, and if this is done properly typhoid fever and kindred diseases are reduced to a minimum. To give some idea how efficient chlorination has been in this city, I might state that when I was house surgeon in the General and Marine Hospital here twelve years ago, we had about twenty beds occupied by typhoid fever patients at one time, and the nurses certainly had a great training in nursing this disease. Now, there are some nurses who go through their training at this hospital and perhaps see one case, and that case is usually brought from outside the city. Accurate tests and careful chlorination have reduced this disease to a minimum.

The plumber has two essential duties to perform. 1st—to bring water into the house, and 2nd to take away the sewage. Pure water may be purchased by any municipality and to-day, we consider it a crime to have an outbreak of typhoid, etc., in any self respecting municipality.

The waste from dwellings is of three different kinds—sweepings and ashes from fires, waste from kitchens, scraps of food, called garbage, and sewage—the most important from a health standpoint, consisting of solid and liquid excreta of the body and waste water from wash tubs, bath tubs, kitchens and laundries.

Ashes have little effect on the health except that they absorb moisture and should not be left in a cellar nor should they be used to bank up a house with.

Kitchen garbage readily decays and it is very doubtful if any ill effect in health is noticed from living in close proximity to a garbage dump unless the flies and rats carry disease.

Sewage Most Important

Sewage is, however, much more important than either of the former wastes and one which until recently was nearly always considered the least important. Let us just look back a few years and think how this waste was got rid of. usually it was tossed about fifteen feet from the back door, and what happened? epidemics of typhoid, cholera and dysentery appeared each year—Why? Because the surrounding wells were polluted from the soil.

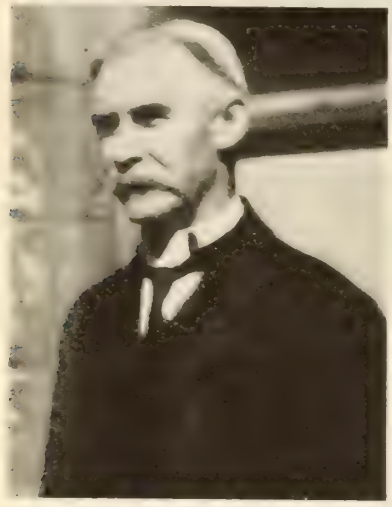
In a city, besides the dwelling house excreta, etc., sewage may contain liquid excreta from stables, refuse from factories, the drainage from polluted soils and the excess rain water not retained by the soil. Fresh sewage is not very offensive to smell and it is doubtful if it is dangerous to health It is, therefore,

essential that sewage should always be removed as soon as possible and before decomposition begins.

The days of the cesspool and outside toilet in cities have passed. They served their purpose, but on account of the pollution of the soil, they could be done away with. In isolated houses and small communities where there is not a general water supply or where the expense of sewage is too great, the pail system can be used, but a septic tank would, however, be much better and less dangerous to health. But, if at all possible, the waste water should be used to carry off the other excreta from a dwelling.

Simplicity

The essence of a good system for removal of sewage from a dwelling or building is simplicity. We sometimes



W. H. MEADOWS

Toronto, re-elected secretary of the Association of Plumbing and Drain Inspectors of Ontario for 1922-23.

forget this and we see elaborate waste of material in some buildings where a much simpler form could be used and much money saved. We have not got to the stage yet where all plumbers study how to do the work in the best and cheapest way, and after receiving reports from our inspectors here, I wonder if some plumbers have the health interests of the community at heart. Often we find that the plumbing by-law is not observed at all, and we sometimes find that wrong material is used in places where it will not likely be inspected.

Sewer gas is detrimental to health, and recently I read of two deaths from this poisoning. There must be dozens of houses in every city where a certain amount of sewer gas is escaping on account of leaks in the pipe, poor traps, etc., and where families are continually ill. These leaks may be discovered by the smoke test, and this should be used in every suspicious case. Many municipalities, however, have not the facilities for this test, we have not here, but we hope to have shortly.

It has been said that a perfect system of sewage disposal from a dwelling will provide for:

1. The speediest possible removal from the house to the public sewer of excreta and other refuse by water.

2. The prevention of the deposit of foul matter in any part of the drainage system and of percolation into the soil of polluting liquids.

3. The establishment of a current of air through every part of the soil drains and pipes in order to disperse any foul gases that may form and to allow them to escape with safety into the open air.

4. The prevention of any entry of air from soil pipes, drains and waste pipes into the house.

5. The exclusion of the air of the common sewer from the house drains and the house.

A plumbing inspector, no matter how conscientious he may be, can hardly make sure of all the work done, on the sewage disposal, he must confine his inspection to certain essential things, and trust that the plumber has carried out his duties faithfully.

Man is a peculiar creature. He thinks laws were just made to break, and anyone who has done any public health work must realize how difficult it is to make the average man do certain things which are bound to improve health. One of the most foolish things I hear so often is "We did not need these things thirty years ago." In my opinion, that man's usefulness ceased just that long ago. If you think back, we had then no sewage disposal, no electric lights, telephones, and very few of us had running water in our homes. And because we had not progressed then, Mr. Citizen thinks that to-day we are infringing on his rights in enforcing health laws.

We are in a stage of transition, things are changing every day, our views on all things are materially different and public health has taken great strides, and you in your work must either be improving in your work or going back. Your duties are not always pleasant and you will always find some people who think they know far more about your duties than you do yourself, and they forever are trying to tell you how to do things.

It has been said that any inspector who is liked by everyone in the community cannot be doing his duty faithfully because in carrying out his duties, he is bound to antagonize someone. Even if you do make enemies, it is better to feel that you have done your work well, rather than letting things get by you. Few of us, you know, like to hear about our mistakes, and when they are pointed out, we are inclined to resent it.

It has been known for a plumber to stand up against a soil pipe that is leaking so that the inspector will not see the water oozing through. Things like this of course, are not fair to the inspector, the plumber, to the people in the house; and while much of the poor plumbing we find has been put in by amateurs, I am also convinced that in some cases, the defects are due to careless workmanship.

Description of Peterboro Filtration Plant

Electric Pumps Have Capacity of 12,000,000 Gals. Daily—Six Filter Beds

PETERBORO, Ont.—The new filtration plant, in operation for over three weeks, has, in the opinion of the engineers in charge, demonstrated its ability to take care of all the work which has been assigned to it. The plant is now working both day and night and a decided improvement in the city water has been noticed.

The plant itself is one of the most up-to date in the country and embodies all the most modern improvements. The working of the six filter beds which it contains is so simple that it can be done by one man. In working the plant three men will be employed working eight hours each.

The visitor in making a tour of the plant would first visit the low level pumping station in the main building. Here are situated two electrically driven centrifugal pumps with a combined capacity of 12,000,000 gallons daily. These pumps take the water from the river through two 30-inch pipes, which extend 80 feet out into the river and deliver it to the sedimentation basin. It is while on its way to the sedimentation basin that the water receives its dose of the coagulated material which takes up the impurities while resting in the sedimentation basin and is later filtered off. Before entering the basin the water is sent over an aerator where it passes in a thin stream over the cascade of five steps which gives the oxygen of the air an opportunity to assist in the purification process.

The sedimentation basin is covered so that a good view of it cannot be obtained. It is 110 feet long, by 70 feet wide and 16 feet deep. It has a capacity of 800,000 gallons and by allowing a three hour period of coagulation can easily handle 6,000,000 gallons of water in a day.

From here the water is admitted to the filter beds. These are six in number, and are inside the main building. They are 24 feet long and 17½ feet wide and have a capacity of 1,000,000 gallons each per day. They are built of concrete and designed along the most scientific lines with all modern improvements.

From the filters the water goes to the clear water basin which is situated underneath the filters themselves and has a capacity of 100,000 gallons. This only serves as a temporary place of storage for it is immediately pumped to the reservoir. This is a covered basin 165 feet long by 135 feet wide and 14¼ deep. It has a capacity of 2,000,000 gallons.

From the reservoir the water is pumped directly to the city. The pumps for

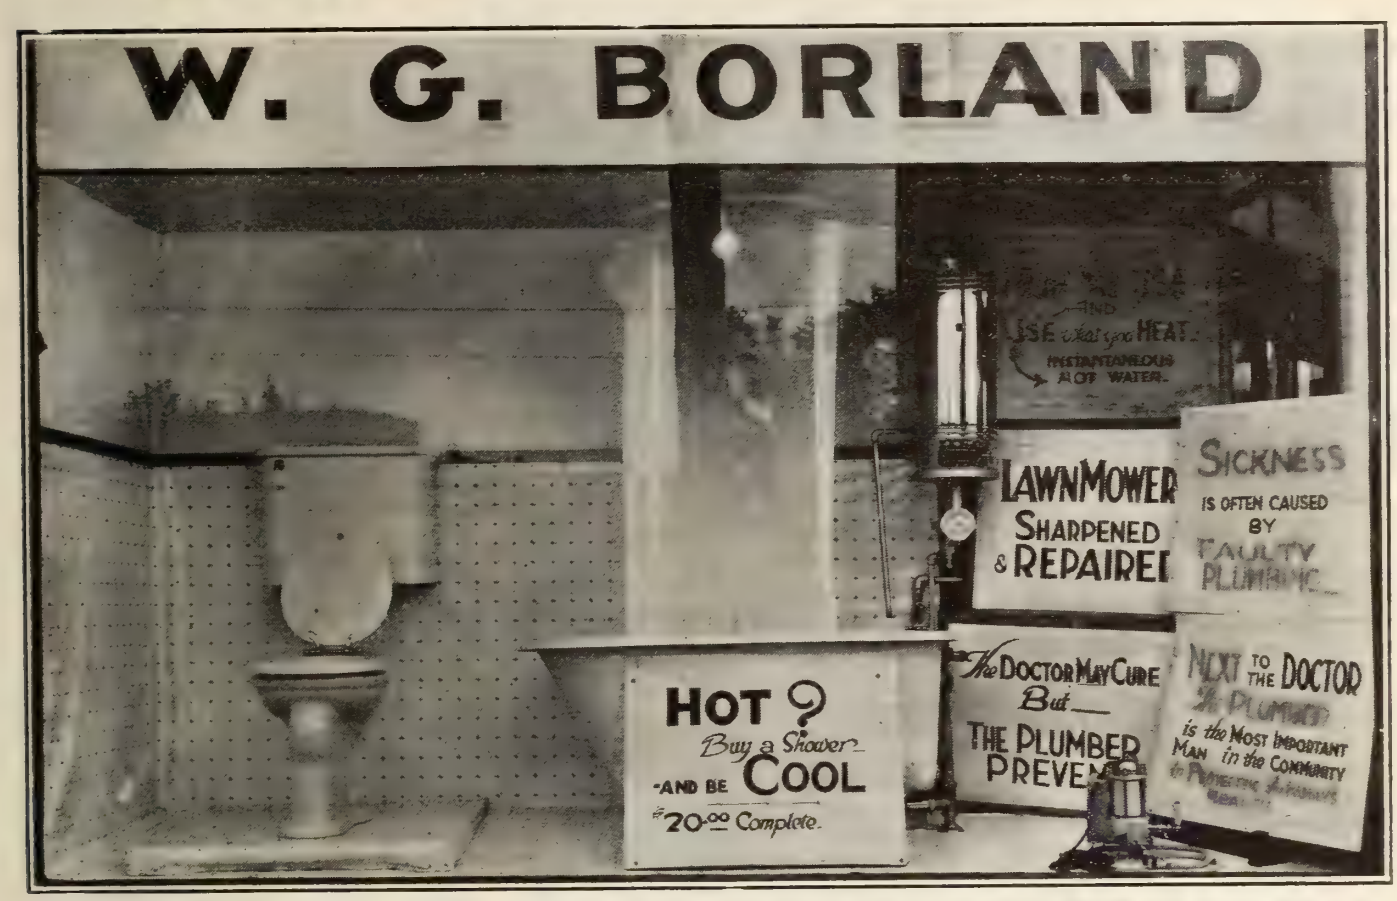
Plumbers Vital to Community Health

Educating the Public to the Importance of the Sanitary Engineer is Very Essential—Montreal Plumber Advocates Window Displays With Prominent Cards Pertaining to Health of Community



W. G. BORLAND
LAWNMOWER SHARPENED & REPAIRED
SICKNESS IS OFTEN CAUSED BY FAULTY PLUMBING
HOT ? Buy a Shower AND BE COOL $20.00 Complete
The DOCTOR MAY CURE But— THE PLUMBER PREVE
NEXT TO THE DOCTOR The PLUMBER is the MOST IMPORTANT MAN in the COMMUNITY

Catchy widow cards and attractive arrangement of plumbing wares with a seasonable appeal are means employed by W. G. Borland, Montreal, in stimulating interest, particularly at this time of year. For the spring and summer months Mr. Borland advocates the use of such cards as the one shown resting against the bath tub. Messages are also used regularly tending to link up the plumber with community health. Three of such are used in this display. The windows of this shop are always clean and attractive and containing such message which attracts attention.

"TOO MANY people look upon the plumber as the man who comes into their home and puts a washer in the tap," said W. G. Borland, 5726 Sherbrooke St., West Montreal to Sanitary Engineer.

"Meaning by this statement that the public do not realize the plumber is very closely connected with the health authorities. That he is, or should be, responsible for the maintenance of health in his community insofar as his trade demands. And this is a good deal, for the heating of the home, the water supply and the sewerage disposal are three very important factors in the daily life of his customers for which he is a supervisor.

"If we can educate the public to the importance of our trade in connection with the sanitation of the locality in which we are situated, we will have made a long stride towards improvement in our business, and would result in bigger sales for us," continued Mr. Borland.

Advertising would lend most aid to this teaching in Mr. Borland's opinion. Most plumbing establishments have a display window, or could convert a good amount of floor space to one, and here is where a good amount of missionary work can be carried out. "We are often judged by our outward appearances, and if a clean and neatly dressed window meets the approach of a customer, or even the casual glance of the passer-by, a much brighter reflection is cast than from the disregarded and neglected display of wares. Enamelled ware and other plumbing supplies are ideal for an attractive window display, and while the fixtures are often placed more or less permanently, the attractiveness can be maintained by keeping it always spotlessly clean and add from time to time some new appliance. Another means of doing this is to place catchy display cards in the window, worded to draw attention at first sight."

Changing Ads Frequently

The local newspaper is another medium that will prove of great benefit in advertising. But rather than having an unchanged advertisement run week after week, the force of the message is conveyed by changing often, with some statement pertaining to the health of the community featured.

Mr. Borland recently had an attractive display, featuring a water heater and a curtained shower bath. While the window together is that of a bathroom, space however, does not permit of a more complete outfit. It will be noticed that display cards are prominently placed with some catchy wording that is bound to attract attention, dealing with sanitation and health. The articles featured are appliances that are in demand in the warm summer months, it being special lines of this nature that are displayed with results by Mr. Borland.

Collection of Interest on Overdue Accounts Insecured by Trade Form

Editor, Sanitary Engineer:

I am getting out a new counter check book and wish to ask whether, if printed on this that interest will be charged on overdue accounts it would be legal without any signature of the purchaser to that effect.

Judges here take the stand that interest cannot be charged on open accounts even though it be past due, unless it is covered by an agreement to that effect or by note or by judgment. Kindly give me this information.

(Signed) J. W. Richardson,
North Bay, Ont.

THE LEGAL rate of interest is 5 per cent. where no other amount is mentioned in the undertaking. A maximum of 1 per cent. a month or 12 per cent. a year is allowed by law to be stated. It is necessary that the rate of interest on overdue accounts be agreed to in writing by the debtor in some way. This appears to be the law as it applies to the province of Ontario. However, each province and state has its own mercantile laws so that it would be necessary to obtain legal opinion on these.

It would therefore appear that merely placing the words "interest at 7 per cent. per annum charged on overdue accounts," on statement form does not give the seller proper legal protection in the matter, though it is the accepted business policy to do so. It would be necessary that this should appear on a contract or some such signed document.

The following advice on this point is from a legal authority on the subject:

"In cases where collection is made without suit, the laws of Canada do not allow for recovery from debtor, of the charges sustained by you.

"Where suit is undertaken, the party defending, should the action prove successful, is bound by law to pay whatever expense the court has been put to. In certain cases, the doctor is also bound to pay some of plaintiff's attorneys fees, but never commission on the amount recovered for the plaintiff. In the Division Courts of Ontario, debtors pay actual court costs, but you are held liable for commission and attorney's fee for conducting the action. The latter varies anywhere from $3.50 to a full 10 per cent of the amount involved.

Must be Undertaking by Debtor

"With reference to interest, the legal rate of 5 per cent applies automatically to any note, acceptance or judgment. You are quite within your rights in asking for 7 per cent. on overdue accounts, but you cannot enforce payment of same, not even 5 per cent. unless the other party signifies his willingness to the arrangement—in other words there must be an undertaking on the part of the debtor, to pay interest before you can enforce the same."

A recent ruling on this subject given in Saskatchewan is as follows:

The rule in allowing interest is founded either on the ground of (1) a contract expressed or implied to pay interest, or (2) as damages for the improper withholding of money or for the breach of some contract or violation of some duty, or (3) where it is given under the provisions of some statute.

Chapter 39 of the Statutes of Saskatchewan, being King's Bench Act, is the statute which deals with interest in Saskatchewan, and in section 28 it provides that interest shall be payable in all cases in which it is now payable by law or in which it has been usual for a jury to allow it. Subsections 1 and 2 of section 29, however, are the sections which we would be particularly interested in, as subsection 1 provides that upon the trial of an issue or upon an assessment of damages, upon a debt or sum certain, payable by virtue of a written instrument at a time certain, interest may be allowed from the time when the debt or sum became payable; while subsection 2 provides "if such debt or sum is payable otherwise than by virtue of a written instrument at a time certain, interest may be allowed from the time when a demand of payment was made in writing, informing the debtor that interest would be claimed from the date of the demand."

Some Cases in Point

In Hart vs. Greer, 9 W.W.R. p. 709, the district court judge held that the printed words on an account, "interest at 10 per cent chargeable after thirty days," together with verbal references to these words and notification that interest is being charged, constitute a demand in writing sufficient to support a claim for interest after the expiration of the thirty days.

In the Last West Lumber Company vs. Haddad, 9 W.W.R. p. 578, the Supreme Court en blanc of Saskatchewan held that in all cases where, in the opinion of the court, payment of a just debt has been improperly withheld, and it seems to be fair and equitable that the party in default should make compensation by payment of interest, it is incumbent upon the court to allow interest for such time and at such rate as the court may think right.

In Marshall Wells vs. Eaton & Gordon, 8 W.W.R. p. 789, the district court judge of the Calgary Judicial District stated in his judgment as follows:

"It has also been held that a general intimation on a tradesman's statement of account, that interest will be charged after a certain period of credit, is not a sufficient notice of demand of interest within s. 28 of 3 and 4, William IV., ch. 42, in re Edwards, Williams vs. Trench, 61 L.J., ch. 22. This decision still stands as an authority on this particular point, but in so far as it decided that an agreement to pay interest would not be implied by the courts (in respect of moneys due on an account for goods sold and delivered) from the past dealings of the parties, it has been overruled by the Court of Appeal, in re Anglesey, Wilmot vs. Gardner (1901), 2 ch. 548, 70 L.J., ch. 810, which lays down the same principle as that contained in Higgins vs. Sargeant and Nichol vs. Thompson, that an agreement to pay interest may be reasonably inferred from the previous dealings of the parties, and that in such cases it is recoverable."

In that case he decided that in the absence of some special usage of trade or of some stipulation expressed or implied, a trader is not entitled to interest on the price of goods sold and delivered. An agreement to pay interest, however, may be reasonably inferred from the previous dealings of the parties, coupled with a printed notification of intention to charge interest on the vendor's statement of account.

In the case, Marschall Wells vs. Eaton & Gordon, the plaintiffs had printed in heavy type on their statements the words, "Interest at 8 per cent. charged on all overdue accounts," and the judge found as a fact that the defendants were in the habit of making payments from time to time on account of their indebtedness, and that, although they were aware that interest was being charged to them, they evidently did not wish to force the issue of their liability or non-

Saskatchewan S. and H. Engineers Meet

Representative Gathering at Fourth Annual Convention of Sask. Society of Sanitary and Heating Engineers—Banquet and Theatre Party—Many Interesting and Instructive Addresses and Discussions

By Special Representative of Sanitary Engineer

Group photo taken for Sanitary Engineer of the delegates to the fourth annual convention of Saskatchewan Society of Sanitary and Heating Engineers, held in Regina.

REGINA, Sask.—A very representative gathering was on hand for the opening session of the fourth annual convention of Saskatchewan Society of Sanitary and Heating Engineers, which lasted three days and was held in this city.

The meeting was opened with roll call and the president's address of welcome to the delegates and the work was then carried on as per program.

The convention heard the sec.-treasurer's report on the splendid financial standing of the Society with great pleasure.

The balance of the first morning session was taken up with enrolling of new members, payment of dues and listening to his Worship, Mayor Jas. Grassick's address of welcome to the city of Regina.

The afternoon session was carried through as per program—the first item of which was the election of officers. J. S. Robertson, Regina, was elected president, Jas. Yates, Brandon, was elected vice-president.

Jas. Adam who has been sec-treasurer since the time the Association was formed, asked to be allowed to resign from this office and Geo. R. Seater, Regina, was elected sec-treasurer.

The Executive Committee elected were:—

E. P. Pauline, Regina,
T. Baylis, Moose Jaw,
N. Beaton, Saskatoon,
H. J. Warron, Yorkton,
P. J. O'Neil, Swift Current.

The balance of the afternoon session was given to unfinished and new business.

Theatre Party

The convention as a body attended the Grand Theatre in the evening with their ladies and an enjoyable time was had by all.

The Thursday session was called to order at 9.30 a.m. and some little changes were made in the program on account of Jas. Smith of Winnipeg having advised that it was with regret that he could not be present to deliver his address.

An address was given by R. H. Murray, Provincial Director of Sanitation, on the subject, "Sewage disposal and treatment." This address is given fully elsewhere in this issue. An address was also given by R. N. Blackburn, Provincial Chief Inspector of Steam Boilers on the subject, "Provincial legislation affecting steam plants." The address by J. E. Yates of Brandon on the subject, "Pressure Hot Water Heating" which was to have been heard on Friday morning was given on Thursday.

Visit Power House

The afternoon session was taken up with a visit to the Imperial Oil Works plant and the power house of the Parliament Building. Upon returning to the hall, the balance of the program was carried out and the address by F. L. Bastedo on the Mechanic Lien Act was listened to with a great deal of attention.

The banquet in the evening was a decided success, and it was a revelation the talent that was discovered amongst the members, and the cartoons of some of the members done by Mr. Chenoweth of the Engineers & Plumbers Supply Co., were of no mean order. A most enjoyabl time was had by every one.

On Friday morning, H. D. Mathias, Regina City Plumbing Inspector, gave an interesting address entitled, "From boggy creek to Wascana Valley," followed with an address by G. G. Taylor of Saskatoon, City Plumbing Inspector.

The question box, conducted by E. P. Paulin, produced some very interesting questions and all left the convention hall feeling that they had found a solution to several of their troubles. Those who had no questions to ask feel that they had accumulated a great deal of knowledge through this source.

The convention was adjourned until March 1923, when it is expected to meet in Saskatoon.

TRADE OPPORTUNITIES IN LONDON DISTRICT

London, Ont. — There is a large volume of building getting under way here early and men in the trade are looking for an unusually busy season. Home building promises to break all records and the shortage of houses to rent is leading some of the speculative builders to get busy. The great majority of the construction work that will go on though is for home owners and some of the projects are especially attractive from a plumbing and heating standpoint. Included in these will be a number of homes ranging in price all the way from $8,000 up. Local architects are also busy with plans for a number of larger jobs including business buildings several of which range from $50,000 to $75,000. Plans are nearing completion also for the group of buildings for the Western University which will cost $1,500,000 and tenders will be called, it is stated, about the middle of May. Work will begin also in a few weeks it is stated on the big new hotel which will cost over a million.

Maintenance of Plumbing Installations

Leaving of Plumbing Inspection Work to Sanitary Inspectors Working Under Local Boards of Health is Insufficient Protection From Faulty Installations—Advocates Reinspection of Plumbing When Tenants Change—Saskatoon Has Fewer Faulty Installations Now

Address by G. G. TAYLOR, City Plumbing Inspector of Saskatoon, before Fourth Annual Convention Saskatchewan Society Sanitary and Heating Engineers

A GREAT MANY years have been spent getting together by-laws governing plumbing systems, with the object in view of protecting the health of the public, with the result that practically all the provinces and municipalities throughout the whole Dominion demand the installation of plumbing fixtures in a proper and sanitary manner. In some instances these regulations are carried out satisfactorily; in other cases systems have been renewed, altered and added to without being brought to the attention of the Inspector in charge of this class of work. When a plumbing permit has been applied for and the work authorised, the system is afterwards water and smoke tested, the general opinion then is that the work will last the lifetime of the building. It is on this question I would like to say a few words, and, if I may, make a suggestion which I hope will get some little consideration.

We often hear of plumbing inspectors being let out for lack of construction work to keep them busy, when right along the whole sewage system there are hundreds of systems in a rotten state of repair. We all know the causes attributed to these defects, and that they are most likely to be found in buildings where there is a continual change of tenants. The easiest way to clear a choked waste line and avoid a plumber's bill is to cut into the lead waste and wrap it up any old way afterwards, or if a house has been left vacant for a few days during the winter months the fixture traps become frozen and if at all possible are fixed up by the tenant or janitor in a crude way. Then again one will very often find an occasional opening in the soil of waste line where fixtures have been taken out and no attempt to close up the connection, allowing the usual escape of sewer gas. You, gentlemen, are all conversant with the various causes which render a plumbing system dangerous to the health of the public. The expansion of lead joints in soil pipe line exposed to frost; defective joints in soil pipes from settlement of buildings; defective joints soil and waste lines by vibration in buildings such as mills, factories or workshops where heavy machinery is in use. These are just a few of the many causes which go to strengthen the necessity of rigid inspection periodically of all installations. This in my opinion is just as essential as the water and smoke testing of all new work. I have taken the trouble to write to a great many towns in Eastern and Western Canada and in the States to find out how this work in taken care of and almost in every case I have been informed that the maintenance of all plumbing installations is left to the mercy of sanitary inspectors working under the local health boards. This system of taking care of plumbing systems may be all right as far as it goes but it does not go far enough. In my opinion the only inspector who can make a thorough examination of any installation is the inspectors who are in charge of the by-law and who are conversant with plumbing systems from three feet outside to the roof line of any building.

Clause in By-laws

In almost every plumbing by-law in Canada you will find a clause reading as follows:

"The plumbing and drainage system in all premises shall be maintained by the owner at all times in good working order and in conformity with this by-law. In the event of any defect being discovered in such systems it shall, on the order of the plumbing inspector, be at once repaired and made good."

Yet, realizing the object of this particular cause, anyone who is conversant with this class of work knows that there are a great number of systems in almost every town in a poor state of repair and very little being done to overcome this nuisance. Defects in house plumbing might be brought to light with a careful examination by sanitary inspectors but it is hardly fair to expect them to take care of such systems as are installed in larger buildings such as hotels, office blocks, apartment houses and factories, where there are more or less changes taking place.

Reinspection

The reinspection of this work left to the care of plumbing departments may appear to some people a large undertaking especially in cities where there are a large number of connections and a small staff of plumbing inspectors kept busy on construction and alteration work but something could surely be done to help to lessen this condition which I am sure is becoming worse year after year. As a suggestion it might be well to advocate a clause in plumbing by-law calling for reinspection of all systems in houses where a change of tenants occurs. For instance on an application being received to turn on water in any premises other than when shut off temporarily a fee of fifty cents shall be charged for the reinspection of the plumbing; in the event of any defect being found it shall be made right by the owner of the building. Such a clause would take care of the defects which seem to be found more frequently in the class of buildings which are being occupied by new tenants almost every year. The larger installation is a more difficult proposition, especially in cities which are considerably built up, but as some check is necessary to keep this work in good repair a yearly inspection of the larger buildings would go a long way towards keeping such systems in a sanitary condition.

Almost in every city you will find evidence of plumbing systems in a poor state of repair. This condition of affairs will exist and year after year become worse until some system of reinspecting is enforced and carried out by some live plumbing inspectors. There is a great field for real work along this line and one is surprised to hear at times of assistant inspectors being laid off for lack of work when right at their very door there is work enough for a great many more inspectors than they usually employ. Apart from the work that these inspectors bring to the trade in general the main object is being attained and health of the public protected.

In 1919 a clause such as has been outlined in this article was brought before the city council of Saskatoon, with the result that it was embodied in the plumbing by-law that year. It might be interesting to quote a few figures in connection with this particular clause.

Case of Saskatoon

For the year ending December 31st, 1921, 1220 reinspections were made or an average of 4 inspections per day. I find that most of the transferring of meters takes place during the months of March and April in the spring and September and October in the fall of each year when construction work does not demand the attention of plumbing inspectors as it does in the summer months. The result of the 1220 reinspections which were made during 1921 was that 113 were found more or less defective and made good. These faulty systems are becoming less year after year as this method of maintenance is being carried out and apart from the good it does to the trade in general it also helps considerably in educating the people to the necessity of keeping plumbing installations in good repair. The plumbing in a building is installed for health, comfort and convenience of the occupants and must be viewed from a public health rather than a building construction standpoint. If the maintenance of this work is neglected and plumbing system allowed to become more a death trap year after year with no attempt to get it protected, why all the water and smoke testing of the new work, why all the time spent talking reconstruction, standardization or building up by-laws governing the installation of this work?

The master plumbers were among the first early pioneers in behalf of organized effort in getting together by-laws whereby plumbing was made a little more safe to the general public. These men have always recognized the need and nature of the pull together spirit in all things. There is no reason in the world why every master plumber should

Legislation Affecting Heating Plants

Regulations Governing Heating Boilers Now Applying in Alberta, Saskatchewan and Manitoba May Shortly Be Adopted by Ontario and British Columbia—Welding Cracks in Boilers—Accidents to Compressed Air Tanks

Address by R. N. BLACKBURN, Provincial Chief Inspector of Steam Boilers, before the Fourth Annual Convention Sask. Society of Sanitary and Heating Engineers

LEGISLATION covering the operation of steam boilers has been in force in this province since the year 1898, in which year a Steam Boilers Act was passed by the legislature of the North West Territories (now the provinces of Alberta and Saskatchewan) providing for compulsory inspection of steam boilers. This act did not apply to low pressure heating boilers but an Act passed by the legislature in 1906 provided that boilers used for heating purposes in public buildings such as hotels, stores, offices, etc., should have safety valves set and sealed by a provincial boiler inspector so as to permit of no greater steam pressure being carried than 15 pounds per square inch. Failing this, or in case the owner desired to carry more than 15 lbs. per square inch pressure, all the provisions of the Steam Boiler Act should apply.

Owing to the very diverse standards of construction adopted by different manufacturers, it was soon realized that an adequate system of boiler inspection should commence with the supervision of the design and construction of steam boilers and that a minimum permissible standard of construction and workmanship should be adopted. After some correspondence with neighboring provinces a conference was held at Regina in December 1909, which was attended by representatives of five Canadian provinces and by a representative of the Canadian Manufacturers' Association on behalf of the boiler manufacturers. At this conference regulations were drawn up governing the construction of steam boilers and providing for the examination and registration of boiler designs. These regulations were at once adopted by the Provinces of Alberta and Saskatchewan, and in the year 1913, by the Province of Ontario. The regulations both in the design and workmanship of high pressure steam boilers, for which class of boilers they were primarily intended but they did not apply to low pressure steam heating boilers which at that time were exempted from supervision.

1913 Amendment

In 1913 an amendment to the Steam Boilers Act was passed by which low pressure heating boilers exceeding 20 h.p. in public buildings were brought under the provisions of the Act, but as the regulations for the construction and design of steam boilers then in force were not drafted with a view to their application to low pressure boilers, the activities of the department were limited to inspecting such boilers as were in actual operation and advising on the installation of new boilers when requested to do so.

A number of designs of low pressure boilers were submitted by manufacturers to the department for registration and approval, but the registration of all designs of low pressure boilers at this time was not insisted upon.

As the regulations in force were intended only for high pressure boilers it was necessary to modify them considerably for low pressure boilers and special rulings were made from time to time as occasion required.

In order to secure more uniformity an interprovincial conference was held at Toronto in June, 1914. At this conference the regulations were revised, a number of amendments and additions were suggested, special consideration being given to low pressure boilers and heating plants, but as a result of the subsequent outbreak of war with the consequent disorganization of industry which followed, the recommendations of the conference were not officially adopted by the governments of the provinces represented at the conference.

How Regulations Apply

In 1918 the provincial government of Manitoba invited the other Canadian provinces to send representatives to a conference at Winnipeg to formulate more complete regulations which would be acceptable to all the provincial governments. At this conference the regulations already in force in the provinces of Saskatchewan, Alberta and Ontario, were revised and extended, special attention being given to low pressure heating boilers. Suggestions made by manufacturers and others were considered and efforts were made to harmonize the sometimes conflicting views presented and to draft a code of regulations which would be acceptable to all parties interested. The regulations as drafted were submitted to the Boiler Code Committee of the Engineering Institute of Canada, the boiler section of the Canadian Manufacturers Association and others for criticism. A meeting was subsequently held at New Westminster, B.C., to consider replies received and to make any amendments that might appear desirable. Regulations covering air reservoirs and gas tanks were added and the regulations as now in use were approved for submission to the respective provincial governments for adoption. These regulations have been adopted by the Provinces of Alberta, Saskatchewan and Manitoba and I understand that they will very shortly be officially adopted by the Province of Ontario and probably also by the Province of British Columbia. Considerable interest has also been shown in the matter by the Provinces of Nova Scotia and Quebec but these provinces do not appear to have taken any official steps towards their adoption.

Although uniform regulations are now in force in three provinces of Alberta, Manitoba and Saskatchewan, there are some differences, in respect of their application. The regulations apply in all

New Officials of Provincial Society

Group of new officers elected by the Saskatchewan Society of Plumbing and Heating Engineers at the recent convention in Regina.

cases to high pressure boilers and in each province low pressure heating boilers in private dwelling houses are exempted, (with some slight exceptions, however, in Alberta,) but while the regulations apply to all low pressure boilers in public buildings, such as offices, stores, apartment blocks, theatres and the like in the Provinces of Alberta and Manitoba, in this province the regulations only apply at present to low pressure heating boilers of over twenty horse power, or in the case of twin boilers, when the combined capacity of the two boilers is over twenty horse power.

The regulations also apply in each province to compressed air or gas tanks and reservoirs having a capacity of three cubic feet or over, and carrying a pressure of more than seventy-five pounds per square inch, such as are used in garages, air filling stations, etc. Also to air or gas pressure tanks of less than 3 cubic feet capacity, but operated at a pressure exceeding 200 lbs. per square inch.

The regulations are divided into three parts. Part 1 applies to high pressure boilers and steam plants. Part 2 applies to low pressure boilers and heating plants and Part 3 applies to tanks and receptacles for compressed air and other gases.

Of Interest to Heating Engineers

While the regulations deal principally with the design and construction details of boilers, etc., and are therefore principally of interest to manufacturers of boilers, they also deal with a considerable number of matters in connection with low pressure heating plants, which I believe will be of interest to this meeting. In the case of high pressure boilers the regulations are very complete, and include specifications of materials entering into the construction of such boilers, full details as to design, provision of safety appliances, etc., and complete formulae for calculating the maximum allowable working pressure of each part of the boiler. There are also regulations covering boiler fittings and mountings, boiler settings and high pressure steam mains. This part of the regulations includes rules for repairs to oilers by electric, oxy-acetyline, and other autogenous welding processes and a brief notice of these rules may be of interest.

It may be noted that while cracks not exceeding 16 inches in length in plates in cylindrical furnaces of internally fired boilers, and cracks in flat stayed plates, may be welded, it is absolutely prohibited to weld cracks in shell plates or other parts of boilers subject to tensile stress. While it is admitted that such welds can be and often are successfully made, it has been found that at the present stage in the art such welds cannot altogether be relied upon and there appears to be no certain method of detecting a bad weld short of breaking the plate at the weld which of course is out of the question in a steam boiler. For the same reason air or gas pressure tanks carrying over 75 pounds per square inch working pressure and having the longitudinal seam welded by electric or acetyline welding processes are not permissible, but in small tanks where the shell plate is less than ¼ inch in thickness the longitudinal seam may be riveted and then welded or brazed to ensure tightness. The heads of air tanks may be welded or brazed to the shell provided that the heads are stayed with sufficient stays to carry the whole load on the heads or the ends of the shell may be turned over the flange of the head and then welded or brazed.

Welding Cracks in Boilers

Plates of boilers which are reduced in thickness by corrosion may be reinforced by autogenous welding, provided the reduction in thickness does not exceed a specified amount and the total area of reinforcement is within certain specified limits. Cracks in cast iron boilers built under this part of the re may not be reinforced by building up.

The requirements for low pressure steel boilers are naturally less stringent than for high pressure boilers. Steel boilers built under this part of the regulations are required to be stamped "For Heating purposes only" on the front head or the shell. Low pressure boilers, whether steel or cast iron, are required to be provided with safety valves, steam and water gauges, test cocks, blow-out valves and fusible plugs.

Provision is also made for a sufficient number of handholes and washout plugs. The experience of the Department has been that sufficient attention has not been given to this feature in the past and we have occasionally had some difficulty in convincing manufacturers of its importance. It is by no means unusual to find heating boilers so badly sealed inside that it is difficult to understand how users could get any heat at all.

It may be noted that considerably larger safety valves are required on low pressure boilers in proportion to their size than on high pressure boilers. The safety valve should in all cases be sufficiently large to prevent any serious accumulation of pressure, even should the boilers be fired with the steam valve closed, and it is evident that a much greater volume of steam will escape through a given orifice into the atmosphere with a pressure of 100 lbs. per square inch behind it, than would be the case with a pressure of only 5 lbs. Further, a given weight of steam at 5 lbs. pressure occupies more than five times the volume of the same weight of steam at a pressure of 100 lbs. per square inch. For both the above reasons therefore the low pressure boiler requires a larger safety valve than a high pressure boiler.

It is important that this be borne in mind when a second-hand high pressure boiler is utilized for low-pressure heating.

Safety Valve Needed

When a low pressure service connection for heating or other purposes is taken from a high pressure main, in addition to a reducing valve, a safety valve or valve of ample capacity must be placed on the low pressure side and set to release at a pressure not exceeding 5 pounds per square inch above the pressure to be carried on the low pressure system. The reducing valve must have a stop valve on each side of it to permit it to be isolated for repairs. The reducing valve must also be by-passed, the safety valves being located outside of the by-pass. A low pressure steam gauge must also be provided.

I may mention that through neglect of these precautions a radiator burst last year, severely scalding the manager of the office in which it was located and he was in consequence confined to his home for about four months. The office was heated by steam direct from a boiler which carried 100 lbs. pressure. Probably the valve to the heating system which was usually only slightly opened was opened a little more than usual on this occasion.

It may be noted that the maximum working pressure allowed on Cast Iron Boilers and Cast Iron Radiators of the usual pattern is limited to 10 lbs. per square inch but radiators specially constructed for a higher pressure may be used after designs have been submitted to the Department together with a section for examination and test if considered necessary.

Placing Stop Valves

When a heating plant consists of two or more boilers connected together stop valves must be placed as close to each boiler as possible on both the flow and return pipes. It is advisable in most cases to provide also swing check valves on the return pipes to each boiler.

When the heating plant consists of one boiler only, a swing check valve on the return pipe is usually desirable, but the Department does not in all cases insist upon its provision. Stop valves on flow and return pipes are not compulsory in this Province, where there is only one boiler, though I understand they are required by some provinces.

Where stop valves are not provided however, the flow and return pipes must have flanged connections, so that blank flanges can be inserted for the purpose of testing the boiler by hydraulic pressure.

Blow-off connections may be placed either on the boiler or on the return pipe as close to the boiler as possible.

The ends of steam mains when dropping into wet returns are required to be not less than 24 inches above the water line of the boiler and the main must be carried at least two feet beyond the last branch connections taken from the mains.

I need scarcely remind you that care must be taken in installing steam heating systems to lay out the steam piping so as to avoid the possibility of water hammer.

Part 3 of the regulations relates to the Construction and Installation of Tanks and Receptacles for Compressed Air and other Gases. There are now a large number of automobile service stations having small air compressor plants for inflating tyres and an examination of some of these plants some months ago revealed conditions which were somewhat disquieting. In many of these stations the tanks used for air receivers were quite unsuitable for the pressures carried, an ordinary galvanized kitchen range hot water reservoir being frequently used for this purpose. These reservoirs which are only intended for steady water pressures not exceeding 50 lbs. per square inch are usually made of low grade tank steel and are quite unsuitable for air pressures of from 100 to 150 lbs. per square inch which is the usual pressure carried. In many cases no safety valve is provided and there is nothing to prevent the pressure being raised to an excessive and dangerous amount by carelessness or inattention of the attendant who often has little knowledge

of the risks attending the operation of such plants. The air reservoir is frequently located in some out of the way corner and very little attention is ever given to it, so that the shell might be seriously reduced by corrosion without its condition being noticed. The reservoirs are seldom blown out, in some cases no provision is made for this purpose, and even when a drain is provided it is seldom used. While up to the present there have been no serious accidents involving loss of life or serious injury to attendants in this province, many such accidents have occurred in other places. There have been several explosions of these tanks in this province but fortunately they have not been attended with more serious consequences than damage to property. The most recent case which has come to my notice was an explosion of a compressed air tank in the Municipal Electric Light & Power Plant at Yorkton, which occurred last January. The air receiver which was 24 inches diameter by 4 feet 6 inches long was used in connection with a De La Vergne Semi-Diesel Oil Engine and was operated at a working pressure of 150 pounds per square inch. The shell was made of 3-16 inch steel plate and the ends, which were dished to a radius of about 24 inches, were ⅜ inch steel. The longitudinal seam of the shell was single riveted and brazed. The air receiver stood on one end in a vertical position on the engine room floor. The force of the explosion burst out the lower head and the remainder of the tank was projected clean through a concrete roof 8 inches thick to a considerable height above the building. An eyewitness of the explosion declared that the air tank was projected at least 100 feet above the top of the building. One of the power house staff who was standing near the tank when the explosion occurred was badly shaken up, but was not seriously injured. Fortunately owing to the manner in which the tank ruptured, practically the whole force of the explosion was directed in a vertical direction, otherwise there might have been a serious if not fatal accident. Even as it was the force of the explosion was sufficient to blow out every pane of glass in a large building.

Causes of Accident

The usual causes of accidents to compressed air tanks are (1) structural weakness of the tank, (2) excessive pressure, (3) deterioration due to external corrosion or wear and tear and (4) explosion by ignition of the oil vapour carried over from the oil used to lubricate the air compressor.

After an investigation of the evidence available including a careful examination of the exploded tank I have no hesitation in attributing the explosion to the last of the above causes, namely ignition of oil vapour in the tank. The internal pressure required to rupture the tank is estimated to have been at least 750 lbs. per square inch which is much greater than would be likely to have been generated by the air compressor.

When air at a temperature of 62 degrees Fahrenheit is compressed adiabatically (that is, without being cooled in any way) to a pressure of 150 lbs. per square inch, the air becomes considerably heated and its temperature would be raised to about 586 degrees Fahrenheit. If compressed adiabatically to 170 lbs. per square inch, the corresponding resultant temperature woul be 621 degrees Fahrenheit. These temperatures are sufficiently high to vapourize the lubricating oil used in the compressor and cause it to ignite and if the air receiver is already filled with compressed air and oil vapour a violent explosion will probably result. The air compressor cylinder is usually surrounded a water jacket, which is intended to keep the temperature of the compressed air below the danger point, or in the case of the small air compressors used in garages, the cylinder is ribbed outside so as to radiate the heat generated as rapidly as possible, but it is evident that if oil is allowed to accumulate in the air receiver, conditions might easily arise which would result in a serious explosion.

Safety Valves on Compression

The provincial regulations require all compressed air receivers to be provided with suitable safety valves to prevent excessive pressure. Also with a drain pipe fitted with a gate valve or cock to enable all accumulation of oil and water to be drained away. In addition to the above, air tanks are also required to be provided with a fusible plug at the highest point of the tank which will melt in case of any considerable rise of temperature before the temperature reaches the ignition point of the lubricating oil.

Every air and gas pressure tank is required to be inspected at least once in every two years by a provincial boiler inspector and an owner who operates or causes to be operated an air pressure tank without having in his possession a certificate of inspection is liable to a penalty.

I trust this brief summary of the provincial regulations affecting steam heating plants and air pressure tanks will have been of some interest to you and the department will have your hearty co-operation in its endeavours to reduce accidents in this province to a minimum.

Sewerage and Sewage Treatment

Compares Use of Fireclay Pipes, Concrete and Brick for Sewer Construction—Velocity of Flow in Sewers—Treatment of Sewage—Screening, Grit Chambers, Plain Sedimentation—Development of Heat by Action of Anaerobic Bacteria in Filter Beds

Address by R. H. MURRAY, Provincial Director of Sanitation, before Fourth Annual Convention Saskatchewan Society of Sanitary and Heating Engineers

THE word sewer is derived from an old French noun meaning a canal. In early times the only function of sewers was to carry away storm and surface water and it is only since the advent of the water closet that sewers have become identified with the conveyance of offensive wastes. The water closet made its first appearance about the year 1860. Fifty years after it had been patented, the City of London authorities woke up to the advantages of the water closet, and made its introduction in London obligatory. Other municipal authorities took a similar step, but none at that time realized to what extent the installation of the water closet was going to influence municipal expenditure and public works in the future. No one doubted but that the contents of water closets would continue to flow into private cesspools, from which they would be carted away from time to time.

The proximity of street drains however, and the labor and time which it was necessary to give to the emptying of cesspools caused many householders to construct an overflow from the cesspool to the nearest drain.

From the point of view of the individual, there was much to be said in support of this procedure, for the cesspools, through faulty construction and lack of attention were rapidly becoming a menace to the health of adjoining residents. On the other hand, the nuisance was merely being removed from private to public property and the street drains which had previously conveyed inoffensive rain water, were now open foul-smelling sewers.

The second stage of the problem of sewage disposal, namely the construction of under ground watertight sewers was therefore taken up by municipal authorities. For many years sewers were constructed regardless of system, the shortest route being taken to the nearest watercourse. No attempt was made to collect all the sewage of a community at one point, on the contrary it was usual to see sewers emptying their offensive liquids into a river at regular intervals in the course of its flow through a city. Further, the improved conditions of living resultant upon the adoption of the watercloset, heightened the popularity of the latter, which in turn was responsible for a greatly increased volume of sewage entering the rivers and streams.

In communities dependent upon the rivers for water supply epidemics of typhoid fever made their appearance with alarming persistence, and the authorities were once more confronted with a new problem, namely that of restoring the spent water supply of a community to a harmless condition before discharge into a natural water course.

The history of domestic sewage may therefore be recorded in three distinct stages dating from the introduction of the water closet.

(1) Its removal from the house to adjoining property.

(2) Its removal from adjoining property to a natural water-course.

(3) Its purification or treatment before discharge.

It is not within the score of this paper to deal with the first stage. The members of this Association are all aware of the progress that has been made in the design of water closets and the construction and ventilation of modern plumbing fixtures. The second and third stages consist of the establishment of sewerage and sewage treatment works respectively, and it is these two aspects of the subject that we will discuss here at greater length.

Sewerage

At the outset it may be permissible to differentiate between the words "sewage" and "sewerage," terms which are frequently mis-applied not only by laymen, but by engineers and those who ought to know better.

"Sewage" is the liquid waste which is conveyed in sewers, "sewerage" is a system of sewers in a community, or the process of drainage by sewers. Thus we speak of "sewage" treatment or disposal and a "sewerage" system.

The old form of sewer which still survives in many British cities to-day, consisted of a flag bottom, rubble sides and a flag top.

Obviously these sewers had no pretensions to water tightness, but were designed only (if the word "design" is applicable) to direct the course of surface water. In spite of this, sewers of this type were until recent years used extensively for the conveyance of domestic sewage, and the evils arising from this practice such as the accumulation of solids on the flat bottom of the sewer, and the escape of sewage and foul odors into the surrounding soil, rendered the construction of new and well-designed sewers an absolute necessity.

Various Materials Used

Modern sewers may be constructed of a variety of materials dependent upon the size, location and local conditions.

Fireclay, brick and concrete are however most frequently employed.

Fireclay pipes are used almost universally for sewers up to 24 in. diameter. The usefulness of fireclay was until recent years limited to this size of pipe, because sewers of greater diameter could be more economically constructed of other materials on the ground or in the trench. The manufacturers of fireclay pipes have however placed fireclay segments on the market for the construction of large circular and egg-shaped sewers, and this type of construction is being looked upon with favor by many engineers.

Fireclay sewer pipes are circular in form, and supplied in lengths from 2 to 3 feet with spigot and socket points. The pipes are jointed in the trench, a hemp gasket being tied around the spigot end of the pipe before placing it in the socket of the pipe already laid.

The joints are then made with cement mortar. First class fireclay pipes well and carefully laid present an ideal invert for the flow of sewage. Fireclay is not liable to disintegrate either from the attacks of chemicals in the sewage or alkali in the ground.

Concrete

Concrete sewers of small diameter have been used in past years but with indifferent success. In a small sewer—say 12 in. or 15 in. diameter it is impossible to get the pipes turned as truly as with fireclay, consequently the invert of the sewer as a whole is liable to be irregular and the joints unreliable. Further, concrete sewers are subject to disintegration, especially where the sewage level varies in the sewers—the alternate immersion of concrete surfaces in sewage and exposure to the atmosphere gradually causes the concrete to crumble away. In western Canada where there is so much alkali present in the soil, concrete sewers are subject to attack from without as well as within. Instances might be given in this Province where whole street lengths of concrete sewer pipe had to be torn up and replaced by fireclay pipe.

Concrete is a suitable material however for large sewers, that is, sewers over 24 in. in diameter. The problem of rendering concrete immune from the disintegrating effects of sewage or alkali is largely one of making the exposed surfaces impervious or waterproof, so that if a man can get inside the pipe to point up the joints and apply a waterproofing mixture, the objection to concrete is removed.

Concrete sewer pipes, where used in this Province should therefore be coated inside and out.

Brickwork

Brickwork is undoubtedly the best building material for large size sewers, and it is unfortunate that the cost of first class sewer bricks and labor renders this type of construction almost prohibitive in Western Canada. Brickwork is however extensively used for sewers in Europe. The invert or waterline of the sewers is frequently lined with a special quality of brick known as engineering brick.

Cast iron and steel construction is only used under special circumstances e. g. crossing under railways, rivers, buildings, etc., or in very wet ground.

Velocity of Flow in Sewers

If a sewerage system is to be efficient and free from offensive odors at manholes and other openings, what is known as a self-cleansing velocity must be maintained, that is a velocity of flow of at least 2 ft. per sec. The velocity is dependent upon three factors. (1) The smoothness of the invert of the pipe, (2) the cross section of the pipe or channel, (3) the grade of the pipe.

If proper care is taken in construction there should be no difficulty in ensuring a smooth invert. The cross section of nearly all modern sewers is circular, but where the flow of sewage is subject to considerable variation, the egg-shaped type of sewer is more suitable.

By fixing the minimum velocity in sewers one can determine the minimum grade for any size of sewer by use of tables or a simple formula; for instance we find that an 8 in. sewer must have a grade of 0.4 per cent., a 24 in. sewer a grade of 0.08 per cent., etc., to give a theoretical velocity of 2 ft. per sec.

In this province, where the country is so flat it is frequently impossible to obtain even these minimum grades in laying sewers, resulting in the deposit of solids and subsequently offensive odors. In such cases automatic flush tanks should be installed, so that the sewer may be flushed at regular intervals and all stranded solids refloated.

Junctions. All junctions, or connections between the private drains and the street sewer should be made in the direction of flow, that is by a Y and not by a T.

Bends. Should be avoided, and where they cannot be dispensed with in private drains should be as slow as possible. All street sewers should have manholes at every change of direction.

The maximum distance between manholes should be 300 feet.

Lampholes

In some cases where the line of the sewer is of necessity irregular, lampholes are constructed at changes of direction. These consist of say 12 in. fireclay pipes built vertically from the sewer and capped with a C. I. cover.

A lamp may be lowered down the pipe and by inspecting the sewer from either of the adjoining manholes any stoppage may be located.

Sewage

The sewage conveyed in sewers is of three kinds:

(1) Domestic Sewage.

(2(Storm Sewage.

(3) Industrial Sewage.

Domestic sewage may be defined as the spent water supply of a community. The total discharge from domestic sewers approximates the total water consumption.

Storm sewage is usually of a less offensive nature and consists of rain and surface water. Frequently storm sewage is very foul immediately succeeding a rain storm, when all the street washings and accumulated solids in the sewer are swept down; at such times storm sewage could be passed through a settling tank with advantage before discharge.

Industrial sewage or trade waste is discharge from creameries, breweries, tanneries and other industries. It is usually of a highly putrefying nature and should receive preliminary treatment before discharge in the domestic sewers.

There are two kinds of sewerage systems—the separate system and the combined system.

The separate system may be described as one of small diameter pipes which take care of the domestic sewage and in some cases roof water and cellar drainage, separate sewers being laid for storm water.

The combined system consists of large diameter sewers which carry all the above liquids.

There are advantages claimed for both systems, and each has its particular field of application.

At first sight the combined system would appear to be the most sensible inasmuch as one large sewer may be built and maintained more economically than two small sewers of the same total capacity.

But further consideration will bring out the following advantages of the separate system.

(1) Domestic sewage as it flows in any sewer is, more or less a constant quantity per day, capable of close estimation. It is therefore a simple mat-

ter to provide self-cleansing velocities at all times.

On the other hand, combined sewers are of necessity so large that at periods of dry weather flow the velocity is very slight and insufficient to prevent the deposit of solids.

(2) Where the sewage has to undergo treatment before discharge, the cost of the treatment works will be greatly reduced if the sewerage system is on the separate principle, and storm water which does not require elaborate treatment, is excluded from the works.

Hence the separate system is being almost universally adopted in Canada, and the combined system is being patronized chiefly by towns and cities on the sea coast, where expensive treatment works are unnecessary.

Sewage Treatment

We now come to the subject of sewage treatment. The evils attendant upon the discharge of raw or partially treated sewage into stream and watercourses which may be used as a public water supply are too well known to be enlarged upon here. There are certain acknowledged principles upon which the treatment of sewage has in late years been based—they may be enumerated as follows:

Sewage Treatment

Screening.

Grit Chambers.

Plain Sedimentation.

Septicisation.

Sedimentation accompanied by Septicisation.

Chemical Precipitation.

Broad Irrigation.

Filtration.

The Activated Sludge process.

Disinfection.

Screening

The sewage on discharge from the outfall sewer and before passing through the works is usually screened to rid it of any large floating substances such as sticks, rags, etc., which might seriously interfere with the operation of valves and other fittings. Screens are usually constructed of vertical bars of ½ in. or ¼ in. diameter, the spaces between bars varying from ⅜ of an inch to 4 in. Screens of finer openings than ⅜ in. are not advisable as they tend to collect too many solids. The whole screen is usually inclined at an angle of 60 deg. away from the direction of flow of the sewage.

The second process in sewage treatment, is that of settling the heavier mineral particles by means of grit chambers.

Grit Chambers

In this province, (Saskatchewan), and in other localities where sewerage systems are built on the separate principle and where the subsoil is for the most part clay, grit chambers are unnecessary, but where combined sewage has to be treated and in localities which have a subsoil of sand, mineral particles may be present in large quantities in the sewage and must be removed. This is accomplished by the simple expedient of decreasing the velocity of flow of the sewage to about 1 ft. per sec. This velocity allows the heavier mineral particles to settle while retaining the organic matters in suspension.

Grit chambers should be in duplicate and should be provided with means for removal of deposited mineral matter. The principle in grit chambers is that of plain sedimentation by reducing the velocity of flow.

Plain Sedimentation

Reference has been made to the deposit of solids in sewers if the velocity is allowed to fall below 2 ft. per second. When the sewage arrives at the treatment works this principle is made use of by discharging the sewage in large tanks and thus reducing the velocity to a minimum. By this method from 60 to 65 per cent. of the solids are precipitated. The most common type of plain sedimentation tanks is designed on the continuous flow principle; the sewage being discharged into tanks whose cross sectional area gives a velocity of not more than ½ in. per sec-

JAMES YATES

Brandon, Man., elected vice-president of the Saskatchewan Society of Sanitary and Heating Engineers.

ond. The total capacity of the tanks represents about 3 hours' flow of sewage, that is, a particle of sewage leaves the tanks 3 hours after entering. Th solids deposited accumulate in the bottom of the tank and should be drawn off by means of valves at least once every week to sludge beds, where the water is allowed to drain off the sludge, and the dried sludge is then dug into the ground. The bases of such tanks are inclined to the sludge valves and if the inclination of the base is not sufficient to allow the sludge to flow by gravity to the valves, floating arms are provided to draw off the top layers of water so that the bottom of the tank may be cleaned.

Septicisation

Perhaps no method of treatment is associated with sewage more than that of the septic tank. The septic tank was first introduced by Mr. Cameron, in Exeter, England in 1896. It consisted of a water tight tank of concrete or brickwork, from which light was excluded by a roof. The principle of this tank was to encourage the action of the anaerobic bacteria, i.e., those that live without oxygen. These bacteria attacked the solid organic matter and so the deposited solids were broken up, and the residue consisted of mineral particles and humus. A thick scum gathered on the surface of the liquid, due to the generation of large quantities of gas—the gases rising to the surface carried small particles of organic matter in suspension. For several years the septic tank was very popular inasmuch as the problem of dealing with the sludge was thought to be at least partially solved, but experience has shown that the septic tank was considerably overrated and that it has its limitations. Where the sewage has to be treated later by filtration one great objection to the septic tank was the large amount of suspended solids carried off by the effluent due to the heavy scum on the surface of the tank.

Septic tanks are usually constructed to take about 1 day's flow of sewage and the inlets and outlets should be submerged to provide for quiescence.

Sedimentation Accompanied by Septicisation

A marked advance of recent years in sewage treatment has been the adoption of what is known as the two-story or compartment principle — one compartment for sedimentation and the other for septic action. In operating the plain sedimentation tank as above described, it was found especially on this continent, that the frequent removal of sludge was accompanied in the hot summer months by very bad odors and the breeding of flies, and in the winter time when the temperature was low the sludge froze immediately on being discharged and could not be conveniently removed. On the other hand the solids if allowed to accumulate in the tank reached a depth of several feet and the amount of suspended organic matter leaving the tanks was very high. The solution of this difficulty was found by Dr. Karl Imhoff, who in 1907 installed a plant in the Emscher district on this two-story principle. The principle is as follows: The sedimentation tank is provided with a slot in the base through which the settling solids gravitate into a lower or septic compartment. The entrance from the upper to the lower compartment is trapped, thus preventing the gases generated in the sludge compartment, from rising to the surface of the settling compartment as is the case in ordinary septic tank. The upper compartment is designed to give about 3 hour's flow of sewage, and the lower compartment should provide storage for 6 month's accumulation of sludge. The liquid leaving the tank is therefore still fresh, although relieved of a large amount of suspended solids, and is free from any scum which might clog any further process of treatment.

The solids in the lower compartment are retained under the conditions of the septic tank and the organic matters are reduced by the action of the anaerobic bacteria to an inoffensive and non-putrescible residue similar to humus, and if discharged after a period of six months will be free from offensive odors and when dried can be spread or dug into the ground.

Chemical precipitation is rapidly becoming a matter of history in sewage disposal. The process consists of add-

ing some precipitant to the sewage such as lime, alum or salts of iron before it enters the settlement tank.

The solid particles of sewage are carried to the bottom of the tank by the descending fine particles of lime or by the coagulating action of other substances and the upper liquid is thus considerably clarified. Precipitation gives an effluent freer of organic matter than that obtained by plain sedimentation, but evidence goes to show that the improvement in quality is not commensurate with the cost involved.

Broad Irrigation

"Broad Irrigation," "Sewage Farming," and "land treatment" are terms used to describe the discharge of sewage on to land at such a low rate of flow as will not interfere with the raising and harvesting of crops. For more than a generation in England, land treatment was considered one of the principal methods of sewage disposal. With the growth of cities however, it has been found impossible to obtain sufficient land for the purposes—one acre being required for every hundred people connected with the sewers. In a province such as ours where we have a subsoil which is for the most part impervious the adoption of irrigation for any but very small plants would result in complete failure.

In America irrigation is not practised to-day in such a way as to give satisfactory results in sanitary disposal of sewage. Objections to the method have increased rather than decreased. Such objections include odors, prejudice against the growing of vegetables which are eaten raw, and the transmission of disease by flies and organisms. It must also be evident that our winter climate renders this process impracticable.

Filtration

Even with the most efficient settling tanks the effluent contains large quantities of organic matter in solution which would quickly putrefy if not supplied with the required oxygen.

These particles must be rendered stable before discharge unless the river into which the effluent is discharged is sufficient in volume to provide the necessary oxygen, and for this purpose oxidising filters are used.

Filter beds are of two types—contact filters and sprinkling filters. The filter material is similar in each case and should consist of crushed stone, clinker, broken bricks or any other material which is hard, comparatively rough and not liable to disintegrate. The most suitable size of media is from 1½ in. to 3 in. and the beds should be of a depth of 7 feet.

Contact Filters

Contact filters are so named because the liquid is run into the beds with the outlet closed, and is allowed a period of contact with the filter media for say two hours—then run off suddenly, and the bed allowed a similar period for aeration.

This method of filtration, while attended with some success, has given place to filtration by sprinkling, a method which not only permits of more liquid being handled, but gives a greater efficiency in the effluent.

Contact filters are, however, suitable for small installations.

Sprinkling Filters

In filters of this type the liquid is sprinkled by some mechanical device over the entire surface of the filter bed and allowed slowly to percolate to the bottom of the bed. For the first few weeks of operation of a new bed the media acts merely as a strainer for retaining the solids in suspension, but after use for some time the surface of each piece of filter media becomes coated with a film which harbors multitudes of anaerobic bacteria. These bacteria feed upon the organic matter converting it to nitrates and rendering it stable. Oxygen is an absolute necessity to the proper operation of the beds otherwise anaerobic bacteria will develop and reduce the efficiency. Filter beds should be provided with well drained floors to carry off the liquid and to give free access to the air.

The surface area of sprinkling filters should bear a direct relation to the population using the sewers, i. e. to the amount of oxidisable matter present in the sewage.

For first class effluents this ratio should be 1 acre per 19,000 people or 255 square yards per 1,000 population.

Temperatures in Sewage Filter Beds

Location. Date.	1. Outside temp. of air.	2. Temp. of air in filter beds.	3. Temp. of sewage as sprinkled on filter beds.	4. Temp. of effluent from filter bed.	Difference between 3 and 4.

Methods of Distribution

These methods include perforated trays, revolving distributors, travelling distributors, and fixed sprays.

Humus Tanks

The organic matter which is retained by the filter media and which is oxidised is discharged from the beds from time to time in the form of humus. Final settling tanks should be provided for the retention of this sludge, otherwise the bed of the river or stream may become loaded with this deposit.

Activated Sludge Process

A combination of the two processes of sedimentation and oxidation has been evolved in recent years and the activated sludge process which was unknown by that name eight years ago is already passing out of the experimental stage.

The process consists of blowing air for several hours through sewage held in tanks, during which the suspended matters collect in flocculent masses which resemble pieces of sponge, and come into contact with every part of the liquid.

These spongey particles harbor great numbers of bacteria which oxidize the organic matter and convert the nitrogen into nitrates.

The process is specially applicable to large centres of population where suitable land for sewage disposal is difficult to acquire, and where the additional cost of introducing air under pressure to the works may be offset by the omission of filter beds and by the comparatively small area of land required for treatment of the sewage.

Disinfection

The object of all the foregoing processes of treatment has been to remove from the sewage as much of the solids as possible and to convert the remaining liquid into a stable effluent which will not putrefy or give offence when discharged. In other words the processes above described have been for the reduction of suspended solids and the creation of a condition of non-putrescibility. Although a certain percentage of the bacteria will be eliminated with the retention of the solids, none of the above processes are calculated to destroy the bacteria, and it is possible that a clear odorless and stable effluent might be charged with disease-bearing germs capable of creating an epidemic of typhoid fever.

There are two ways in which the disease germs may be eliminated from or

(Continued on page 35)

Patterns For Paneled Diagonal Pipe

Written for Sanitary Engineer by O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Missouri

LEADER pipes as well as vent pipes, placed on the outside of the building, are often ornamented by making a set in member, and over this, panel bars are planted.

This helps ornament the pipe, and takes away the plain monotonous effect.

However, to lay out the pattern and make a suitable working drawing, first draw the side elevation with a wall line as M-N-O-P.

Next develop the plan or section through top I, and place the plan on an angle as E-F.

After which, detail the lower section and draw the diagonal lines as shown.

The dotted lines a-b; e-d, also f-g and i-j are panel bars, built in over the miters, so a straight effect is produced in the front.

Observe the elevation miters are bisected to the angles of the wall lines, and give the lines N-c and O-h.

Now as both the elevation and the plan are foreshortened a diagonal elevation must be developed.

To do this, we place a strip in the position X and from each point in elevation, miters project the altitudinal heights to the strip X as shown.

We now place this strip in the position X′ so it is at right angles to E-F of plan.

From each point in this strip X we square out lines until they are parallel with E-F.

Then from each point in plan, taking in each of the corners in the top and bottom sections, we project lines so they are at right angles to E-F of plan.

Where these intersections take place, we draw the shapes of the top and bottom section in the diagonal elevation.

After which, we join the side lines and that gives us our true position of the double offset.

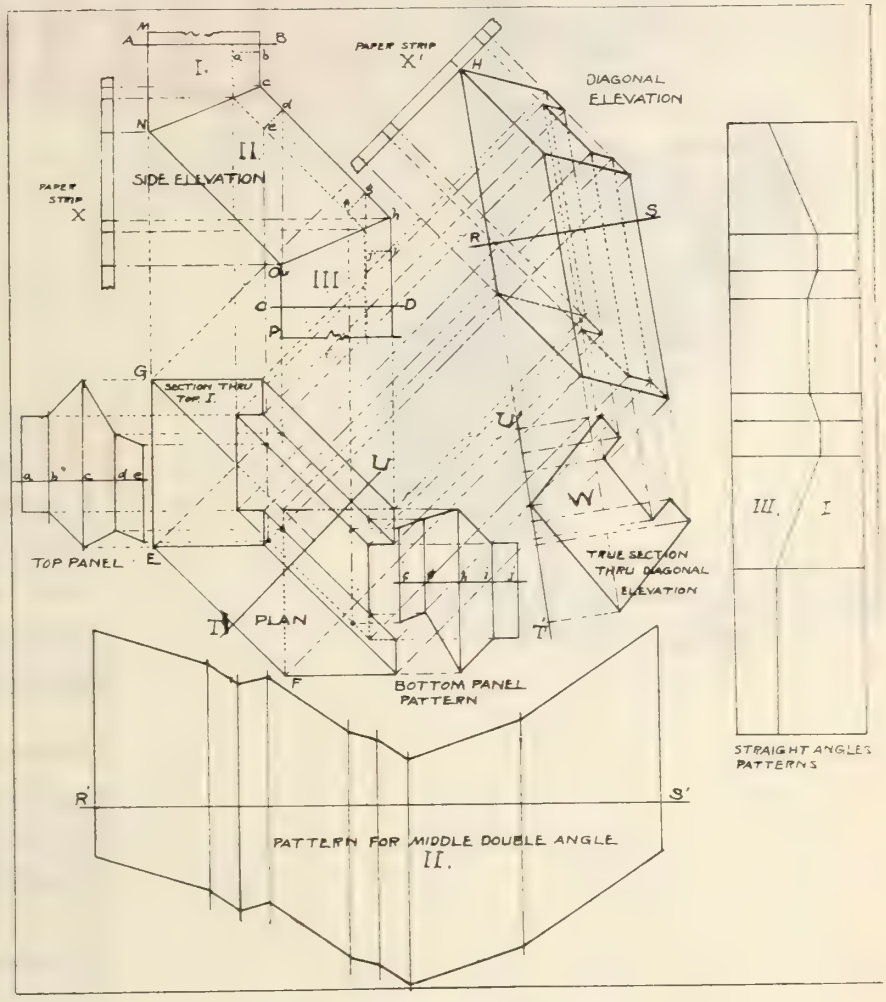
The next step is to develop a true section through the diagonal elevation, giving the exact outlines how the metal must be formed, both in shape and in girth, as shown at W.

To do this, we draw a set line square to E-F as T-U.

We pick all the width of plan lines along this line T-U of plan and transfer them on the extended diagonal elevation line, as T′-U′.

Now from each point in the diagonal elevation extend the lines parallel and from each point in the line U′-T′ square out lines to intersect those from elevation and this will enable you to draw the shape W through the intersections thus established.

To set out the patterns for the various parts, the straight angles I and III



Patterns for Paneled Diagonal Pipe.

are set off the same as any straight angles where the girth is taken from the section through top I and the distances are picked from line A-B or else from C-D of elevation.

But for the middle pattern, we must pick the girth from the true section W, and set it off on the line R′-S′

Through each of these points draw stretchout lines and then draw any set line in diagonal elevation as R-S.

Use this set line as a base line and pick the length of each line from diagonal elevation and set off on similar numbered line in pattern.

At the intersections thus established draw the miter line as shown and this gives the pattern for the middle angle.

Now to lay off the panels which fit over the miters we pick the girth from side elevation as a-b-c-d-e and set to the left of plan as a-e.

In the same way pick the girth f.g.h.i. j. from the side elevation for the lower panel and set as f-j to the right of plan.

From each of these points in elevation drop lines into plan to intersect those lines of similar number shown by the heavy dots in plan.

From these points square over lines into stretchout and this enables drawing the miters for the patterns as shown. Laps must be allowed extra on all edges for seaming.

INCOME TAX BOOKLET

The Canadian Debentures Corporation, Ltd., have issued a booklet entitled "Dominion Income Tax Questions and Answers," the work of a tax specialist which simplifies for any individual, company or estate the preparation of the necessary income tax return slip. The booklet should prove of particular interest to business men. Readers of Sanitary Engineer may secure copies of this booklet by writing to Canadian Debentures Corporation, Limited, 36 King Street, East, Toronto, and asking for booklet No. 37A.

Bucking

BUCKING Bronchos and bucking business don't seem to have much in common on the surface—but both represent hard work, both require a firm hold on things, skill, patience, resourcefulness, and last but not least aggressive methods.

Modern Business requires all these qualities in the man who would be a success in business—especially the plumbing business.

There is a rich field awaiting the Sanitary Engineer who will use aggressive methods in going after business—a rich field which only aggressive salesmanship will develop.

Right in your district there are probably hundreds of homes where up to date bathroom equipment is needed—all sorts of plumbing fixtures that go

Spring Advertisements for Plumbers

Many Lines of Plumbing and Heating Fixtures, Tinsmithing, Ventilating, etc. Dealt With Effectively in Newspaper Ads by Plumbing and Heating Engineers Throughout Canada—Some Helps for Writing the Spring Advertisements

THE SPRING and early summer season provides a splendid opportunity for the plumber to advertise various lines in a seasonable manner which will appeal to many prospects. The layouts shown herewith indicate the manner in which progressive plumbing and heating firms are advertising in their local newspapers, and these together with the following descriptions of copy being used by others should be of assistance to the sanitary or heating engineer who wishes to alter the "copy" for his ads, or to plan a special advertising campaign.

A. Moffatt, plumber of Barrie, Ont., points out that sanitary plumbing is fine but it must be maintained in clean, careful working condition, and makes an argument for installing the best equipment procurable and then keeping it in best shape. "Sanitary equipment is only sanitary if looked after," he states.

"Have your bathroom fitted up complete. There are so many little things such as towel, paper, tumbler and tooth brush holders, soap dishes, glass shelves with nickel brackets, etc., that go to make your bathroom comfortable and convenient," states the ad by J. S. Mitchell & Co., Sherbrooke, Que., continuing, "Why not a medicine cabinet? We have them in both bevelled and plain mirror door. If you are contemplating building or installing a new bathroom it will be to your advantage to consult us and let us figure with you."

Solving Heating Problem

Classic Sanitary and Heating Co., Stratford, advertise to Mr. House Owner to let this firm solve the heating problem with the installation of pipe or pipeless furnace.

A Spring clearance sale of stoves and ranges in every style and size at greatly reduced prices, is advertised by F. C. Kulow, plumbing, heating, etc., Port Colborne, Ont.

The tinsmithing department is dealt with in the ad by Simmons, Bros., Kingston, Ont., which states, "We make everything in tin and sheet metal. We have facilities for making a small can or a monster tank, a simple leader or an elaborate cornice or portico. If you are in doubt as to what is best adapted for your purpose in tin or sheet metal we shall be glad to assist you with our advice based on experience and knowledge."

An ad devoted to bathroom fixtures by W. H. Thorne & Co., St. John, N. B., reads, "On the fixtures depends the attractiveness, convenience and completeness in the sanitary arrangement of the modern bathroom. Our complete line of fixtures is fully abreast of every requirement."

The policy of mentioning certain installations which have been completed by the firm is followed in the ad by E. Cardwell, Welland, Ont., which states, "we have supplied and installed the complete plumbing, heating and ventilating equipment for the Lambert Theatre and Reeta Hotel. We make a specialty of steam, hot water heating and plumbing, using only the very best materials, and can refer to many large jobs in Welland vicinity installed by us. On any piping problem you can come to us with confidence, based on the quality of our materials and our ability to do work

Appeals to the Boys

"Take the Terror out of the Saturday night tub," says the ad by McKelvey & Birch, Ltd., Kingston, Ont., continuing, "boys don't need any persuading when they have a big porcelain enamelled bath tub to jump into. They get almost as much fun out of it as is afforded by the lake or that 'old swimming hole.' It gives them the bath habit and all the physical and mental cleanliness which frequent immersion creates. And when they are through, shining with health, it's a matter of only a few moments to restore the normal lustre of both tub and fittings. Is your bathroom equipped with such ware?"

"When planning the home," says the ad by T. J. Minnes & Co., Brantford, Ont., "considerations of health come first. That means plumbing—good sanitary fixtures and fittings in the kitchen and elsewhere. Above all, the bathroom must be right. It must be as spick and span, and wholesome as you would have yourselves and your children. Let us show you the lustrous white porcelain enamelled bathroom equipment we have in our store. You will find its price as satisfactory as are its appearance and obvious convenience."

Dealing with eavestrough, the ad by Dufton & Saunders, Stratford, Ont., says, "we have made up 25,000 ft. of trough, ridgeroll, valleys, etc., from the famous. . . . . .galvanized copper steel, the very best obtainable for its lasting qualities. Do not be satisfied with the common factory-made trough which only lasts a few years when we can supply you with hand made trough, made from the very best material at a very little difference in price. Get your orders in now for the spring."

SEWAGE AND SEWAGE TREATMENT

(Continued from page 30)

destroyed in an effluent, namely by sand filters or by chlorination.

The former is a costly process and is equivalent to slow sand filtration of water—it is rarely used and should be discarded in favor of disinfection. This is accomplished by applying a solution of chloride of lime to the effluent. Experience has shown that a very small quantity of chlorine, 5 parts of available chlorine to 1,000.000 parts of water will destroy about 95 per cent. of the bacteria present. The germicidal action of the chlorine is indirect. as it acts on the organic matter by the liberation of nascent oxygen in the water.

Development of Heat by Action of Aerobic Bacteria in Filter Beds

At the Annual Convention of this society held in Moose Jaw last year when the tendency of subsurface disposal fields to freeze was under discussion, the writer was asked if the heat developed by the action of aerobic bacteria would not prevent the freezing of subsurface fields.

The reply then given was that any increase in temperature due to such action would be negligible, but the convention was promised some definite data on this subject at its next meeting.

Through the courtesy of the City Engineers of Regina and Moose Jaw and of the Works Superintendent of Weyburn some data were secured for the information of the members of this association.

While the conditions at the sewage disposal plants of these cities are not those of the disposal field on the farm, the point in question, namely the increase in temperature due to the action of aerobic bacteria, is clearly answered, and the increase is found to be a negligible quantity in one of the plants and in the other two plants a minus quantity.

MONTREAL WILL HAVE DAYLIGHT SAVING

At a meeting of the Montreal City Council this week a resolution was adopted whereby Montreal will have daylight saving again this summer from April 30th to October 1st. Although some opposition has been given from different quarters in recent weeks, the Council passed a resolution by a vote of 23 to 10, and the City will now notify the general public of its intention to adopt the new time for the period mentioned.

Questions and Answers Regarding Plumbing and Heating Practice

SEWAGE DISPOSAL—QUESTIONS

Editor, Sanitary Engineer, Toronto:—

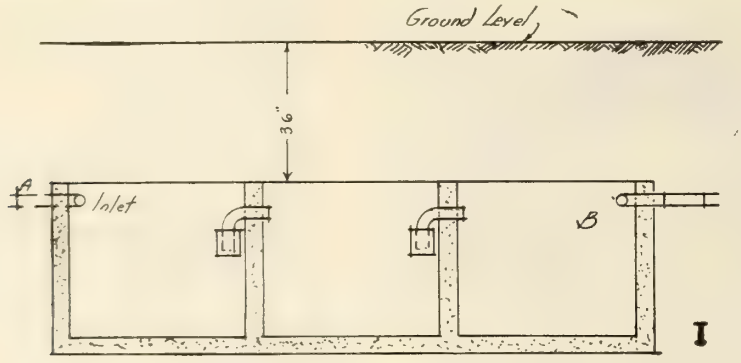
Would you kindly give me any information or suggestions on the following:—I am enclosing a rough sketch of a faulty septic tank. There is no syphon in the third chamber, only an overflow which leads to a disposal bed.

The reason the tank is built so far underground is to take care of the toilets in basement of the building. What I wish to do is to discharge the contents of the 3rd chamber, (which is practically clear water) through the drain B, automatically say, once a day. Would a Morrison cellar drainer do it, or would you give me the name of a suitable lift. I have water pressure system to work off. Pressure varies from 10 lbs. to 35 lbs.

Robt. Broom.
Burlington, Ont.

Answer

Although the liquid in chamber B may have the appearance of clear water, it is by no means harmless to animal life.



I

In fact, this liquid is several degrees more poisonous than is raw sewerage and requires further treatment before it is discharged to where it may become a source of danger to health or life.

All of the time that the sewage has been in the various chambers of the septic tank it has been subject to the action of anerobic bacteria and as a result the effluent contained in chamber B is heavily charged with these poisonous germs.

These germs must be destroyed by the action of aerobic bacteria, and because no aerobes can live when deprived of light and air there can be no aerobic action in any part of this underground tank. Therefore it becomes necessary to make arrangements so that the effluent in chamber B may be discharged into a system of field tiles set close enough to the surface of the ground so as to be in the field of aerobic activity.

The ground within a foot or eighteen inches of the surface contains aerobic bacteria. These will thrive and multiply when properly fed, but can be easily drowned by a constant discharge from the septic tank.

It is well to design the dosing-chamber so that the tile laterals in the disposal field are charged with the effluent once in every six hours, so that the aerobic bacteria may have intervals of time in which to rest and multiply.

If we were to re-model the system of sewerage disposal, as outlined in your inquiry, we should raise the laterals to within a foot or so of the earth-surface; provide a dosing chamber, and set the automatic cellar drain so that it would discharge the liquid from B into the dosing chambers. And it would be well to arrange so that the discharge would take place about every six or eight hours.

The cellar drain mentioned in your letter may be used for this purpose.

It will be necessary to provide for more laterals in the disposal field than would be necessary were there only to be the effluent from the tank discharged therein. The extra laterals are required because of the fresh water used in the operation of the cellar-drain.

You do not state the number, or class, of fixtures to which this system is connected, nor do you give the dimensions of the tank. If you will send us this particular we will show in detail the setting for the cellar-drain, the dosing-chamber and the tile laterals in the disposal field.

On several occasions the writer has been asked for suggestions in cases similar to this one of your difficulty, and in the majority of instances (when it has been possible to do so) we have had the toilets removed from the basement and set at a level higher than that of the septic tank and disposal field. In other cases we have arranged so that the effluent from the septic tank was exposed to the air during its passage through the filtering beds which were set in a secondary chamber.

QUANTITY OF WATER ALLOWED

Editor, Sanitary Engineer:

1.—What quantities of water per head of population are generally allowed in planning waterworks systems?

2.—Will a septic tank work well in low wet land?

3.—What time is required to instal a five-fixture country plumbing system?

4.—How much does the average city fulsh tank hold?

J. Meiklejohn,
Warkworth, Ont.

* * * *

Answers

1.—The quantity of water used per person varies according to local conditions and regulations.

Some cities allow 100 gallons and upwards per head per day. Others as low as 50 gallons per head per day, but would say with the case under discussion about 30 gallons per head would be sufficient for domestic purposes, same including bath, toilet, washing, drinking, etc., therefore for a family of 3 the daily consumption would be 90 gallons, for 4 persons 120 gallons, for 6 people 180 gallons. Should no conveniences be installed and it is purely a drinking, cooking and washing proposition this quantity can be reduced by half.

The cistern in question, 3 ft x 6 ft. x 4 ft. full to the top would hold approximately 450 gallons and would last a a family of 3, on the above capita basis, 5 to 10 days respectively.

2.—With reference to a septic tank working satisfactorily in low wet land the writer would say that the tank will work equally well in any soil, but the clarified sewage discharged from same has to be filtered and light loaming soil is the best condition possible, but in clay or heavy wet soils the pipes are laid further apart and the trenches and pipes surrounded with ashes, broken stone or loose material for filtering and aeration purposes, so the pipes must not be laid too deep as the purification depends upon the air taken or sucked down from the surface.

3.—The usual time required to instal a five fixtured country plumbing system varies considerably, but would say an average would be from 7 to 10 days providing all material was on the site.

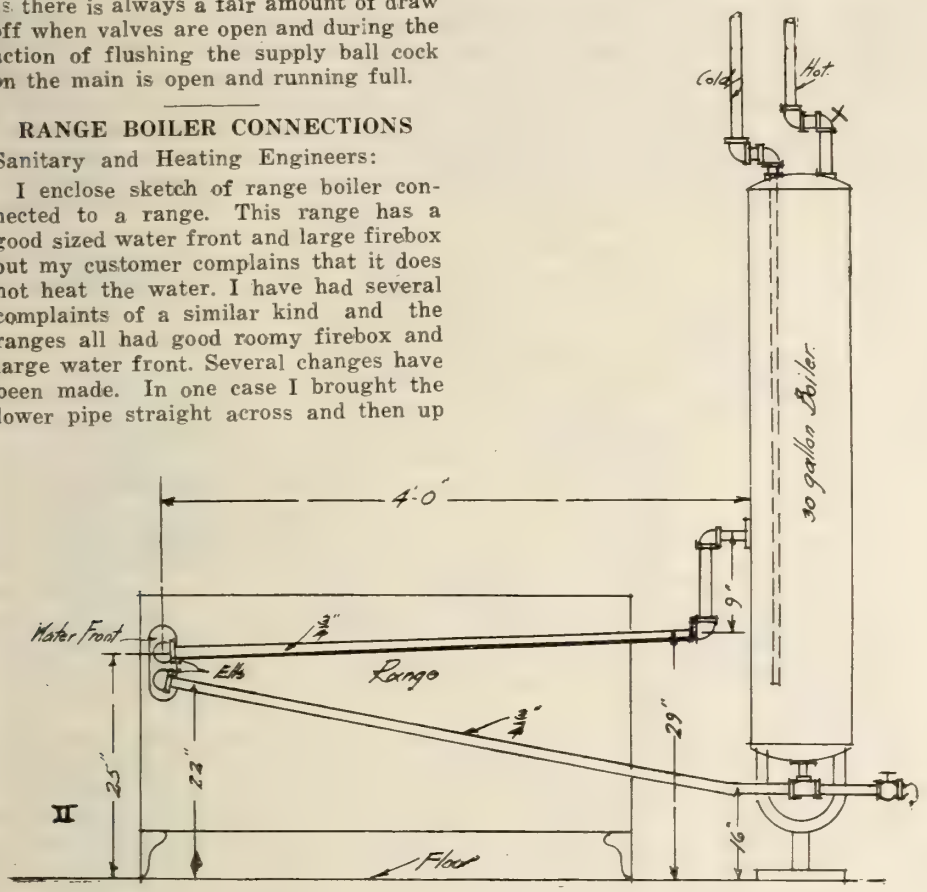
City plumbers would do this work in 5 to 6 days on an average a lot pending on the men employed.

4.—The average city flush tank holds 5 gallons of water, and when flushed discharges or uses about 6 or 7 gallons, as there is always a fair amount of draw off when valves are open and during the action of flushing the supply ball cock on the main is open and running full.

RANGE BOILER CONNECTIONS

Sanitary and Heating Engineers:

I enclose sketch of range boiler connected to a range. This range has a good sized water front and large firebox but my customer complains that it does not heat the water. I have had several complaints of a similar kind and the ranges all had good roomy firebox and large water front. Several changes have been made. In one case I brought the lower pipe straight across and then up to the water front, sometimes this cures the trouble and sometimes it does not. I would appreciate your advice.



H. J. Andrews,
Orillia,
Ont.

* * * *

Answer

Your sketch does not show any fault in the lay-out of the piping.

If the installation in question has been made as indicated on the sketch, with the pipes all graded as shown, there should be no trouble such as that mentioned in your letter.

It is just possible the trouble lies chiefly in the fact that the whole volume of water contained within the tank heats at a uniform rate, and that your customer requires a limited amount of very warm water in preference to a large amount heated to a lower temperature. If this is the case we should suggest the plugging of the side opening of the boiler, and the connecting of the hot water flow pipe to the point marked X on the drawing.

If the top connection is made as we suggest, you will find that the water will be heated in the tank from the top downward, and that there will be a body of very hot water found in the top of the tank shortly after the fire is kindled in the fire-pot.

However, we wish to say that there is nothing really wrong with the piping system as outlined by you.

NEW GOODS

MUELLER STEAM VALVES

The H. Mueller Manufacturing Company, of Sarnia, Ont., announce the introduction to the trade of their new models and extensions to the Mueller line of steam valves. In describing these products, the makers claim that they are made of high-grade steam metal in sizes ranging from ¼ inch to 2 inches. They are also fitted with the Mueller composition disc, which have successfully withstood various pressure tests. Other features pointed out by the makers are that these are provided with a large packing gland; the valve can be re-packed when open; the disc holder may be removed from the stem and placed in a vise facilitating the removal of disc; and both inlet and outlet are provided with full length tapered threads, while ample recess for pipe end clearance is provided for between the threads and the web. The valve is the new barrel type body, is of pleasing design and smooth uniform castings.

ELECTRIC WATER HEATER

The Supreme Water Heater Co., of Toronto, are giving special attention to their electric water heater, which is called the "Supreme." This product consists of a copper coil insulated in a jacket. The heating unit is of special construction, enabling the heat to be easily transmitted from the electric element to the copper coil. This coil is in turn wound into a spiral, so as to insure rapid circulation. This new way of heating water by electricity, is claimed by the makers of the Supreme heater to be much faster and more economical than the previously adopted methods of heating water electrically. It is claimed that this type of heater can be connected to any domestic boiler. One of the important features in connection with this Supreme heater is that the electric element is a separate unit from the heater itself, and in order to remove the element, it is not necessary to disconnect the heater. After the current is turned off the electrical element can be easily removed.

MYERS DISPLAY CARDS

A series of cut-out display cards illustrating the various lines of Myers products are being offered to the trade by the F. E. Myers and Brothers Company, of Ashland, Ohio. These display cards and other advertising material, illustrate the different styles of Myers power pumps. The Myers Company also offer printed matter for local distribution and also electrotypes for local advertising purposes where required. The intention is to assist the dealer in selling

McCASKEY ADDING MACHINE

A new product has been added by McCaskey Systems, Ltd., of Galt, Ont., to their specialty line of account systems and sales records. This is an adding machine which combines a cash drawer, and the makers claim that when this is used in conjunction with the McCaskey account register, it establishes a complete credit and cash system for any business. This combination adding machine and cash register is put up in three different key-board arrangements, and the manufacturers state that this machine gives a wide range of possibilities to merchandising records, for tracing cash, credit or departmental business transactions.

Catalogues and Booklets

MUELLER FLUSH VALVES

Catalog No. 4a illustrating flush valves, has recently been issued by the H. Mueller Manufacturing Company of Sarnia, Ont. The introduction to this booklet describes two of the principal uses of a flush valve, these being to render the closet tank unnecessary, and to deliver just sufficient water to flush the bowl satisfactorily. The makers claim that the flush valve is therefore very economical. It operates with either a push button or a turn of the handle. The catalog also contains a number of illustrations showing the flush valve in practical installation. Full details of the various styles are included, which, together with drawings and illustrations, present complete information on this line of products.

STORY OF THE BATH

"The Story of the Bath," is a story recently written by Edwin L. Barker, dealing with the history of the bath from its earliest stages until the present. This book introduces many practical themes in connection with the benefit of the daily bath, as well as presenting fundamental reasons for bathing, and the beneficial effects usually noticeable therefrom. An almost universal distribution is generally predicted for this book entitled "The Story of the Bath," in view of the every-day applicable nature of its contents.

VOL. XVI APRIL 1, 1922 No. 7

Sanitary Inspector's Work

THE DECISION of the Ontario Association of Plumbing and Drainage Inspectors at their convention to admit master plumbers and heating engineers to future meetings of this organization is a progressive move. In a great many cases the work of the sanitary inspector and that of the master plumber and heating engineer are very close and getting together to discuss their problems at the annual convention should be of assistance to both parties. There is room for much educational work along this line because in too many cases sanitary inspectors and assistant inspectors working under the direction of local boards of health have not the necessary qualifications to thoroughly inspect and make recommendations on plumbing and heating installations. In this connection it is also apparent that in most municipalities the only thought is given to the inspection of new installations and when work is slack the inspectors are allowed to go. The subject of reinspection of installations in existing buildings is one which should have wider consideration. The city of Saskatoon has had experience with reinspection when tenants of properties move, or periodically when tenants do not change over a considerable period, and as result of such reinspection the number of faulty installations has been much decreased.

There is need for the application of strict plumbing by-laws in the various provinces of Canada, particularly in regard to the location of septic tanks and laterals so that they will not pollute the water supply with sewage. This matter was dealt with at the convention of the inspectors. Particularly are such measures needed in the rural districts, hence the need for the early enforcement in Ontario and other provinces of regulations which adequately cover the subject but which are being held up for some reason.

Lifting a Ton a Day

THE GREAT need for improved sanitary conditions in the rural districts of Canada provide plumbers with one of the best opportunities for business which could well be had. In encouraging the use of water supply systems and sanitary appliances in the rural districts the plumber is not only developing profitable business for himself but he is doing the farmer and the country as a whole a great service. This is the light in which such necessary equipment should be sold.

A short time ago a provincial department of agriculture sent out to a large list of farmers' wives the following question: "What one change of improvement would be of the greatest benefit to your home or which one would you yourself rather have?"

When one stops to consider for a moment the extensive list of conveniences for the country home which these women might choose, the result of the test is almost startling in its significance. After the replies were all in and a careful count made it was found that fifty-three per cent. of them preferred some system of running water to any other home convenience.

In commenting on the result the secretary of the department of agriculture stated: "The kitchen sink is still a luxury to too many farmers' wives although it should be considered a necessity. Running water means less need for hired help, fewer doctor bills, and a reduction in daily work for all. More water systems are needed to free the farm women from the back-breaking drudgery of carrying water."

A prominent engineer after having made a careful study of the water supply situation on the farm makes the astounding statement that many farmers' wives are lifting a ton of water a day. He classifies the securing of water from the source of supply and transporting it to point of application as the heaviest manual labor the farm woman must undergo. He figures that water so secured is handled an average of six times and a bucket of water containing two gallons will weigh twenty pounds, making a total of 120 pounds for a bucket of water. The cooking of three meals a day necessitates ten buckets, to which must be added water for bathing, scrubbing, washing, etc. He points out that in a short while the lifting of a ton a day will take the bloom from the cheek and the enjoyment from the soul of any woman.

The argument is strong enough and agencies are at work to encourage better sanitary conditions. The plumber can gain by linking up with such effort.

The Coal Strike

THERE APPEARS to be little chance of averting the international coal strike involving 600,000 miners and operators, particularly in view of the improbability of intervention by the U. S. Government as indicated in latest advices. While some who pose as authorities on the coal situation in Canada were quick to discount the effect of such a strike on Canadian industry, it is evident on further consideration that a protracted strike of miners can hardly fail to bring a shortage of fuel in many parts of Canada. Nova Scotia fields are so far not affected by the strike, this will relieve the situation in New England and Quebec. The opening of the navigation season helps the situation for Montreal, but southern Ontario is much concerned and in this territory lie many industries.

Many Canadian industries have laid away considerable reserve supplies of coal and certain steel and other industries have independent sources of supply. In the last coal strike in 1919 Canada got liberal treatment from the U. S. Fuel Conoller, but already there is some sentiment across the line that a repetition of the strike conditions should not bring about a repetition of such generous treatment for Canada as was formerly given. The United States is said to have a reserve supply of about 65,000,000 tons of soft coal, fully 80 per cent. of which is in the hands of railroad and public utilities. Non-union production is estimated to continue at a rate of about 4,000,000 tons a week and the reserve supply will therefore, if carefully watched, carry industries over 60 days' operations. The U. S. iron and steel industry is said to have sufficient coal to last 60 to 90 days. There are also fair stocks held in Canada, notably at Fort William, and the railways are fairly well taken care of. The stocks held are mostly out of reach of central Ontario points, however, and unless fairly generous treatment is accorded by U. S. authorities industries in this section may be the first to suffer from the coal stringency.

* * * *

THE PAST week has seen further improvement in the iron and steel trade from the standpoints of business and operation. Prices also are stronger though the 1.50c basis on plates, structural shapes and bars for which more large U. S. producers are holding is not established thus far by important transactions. March tonnage is well in advance of February which was the best month in over a year. Production of U.S. producers is now working toward the 70 per cent. mark.

* * * *

THE ANNUAL report of the U. S. Steel Corporation, leading iron and steel producer in the U. S., shows a decrease in earnings for 1921 of eighty-four million dollars while the output of all raw, semi-finished and finished products showed marked shrinkage. Production of iron ore mined decreased 39.2 per cent., manufacture of coke declined 39.4 per cent. and rolled and other finished steel products were reduced 44.8 per cent. Since the beginning of 1922, Judge Gary pointed out, new orders received have been equal to about one-half the total capacity of the plants of the company.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

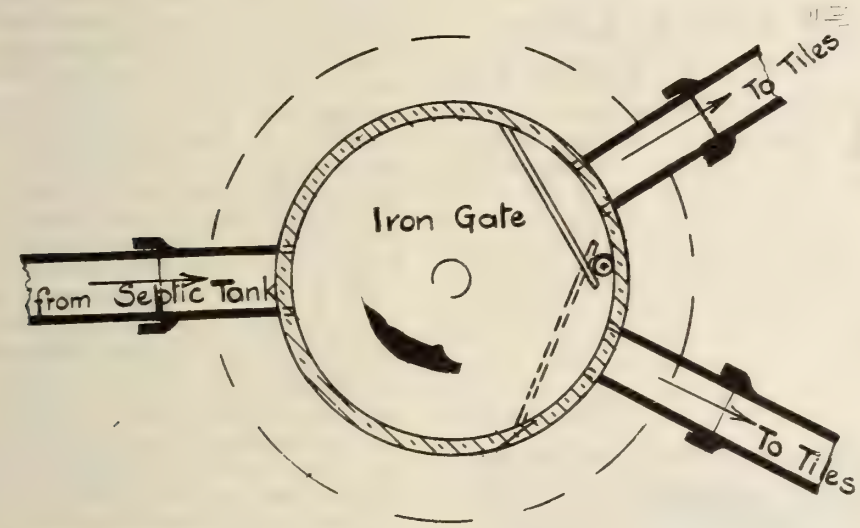

FIG. 65.

Continued from last issue

IN LARGE filtration areas it is always advisable to lay the land out so that whilst one part of same is undergoing treatment the other can be resting and obtaining the aeration required before receiving its second application of sewage. This is best controlled by means of diverting gates built in a distributing chamber. Figs. 65 and 66 show the plan and section of a cheap and effective chamber which consists of an ordinary 12 inch diameter vitrified pipe on a concrete base and surrounded with concrete 6 inches thick, the different main supply branches leading to their respective filtration areas are controlled by a ⅜ inch iron gate which works on a central hinge and protects either pipe by hand control and diverts the sewage to the area required for treatment.

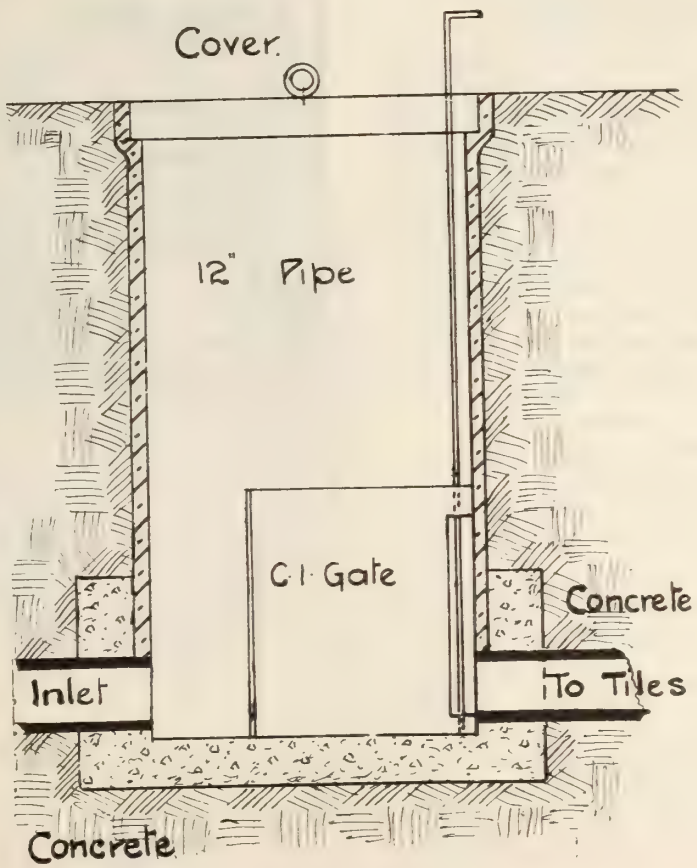

FIG 66.

MONTREAL'S INCREASED WATER SUPPLY

By converting a 30,000,000 gallon steam pipe into a pump operated by electricity at the low level pumping station, Atwater Ave., the city authorities announce they will in a few weeks have the electric pumping capacity increased from 75,000,000 gallons a day to 105,000,000 gallons.

INTEREST IN LEGISLATION RE WATER TO SUBURBS OF CITIES

Ottawa, Ont.—Considerable interest has been aroused over the move in the Ontario legislature to force cities to provide water and other services for suburbs. Works Commissioner A. F. Macallum of Ottawa, discussing the matter with the local representative of Sanitary Engineer said its effect in the Capital would be that practically twice as much power would have to be purchased, as the present pumping plant would be inadequate to supply the additional power needed to give suburban muncipalities service.

Generally speaking, he said, it would mean a tremendous expense to such cities as would be affected, Ottawa being one of them, and Toronto and Hamilton being among the others. Mr. Macallum stated that the farmer members in the House were responsible for the bill getting its second reading by such a large majority, as it would naturally be of great benefit to rural municipalities.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Kitchener, Ont.—Oscar Grosy has taken over the plumbing, heating and tinsmithing business of W. G. Weichel & Son.

PERSONAL

Egmont L. Frankel, general manager, Frankel Brothers, metal and waste dealers, Toronto, Ont., has been elected President of the Non Ferrous Metal Division of the Waste Trade Dealers' Association of America.

OUTLOOK GOOD IN QUEBEC

W. H. Wiggs, President, The Mechanics Supply Co., Ltd., Quebec City, was a recent visitor at the Toronto Office of Sanitary Engineer. Mr. Wiggs stated that there is a great deal of building going on in the country districts and that business has been very good indeed with his company. He spoke optimistically of the outlook for the future especially in the country districts of Quebec.

OTTAWA PLUMBERS' UNION REFUSES WAGE REDUCTION

Ottawa.—The offer of 75 cents per hour, five cents per hour under last year's schedule, which was put forward by the master plumbers, was rejected in short order by the representatives of the plumbers' and steamfitters' union Last year the men received 80 cents per hour and this year have been offered 75 cents per hour, for the wage agreement of 1922-23. Beyond declining the offer of the masters the men did not state what their intentions were. A further meeting between the employers and the men will be held next week.

BETTER OUTLOOK FOR ENAMELWARE

In his review of operating conditions, President L. M. Wood, Port Hope Sanitary Mfg., Co., says, "As predicted in our last report there was a fair amount of building during the year, while prices of builders' materials declined to a level which with the easing of financial conditions generally, should permit of increased activity. The outlook for 1922 is encouraging, and promises a better demand for enamelware. While the volume of business may not increase very much as to value, our factories should produce a greater tonnage, the effect of which will be a lower production cost, which should in turn offset the last reduction in prices."

Announce Death of Sir John C. Eaton, Pres. T. Eaton Co.

THE death is announced of Sir John Craig Eaton, president of the T. Eaton Co. Ltd., Toronto and Winnipeg, the largest departmental store in Canada and one of the largest on this continent. Sir John Eaton has frequently been referred to as the "greatest merchant" in the Dominion and his death will be felt keenly among various branches of the business life of this country. Under his direction the T. Eaton Co., has continued to grow on the basic principles established over half a century ago by his father, the late Timothy Eaton, who died only fifteen years ago.

SIR JOHN C. EATON
President of T. Eaton Co., Ltd., Toronto, and Winnipeg, whose death is announced.

Sir John Eaton was but forty-six years of age, and passed away while actively engaged in directing the business affairs of the firm of which he was the head. Death resulted from influenza and came somewhat unexpectedly after a period of several days recovery from an earlier attack of this malady. He leaves a widow and five children the eldest a boy of nineteen years. Also surviving are his mother, Mrs. Timothy Eaton, and a brother, Major W. F. Eaton and two sisters.

A Liberal in politics, Sir John Eaton refrained from taking an active interest in party affairs though he was one of the eighteen prominent business men of Toronto who seceded from the Liberal ranks in opposition to the reciprocity pact of 1911. He was always a strong supporter of Canadian industry. Of necessity his store was a large importer of foreign goods, but wherever possible the Canadian product was given first attention. He was created a Knight Bachelor on June 3, 1915.

The T. Eaton Co., has always been in the forefront in introducing and following up business reforms, particularly in regard to the retail distribution of merchandise, and has been a leader in such movements as those for shorter hours for employees, half holidays, etc., and among business interests it is recognized that both Sir John Eaton and his father who founded the firm have always granted the utmost concessions to employees in the interests of a higher standard of living. Throughout all branches of the manufacturing and distributing enterprises of this company, these reforms have been carried.

The benefactions of Sir John Eaton have also been widespread and generous. He has made large grants to various charitable institutions and provided a helping hand frequently when required by various organizations and individuals. His assistance to employees particularly during the war was particularly appreciated by his staff, and his assistance in forming special fighting units and in other ways was an important factor in war times.

At the time of his death Sir John was in addition to his position at the head of the T. Eaton enterprises, a director of the Dominon Bank, Canadian Pacific Railway, Honorary Director of the Canadian National Exhibition, etc. His untimely death will be keenly felt by both business and social interests with which he was in contact.

PETERBORO FILTRATION PLANT

(Continued from page 20)

this purpose are situated at the reservoir dam. Here are installed two reciprocating pumps with a capacity of 2,500,000 gallons each per day, one reciprocating pump with a capacity of 3,000,000 gallons. These pumps are operated by waterdriven turbines which in turn are driven by the water held back by the reservoir dam so that their operation costs the city practically nothing.

CONVENTION ONTARIO SOCIETY D. S. & H. E.

The Eleventh Annual Convention of the Ontario Society of Sanitary and Heating Engineers will be held in Hamilton on April 6th, 7th, and 8th.

The Hamilton Society of Sanitary and Heating Engineers will entertain at a banquet on Friday evening April 7th. Invitations will be forwarded as follows: To members of the Ontario Society of Sanitary and Heating Engineers, members of the Hamilton Society of Sanitary and Heating Engineers, Unaffiliated Sanitary and Heating Engineers of Hamilton and District, and to the Ontario Manufacturers and Wholesalers. The convention and banquet will be held at the Royal Connaught Hotel.

QUEBEC TO INSPECT HEATING PLANTS

Montreal.—That action towards making effective the various provisions of the Provincial Act respecting "the protection of public buildings against fire," is about to be taken, was announced by Louis Guyon, Deputy Minister of Public Works and Labor. Within a fortnight, said Mr. Guyon, the establishment would function for the twofold purpose of examining electrical workers and of conducting inspection of electrical installations and heating systems in all public buildings.

The law on this subject was adopted by the Legislature in 1909, and amended at the last session of the Legislature. The purpose is to provide for the inspection of all buildings to which the public are admitted, including office buildings, schools and churches. By the amendments adopted at the last session it was provided that after May 1, 1921, every new installation either for light, heat or motive power, as well as the heating system in public buildings, must be submitted for the approval of the chief inspector of industrial establishments and public buildings, and to the examiners appointed for that purpose. When an installation is approved a certificate will be given and must be posted in the building. The act further provides that installations placed in buildings previous to the coming in force of the law may be inspected, and if found defective must be altered in accordance with the views of the chief inspector.

WESTERN ONTARIO NEWS

Alex. Milne, London, Ont. has been awarded plumbing and heating for new $4,000 residence for J. M. Totten.

Andrew Lang, Dunkeld, Ont., wants prices on hot air heating and plumbing for new $4,000 residence.

F. L. Willgoose, 546 Dundas St., wants prices on hot air heating, plumbing and electrical work for new $5,000 residence.

F. Dark, R. R. 7, London, Ont., wants prices on hot air heating, plumbing and electrical work for new $5,000 residence.

Percy Ashton, Dominion Savings Building, London, Ont., wants prices on hot air heating, plumbing and electrical work for new $4,500 residence.

Mechanics Supply Co. Erect New Warehouse

The contemplated erection of another four or five storey warehouse, marks another important step forward in the progress of the Mechanics Supply Co. Ltd., Quebec City, hardware and plumbing supply firm. The history of this company during the past fourty-four years under the capable guidance of W. H. Wiggs, has many romantic sidelights and provides an important link in the history of plumbing trade in Canada.

Two years ago a large piece of property was purchased on St. Andrew St., Quebec, and the time has now arrived when a fine new warehouse will be erected on those premises to supplement present facilities.

It was in 1878, forty-four years ago, that W. H. Wiggs as a young man of seventeen years entered business in Quebec and after eleven years apprenticeship he had an opportunity of forming a company of his own. Some of the first members of the staff who are still with the firm often look back to those early days when modern plumbing and heating were in their infancy. Among these may be mentioned G. H. Simpson now vice-president, W. R. Wilkinson, secretary, Messrs. A. Matte and A. Morisset, two directors, and O. Carrier, the firm's oldest storeman.

The new warehouse will be erected on St. Andrew Street and will give ample accommodation for future local requirements.

W. H. WIGGS

President Mechanics Supply Co. Ltd., of Quebec City, whose forty-four years of business in the plumbing and hardware trade is now capped with further progress in the form of enlarged warehouse facilities.

E. Bourne, 510 Hamilton Road, London, Ont., wants prices on hot air heating, plumbing and electrical work in connection with five dwellings to cost $15,000.

Plans for an $18,000 school are being prepared by Archt. W. G. Murray, Dominion Savings Bldg., London, at Mount Elgin, Ont. Hot air heating, plumbing Frank Harris, secretary. Prices wanted.

COLLECTION OF INTEREST

(Continued from page 22)

liability to pay interest until the final settlement of the account, when they evidently intended to raise the question of their liability to pay interest.

Implied Understanding

In the result the judge held that the court of dealings between the parties, coupled with the printed notification on the plaintiff's statement of account, sufficiently evidenced an implied understanding or agreement to pay interest, to bring the case within the general principle that an agreement to pay interest may be reasonably implied from the previous dealings of the parties, coupled with a printed notification of intention to charge interest on the vendor's statement of account.

In Hart vs. Greer, 33 W.L.R., p. 39, the plaintiff had printed on his account, "interest at 10 per cent. per annum chargeable after thirty days," and the evidence showed that on several occasions subsequent to the expiration of thirty days, the plaintiff called the defendant's attention to the printed notice on the statement, and notified him that interest was being charged.

The district court judge considered the case of Marshall vs. Eaton & Gordon, mentioned above, and decided that while, as stated by the judge in that case, the printed words taken alone do not constitute a written demand under the Act, they do limit the period of credit or render the account payable within the time therein specified, so as to bring the case within the first part of subsection 2, s. 29, of the King's Bench Act above referred to, and that where the attention of the debtor is called to the notice and he is notified that interest is being charged, it constitutes a demand in writing informing the debtor as is required by the said subsection.

To sum up, therefore, it would account to the effect that interest as appears from the cases above quoted that if a notification is printed on the notice a specified rate will be charged after a certain period the debtor will be liable to pay interest by virtue of that notification, if (1) he has been in the habit for a period of time of making payments from time to time on accounts bearing the notification and including interest, so that an agreement to pay interest could be inferred from the course of dealings between the parties; or (2) if, after the expiration of the credit period intimated on the account, a demand is made for payment from the debtor and interest is demanded pursuant to the notification printed on the account.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

MARKETS AT A GLANCE

CURRENT price developments on sanitary and on tin plates, brass compression bath cocks, heating materials include lower quotations wrought nipples, and galvanized sheets. Easier price levels are also recorded on some lines of plumbers' nickel-plated bath and basin fixtures, such as supply pipe and traps, while asbestos wick packing shows a similar reduction. Charcoal tin plate, coke tin and terne plates show varying reductions on the different cases. The lower quotations are evident through revised discounts on wrought nipples in all sizes and lengths, but no similar change is reflected in couplings or wrought piping.

Some improvement in the seasonal movement of plumbing and steam-fitting materials is recently noted, with brisk building activity being reflected in the future demand for such products as enamelled ware, radiators, eavestrough and piping. Some further developments are looked for in certain quarters as regards brass compression discounts.

It is noticeable that there has developed a firmer trend in the sheet markets, together with a slightly improved buying activity in bar iron and steel products. Recent reports covering the steel industry indicate that prices are stiffening, but while there have been no actual advances recorded, signs that this condition is liable to merge into future increases may easily develop. Trade in range boilers remains of a moderate nature, but there is recently a more active movement in eavestrough. Cautious buying continues the rule in corrugated, with a slight increase reported in inquiry for certain brass and copper products. Activity in electric ranges is noticeable, with oil stoves for the summer season also registering a satisfactory movement. The easy undertone is still evident in scrap materials, while irregularity remains the principal element in ingot metal centres.

MONTREAL MARKETS

MONTREAL, March 31.—Price recessions in the sheet markets, compression goods and wrought nipples feature the markets for plumbers' and steam-fitters' supplies. Tin plate in full boxes is reduced 50 cents per box, and 56 sheet boxes 25 cents. Terne plate is $1.00 per box lower, and is now quoted at $15.00. Discounts on close and short nipples are increased ten points, while long are affected to the extent of five points. In compression goods, bath cocks show a price decline of approximately five per cent. through increasing the discount, and nickel-plated supply pipes and traps are slightly reduced. Asbestos wick packing is reduced and is now quoted at 65 cents per lb.

There is a general improvement felt throughout the trade, and sales in many commodities have shown a favorable increase during the past two weeks. Further increased building construction is promised at a later date, and a corresponding movement of such lines as enamelled ware, boilers and radiators, range boilers, and compression goods, is anticipated in the near future.

LOWER PRICES ON ASBESTOS WICK PACKING

Montreal

A reduction is made in the quotations on asbestos wick packing and this is now quoted at 65 cents per lb.

WROUGHT NIPPLE PRICES ARE REDUCED

Montreal

Lower prices are now quoted on all sizes and lengths of nipples, owing to a revision in discounts. Close and short nipples, all sizes, show a change of ten points in their discounts, while long nipples, in all diameters, are revised to the extent of five points. It will be remembered that nipples were not reduced at time of issuing last wrought pipe list, and present revision is made without a change in pipe. Couplings also, remain unchanged. The sale of fittings is still described as fair, mostly confined to small sorting orders. Following are present quotations:

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30
Flange unions	30
Malleable unions	47
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	60
Do., long	65
Do., 4½ to 8" close and short	50
Do., long	55
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods —	Blk.	Galv.
Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

REDUCTION IN BATH COCKS AND PLATED SUPPLIES

Montreal

Through increasing the discount on compression bath cocks three points, a reduction of approximately five per cent. is recorded. Other lines showing a slight revision are nickel-plated supply pipe and traps. The remaining lines are unchanged for the present, but a further reduction on certain supplies would not be surprising in the near future. The nature of this revision and the specified lines it would affect could not be ascertained at present, but a move is said to be on foot to make other changes. There is now a fair amount of business reported, which will in all probability be increased in the near future with the approach of a more active building program. Following are present discounts:

COMPRESSION GOODS—	
Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	43%
Bath cocks, compression	38%
Bath cocks, quick opening	41%
Basin cocks, compression	34%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, st'nd'rd	46%
Brass steam cocks, standard	43%
Radiator valves, standard	58%
Do., removable discs	58%
Globe, angle and check valves, standard	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing check	19%
Jenkins gate or straightway	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	33%
N.P. "P" and "S" traps	40%

FURTHER REDUCTIONS IN SHEET MARKETS

Montreal

Local sheet markets are again featured with price recessions, American galvanized sheets being reduced in quarters where quotations were formerly higher than those given by other firms. Tin plate in full boxes shows a price decline of 50 cents per box, and 56 sheet boxes 25 cents. Terne plate is $1.00 per box lower, and is now quoted at $15.00.

Although the local market in recent weeks has recorded easier price levels on practically all lines, there is said to be a much healthier condition at sources of supply. The recent changes locally are, for the most part, the result of distributors attempting to reach the lowest possible levels in order to allow Spring shipments for the more active period in the following months. It is now generally believed that such has been reached, and the opinion has been expressed that higher prices are altogether probable in the not far distant future. Business is more active from week to week, particularly in galvanized sheets. Following are revised quotations:

BLACK SHEETS—		
10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05
26-gauge	4 60	5 20
22-24 gauge	4 65	5 25
28 gauge	4 75	5 35
GALVANIZED SHEETS—		
10¾ ounce	6 65	7 10
28 gauge	6 25	6 70
26 gauge	5 95	6 35
22-24 gauge	5 80	6 10
20 gauge	5 65	5 95
18 gauge	5 65	5 85
16 gauge	5 50	5 80
14 gauge	5 35	5 75
12 gauge	5 20	5 75
10 gauge	5 10	5 75
	Queen's Head.	Fleur-de-lis
English Standard—		
28 gauge	7 00	6 75
26 gauge	6 75	6 50
24 gauge	6 15	6 10
22 gauge	5 80	5 65
18-20 gauge	5 10	5 50

NOTE—These prices are for full bundles: an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

CANADA PLATES—	
Dull.	
18 x 24 x 52s	5 60
18 x 24 x 60s	5 80
18 x 24 x 75s	6 10

20 x 28 IX., 112s	18 00
20 x 28 IXX, 56s	10 25
20 x 28 IXXX, 56s	11 00
TERNE PLATES—	
20 x 28 IC, 112s	15 00

VIRGIN METALS STEADY LEAD PRODUCT SITUATION

Montreal.

The downward revision in solder quotations three weeks ago marked the last price development in lead products. The market generally is now fairly steady owing to metals on primary markets continuing with quotations practically unchanged. Trade in these products shows a slight improvement in recent weeks, but with the winter months now over, a further improvement is looked for especially in such lines as lead pipe, traps and bends, and other plumbers' supplies. These lines being in demand for building activities. Following are unchanged quotations:

Lead pipe, per 100 lbs.	12 50
Lead waste, per 100 lbs.	13 50
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	10% off
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10½
Lead sheets, 3 to 3½ lbs., sq.	
Do., 4 to 8 lbs., sq. ft.	0 09½
ft., lb.	0 10¼
Cut sheets ¼c lb. extra and cut sheets to size, ¾c lb. extra.	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.	0 21½
Do., wire, lb.	0 33½
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

COPPER PRODUCTS ARE SOMEWHAT STEADIER

Montreal.

There is little or no change in the market for brass and copper products, and quotations remain at recently revised levels. The virgin metal in recent weeks has become more settled, and while failing to show much activity is apparently at the end of the downward movement for the present at least. Unchanged prices are the following:

	Base
BRASS—	
Sheets	0 24
Rods, ½ to 1 inch, round	0 22
Tubing, seamless	0 30
COPPER—	
Rods, ½ to 2 inch	0 29
Soft sheets, plain, 16 oz. and heavier lb.	0 32
Plain tinned, 16 oz. and heavier, lb.	0 36
Polished and tinned, 16 oz. and heavier, lb.	0 41
Tubbing, lb.	0 32

Above prices are for full sheets or bars. Cuts 5c. per lb. higher.

IRON AND STEEL MARKET IS NOW FIRMER

Montreal.

Current demand for iron and steel continues to improve, and while the progress may be slower than was hoped for earlier in the year, the trend is described as being healthy. The absence of any great movement in larger building construction is felt, but even here, it is stated as not too late for an improvement at a little later date. Mill operations are still increasing, and there is every indication of a general betterment at primary sources. Quotations locally are unchanged, but generally considered firm. Unchanged quotations are the following:

IRON & STEEL—	
Common bar iron, 100 lbs.	2 65
Refined iron	4 15
Iron finished machinery steel	2 70
Mild steel	2 65
Single reeled machinery steel	4 75
Band steel	2 65
Spring steel	4 25
Sleighshoe steel	2 65
Tire steel	2 85
Toe calk steel	3 55
Harrow tooth steel	2 80
Mining tooth steel, per lb.	0 21½
Black Diamond tool and cast steel	0 21½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

BUSINESS IS QUIET IN SCRAP METALS

Montreal.

The waste material markets are unchanged, prices now remaining fairly steady, with buying continuing of a hand-to-mouth nature. Scrap iron, according to dealers, should soon commence to show an improvement, as the steel industry, on a whole, is improving and is now on a better basis than it has been during past months. While it may take some time for this to reflect in scrap markets, encouragement is lent by the move evident in this direction. There is very little business in non-ferrous metals, these having been very quiet for some months past. Following are average dealers' quotations:

SCRAP—	
Automobile Tires	0 50
Rubber Shoes	0 03
Yellow brass	0 05
Red brass	0 08¼
Light brass	0 03
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 08
Heavy copper	0 10
Wrought iron, R. Rd., No. 1 per gr. ton	10 00
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 55
Heavy melting steel	6 50 to 7 00
No. 2 busheling	3 00
Boiler plate	6 50
No. 1 machinery cast	20 00

PRACTICALLY NO CHANGE IN RANGE BOILERS

Montreal.

The range boiler situation locally shows little change, sales continuing of a moderate nature, and quotations more or less unsettled. List prices and discounts are quoted by most firms, but others are still maintaining former net prices. Current business is expected to improve in the near future, the opening of the present month usually bringing the commencement of a more active period in lines pertaining to the building industry. The tone of the boiler market is also little changed, and although present quotations are recognized as low, with galvanized sheets showing first signs of improvement and a possibility of increased prices, there is said to be no immediate signs of a revision in the finished products. List prices and discounts are the following:

RANGE BOILERS:—	
5 Gallon	$13.50
12 "	14.00
18 "	15.00
25 "	16.00
30 "	17.50
35 "	20.50
40 "	22.75
52 "	38.00
66 "	60.75
82 "	74.00
100 "	103.00
120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00

Discounts. Standard weight, 50 per cent. Extra Heavy, 40 per cent.

EXPECT BRISKER TRADE IN SOIL PIPE

Montreal.

With the gradual approach of a more active building program, dealers in soil pipe and fittings anticipate a better buying movement to commence in the not far distant future. Up to the present, sales of these lines have been seasonably quiet, but not unusually so for the earlier months of the year. Quotations remain at former discounts, and while there is said to be a possibility of a slight revision in an upward direction with the opening of a better buying movement, there is no indication of a change in either direction at the present time. It is generally recognized that prevailing levels are well down to bottom, and where quoted owing

to competition from outside fields, but it is felt that a stronger factor than a business revival will be necessary to increase quotations. Following are unchanged prices:

SOIL PIPE—
2 and 3 inch 47½%
4 inch 50%
5 and 6 inch 47½%
Fittings—
2 to 6 inch 50-10%

BOILER TUBE BUSINESS IMPROVES SLIGHTLY

Montreal.

A somewhat better buying movement is now reported in boiler tubes and it is felt that an inceased volume of trade will continue in view of the quiet period in past months. Prices are remaining steady and better sales will undoubtedly assist towards maintaining present levels, although these quotations are considered rather high in comparison with allied products in the iron and steel industry.

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	26 00	26 00
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

ENAMELLED WARE SHOWS SIGNS OF IMPROVEMENT

Montreal.

The local market for enamelled ware can now be described as somewhat improved over the past quiet months. From a sales point of view, activity is more pronounced from week to week. Although, according to a large distributor of these lines, there is room for great improvement, it is generally felt that trade will reach a satisfactory volume as the season advances. The building program for this year is encouraging, and although principally of the dwelling-house type, it is this class that requires the various lines of enamelled ware. Quotations are nominally unchanged at 33 1-3 off, with a further small discount offered for attractive sized inquiries. Following are list prices and discount:

	1 only	2 only	3 only
Sinks, roll rim—			
18 x 30			$23 00
Sinks, flat rim—			
16 x 24	$ 7 60	$ 7 40	$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet			57 10
Lavatories—			
17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim, F241 or P4345			12 60

Less 33 1-3 per cent.

CLOSET OUTFITS STILL NOMINALLY QUOTED

Montreal

Current quotations on closet outfits are unchanged, although it is generally admitted that prices are very nominal, and price concessions are given for fair sized orders. This condition has prevailed on the local market for some time, and while the situation is still little improved, it is certainly no worse than in past months, and dealers are hopeful that increased business at a little later date will remedy this to a great extent. As in other lines of enamelled ware, closet combinations are selling somewhat better in recent weeks, with the outlook promising for further improvement owing to increased building construction. Following are unchanged nominal prices:

CLOSET OUTFITS—	
Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china or enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	12 75
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	11 50
Do., siphon jet bowl, less spud	19 00
Do., Richelieu bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china, or enameled iron tank, with fittings, flush elbow and supplies less seat	18 50
Do., Vitreous China	20 00

RADIATORS AND BOILERS AT UNCHANGED DISCOUNTS

Montreal.

Quotations on radiators and boilers remain at former discounts with trade described as seasonably quiet at present. Although there is considerable building construction under way, and quite an extensive program for a little later date, this has not yet advanced to the stage when heating systems are required. Indications, however, point to a satisfactory season in the months following, and dealers are quite optimistic. Unchanged quotations are the following:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60. Discount, 59% for hot water and 60% for steam.

Wall Radiators—5 ft., $1.15; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 64 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 20 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in. 20 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 20 per cent. Ontario Govt. trimmings, 10 per cent.

Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings, 25 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

VERY LITTLE CHANGE IN COTTON WASTE MARKET

Montreal.

Conditions in the cotton waste market are practically unchanged, quotations said to be much steadier than in the opening months of the year owing to the raw material being on a more stable basis. Fluctuations have occurred recently, but not of sufficient extent to reflect on waste and other finished products. Demand is described as improving and dealers anticipate a fairly active movement in the following months. Unchanged quotations are the following:

COTTON WASTE—Cream polishing, 18c. per lb. White—XXX extra, 16c.; XX grand, 15c., XLCR, 14c.; X Empire, 13c.; X press, 11½c.
Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.
Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.
Dominion Wipers—White cotton, 20c; colored cotton, 14c.

EAVESTROUGH AND CONDUCTOR PIPE STEADILY IMPROVES

Montreal

Current trade in eavestrough and conductor pipe has now reached favorable proportions for this season of the year, dealers stating that sales have steadily improved during the past few weeks, with indications of a fair season ahead. Quotations on these lines, also sundries, are continuing unchanged, with the improvement in flat sheet circles tending to firm the situation to an extent. There is, however, no indication of a change in the near future, and manufacturers and distributors are of the opinion that prices will remain quite steady throughout the active season in the weeks to follow. List prices and discounts are as follows:

EAVESTROUGH—
O.G. Round and Half-round, per 100 ft., 8 in., $16.90; 10 in., $18.70; 12 in., $22.20; 15 in., $29.80; 18 in., $37.80.
O.G. Square bead, per 100 ft.: 8 in., $15.90; 10 in., $17.70; 12 in., $21.20; 15 in., $28.80; 6 in., $36.80.
Discount 70|10 per cent.
Conductor Pipe, Round, Plain and Corrugated, per 100 ft.: 2 in., $18.40; 3 in., $23.30; 4 in., $29.60; 5 in., $40.00; 6 in., $49.00.
Discount 70|10 per cent.

CONDUCTOR ELBOWS—
Plain or corrugated, price per doz.
2 in., $5.25; 3 in., $6.00; 4 in., $10.50; 5 in., $24.00; 6 in., $29.00.
Discount 60 per cent.

CORRUGATED SHEETS ALSO MORE ACTIVE

Montreal.

The improvement recorded in flat galvanized sheets is also noted in corrugated. For some weeks past the movement of these sheets has improved, and although gradual, it is said to be of a healthy nature and indicates that further increased business will be forthcoming as the season advances. Building of the smaller class is now demanding supplies, and practically all sections are benefiting by this movement. Quotations are unchanged at the following list prices and discounts.

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

INGOT METALS CONTINUE TO MARK TIME

Montreal.

Changes in the ingot metal markets are very slight, and there are no special features to report. In most cases prices are more or less marking time around the bottom, but when the upward trend

will commence is difficult to state. Buyers are still working on a hand-to-mouth basis, and will doubtless do so until there are clearer indications of an advance.

TIN.—This metal continues to range around £143 mark in London, and has now been close to this figure for some time. Consumption is expected to improve from now on, and the position of this metal should benefit thereby. The local market remains quiet at 34 cents.

COPPER.—Fluctuations in London are slight and caused chiefly by the movement in exchange. New York is quiet, and it is possible to buy electro at about 12⅞ delivery for prompt shipment. There is little demand for ingot copper locally, and quotations remain at 16¾ cts. for electro, 16½ for casting.

SPELTER.—East St. Louis is slightly lower at $4.62½ for spot. London is steady and there is no sign of weakness there. Locally spelter is unchanged at 7 cents.

LEAD.—Lead is fairly firm in all markets, and demand is good. Prospects for this metal seem somewhat better at present. Locally, quotation is unchanged at 6¾ cents.

ANTIMONY.—Domestic demand for this metal remains at low ebb, and the market is practically unchanged. Stocks are still quite heavy, and with this condition prevailing, there seems little chance of an early improvement. Chinese is quoted at 6¾ cts., high grade English at 7¾ cts.

ALUMINUM.—Aluminum continues dull on the market, and the situation of this metal is unchanged with quotation remaining at 24 cents.

TORONTO MARKETS

TORONTO, March 31.—Charcoal tin, coke tin and terne plates, together with brass compression bath cocks, and wrought nipples, supply the principal price revisions on the current sanitary and heating markets. Tin plate quotations record varying reductions on the different cases. Through revised discounts, lower price levels are evident on nipples in all sizes and lengths, but no similar change is reflected in couplings or wrought piping. The lower quotation on compression bath cocks is included among reductions on some lines of plumbers' nickel-plated bath and basin fixtures, such as supply pipe and traps.

The asbestos market is still in a quiet condition, but an active season is generally looked for in enamelled ware products. A firmer trend has developed in the sheet markets, with slightly improved buying activity in bar iron and steel products. There is moderate trade in range boilers, but a more active movement in eavestrough is noted. Cautious buying of corrugated sheets prevails, with better inquiry for certain brass and copper products reported. There is generally an active demand for electric ranges, with oil stoves for the summer season also registering fair activity. The easy undertone is still evident in scrap materials, while irregularity remains the principal element in ingot metals.

VARYING REDUCTION IN TIN PLATE PRICES

Toronto.

In support of the tendency to shade prices on tin plate for attractive orders, which was recently noted in Sanitary Engineer, a revision has now been announced in prices on these products. These changes affect coke tin plates, charcoal tin, and terne plates. The average decline is between fifty cents and one dollar per case. Following are the revised quotations on the domestic markets:

	Per box
PLATES, CANADA—	
Dull, 60 sheets	5 30
Ordinary, 52 sheets	5 25
PLATES, COKE TIN—	
IC, 20 x 28, 112 sheets	12 50
IX, 20 x 28, 112 sheets	16 00
IX, 20 x 28, 56 sheets	8 50
PLATES, CHARCOAL TIN—	
IX, 20 x 28, 112 sheets	10 00
IXX, 20 x 28, 56 sheets	12 00
PLATES, TERNE—	
10 x 14 x 20, 112 sheets	11 50

ACTIVE DEMAND NOTED FOR ELECTRIC RANGES

Toronto

Current business in stoves and ranges is described as fair by manufacturers of these products. The chief degree of activity is evident in electric ranges, for which it is stated there is a fairly brisk demand. On the other hand, the coal and wood stoves are now entering the dull season. Oil stove manufacturers and distributors report recent improvement, and generally look for a good trade to develop throughout the ensuing months.

REVISED DISCOUNT ON COMPRESSION COCKS

Toronto.

A downward revision of approximately five per cent. has been made in quotations on some lines of plumbers nickel-plated bath and basin supplies. Supply pipe and nickel-plated traps record a similar reduction. The discount on compression bath cocks has also been changed from 35 to 38 per cent. off list. Other lines of compression goods show little variation, current business being of a fairly moderate nature, with quotations generally being maintained at the recent revisions. Following are prevailing discounts on these various products:

	Per cent.
VALVES—	
Compression work, standard	45
Fuller work, standard	30
Bath cocks, compression	38
Do., Fuller	25
Flatway stop and wastecocks, stand'd	54
Roundway stop and waste cocks, std	46
Brass steam cocks, standard	43
Globe, angle and check valves, std	25
Mueller globe, angle and check	25
Mueller composition disc steam valves	33
J. M. T. valves, screwed	20 10
J. M. T. gate valves, screwed	25 10
J. M. T. gate valves, screwed	25 10
Jenkins gate or straightway, screwed	25 10
Jenkins globe, screwed	19 10
Radiator valves, standard	58
Do., removable disc	58
Emco. J. D., rad. valves, screwed	33
Emco swing check, ⅜" and ½"	40
Do., Do., other sizes	33
Webber gate valves, screwed	30
Emco globe valves, std.	25
Emco globe valves, J.D., screwed	33
Basin cocks—	
No. 0 and 1 Fuller pattern	30
Quick opening No. 3633	50
No. 3623, plain or index handle	34

REVISED DISCOUNTS ON WROUGHT NIPPLES

Toronto

Lower quotations on wrought iron nipples, through revising the discounts, feature the current pipe fittings market. These products were not changed when the last revision was made on pipe, and the present change is not reflected in quotations on piping. Nipples, close and short, four inches and under, are now given a discount of 60 per cent. Varying reductions are needed on the other sizes and lengths. Couplings remain unchanged in price.

Sorting orders continue to form the greater portion of present trade in pipe fittings, with dealers apparently still willing to care for immediate requirements only. Quotations on the various lines, including the revised discounts on nipples, are as follows:

	Per cent.	
PIPE FITTINGS—		
Cast iron fittings	30	
Plugs, cast iron	30	
Oo., solid	30	
Do., countersink	30	
Bushings, malle.	32	
Do., cast	32	
Unions, ¼ in. to 2 in.	47	
Do., 8 in., 2¼ to 4 in.	47	
Flanged unions, std.	30	
Flanged fittings	30	
Dart unions, blk., ¼ to 2 in.	33½	
Do., ⅛ in., 2¼ to 4 in.	23

Class B	0 20	0 28
Class C	0 13	0 20

UNCHANGED DISCOUNTS ON SOIL PIPE AND FITTINGS

Toronto

With the current quotations unchanged on soil pipe and fittings, general interest in this market is attracted to the volume of business now reported, together with the prospects for future improved activity. While some variation in discounts is still noted between local and eastern markets, yet the Montreal freight rates are described as tending to prevent eastern houses from encroaching upon western territory to the detriment of local manufacturers and

distributors. With the advent of more staple conditions in these markets, due to improved demand during the ensuing spring and summer periods, uniform quotations are looked for in the near future. Following are the local unchanged discounts:

SOIL PIPE—

2 inch	40 per cent.
3 inch	40 per cent.
4 inch	40-5 per cent.
5 and 6 inch	40 per cent.
8 inch	net

FITTINGS—

2 to 6 inch	50|5 per cent.
8 inch	net

PROGRESS IN BUILDING REFLECTED BY CALL FOR CLOSET OUTFITS

Toronto

Trade in closet combinations and fixtures during the month of March is described by manufacturers and distributors of these products as moderate. An improvement in this respect is generally looked for during the ensuing months, with more seasonable weather contributing towards activity in building circles, which in turn is reflected in the current demand for closet outfits. Following are the average unchanged price levels on the local market:

	each
CLOSET COMBINATIONS, low down	
Closet, standard outfit, oak	27 75
Do., with post hinge seat	28 40
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	30 25
Do., vitreous china, with oak post hinge seat and cover	30 75
Do., vitreous china, with mahogany post hinge seat and cover	31 00
Do., white Vitro or Pussyfoot, with maoak post hinge seat and cover	30 75
Do., white Vitro or Pussyfot. with mahogany post hinge, seat and cover	31 00
Do., enamelled iron tank with oak post hinge seat and cover	30 75
Do., enamelled iron tank with mahogany post hinge seat and cover	31 00
Additions or reductions to above	
Add for reverse trap bowl	1 25
Add for syphon jet bowl	7 00
For ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 80
CLOSET BOWLS—	
Washdown bowl, less spud	10 00
Reversible trap bowl, less spud	11 25
Syphon jet bowl, less spud	17 00
"Richelieu" bowl	10 50
CLOSET TANKS, low down	
Oak, Vitro or Pussyfoot tank with fittings, less seat	18 10
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 25
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	18 00
CLOSET SEATS—	
Oak wood strip seat and cover	3 25
Oak post hinge seat and cover	4 00
Mahogany finish post hinge seat and cover	4 25

LOWER QUOTATIONS ON SHEETS AND PLATES

Toronto

An improved interest in sheets from manufacturing consumers is recently manifest, according to distributors, while the undertone to the market generally is described as improving. There has also been more life to recent inquiries, although business is still a little spasmodic in certain quarters. Prices have receded approximately twenty-five cents per 100 lbs. all through the list, this change being attributed to concessions for the more attractive orders tending to result in a lower market level. This downward revision is applicable on galvanized, black and blue annealed. Following are the new prices on sheets:

BLUE ANNEALED—		
10 gauge, base	3 50	4 25
12 gauge	3 55	4 30
14 gauge	3 60	4 35
16 gauge	3 65	4 40
BLACK—		
18-20 gauge	4 05	4 80
22-24 gauge	4 10	4 85
26 gauge	4 15	4 90
28 gauge	4 25	5 00

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—	Queen's Head.	Fleur-de-lis.
28 gauge	7 75	7 25
26 gauge	7 50	7 00
24 gauge	7 10	6 60
22 gauge	6 65	6 15
18 and 20 gauge	6 50	6 00
Premier and Apollo—		
10¾ oz.	5 75	6 50
U. S. 28, base	5 35	6 10
U. S. 26	5 05	5 80
22 and 24	4 90	5 65
18 and 20	4 75	5 50
16	4 60	5 35
12 and 14	4 45	5 20

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing sheets.

EXPECT ACTIVE SEASON FOR ENAMELLED WARE

Toronto.

The call for enamelled ware is described as just fair for this season of the year. While brisk activity has been noted in building circles, the lack of seasonable weather has hindered progress in this direction to some extent. With a large majority of construction consisting chiefly of dwellings and smaller erections, a fairly active season is generally anticipated for enamelled ware products. Following are unchanged quotations:

Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F154 or P3845 or P3847	23 60
18x21" Apron F169 or P4205	17 60
18 x 21" Roll Rim, F197, F199 or P4655-6	15 40
17 x 19" Roll Rim, F241 or P4345	12 60
Sinks, Roll Rim, 16x24 in.	18 10
Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70

Sinks, Flat Rim—	3 only	2 only	1 only
16 x 24	$7 60	$7 70	$7 80
18 x 30	8 50	8 60	8 70
20 x 30	9 70	9 80	9 90

Above prices list, less 33 1-3 per cent.

All steel enamel baths, 4 and 4½ ft.	$14 00
Do., 5 ft.	15 00
Do., 5½ ft.	16 75

These quotations are net.

MODERATE TRADE NOW IN RANGE BOILERS

Toronto.

The current situation in range boilers is described as fairly good compared with the demand experienced at this time last season. While the total volume is still of moderate proportions, manufacturers and distributors both look for improvement in these markets, as soon as seasonable weather is evident. Stocks on hand are described as comparatively light in most cases, and purchases on the part of dealers and consumers continue to be for immediate requirements only. Following is the nominal list and discounts:

RANGE BOILERS

Size.	List Price.
5-gallon	$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 50 per cent.
Extra heavy, 40 per cent.

BRIGHT FUTURE IN RADIATOR MARKETS

Toronto.

Compared with this season in 1921, current business in radiators is described as good. While the volume of trade is yet moderate, the future looks exceptionally bright, according to the opinion expressed to Sanitary Engineer by manufacturers and distributors of these products. This brighter outlook is based upon the fact that building activity is in sight this year, whereas construction work was more or less of restricted nature during the previous season. Quotations on both radiators and boilers remain unchanged at the discount levels quoted in January. These are as follows:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

ASBESTOS MARKET STILL IN QUIET CONDITION

Toronto

The asbestos market is still described as being in a soft condition, but manufacturers and distributors naturally expect a fair degree of improvement in the near future. The business outlook is generally brighter, and prices are remaining unchanged at the recent lower levels, which are as follows:

ASBESTOS—

Pipe Covering—

Air cell, 4 ply	55 per cent. off list.
Air cell, 3 ply	60 per cent off list.
Air cell 2 ply	65% off standard list.
Boiler Covering	$1.90 per bag.
Asbestos Sheathing	$8.00 per 100 lbs.

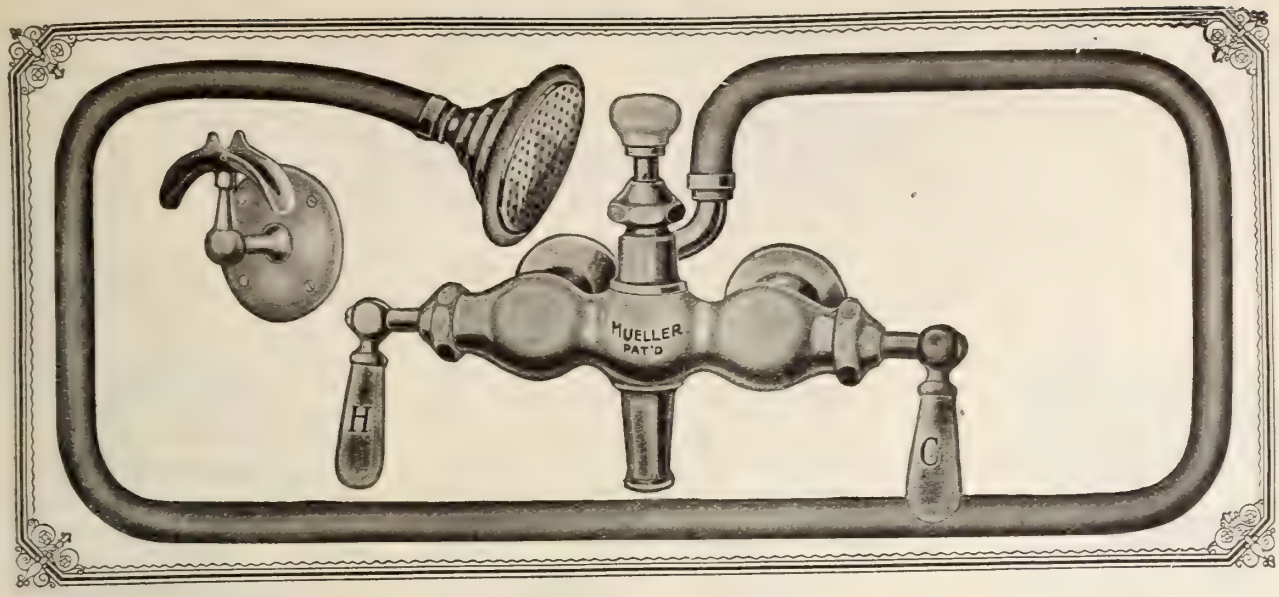
F.o.b. Toronto.

BAR PRODUCT PRICES MAY SOON STIFFEN

Toronto

It is stated that prices on bar iron and steel have now reached relatively lower prices than any of the other semi-finished steel products. The consensus of opinion points towards the possibility

Continued on page 48



The A-2395 Mueller Tub Faucet bearing a price to consumers of $15.25 will be advertised in April 8th issue of Saturday Evening Post, reaching about 200,000 Canadian readers. This price does not include installation.

Canadian Plumbers' Price is $9.25

Order a stock of Tub Shower Faucets now to take advantage of the demand created by the advertising in the Saturday Evening Post.

H. MUELLER MFG. CO., LIMITED

Sarnia, Ontario

TORONTO MARKETS

Continued from page 46

of a stiffening in quotations in the near future. An effort in this respest was recently noted on southern primary centres, but beyond securing sufficient orders to enable the mills to run for some sixty days at the present rate of operation, price levels generally remain unchanged. The market locally is described as very competitive, but this condition has been more or less evident for several months. Some speculaton is evident as to just what effect a coal miners' strike upon extensive lines would have on the steel industry in general and how it would affect prices on bar products in particular. In the meantime the following quotations represent the average levels on the local market:

IRON AND STEEL

Mild steel bars, base	2 75
Mild steel bands, 3 16 in. base	3 25
Bar iron, base	2 75
Angle iron, base	2 85
Horseshoe iron	3 60
Tire steel	3 35
Spring steel	5 50
Crucible cast sheet steel	30 00
Mining drill steel	18 50
Cast tool steel, medium	18 00
Cast tool steel, high grade	31 00
Sleigh shoe steel	2 85
Norway iron	12 50
Toe caulk iron	4 00
Hoop steel	3 75

MORE ACTIVITY RECORDED IN BOILER TUBES

Toronto.

More activity is reported in the boiler tube market during recent weeks. Prices are remaining fairly steady, and with the tube season now at hand, it is felt in distributing circles that in view of the restricted volume of trade during recent months, a fair amount of current tube business is now opening up. Prevailing trade is said to show a very favorable comparison with this period last year, while an optimistic outlook is generally reported. Following are the average unchanged prices recorded on the domestic markets:

BOILER TUBES—

1 inch	24 75	.....
1-¼ inch	24 50	.....
1-½ inch	24 00	.....
1-¾ inch	26 00	.....
2 inch	24 50	20 00
2-¼ inch	27 75	23 00
2-½ inch	32 50	23 75
3 inch	40 00	30 00
3 ½ inch	50 00	32 50
4 inch	65 00	43 50

CAUTIOUS BUYING OF CORRUGATED SHEETS

Toronto.

The outlook in the corrugated sheet market as regards an improved volume of trade in the near future, is described as optimistic. With more seasonable weather prevailing, conditions are favorable to brisk activity in building circles, especially where corrugated and similar materials are required. With an improved demand developing in the near future, it is expected in some quarters that the nominal prices on the heavier gauges recently noted as subject to price shading according to specifications, will become more stabilized. On the other hand, some lowering in flat sheet quotations has given rise to the impression that a similar change may be looked for in corrugated. However, for the present, the following list prevails:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

OPTIMISTIC OUTLOOK IN WROUGHT PIPING

Toronto.

List No. 54, still governs the domestic pipe markets, with current conditions in this industry registering very little variation. Some development is noted in the primary steel markets where price shading between opposing interests is again reported, but domestic manufacturers and distributors report that no changes are, at present, being contemplated. Current business is described as comparing very favorably with the volume of trade last year, while increases are generally reported during recent weeks. With an improvement in basic market conditions during the ensuing months, the outlook is stated as generally optimistic. Following is list No. 54.

WROUGHT PIPE

Price List No. 54. December 22, 1921.

quantity.

VIRGIN COPPER SHOWS SIGNS OF RECOVERY

Toronto

Brass and copper products remain at the recently revised price levels, with primary market conditions practically stationary. Further developments in quotations depend upon the future trend in virgin metals. These now show some signs of recovery from the recent depression, but quotations on the semi-finished products continue at the lower levels following:

BRASS—	
Sheets base, per lb.	0 21
Rods, base, per lb.	0 19
Tubing, base, per lb.	0 23
COPPER —	
Rods, base, per lb.	0 27
Soft sheets, plain, 1 oz. and heavier, lb.	0 28
Do., plain tinned, 16 oz. and heavier, per lb.	0 35
Do., polished and tinned, 16 oz. and heavier, lb.	0 40
Tubing	0 27

VERY LITTLE CHANGE IN SCRAP MATERIALS

Toronto.

There has been no appreciable change recorded in the waste material markets. Prices have remained fairly steady, but buying has continued on a hand-to-mouth basis. Copper scrap is still dull, although a few more sales have taken place. Owing to the light operations of various steel companies, the scrap iron market is also quiet. Dealers are therefore only purchasing in small quantities. There is very little business of any kind in scrap rubber at present. The following are the usual averages of dealers' nominal buying prices for fairly large quantities:

SCRAP MATERIALS—

Scrap Iron		
Gross Tons —		
Heavy melting steel (Hamilton)	11 50	$12 00
Borings and turnings	2 00	3 00
Rerolling rails	10 50	11 50
Scrap pipe	6 00	7 00
No. 1 railroad wrought	10 25	11 25
Steel turnings (Hamilton)	6 50	7 50
Agricultural malleable	10 00	11 00
Railroad malleable	11 00	12 00
Net tons —		
No. 1 cast	15 75	16 75
Stove plate	11 50	12 00
Grate bars	10 50	11 00
Standard car wheels	14 50	15 00
Scrap Metals.		
Heavy copper and wire	10 50	11 00
Light copper	8 00	9 00
No. 1 composition	9 00	10 00
No. 1 comp. turnings	6 00	7 00
Light brass	3 00	3 50
Heavy yellow brass	5 50	6 00
Heavy lead	4 50	4 75
Tea lead	2 00	2 50
Scrap zinc	4 00	4 25
Scrap Rubber.		
Boots and shoes	2 50	2 75
Lumbermen's rubber boots	1 50	2 00
Auto tires	0 50	1 00
Solid tires	0 75	1 25

EASIER PRICES APPEAR ON METAL MARKETS

Toronto.

Easier prices have now developed on the majority of ingot metals, this weakness being chiefly attributed to the fact that the current demand remains much smaller than the visible supply. Copper, tin, lead, spelter, antimony and aluminum are all affected, each metal recording lower quotations on both the domestic and primary markets The current consuming demand is very moderate, while stocks on hand retard any stimulant for future commitments.

COPPER—Trade in copper is described as moderately quiet. Domestic consumers have apparently fully covered their requirements for the current month, and there is another lull in home trade. Primary copper markets report that the export business is just fair. The better side of the situation appears to be in the improved demand for finished copper and brass products. A few inquiries have been noted, which are looked upon as testing the tone of the market. Prices locally are lower at 16½ cents.

TIN—The tin market remains dull, with local prices easier. The demand is again a little quieter, but recent reports from other centres indicate that many consumers have availed themselves of the prevailing favorable opportunities for contracting for delivery of tin over a period of several weeks. The

fluctuations in Sterling exchange continue to interest this market. The local quotation is now around 34 cents.

LEAD—The current demand for lead is good, but the uniformity looked for in the primary markets is slow in developing. This slight variation in quotations is attributed to producers marking up prices on futures. The general condition of the lead markets is described as well-balanced, with the local figure now averaging $6.50.

SPELTER—The demand for spelter is rather light at present, but the general tone of this market remains fairly firm. Buyers are apparently not very active, but it is generally considered that consumption is proceeding on a scale at least equal to the ratio recorded during the previous few months. A note of optimism regarding the future outlook is observed in some quarters, the situation being described as nearing the end of the recent period of dullness. Local quotations have receded to the level of $6.50.

ANTIMONY—This market is said to be a little firmer on account of some recent buying for stock, but the current demand for immediate needs continues small. Stocks in general are heavy. The local market level hovers between 6 and 7 cents.

ALUMINUM—Prices on aluminum remain unchanged, and there is little to report in this market. The local situation is described as dull, with prices in the neighborhood of 26½ cents.

WINNIPEG MARKETS

WINNIPEG, March 31.—Black and galvanized sheets, corrugated iron, eavestrough and conductor pipe, and certain lines of brass compression goods, comprise the principal price changes noted on the current sanitary and heating markets. Each of these items are now on lower price levels, with quotations on other plumbing and steam-fitting materials generally remaining unchanged. Trade is noticeably quiet in cotton wastes and range boilers, but improved demand for such products as soil pipe, enamelled ware, and similar goods is looked for with the advent of the Spring and Summer seasons. A firmer tone is recorded in wrought piping.

QUOTATIONS ON SHEETS NOW ON LOWER LEVEL

Winnipeg.

New lower quotations have been received on black and galvanized sheets. Following are the new lower prices:

SHEETS—... ... ...

Black—10 Ga., $5.35 per 100 lbs. 12 Ga., $5.40 per 100 lbs. 14 Ga., $5.45 per 100 lbs. 16 Ga., $5.50 per 100 lbs. 18 20 $5.90 per 100 lbs. 22-24 $6.00 per 100 lbs. 26 $6.10 per 100 lbs. 28 $6.40 per 100 lbs.

Galvanized—16 Ga., $6.45 per 100 lbs. 18-20 $6.60 22-24 $6.75. 26 $6.90. 28 $7.20. 10¾ oz. $7.00.

REVISED PRICES ON PIPE AND TROUGH

Winnipeg.

Lower prices are quoted this week on eavestrough and conductor pipe. Following are the new reduced prices:

EAVESTROUGH—

8 in. $5.06 per 100 ft. 10 in., $5.63 per 100 ft. 12 in., $6.75 per 100 ft. 15 in., $9.38 per 100 ft.

CONDUCTOR PIPE—

2 in., $6.19 per 100 ft. 3 in., $7.13 per 100 ft. 4 in., $9.00 per 100 ft. 5 in., $12.75 per 100 ft.

PRICE DECLINE NOTED ON CORRUGATED SHEETS

Winnipeg.

Local quotations on corrugated sheets have now been reduced, and the new levels are placed in the hope of stabilizing the market in anticipation of future spring trade in these products. Following are current revisions:

CORRUGATED—

Galvanized—28 Ga., $6.42 per 100 lbs., 26 Ga., $5.65 per 100 lbs.

Painted—28 Ga., $5.35 per 100 lbs. 26 Ga., $5.40 per 100 lbs.

LOWER QUOTATIONS NOTED ON COMPRESSION GOODS

Winnipeg.

Another revision in the discounts of certain lines of compression goods has been recorded. This current change affects standard compression bath cocks, brass steam cocks, and basin cocks. Following are the revised discounts:

COMPRESSION GOODS—

	Per Cent.
Compression work standard	40-5
Fuller work	25
Bath cocks, compression	30
Do., Fuller	20
Basin cocks	30
Pantry cocks	28

QUIET TRADE NOTED IN RANGE BOILERS

Winnipeg.

There has been no change recorded in range boiler prices for some little time. Current trade is described as quiet, but improvement in this direction is generally looked for in the near future. Following are the unchanged prices:

RANGE BOILERS—

30 gal. $9.60 ea.; 35 gal. $13.25 ea.; 40 gal. $16.25 ea.; 52 gal. $23.45; 66 gal., $33.15; 82 gal. $40.60; 100 gal $62.50 ea.; 120 gal., $75.00.

DULL TRADE REPORTED IN COTTON WASTES

Winnipeg.

Cotton waste prices remain at the revision of a month ago, when the higher grades were slightly reduced. The present season is somewhat slow at any time, but it is exceptionally backward this year. The unchanged prices are as follows:

WASTE, COTTON—

Cream polishing, 29c. per lb. White XXX Extra 18½c. per lb.; XX Grand 17½ per lb.; XLCR, 16½c.; X Empire 15c.; X Press, 14½c.

Colored—Fancy 15½c.; Lion 14c.; Standard 12½c.; Popular J 11c.; Keen 9½c. per lb.

LOOK FOR IMPROVEMENT IN SOIL PIPE TRADE

Winnipeg.

With the approach of the spring and summer seasons, an improvement in the demand for soil pipe and fittings is generally anticipated. The brisk activity noted in building circles, is naturally expected to reflect a more uniform movement in these products. Discounts at present, remain unchanged, as follows:

SOIL PIPE—

2 and 3 in., 20 per cent. off; 4 inches, 30 per cent. off.; 5 and 6 inches 25 per cent off.; 8 inches 10 per cent adv.

Fittings—2 and 3 inches, 40 per cent. off; 4, 5 and 6 in., 45 per cent.

STRONGER TONE RECORDED IN WROUGHT PIPING

Winnipeg.

It is reported that the pipe market is distinctly stronger than it was a few months ago. With the open season there has developed a fair amount of current business and manufacturers state that the general situation now looks much improved. Prices have not changed for some time. The current quotations are as follows:

BLACK PIPE

MAINTENANCE OF PLUMBING INSTALLATION

(Continued from page 24)

not do some boosting toward getting such clause inserted in their own local by-law, which would in some way maintain the work as it should be—safe and sanitary to the general public.

In conclusion I might say that the wonderful progress in sanitation is mainly due to the combined efforts of those interested in the trade in demanding and working for the adoption of sanitary regulations and laws. We have as a consequence what is generally styled "Modern Plumbing" and I would therefore ask you, gentlemen, to do all you can to keep it as such by boosting a maintenance clause demanding a periodical reinspection of all systems.

Plate 2-RM

Plate 105-RM

Plate 343-RM

The R. & M. Trap Cleanout

(Patented)

The object of a Trap Clean-out is to provide a means of ready access to the trap of a closet for the purpose of cleaning it out if clogged.

Not only does the R. & M. Clean-out device provide for this in the most simple and effective manner possible, but it practically eliminates the necessity of using the various tools or instruments which heretofore have had to be used upon such work.

The construction of the plug itself is very simple —the only labor necessary to make use of the device being the removal of the screws holding the cover plate in position.

It is produced in solid brass and is fastened to the earthenware in such a manner as to make leakage either of water or sewer-gas impossible. It is also located in such a position on the closet as to make the greatest length of trapway accessible to the opening when in use.

Plate 2-RM illustrates our "Old Twin" Syphon Jet equipped with this feature; Plate 105-RM similarly illustrates our "A-1" Syphon Action Washdown and Plate 343-RM our "Classic" Reverse Trap Washdown so equipped.

The nominal cost of this very good feature is inexpensive insurance against excessive bills for time employed clearing clogged traps.

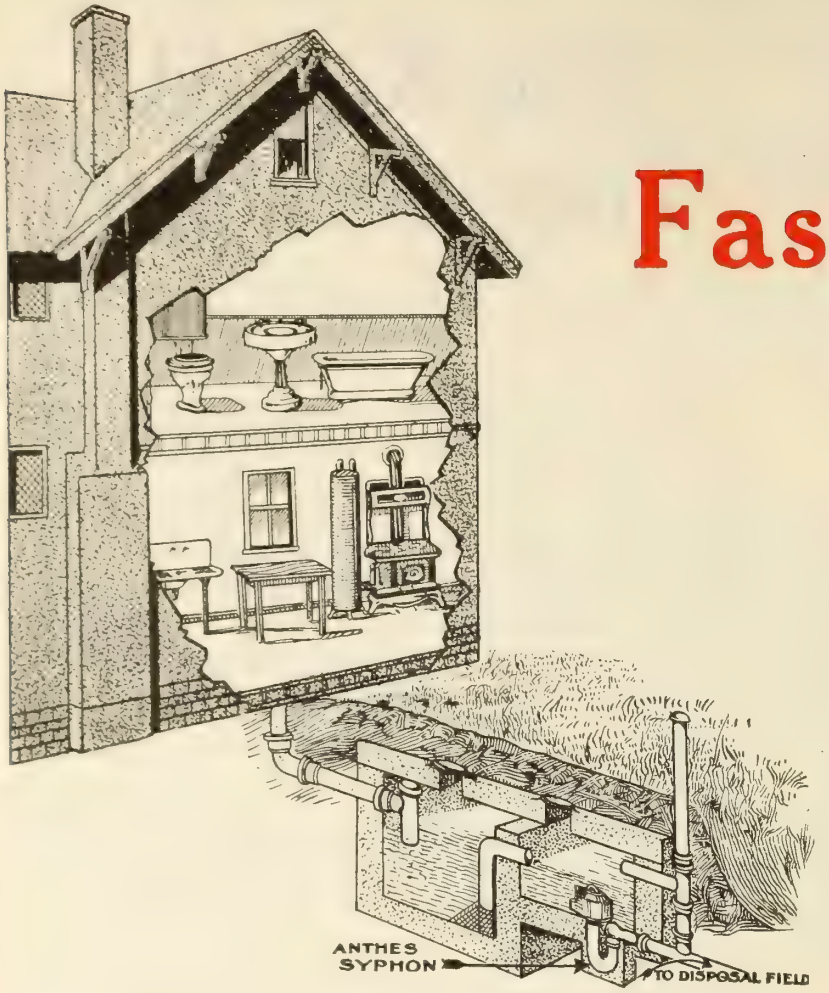
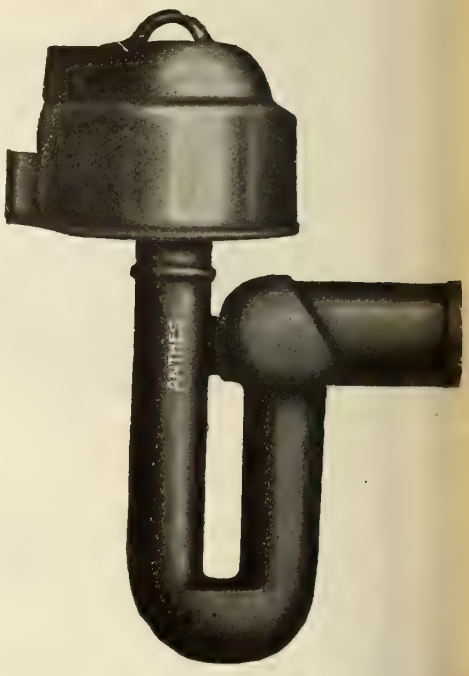
Fast Nickels



FAST nickels are better than slow dimes any day in the week—but we have to work harder to make them come fast.

This summer you Sanitary Engineers in the rural districts will have a good many slack days on your hands. Overhead will go on just the same. You must maintain your staff in the slack season as every other business does. That's so, isn't it?

You can make the slack summer months the best paying months in the year by linking up with the Anthes plan. Here's how—



and Slow Dimes

Few rural homes have sewage disposal systems and they all need them. But they don't all know how much they need them. They must be shown the many advantages before they will buy.

How long do you suppose Pa Jones and his family are going to put up with the discomforts of the out-door toilet after you show them the comforts which a water and sewage system will give.

Have every man on your staff devote his spare time in getting out and showing people what water sewage systems mean and how little they cost in comparison to the value received.

There are hundreds of prospects right in your locality which mean thousands of dollars in your pocket for the mere going after them.

Our Bulletin No. 2 tells all about it. Send for one to-day.

Anthes Syphons are made in one piece, without seam or joint, and, operating on purely natural laws, with no moving parts to get out of order, they give great satisfaction in use.

Anthes Syphons will make friends for you. Every installation means satisfaction on the part of the customer that will bring him back to you every time he is in the market for anything in the plumbing line.

Remember—when you install a sewage system—you also open up a market for electric water systems, closets, baths, wash basins, laundry tubs, sinks and a lot of other plumbing equipment.

"Mixed Farming and Mixed Plumbing."

Sad experience has taught the farmer that it is not a wise policy to carry all his eggs in one basket.

Wheat-growing alone only is rapidly giving way to mixed farming, with the result that the farmer, while having to dig a little harder, is extending his market without having to go far afield to do it.

So with the plumber. There are fertile markets which lie almost at his door, but he must do a little digging to get them.

The farmer has found that the town-dweller will buy his produce and reciprocate trade results.

The hardware man is getting some, so is the grocer, the dry-goods man, the automobile salesman, etc.

"Why not the plumber?"

Go to it.

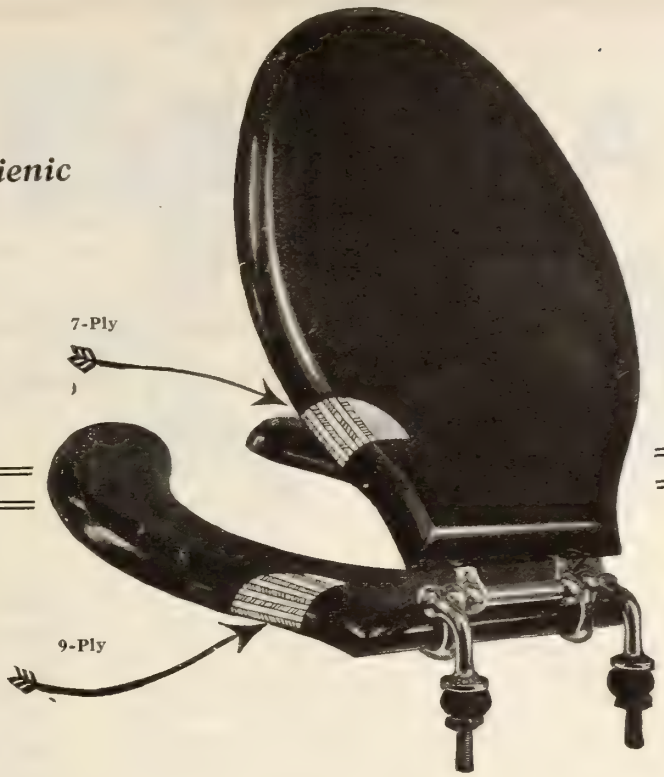
"EVERLASTING"

Veneer Toilet Seat—Strong, Clean, Hygienic



Air-seasoned Veneer

And Our Special Wood Cement

Air-seasoned wood veneer in 7 and 9-plys, according to the amount of strain and wear required of its respective parts, makes this a substantial seat, unequalled for durability. The veneer is held together by means of our special wood-cement that is proof against extremes of heat, cold and dampness.

For cold, damp basements, schools, factories, or other public places where the closets are subjected to all manner of abuse or rough usage, it is specially recommended. The Everlasting Veneer Toilet Seat will never crack, warp or split.

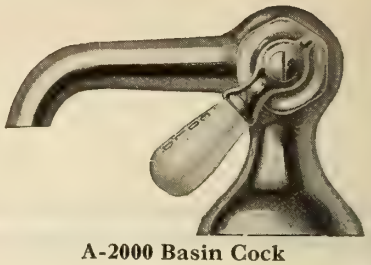
APPRECIATION

A-1900 Basin Cock

We never say half enough to hearten the man whose work is well done.



A-2000 Basin Cock

A fine job, a job that has taken conscientious thought, painstaking effort, and scientific skill to produce is too often taken for granted and the craftsman must get along without the smile and the glow and the twinkle of appreciation that his daily habit of doing the job right should bring forth.

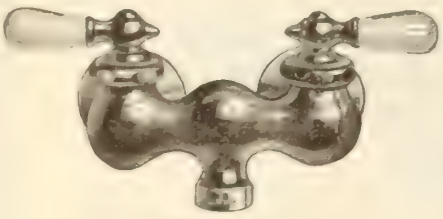
The Plumber when he thinks it over must suffer heartbreak, sometimes this bodily organ splitting crosswise, sometimes straight up and down, and at others literally shivered throughout.

The Plumber is the custodian of the community health—when he slumbers or sleeps or slacks on his underground work, his between wall work, or underfloor work, he leaves in his wake uncanny cesspools—ready for use Germ Incubators for wily, tiny germs, typhoid, malaria, and the whole hideous host of infection.

This "concealed plumbing" that the plumber installs with a conscience and skill brings usually no man's commendation, no approval, no say so.

But still the plumber has an important alternative—those **brightly nickeled, porcelain mounted bath cocks, basin cocks, bibbs, sink faucets** and the up-to-date **Classic Mixing Faucet** are for the plumber the fruit of his tree, the flowering of his skill and effort.

If the plumber will crown his installations with **Quaturn Plumbing Fixtures,** the uniform and harmonized line, designs of grace and beauty, with **interchangeable and renewable** features of greatest utility the **good housewife,** radiating appreciation will say, "Isn't that splendid. I must ask Mrs. Climber to come right in and see it, they will want to be fixed up too."



A-3200 Bath Cock

And the plumber will make himself "Jake" with the whole neighborhood and have his just reward—appreciation.

will be

Hamilton Convention Number

While this number will be of more than ordinary interest to every Domestic Sanitary and Heating Engineer in Canada, it will be most eagerly looked forward to by the Trade in Hamilton and district, most of whom will attend the big Convention of the Ontario Society in that city on the 6th, 7th, and 8th of this month.

In this number, the full report of the convention proceedings will be given.

Hamilton as the Convention City will loom big before the trade from coast to coast.

Surely an opportune number for the Hamilton manufacturer to place his message before the Trade.

Here Are That You Will Feel

Your efforts to satisfy your clients in connection with any drainage work will be more than rewarded if you recommend these reliable cast iron pipe fittings, made with iron of high tensile strength and correct tappings.

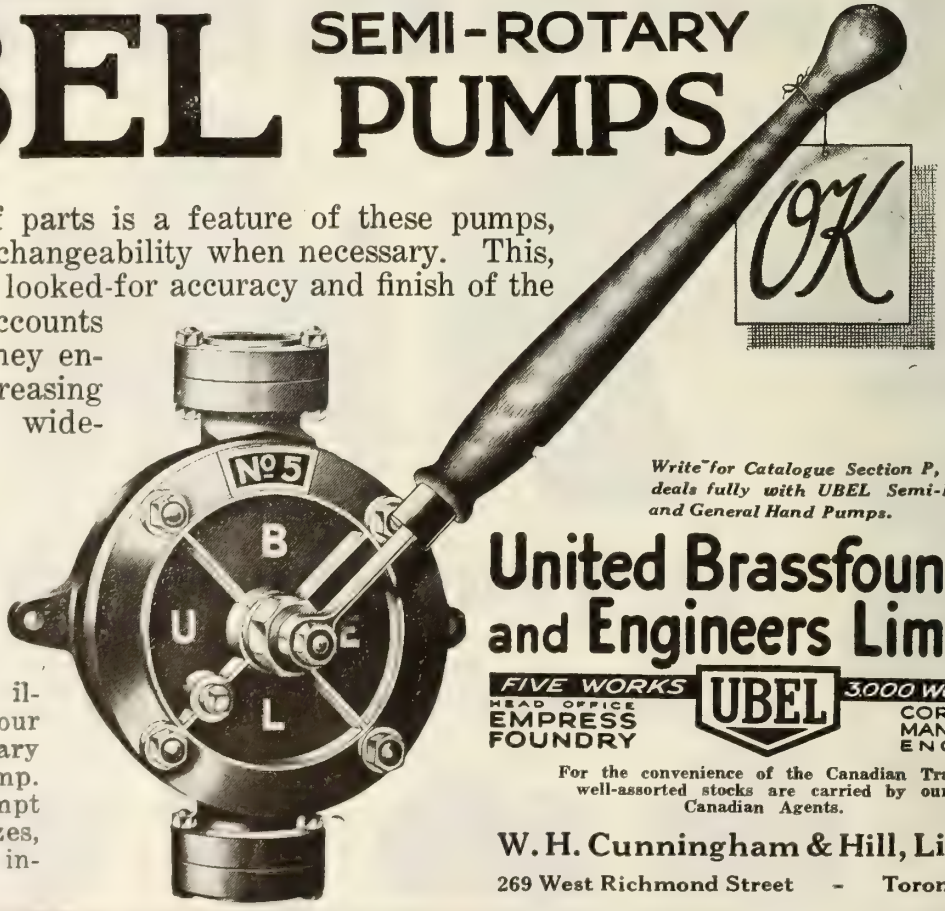
UBEL SEMI-ROTARY PUMPS

Standardization of parts is a feature of these pumps, guaranteeing interchangeability when necessary. This, combined with the looked-for accuracy and finish of the UBEL product, accounts for the fact that they enjoy an ever-increasing popularity and widespread demand.



The accompanying illustration shows our Fig. P 1 Semi-Rotary Double-Acting Pump. We can give prompt shipment of all sizes, from ½ in. to 3 in. inclusive.

Write for Catalogue Section P, which deals fully with UBEL Semi-Rotary and General Hand Pumps.

Kerr Valves

Give

Character to Work

They reflect credit on the man who specifies them, the man who installs them, and they give complete satisfaction to the men who use them.

Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face to face dimensions; observe the accessibility of the stuffing box; the strong, generous flanges and the properly spaced bolting.

KERR VALVES ARE GOOD VALVES

TRADE MARK J.M.T. REGISTERED A GUARANTEE OF QUALITY

True Economy

Stack Heater

The Stack Gas Water Heater will heat water in one minute.

The almost perpendicular copper pipes in the Stack Heater offer no hindrance to the natural tendency of water to rise when heated.

Take notice of the small size and large number of coils; this means quick heat. The numerous small pipes will naturally heat water quicker than one big pipe because of the greater heating surface offered.

More hot water with smaller consumption of gas—that's true economy.

Expansion means Grip!

RAWLPLUGS

The screw or the material will give way before the Rawlplug.

Rawlplugs are plugs that may be inserted into concrete, brick, plaster, slate, metal, stone, tile, marble, glass or hard rubber.

They are manufactured tubes of fibre strands, stiffened lengthwise. The strands are so interwoven and cemented as to withstand weather and wet. They will not decay.

Rawlplugs expand as the screw is turned in, becoming an integral part of the material in which they are inserted.

Samples and price list on request.

RIVETED RANGE BOILERS

Made by the old reliable

TORONTO HARDWARE MFG. CO., LIMITED

The GREAT POINT About Burnham Grates

The great point is that they operate in two sections—front half and back half. This takes the back "breaks" out of shaking, but puts savings into coal bills. Grates operating half at a time mean that you can have only half a fire when you don't need a whole one.

Send for our booklet about this.

Dear Sirs:

We consider The Sanitary Engineer a good publication.

For the business man who wants information quickly about the market, The Sanitary Engineer is serviceable. For the builder, it is interesting and valuable, with its current statistics. Its editorials are advanced, practical and authentic. Its question box is a good department for the student, and we make the assertion that its very up-to-date price list is in itself worth the entire price of the yearly subscription.

We wish The Sanitary Engineer every success.

Yours truly,
BAYER & CO.

AMONG a plumber's best friends are his tools and, among his tools, many a plumber claims Williams' "Vulcan" Chain Pipe Vise as his best friend.

It's the *only* Pipe Vise made entirely of wrought steel. 3 sizes for ⅛ to 8″ pipe.

Harmonize with Decorative Effects

The value of STEEL Lavatory Partitions in Schools Factories, Industrial Plants and Public Buildings, needs little argument to the Sanitary Engineer or Plumber.
Their fireproof, indestructible and hygienic qualities are readily recognized.
One point that must be driven home is that

DENNISTEEL
Made in Canada
STEEL LAVATORY PARTITIONS

can be harmonized without difficulty to most elaborate porcelain wash bowls, urinals, showers, etc. The steel surface takes the enamel smoothly and can be easily decorated to white, marble, porcelain or other harmonizing effects.

THE Royal

Automatic Gas Water Heaters

Make More Money for you

You can sell a Royal "Automatic" at present low prices as readily as you can sell an ordinary heater. You'll make more money—a larger discount and a more easily installed job.
Besides, the Royal "Automatic" gives you a bigger market. Every home needs the constant hot water service the Royal "Automatic" gives. Every dentist and doctor will value its convenience. No barber shop is completely equipped without it. Clubs, hospitals, apartments, schools, theatres, restaurants—there's a type of "Royal" to meet every need for instant hot water service.

Sold only by or through plumbers. Write for descriptive literature and full information. Today!

Unrivalled Facilities for Success in Sanitary Engineering and more than 300 other Vocations

In no branch of Mechanical Science has there been more noteworthy progress than in Plumbing, Heating and Ventilation, and no other Educational Institution has trained so many splendid successes in it as the International Correspondence Schools. The spare-time home-study method of learning is wonderfully suitable for the young mechanic who must continue to earn while he learns to earn more.

Heating and Ventilation, once regarded as incidental features of building constructions are now considered as items of extreme importance, requiring for their design and installation the attention of specially trained experts. This new order of things has made technical education a necessity for the man who hopes to hold a position of any importance in the Plumbing, Heating or Ventilation field of Engineering.

In the last 30 years many thousands of Canadians have profited from the training of this Institution which created the method of teaching by correspondence and has provided unrivalled texts for home instruction. These texts are formed into more than 300 courses, each easy to study, easy to remember, and easy to apply and supplemented by a highly qualified faculty that give personal attention to every student throughout his progress to knowledge and efficiency.

Thus the I.C.S. provide you with the best and most convenient opportunity of self-advancement you can find anywhere. Let us help you in Sanitary Engineering or any other vocation you prefer. We can give you the training you need right at your home in your spare time. As a first step, mark the coupon and mail it to Montreal. You'll receive a most interesting booklet in return.

Drinking Fountains
White, Clean, Vitreous, Sanitary

The lustrous white clean surface of a Canadian Vitreous Drinking Fountain suggests the cool refreshing draught which can with safety be taken therefrom.

Canadian Vitreous China is the most thoroughly sanitary material of which a Drinking Fountain can be made. It is all clay, the same white, dense, substantial, strong, vitreous body through and through, with a beautiful hard, lustrous, live-white glaze surface, which cannot chip, crack, rust, discolor or deteriorate.

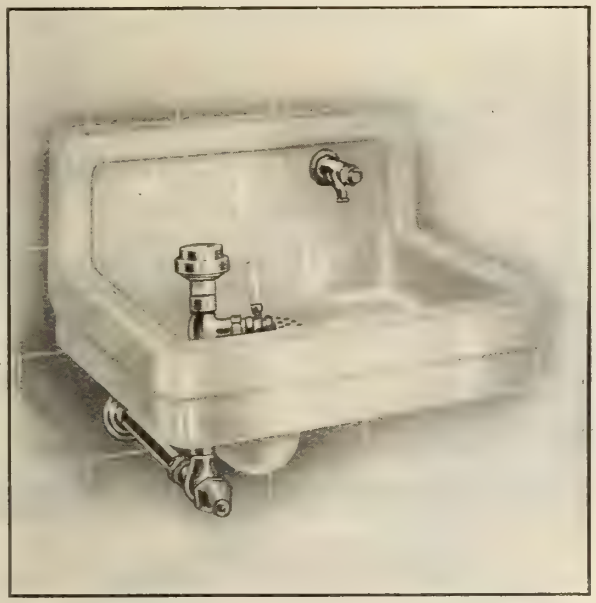

Plate 901

Dirt and germs will not readily cling to its smooth hard surface so that with a minimum of effort its original glistening whiteness will be retained after years of use.

The fittings illustrated are only suggestive. A variety of good sanitary bubblers are obtainable which will readily fit either of the patterns shown.

The moderate price at which these very desirable fixtures are furnished by us should ensure their installation in every public building.

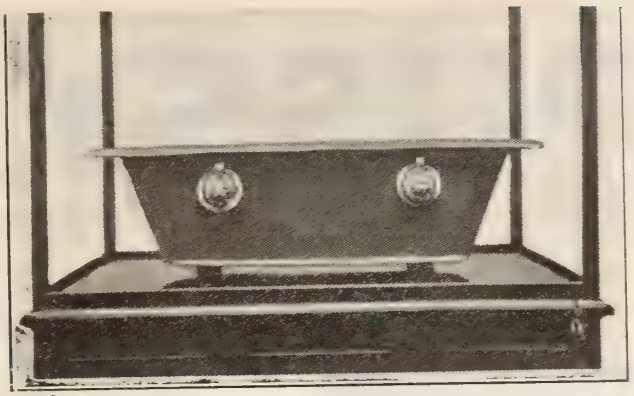
2000 Years in

ago Pompeii



Cast bronze bath tub, made in the first century.

TWO THOUSAND YEARS ago the stately city of Pompeii, one of the gems of the Roman Crown, slowly gasped its life out under the millions and millions of tons of ashes thrown off by the eruption of Mount Vesuvius. In a few short hours Pompeii was buried! Buried under 100 feet of volcanic ash.

Nearly 2,000 years later, excavators seeking to unearth some of the lost glory of once great Pompeii were finally successful in bringing several marble dwellings to the light of day.

In the first villa entered one of the first objects to draw their attention was a bath—a real honest-to-goodness bath of solid bronze and in a remarkable state of preservation.

Later excavations unearthed several more of these and the one shown above now rests in a glass case in the Marshall Field Museum in Chicago.

They sold bath tubs in Pompeii. They sold a lot of them, nearly every house boasted of one.

Aggressive selling sold the Pompeians on "the bath in every home" idea.

Aggressive selling will do the same to-day. Let's get busy.

Ontario D. S. & H. E. Convention

Delegates Think Canadian Society D. S. and H. E. Should be Executive Body Only as Present Expense out of Proportion to Results Achieved—Industrial Conferences to be Held—Secretary G. Frankland Resigned—Discuss Committee Reports

By Staff Representative of Sanitary Engineer

HAMILTON, Ont.—The 11th annual convention of the Ontario Society of Domestic Sanitary and Heating Engineers, held at the Royal Connaught Hotel, Hamilton, Ont., on Thursday and Friday, April 6 and 7, marked an important occasion in the work of this organization in the interests of the sanitary and heating engineers. The arrangements for the convention were made under the direction of G. Stewart, secretary of the Hamilton Society, whose untiring efforts were highly appreciated. On the first afternoon of the session a meeting of the Board of Directors was held, while K. B. Allison assisted by certain of the early delegates arranged a number of attractive window and shop displays in which much interest was taken by the delegates and other visitors. In the evening a meeting of the Hamilton society was held.

The convention business was entered upon Friday morning with president Thomas Maxwell in the chair. John Hart Hamilton and Ross Belyea, Toronto, were appointed sergeants at arms.

Following the reading of the president's report, as outlined elsewhere in this issue, some discussion took place on various points brought up. One of these was in connection with the annual conventions of the Canadian Society D. S. & H. E. It was felt by several members that the expense involved in attending conventions of the Canadian society, was out of proportion to the value of the convention and the suggestion was renewed that this latter body be made merely an executive one with only one or two delegates attending as representative of the various provincial organizations. Secretary Frankland explained that the per capita charge on the Ontario society members was only $1 but it was the personal expense involved in attending the Canadian society conventions which was important. He pointed out that Alberta last year wanted a dividing line between the provinces of eastern and western Canada and in view of this condition and the lack of organization among other provinces he doubted the value of the Canadian society's influence. Replying to G. Clapperton's suggestion to send one delegate as representing the Ontario society, to the Canadian society conventions, Mr. Frankland stated that an attempt had been made to put across this idea but it has failed, and suggested some other method. Mr. Clapperton did not agree with the suggestion to hold Canadian society conventions only once in two years, pointing out that if that body was to be of much use, meetings should be held at least annually, as other parts of the country have problems which may sooner or later arise in Ontario and it would be well to be acquainted with these.

Parent Society an Executive Body

On the motion of H. G. Hicks, Ottawa, seconded by G. Clapperton, it was moved that the Canadian society be constituted as an executive body for Canada with representation consisting of the provincial presidents and meet annually.

In connection with industrial conferences, local meetings to consider wage agreements, etc., Thos. Arthurs, Hamilton, supported this suggestion as a means of helping standardize wage rates among various centres. E. Cardwell's motion that an industrial conference be held soon after the convention was adopted.

NORMAN SWANSTON

Toronto, elected Presiaent of the Ontario Society D.S. & H.E. for 1922-23 at the convention in Hamilton. Mr. Swanston was last year chairman of the Legislation Committee.

Other points raised in this report were in connection with Hamilton and Niagara Falls joining the organization with sufficient members to constitute a local committee.

In connection with the action of York Township in making residential requirements in licensing plumbers, the question was raised as to whether the convention should consider the advisability of removing municipal control and allow plumbers to operate anywhere in the province. This was left for later consideration.

It was decided to have the secretary write a letter of sympathy to Mrs. Purdy in connection with the recent bereavement of her husband, Alex. S. Purdy of the firm of Purdy, Mansell, Ltd., Toronto.

Hamilton and Niagara Falls Have Required Members

Discussing the report of vice-president Thos. E. Arthurs, Hamilton, it was shown that in connection with membership plans, both Hamilton and Niagara Falls have the required ten members to form a local committee and secure representation in the Ontario Society. It was suggested that a committee be appointed to work out a scheme whereby the present membership could be divided into districts and representatives be appointed from local associations to meet as a district council. On motion of J. R. Brown, seconded by E. Cardwell, this recommendation was adopted.

Treasurer's Report

The report of treasurer H. A. Weinraub showed total receipts for the year of $1,014.28 of which $890 was in membership fees. Disbursements amounted

to $923.28 including secretary's salary, per capita dues to Canadian Society, expenses of delegates to Canadian Society convention, printing, rent, etc. Assets were valued at $691 and the assets of the Endowment Fund were shown as $253.36.

Secretary's Report

Secretary G. Frankland's report was as follows:—

"During the year we have just held our own in respect to members and we seem doomed to carry on as we are doing. Are you proud of your calling Are you members satisfied with your position? Do you feel proud in saying, 'I am doing it?' Do you realize the intimate character of your calling? Don't forget that before we can achieve anything we must first become important in our own estimation.

"In dividing the province into zones, each district comprising two or more councils and with representatives to the society there should result considerable benefit to this association. There would be seventeen divisions in all.

"I would also suggest a place in the membership for those who have helped build up the association but not now entitled to membership. This class would include such men as Messrs. Grinyer and Cunningham.

"There have been 19 new members enrolled during the year. We extend our thanks to the Hamilton members for their efforts to make this convention a success. The Canadian Trade Extension Bureau proposed some time ago has been provided for, but is not yet functioning on account of financial conditions.

"I hereby tender my resignation to take effect at your pleasure."

On motion of P. C. Mansell, Toronto, the question of the secretary's resignation was left for the consideration of the directorate.

Form Branch American Heating and Ventilating Society

Discussing the report of the Heating Committee, as outlined elsewhere, Mr. Mansell stated that steps were being taken by heating engineers of Toronto to secure a charter as a branch of the American Society of Heating and Ventilating Engineers.

Dealing with some of the difficulties outlined in this report, one delegate pointed out that as long as the engineers leave it to the boiler manufacturers to lay out their jobs for them there is going to be trouble of the kind mentioned.

Many interesting points were brought out in the report of the Committee of Apprenticeship which was adopted on motion of G. C. Abbott and W. Boxall, Toronto.

Discussing the points brought out in this report, some comment was made on the suggestion to indenture apprentices and accept them on the basis of weight and intelligence, not alone by weight. G. Clapperton thought the educational system should be such as that a boy when he finishes public school should know what he is fitted for. P. C. Mansell thought the education of a boy was beyond the jurisdiction of the Society and thought that the probationary period of three months was enough to determine whether a boy would be of any use in this industry and this limited term interfered little with his life.

Mr. Clapperton suggested that the schools of Ontario should use discernment in dealing with boys and make recommendations as to their fitness for certain occupations. In answer, another delegate thought the schoolmasters as a whole did not know how to shake a furnace or whether to open the damper or draft on a furnace, so in view of their limited knowledge of this industry they could hardly make intelligent recommendations concerning boys' fitness for this occupation.

On motion of H. Hicks, Ottawa, seconded by H. Weinraub, Toronto, it was decided to advise the educational authorities of the stand of the association in the matter.

Continuing the discussion, H. M. Rushbey, Toronto, disagreed with the tendency to shelve the question and leave its solution to posterity, pointing out that the boy who comes into the shop for a job to-day is the one being dealt with.

"I contend that when we take on a boy he should enter into partnership with us in the work of making a plumber of him."

OFFICERS OF ONTARIO SOCIETY D. S. & H. E. FOR 1922-23

President — Norman Swanston, Toronto.

Vice-President—C. G. Stewart, Hamilton.

Treasurer—H. Weinraub, Toronto.

Auditors—F. M. Gentle, Toronto; F. Smith, Guelph; Thos. Arthurs, Hamilton.

COMMITTEE CHAIRMEN

Sanitary—J. Wright, Toronto.

Heating—W. F. Clifton, Toronto.

Arbitration—E. Cardwell, Welland.

Legislation—P. Mansell, Toronto.

Apprenticeship—G. Baker, Toronto.

Education—R. Belyea, Toronto.

Trustees—Wm. Mansell, Toronto; H. Mahoney, Guelph, (G. Frankland.)

H. WEINRAUB

Toronto, Treasurer for 1921 and re-elected for 1922 to that position by the Ontario Society, D. S. & H. E.

Probationary Period

The second recommendation of the report that a probationary period of one to three months be established was adopted though there were some who suggested that this should not be shorter than six months.

It was agreed that the larger employers should not be expected to be the training ground of apprentices for the smaller operators to exploit. Also that apprentices should not be controlled altogether by employers but partly by the local association in view of the fact that it is the actions of such associations that make the way possible for the boy. It was agreed that steps should be taken to make the industry so attractive that the proper class of boy will be secured. It was thought that it should be impressed on parents' minds that they should make some sacrifice for a boy serving apprenticeship in this industry.

A recommendation of the report was that apprentices would receive $5 for the first year, $7 for the second and $10 for the third year. Small operators would therefore be able to carry one boy, intermediate operators two boys, the employer to provide the boy's tools and the boy to be examined by a special examining board. The indenture method of apprenticeship was new in this country, but, Mr. Baker thought this country should look to the Old Country for some helpful leads in respect to such matters.

Following the reading of the Heating Committee's report, H. Hicks, Ottawa, suggested that copies of this report be sent to other associations. T. J. Minnes, Brantford, added that this should also be sent to architects and an attempt should be made to bring governmental action on the recommendations.

Educational Committee Report

Making a verbal report, G. C. Stewart, chairman of the education committee, pointed out that education was the keynote of the successful development of the association and was the secret of increased membership. "We have had trade organizations and their life has been determined largely on the basis of the educational facilities they were able to offer their members. We were disappointed that the program of the Trade Extension Bureau was limited. The personnel of our business seems to be changing rapidly and the experience that our older men have had is not being handed down, and as a result the trade is suffering. Our Society has much val-

uable information in hand and this should be passed on to members of other societies. Chalk talks are a big help in disseminating information and such features have been much appreciated in our Hamilton Society."

At this stage enquiry was made as to whether or not certain manufacturers' and wholesalers' representatives in the lobby would be admitted to the meeting. Some objection was taken and secretary Frankland pointed out that if the representatives were principals they would be welcome, but that travelers and junior representatives would be of little help in connection with the business of the meeting.

The report of the committee on legislation and sanitation, as outlined elsewhere was read by Norman Swanston, who explained that while it dealt chiefly with conditions in Toronto, yet these were representative of other parts of the country as well. At the conclusion of lengthy and interesting report, G. Clapperton suggested that it be brought before other societies and given as much prominence in trade and other publications as possible. H. Mahoney thought the report emphasized the necessity for enforcing the suggested by-laws in Ontario and asked that every delegate get in touch with his member of the legislature for the purpose of supporting it.

York Township Case

At this point a considerable discussion was entered upon in regard to that clause in the president's report which dealt with the action of York Township in enforcing a residence ruling in connection with licensing plumbers to work in that township. H. W. Rushbey, president of the York Township Master Plumbers' Association, asked for an expression of opinion on the law as it exists. Another plumber of the township stated that if no redress was forthcoming from the convention the matter would be taken into the courts in order that satisfactory arrangement might be made whereby plumbers of the township could do business in Toronto city without present restrictions. It was explained that the Police Department in Toronto has the power to give licenses and that the association could do little. The troublesome regulation had been made necessary when some U. S. firms came into Toronto and took business without establishing a place of business. A. Paddon, Windsor and others thought the prolonged discussion had little to do with other parts of the province, but officials of the society pointed out that the trouble was likely to occur elsewhere and should be thoroughly investigated. H. Mahoney thought the best solution of such difficulties was to get the lieutenant-governor's signature on the suggested plumbing by-laws which are now pigeon holed at the Parliament buildings.

The matter was finally settled on Mr. Mahoney's motion that the whole matter be referred to J. Wright, Toronto, chairman of the legislature committee. with a recommendation for an early enactment of the plumbing regulations awaiting approval.

For the election of officers a nominating committee was appointed consisting of Messrs T. J. Minnes, H. Mahoney and G. Clapperton. Names of Officers elected appear elsewhere.

On motion of H. Mahoney, Guelph, Messrs. Cunningham and Grinyer were made honorary members of the association.

Following his election to office, the new president, Norman Swanston made a brief address asking for the co operation of all members throughout the ensuing year. H. Mahoney moved a vote of thanks to the retiring president, Thos. Maxwell, also a vote of thanks to the trade papers for their co operation. Speaking to this latter motion, president Swanston agreed that the trade papers were deserving of much appreciation for their efforts in sending information of convention doings broadcast. Appreciation was also expressed to the Hamilton society for securing the convention hall and other arrangements which they had made.

Says Building Prospects Good For Years

112 Houses for Every Hundred Families in 1913 But Only 92 Houses to Hundred Families To-day— Take Ten Years to Catch up With Correct Proportion

AN ENJOYABLE social hour was spent at noon day luncheon on Friday at the convention, when an address was heard from Russel Kelly of the Hamilton Advertisers' Agency. Mr. Kelly was introduced to the gathering by Mr. Rogers of the Hamilton branch Standard Sanitary Mfg. Co. A somewhat intimate connection with the trade was established by Mr. Kelly in referring to his early relations with certain members of the craft including J. McKinley of Ottawa with whom he served as a foot lathe operator in a brass foundry.

C. G. STEWART

Secretary of the Hamilton Society of Domestic Sanitary and Heating Engineers, who was elected vice president of the Ontario Society, D. S. & H. E., at the convention in Hamilton.

He expressed the belief that Canada stands on the threshold of great development and pointed out that favorable advertising would be an important factor in developing better conditions.

"Canada has received much favorable advertising since 1914," continued Mr. Kelly, "in respect to our soldiers, production of munitions and our financing. This has resulted in turning the eyes of the world toward Canada. We are going to have an opportunity to participate in this wonderful development in the next few years, but there are some serious problems which concern us. Canada will only have this development as we realize our individual responsibility and strive to achieve national unity.

Refers to Articles in Macleans

"Any of you who have been reading the articles of Agnes C. Laut in MacLean's Magazine will be much interested in the points brought out therein. There seem to be many controversies as to problems which are hard to solve. What we want is to get a proper viewpoint on the whole question. An important thing we must do is to Canadianize the foreigners living in our midst. We need more people and we want them properly located. I would advocate an industrial department of the provincial government to make a survey of towns and cities and try to get industries for the smaller centres. You bring a market to the farmer and you will build up the smaller cities.

Briefly referring to the building situation, Mr. Kelly pointed out that in 1913 there were 112 houses in Canada for every 100 families and to-day there are only 92 houses for every 100 families. "It will take ten years to catch up, taking into consideration the natural increase in population, so the building program looks good for some years."

WEYBURN PLUMBER LANDS BIG CONTRACT IN REGINA

J. C. Stewart was recently in Regina in connection with the heating plant contract he secured there in competition with the plumbers of the province. The contract was awarded by the Saskatchewan Co-operative Elevator Co. for installing steam heating plants in twenty-one of the company's houses in Regina, which have hitherto been heated by hot air furnaces. The total cost of installing the steam heating systems will be around $16,000.

Provincial Conferences are Helpful

With Prospects for Increased Construction Activity it is Suggested That Industrial Conferences be Continued—Niagara Falls Forms Local Committee and Hamilton is Expected to Follow.

Report of retiring President THOS. MAXWELL, Toronto, to 11th Annual Convention Ontario Society D. S. & H. E.

I HAVE the honor of presenting my report as the president for 1921 of our Ontario Society of Domestic Sanitary and Heating Engineers and trust my stewardship while in office merited your wisdom one year ago, in appointing me to the responsibilities of your president.

The directors in convening from time to time throughout the year were able to give to the business of the society, the required attention warranted by its importance.

Shortly after our last annual meeting we met in Hamilton to consider the industrial situation in our business through the province and we had representatives present from Brantford, Guelph, St. Catharines, Welland, Toronto and Hamilton, and I am sure that the resultant effects were at least beneficial, and would have been more so if representation had been more general and the expected revival in the building trades had materialized during 1921. These conferences should continue being held, and I would recommend that the incoming directors arrange for same again this year because we are all looking forward to increased construction activities, and knowledge of the nearby local industrial situation is of some value, when you are called upon to take care of your own.

Delegates to Quebec

In June 1921 at the Canadian Society Convention our worthy past-president, Thomas J. Minnes who was provincial vice-president for Ontario of the Canadian society, with treasurer H. A. Weinraub and myself officially represented the Ontario society, at Quebec and were accompanied by a good delegation from Toronto, and other points in the province. The craft in Quebec city certainly did make the visitors welcome and their sojourn a pleasant one, that will not soon be forgotten. A provincial society for Quebec was inaugurated, Thomas J. Minnes, who was provincial president of the Canadian Society and yours truly as provincial vice-president for Ontario. Consideration by the Ontario society at this time as to the advisability of convening the Canadian society bi-annually until greater organization activities are prevalent throughout the provinces, might well be gone into, and have resolution drafted to the president of the Canadian society at Montreal accordingly.

The outstanding factor in the Society's affairs during 1921, was the outcome of the visit paid by Secretary Frankland to Niagara Falls in November and by your directors again in February, resulting in the joining of sufficient members at that point to form a local committee, for whom I bespeak a most hearty welcome to our midst and I trust a successful and profitable organization for our craft in the city of Niagara Falls.

The action of the Hamilton craft along similar lines has long been anticipated and I trust that same may be the final outcome of our meeting at this time in their midst, your directors having conferred with the officers of the Hamilton craft along these lines on several occasions.

THOS. MAXWELL

Toronto, Retiring President of the Ontario Society, D. S. & H. E., whose report is given herewith.

Meeting in York

The directors attended a meeting of the operators in the Township of York in January and outlined the objects of the Ontario society and while no results have shown as yet, the outlook for good results is most promising. This may seem strange, when you consider that this municipality is one that borders on another and has created a most contentious condition in respect to the licensing of master plumbers by creating a residential regulation by the Municipal Act of 1917. This matter will be fully dealt with in the report of our most worthy chairman of sanitation. Mr. John Wright of Toronto, and merits the undivided attention of every member of the society, as to whether the legislation already enacted in respect to the licensing of plumbers for the province of Ontario is satisfactory to the different muncipalities or whether we should consider the advisability of removing municipal control and making it possible to practise our calling anywhere in the province.

This also brings to our notice the ultimate benefits that will accrue to the entire province by the early enactment of the proposed provincial plumbing regulations from an improved standard of sanitary equipment and economically as well by a uniformity of style of installation permitted.

Negotiations were carried on with the London craft through the co-operation of Mr. Russell Wright of Wright & Teale of London to the point where your directors were about to attend a meeting of the craft in London, but owing to the lack of support by the London trade, the directors' visit to London was cancelled. The thanks of the society is extended to Mr. R. Wright for his efforts and I trust he will be numbered among our members at an early date.

Our financial condition is one that should warrant our attention from the angle of organization. If our society is to be both active and growing, we cannot expect directors to expend their money and also give their time in carrying out any extensive plan of organizing. We all have visions of what might be accomplished, but are helpless owing to the want of funds.

In closing I wish to make mention of one who was a pillar of our craft, a staunch supporter of our society, who was to those that had the privilege of knowing him a friend in every sense of the word, and one whose absence from our midst has left a void that remains vacant and always will, in the person of our esteemed craftsman the late Alex. S. Purdy of Purdy-Mansell Limited, Toronto.

I thank you gentlemen for the honor you have bestowed upon me and with best wishes for the continued success and prosperity of our society and all its members,

(Signed),
Thomas M. Maxwell,
President, 1921.

DOMINION ALLOY STEEL SECURES CONCESSIONS

It is announced that the Dominion Alloy Steel Corporation is securing favorable concessions from the Town of Sarnia. The property owned by the company will be annexed to the town, which will also give a favorable fixed assessment, extend the sewers and water into the new plant, and guarantee ample fire protection.

Suggest Divide Members Into Districts

Encouragement of Better Social and Business Relations Among Members of the Association is Object of Recommendations—Want Local Associations to Join Provincial Body

Report of Vice-President THOS. E. ARTHURS, Hamilton, presented to 11th Annual Convention Ontario Society D. S. & H. E.

AS your Vice-President for the term just closing, I have contributed comparatively little to the activities of the Association during the past year.

Under present conditions it must be admitted that the holding together of the present membership is a showing worthy of your consideration as the year just past has been very trying.

I have assisted your President and Secretary to the best of my ability when requested.

In the past year I have given considerable study to the increasing of our membership and would offer the following suggestions for your criticism.

THOS. F. ARTHUR

Hamilton, Ont. former vice-president of the Ontario Society, D. S. & H. E., who made a number of suggestions for improving membership.

At the present time there are several large centres having local associations which are not affiliated with the Ontario Society but who, at the same time, have parties holding membership in the Ontario Society, associated with them. Every effort should be made to persuade these local associations to join us as a body.

It must also, at this time, be recognized that we have, under our present way of operating, very little to offer our present membership for those contemplating joining us.

Under our present plan of meeting in convention once a year, it is impossible for the membership of this Society to become acquainted with one another, both socially and as to business relations. I would suggest at this present session that a committee be appointed with the object in view of trying to work out some scheme whereby the present membership could be divided into districts and a representative appointed from each local association in the said district to attend meetings at least once every two months at a stated place, preferably once in each town or city of said district. This would, in other words, be a District Council whose duty it would be to take up all questions as to the betterment of the Association and trade as a whole.

This body could forward recommendations to your Board of Directors for immediate action.

I feel confident that a great deal of good could be accomplished for the trade in the above method. Annual meetings and correspondence are very slow—by the above method, I believe it would be possible to secure more direct action.

In closing, I wish to express my appreciation of the efforts and work of Mr. C. G. Stewart of our Educational Committee, who has worked very hard in the effort to make this present Convention and banquet a success.

(Signed) THOS. E. ARTHURS

Don't Want Tinsmiths Installing Plumbing

Finest Tinsmithing Job Even Seen Was a Plumbing Job—Plumbers Should Take Vigorous Action to Get Suggested Provincial Plumbing By-laws Adopted

Inspectors' Association

Address by G. BLOOMFIELD representing Ontario Plumbing and Drainage

AN INTERESTING and new feature was the address by G. Bloomfield, Brantford, representing the Ontario Plumbing and Drainage Inspectors' Association. Mr. Bloomfield was introduced by T. J. Minnes. Mr. Bloomfield's address was as follows:—

"I want to ask you to pass a resolution to be forwarded to the Minister of Labor in Ontario to have enforced the legislation or part of the legislation concerning plumbing as suggested by the Hearst Government and which the Farmer government has refused to pass. The reason the farmer has not passed that legislation is that 80 per cent of the plumbers who go to the rural districts have told the farmers, 'you don't need that venting.' You have educated the farmer along that line and he has been falsely educated. In Toronto you have stood for a college professor making the statement 'here's a trap, a plumbers' graft.'

"We find tinsmiths installing plumbing. The finest tinsmithng job I ever saw was a plumbing job. If you will educate the farmer by going to the women's institutes and other places and show them the need for venting and for sanitary installations they will see that the proper legislation is put on the books and have tinsmiths and steamfitters kept out of the plumbing business.

"We have all the mail order houses trying to make a success of the plumbing business but today we have them pretty well on the run and if we can conduct education along the proper lines it will be an easy matter to bring about better conditions. One way to help dealings with our customers is to bury 'overhead' expenses in our business. If you can invent some other word it would be well. People are willing to pay for all legitimate expenses but they don't like to see an entry on their bill entitled 'overhead.'"

On motion of H. Mahoney, Guelph, and W. J. Clifton, Toronto, the report was adopted and an endeavor will be made to have the suggested Ontario plumbing by laws brought into force.

G. BLOOMFIELD

Sanitary Inspector, Brantford, Ont., who represented the Ontario Plumbing and Drainage Inspectors' Ass'n. at the Ontario Society, D. S. and H. E. convention

Advocates Apprentices be Indentured

Ravages of War Have Greatly Thinned Out Ranks of Prospective Employees in Plumbing and Heating Industry—Probationary Period to Protect Both Employer and Employee—Apprentice Should be Partly Controlled by Local Employer's Associations

Report of G. R. BAKER, Toronto, Chairman Apprenticeship Committee, presented to 11th Annual Convention Ontario Society D. S. & H. E.

AT THE last Ontario Convention, I had the honor of being eected Chairman of the Apprenticeship Committee, for the Province of Ontario.

At that convention, I fully realized the importance of such an office, and I feel positive that the gentlemen who elected me had some knowledge of a game vulgarly known as passing the "buck". However gentlemen I want to briefly outline the situation, as I found it in the Province as a whole. During the war the apprentices, who were in the making of future mechanics, were brought face to face with a problem, that brought out the real British ideals, of choosing between getting a living or allowing others to live, and chose the more noble one for humanity's sake.

The dropping of their tuition at the various stages for that great cause, took from us and rightly so, under such conditions, our future mechanics. These gentlemen went away with a knowledge of our Industry, which can only be gained by serving a certain period of time, which our craft demands. After the ravages of the war, taking its toll in various ways, such as amputation cases, and nervous wrecks, it left very few A1 men. And these A1 men had grown from youth to full manhood, and could not be expected to take up the studies of our Industry successfully, and finally drifted into other walks of life, and have become a burden more or less. These facts coupled with the uncertain state of the world's commerce after the war, placed us with equal uncertainty in our own particular Industry, inasmuch that many of our large employers of apprentices, who have in the past taken the responsibility of training boys, have through the rigid retrenchment policy, which was forced upon them, been compelled very much against their wishes, to cut down the number of apprentices.

An Obstacle

Owing to the abnormal conditions as described, my hands have been somewhat tied, and all that could be done under these conditions was to mark time. The present period of optimism which is presenting itself to our Country, and the rest of the world, through the action of the best brains of the world, gathered at the Peace Conference, whereby capital previously used for destroying life, is to be diverted for the purpose of uplifting all nations, and commerce in general. This leads us on to new thoughts, and new ideas, and at this point may I be so pertinent to say that with 15 years, of my own observation of our apprenticeship system

G. R. BAKER

Toronto Chairman Apprenticeship Committee of the Ontario Society D.S. & H.E. for 1921 and re-elected for 1922.

leads me to believe, that a similar state of affairs would have prevailed, even if the circumstances which I have referred to in this report had not taken place, as our apprenticeship system as we knew it, could not be spoken of seriously, therefore as your chairman of the apprenticeship board, I make the following suggestions to you, feeling that you will digest it, and act accordingly as this matter is the most serious of all matters, pertaining to our Industry.

(1)

That a plumber or steamfitter apprentice shall be properly indentured, and that when an applicant for such apprenticeship should present himself, he should not be selected by an employer according to his weight, but should be accepted by weight, and intelligence combined, as these two features are essential.

(2)

That a probationary period of one to three months, should be given for the purpose of both the employer and employee to see if such applicant is satisfactory.

(3)

That the larger employers of our Industry, should not be expected to be the training ground for the smaller operator to exploit.

(4)

An apprentice should not be controlled altogether by his employer, but by our Local Employer's Associations, as it is the actions of such Associations, that should make the way possible for the boy.

(5)

We should, and can make our industry so attractive, that the proper class of boy will come, going so far as approaching his parents, and impressing on their minds, that they as parents must make some sacrifice for the boy's future. Also advertising through the press that the Local Employer's Associations are taking an interest in the boy, by giving scholarships, such is being done in the City of Toronto, by the Toronto Society, and the Local Journeymen's Union combined.

Wages

(6)

The boy for his 1st year will receive ($5.00) per week, ($7.00) per week for 2nd and ($10.00) for the 3rd. If this is done, it will enable the smallest of operators, to take at least one boy. It will also enable the intermediate operator to take two boys, and not farm one boy continually from the plumber to steamfitter, as practised today, as this breeds discontent. Keeping in mind, that in dealing with apprentices you are not dealing with men of matured judgment, and the less discontent you place in the boy's way, the better for all concerned. Also that steamfitters' laborers can always be obtained from the general labor market for heavy work. At the end of the third year, the boy should appear before a Board of Examiners, to qualify for his tools, which should be provided by his employer. The board should consist of Representatives from the Employer's Association, and the Local Union, as it is from the journeymen to a great extent that the boy should get his tuition, and it is necessary for employers of labor, to impress upon their journeymen that it is their duty to impart some knowledge, for the boy's benefit, and we must interest ourselves in the boy's future.

Gentlemen, by using the indentured method of apprenticeship, I realize that I have gone away from the old style of our supposed apprenticeship system, but we must look to the older countries for our object lesson, and such a lesson is outlined in this report. In Toronto alone according to reliable figures, we need 80 apprentices entering our industry annually. At the present time no such number to my knowledge is learning the business. We cannot look to immigration for any material help, as the older countries are going to hold their

Fraternal Spirit at Annual Banquet

Sanitary and Heating Engineers, Representatives of Wholesalers and Manufacturers and Guests, Gather at Banquet Festivities—Excellent Entertainment Provided—Interesting Addresses on Development of Waterworks Systems, Baths, etc.

A BUOYANT spirit of sociability was everywhere in evidence along the various tables at the annual banquet at the Royal Connaught Hotel, Hamilton. Under the direction of officials of the Hamilton society splendid arrangements were made for dinner and entertainment and a representative crowd was on hand for the festivities.

After a splendid meal had been enjoyed, T. J. Minnes, who acted as chairman, introduced Fred Goodram, president of the Hamilton society who briefly welcomed the delegates to Hamilton, pointing out that he and other Hamilton delegates had thoroughly enjoyed themselves in Toronto last year and he was glad of the opportunity of reciprocating.

On behalf of the Toronto society, G. R. Baker replied, after which he provided some very entertaining features in the form of conversations of certain typical London characters, and a recitation entitled, "Democracy as seen by a London 'cop' during the war."

Norman Swanson, newly elected president, thanked the delegates for the honor conferred upon him, pointing out that he was proud of his position in the society. He thought such get-together meetings should be held not less than quarterly throughout the year. He repeated his earlier expressions of thanks to the trade papers for their courtesy in attending and reporting the convention. He also extended thanks to the manufacturers and wholesalers for their efforts at co-operation.

One of the speakers of the evening was Wm. Drynan, president of the local Chamber of Commerce, whom H. A. Rogers of the Standard Sanitary Mfg., Co., introduced as the Mark Twain of Hamilton.

What "Plumber" Means

In introducing his remarks, Mr. Drynan said he had looked up the derivation of the word "plumber" and found it meant "worker in lead" and therefore he realized that the workers in this industry should be termed domestic engineers. He spoke of the value of organization, pointing to the splendid business morale existing in Hamilton because of opportunities for business men to get together.

"Every man owes it to himself to take an interest in civic affairs. Everyone who does is an asset and if he does not he is a liability," said Mr. Drynan, who continued by speaking of the progress made in regard to baths. Making reference to the campaign now being conducted under the title, "A bath a day keeps you fit every way," Mr. Drynan became slightly twisted, referring to it as "A bath a day keeps the fits away."

The bathing habits of the various nations were said to vary considerably, the Japanese bathing four or five times a day in baths which had a charcoal fire at one end to keep the water warm. The Japs took baths . water 100-120 degrees

T. J. MINNES

Brantford, Ont., ex-president of the Ontario Society, D.S. & H.E., who presented a report as vice-president of the Canadian Society and ably presided at the annual banquet.

and thought nothing of bathing openly. There were said to be 1,200 public baths in the city of Tokio and the idea is said to be spreading rapidly in Japan and China.

Plumbing in the Orient

G. Stewart, newly elected vice-president of the Ontario Society, introduced S. P. Westaway who has just recently returned from fourteen years spent in the Orient. Mr. Westaway dealt in an interesting manner with the progress of water supply in oriental countries, pointing out that the world is to day getting nearer to China and that a study of each other's methods is of value to all. He outlined an ingenious plan which was evolved to provide water to a city of 1,500,000 inhabitants lying 3,000 miles inland in China. This city was surrounded with an irrigation system of water supply. This supply was dammed up and a sluice made as the basis. A water wheel 40 ft. in diameter was constructed and placed just outside the city wall which was 30 ft. high. To each paddle was attached a bucket which emptied the water into a reservoir high enough to give the necessary fall. The water was carried through the city level with the sewers by means of bamboo hollow rods. The final distribution of water to consumers was made from frequent reservoirs by means of coolies.

"We must look to the Chinaman as a future competitor," said Mr. Westaway, "but he is a worthy one and we should not discourage his education."

A number of splendid vocal solos, recitations, comedy songs and magical tricks provided plenty of entertainment, interspersing the addresses, and during the dinner splendid music was provided by an orchestra.

INVESTIGATE HAMILTON SEWAGE DISPOSAL

Hamilton, Ont.:—A start was made on the city's sewage system and its problems, with the arrival of H. P. Eddy, consulting sanitary engineer of Boston. Mr. Eddy will go into the whole sewage question with the local engineers studying the present sewer system and visiting the plants in operation. Hamilton's sewage disposal problem is at present one of the biggest ones in the country, and the magnitude of the work involved makes it comparable to the systems of Detroit, Buffalo, Cleveland and other U. S. cities. So far two U. S. consulting engineers have been communicated with, viz., Mr. Eddy and Langton Pierce, chief sanitary engineer of the Chicago drainage commission. Whether the city shall go across the border to engage a consulting engineer is a question awaiting decision, but Mayor Coppley states that although every effort should be made to secure a Canadian for the position, the city should not hesitate to go to the U. S. if the procuring of the best available service is at issue. There seemed to be little doubt that Mr. Eddy would be the expert engaged to settle the problem judging by the way in which his preliminary report was received, the outstanding feature of which was that the attitude of the provincial Board of Health would have a great deal to do with the expenditure required on account of it controlling the waters of the bay. Mr. Eddy thought much money could be saved if the oxidizing facilities of the bay could be used.

The St. Thomas Packing Co., St. Thomas, Ont., W. H. Moody, manager is preparing plans for $50,000 cold storage plant to be erected at Welland, Ont., and wants prices on all equipment.

Need Legislation Regarding Heating

Chimneys a Source of Much Trouble in Case of Heating Plants—Undersize Boilers Frequently Installed—Why Compel Plumber to Have License and Let Anyone Install Heating Plants?—Asks Qualifications for Those Installing Heating Plants

Report of W. J. CLIFTON, Chairman Heating Committee, as presented to the 11th Annual Convention Ontario Society D. S. & H. E.

"I HEREWITH SUBMIT a few suggestions for your consideration which I believe will benefit the public at large as well as our craft.

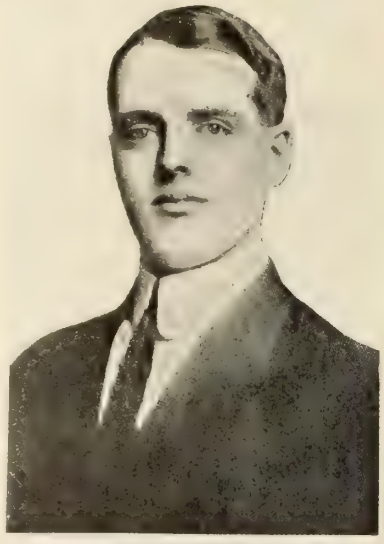
"We have by-laws of different kinds both Municipal and Provincial in regards to sanitation, etc., in connection with plumbing in all its branches, which we all appreciate and uphold, and these are being amended from time to time. But what about the heating and ventilating of our buildings in all its branches? What has been done in the way of legislation along this line?

"First of all, let me refer to the chimney. Surely it will not be necessary for me to go into details to members of our Association, to prove that chimneys cause trouble to heating plants and as a result impair the health of the people. I have in mind a house that has a smoke pipe from the hot water boiler, a three inch vent from the w.c. and a kitchen coal-range pipe all going into one nine inch flue, and the occupant of the house expects service from the boiler when same is not forthcoming. Of course, he blames the heating contractor. Another one carries a smoke pipe from the boiler and two fire places in a 9 inch flue, on a brick veneer house which means one single course of brick. Both of the above cases finally caused injurious conditions to the health of the occupants as well as waste of fuel.

No Law to Prevent

"My next point will be the size of the boiler, radiators or furnace, etc., that is used to heat the buildings. Earlier in my business career I had an experience, when I figured a No. 5 boiler was required to heat a house. The builder plainly stated he only had so much money allowed for heating. As a result I cut the boiler to a No. 3½ and also cut down radiation. The house was finally sold and the house cannot possibly be heated on a cold day. You will all say I am to blame. True, but I had to have an experience of this kind in order to learn. Naturally a man that intends to stay in business will never do that more than once. This thing is being done all over the country to-day and no law prevents it.

"Why compel a plumber to have a license and pass an examination and allow any Tom, Dick or Harry to install our heating plants? It is true chimneys cause trouble in heating buildings as well as the equipment being too small but it is also true that many a building is improperly heated on account of the ignorance and carelessness of the party installing same. It also can be pointed out that buildings have been wrecked by explosions of hot water boilers where proper provisions have not been made for expansion. The writer has in mind a public building heated with two hot water boilers and the pipe from the expansion tank taken off on the wrong side of the valves. The owners were notified of this and also the possible loss of life and property, yet nothing is done, as the owner says it has been that way for fifteen years, and we are still alright, and mind you gentlemen, there is no law to compel those people to make that right.



W. J. CLIFTON

Toronto Chairman Heating Committee of the Ontario Society D.S. & H.E. for 1921 and re-elected for 1922.

Raising Chimney Brings Improvement

I contend this—first, that if the authorities can say that my walls must be a certain size, the joists, etc., a certain thickness, they also can say that the chimney must be built the proper size, and height above the roof. I have just extended a chimney two feet higher and as a result the tenants have been warm for the first time in seven years.

"Second—that the equipment should be of sufficient size to heat the building. The argument that one man may not want his house as warm as the other fellow will not hold water, as this point could be raised about the size of the vent through the roof as well as the size of a wall and joists, etc. Put the system in the proper size and then let the occupants suit themselves, but do not tie his hands so he cannot do it in order to satisfy a jerry builder.

"Third—that all persons installing heating plants should qualify for same. One case in point where a man calling himself a steamfitter desired to release some pressure on a boiler that was carrying 85 lbs. He opened the everlasting blow-off valve quickly into a galvanized iron blow-off tank with a ½ inch vent pipe through the roof. It will not be necessary to explain the results. This coupled with the other illustration referred to compels me to believe that persons should qualify.

Fourth—that an inspection should be made to prevent accidents like those referred to.

Plumbers to Blame

"I am also compelled to believe that the plumbers are largely to blame for the existing conditions. Some times I try to excuse them, as the oakum or solder they use must affect their reasoning powers, as most of them are unreasonable. To illustrate, if I as a heating contractor attempted to run a vent pipe, they would jump into their car for the nearest police station to summon me before a court for infringing on their trade and breaking the plumbing by-laws, etc., and yet on the way down to the station they would connect up a few radiators or do anything else in the heating line. Steamfitters are in the minority and can not do much. If the plumbers would assist the heating men as aggressively in securing by-laws along the above line, as they do for plumbing laws, no doubt we would get results. It is a case of might is right. They will not vote to stop themselves from doing the heating man's work, anymore than you can expect a hardware man to go to the government and plead with them to pass a by-law whereby a hardware man would be fined for doing plumbing work.

"Finally, gentlemen, allow me to summarize the above into the following four points:

1st. Have chimneys the proper size and height.

2nd. Have all heating systems of sufficient size to heat the buildings.

3rd. Have all persons installing heating systems qualified.

4th. Have all heating installations inspected.

"I trust that this convention will go on record as favoring some of these suggestions and give your undivided support to who ever is detailed to carry them out."

PLUMBER BUYS KITCHENER LANDMARK

Kitchener.—Another of Kitchener's old landmarks has passed into new hands. It is the Heller property on King street, and is one of the historic business blocks of Waterloo County. The purchase was made by John Shiry, a local plumber. It is expected the place, the appearance of which still harks back about 100 years, will be completely remodeled into modern store fronts.

Want Uniform Plumbing Regulations

Great Need for Enforcement of Suggested Ontario Regulations—Adequate Plumbing is of Chief Value to Householders—Municipal Inspectors and Supply Houses Should Conduct Campaigns to Popularize Fixtures—Plumbing Regulations and Police Power.

Joint Report of JOHN WRIGHT, Chairman Sanitation Committee and NORMAN SWANSTON, Chairman Legislation Committee, before 11th Annual Convention Ontario Society D. S. & H. E.

I SUBMIT to you the third edition of your Toronto Sanitary Legislature report for the past year 1921 and up to date, which will be reports on the Department of Public Health, Plumbing and Drainage Division, the Hygienic Division and Convention of the Association of plumbers in connection with the Township of York By-laws and an explanation of Re-plumbing By-laws for the Province of Ontario. Interpreting basis on the compiling of the Proposed Plumbing Regulations passed by the Provincial Board of Health, May 6th, 1918.

Department of Public Health 1921 — Synopsis of Work Done — Toronto Plumbing and Drainage Division

Applications For Inspection:

Correspondence, etc., 15.0% less than in 1920.

Amended Plans, 5.0 % more than in 1920.

Requested Plans, 6.5 % more than in 1920.

The Hygienic Division

In presenting you a brief summary of the work accomplished by this Division along the lines of Industrial Hygiene for the year, 1921, I may state that there were cases of plumbing work done by handy-men around factories without inspection and in violation of the Sanitary and Plumbing by-laws, such as sink wastes untrapped, fixtures without vents, traps unsealed, openings in waste and vent pipes, resulting in sewer air escaping from the drain into the workshops and factories. In some places the wastes were found discharging under floor, no connection being made with drain.

There were many cases of plumbing improperly installed, and many cases of defective plumbing. There were oth cases found where closet vents and water closet bends were open and the air vile and offensive.

The above work was corrected, and made right by licensed plumbers. The record which is:

Sinks and basins installed	29
Shower baths installed	10
Drinking bublers and fountains installed	72
Gas and chemical fumes controlled	98
Trade dusts wholly or partly controlled	159
Plumbing defects repaired	155
Drains repaired	123
Exhaust fans, hoods, ducts and vents	71
Ventilation improved	80
Light improved	17
Lunch rooms and rest rooms	18
Number of yard privies abolished and sanitary conveniences installed	569
Conveniences installed on the assessment plan	105
Defective plumbing repaired and reconstructed including industries	653
Number of drains repaired total including industries	165
New W. C.'s and urinals (in industries,	70
Basins and sinks (in industries)	42
Shower baths including factories	10
Total number of nuisances abated by this Division	4982
Houses vacated (insanitary)	48
Cellars condemned	15
Houses turned into workshops and storages	11
Houses without city water	05
Water in cellars	43
Apartment-houses unsatisfactory	13
Rooming houses unsatisfactory	23
Defective furnaces	39
Dirty closets	26
Gas escaping (illuminating)	38
Water wasting	148
Defective roofs and down pipes	90
Living in shops and workrooms	12
Insufficient light	02
Bad ventilation	10
Unsatisfactory public buildings	04
Complaints not well founded	133
Number of letters sent	3762
Number of court cases	264
Improved conditions which have been effected in industries after notice—exhaust fans, hoods, vents, etc., installed	2735

JOHN WRIGHT

Toronto, Chairman of the Sanitary Committee of the Ontario Society D.S. & H.E whose report on sanitation and legislation was one of the most important of those presented at the convention.

The Licensing of York Township

February 24, 1921. Had conference with Councillor W. S. Jury. We went into full details in connection with trouble which had risen in reference to licensing Master and Journeymen plumbers. We showed and explained to him the Provincial Statutes which governs and defines what a Master Plumber is in the Province of Ontario. We were shown how the Township arrived at the defining of a Master Plumber, in the Township, which was a copy of Clause 44 of By-law No. 102, which the City of Toronto had never adopted as this particular clause was already taken care of in the Municipal Act. This Clause 44, Mr. Davenport found out he made a mistake in the drafting as it was already taken care of in the new Amended Municipal Act for the Province of Ontario so he immediately made a ruling for the licensing of Master Plumbers under the new Amended Municipal Act, never adopting clause 44, making a ruling that Qualifications and a Regular Place of Business in the Municipality, classifying a Journeyman plumber under Subsection 2 of Section 2 of the By-law No. 102, which is a Municipal Act, as a Tradesman going from place to place or to other men's houses which brings them in as a resident of the city, which makes both Master and Journeymen Plumbers taxpayers, directly or indirectly in the City of Toronto. The Councillor asking for another meeting

in the near future which took place on February 28, 1922, at the above Councillor's home in regard to this matter and other business they had to bring before us.

Couldn't Combine With Hardware

They wanted to know if it would be possible for the Master Plumbers in the Township to have their place of business in Toronto in connection with some hardware business. They were told it would not be possible as they would have to come within the Act. They tried to show us that it wasn't fair to put them to such expense, as in the Township they were not restricted to a regular place of business, but must be a resident, going further in showing us that all their money was spent in the city of Toronto on material, clothing, groceries etc, and that they thought Toronto owed them something. They were shown that the plumbing business was different from brick and mortar and it was a question of Health to the Community as a whole and that they had all other privileges except in this matter.

Legal Advice Taken on the Above

Dear Sirs:—

You have submitted to me for opinion the question of the validity of By-law No. 6117 of the Township of York, which purports to amend By-law No. 4664 by adding the following sections.

8(a) No person shall carry on business as a Plumber or Master Plumber in the Municipality of the Township of York unless he is the holder of a license issue as hereinbefore provided, and every person so licensed shall be subjected to the provisions of this by-law and shall be a resident of the Township of York and of the full age of twenty-one years.

The Municipal Act gives power to councils of towns, townships, villages and cities to pass By-laws for "licensing, regulating, and governing" plumbers, master plumbers and journeymen plumbers. This is by Section 420 (4), as amended by 7 Geo. V. Chap. 42, sec. 20, which is as follows:

420-(4) For licensing, regulating and governing plumbers, master plumbers and journeymen plumbers:—

(a) For the purpose of this paragraph "master plumber" shall mean a person who is skilled in the planning, superintending and installation of plumbing, is familiar with the laws, rules and regulations governing the same, has a regular place of business in the municipality, and who himself or by journeymen plumbers in his employ performs plumbing work.

(b) A "journeyman plumber" shall mean a person other than a master plumber, who has been in the employ of a master plumber for not less than one year, and desires to follow plumbing as his calling.

The Statutory power is to regulate the trade and does not confer or imply any power to prohibit or prevent the trade.

Must be Resident

The by-law in question of the Township of York, provides that no person shall carry on business as a plumber or master plumber in the Township unless he is a resident of the Township and the holder of a license issued by the Township.

This is an attempt to prohibit all plumbers and master plumbers who are not residents of the Township from doing business in the Township and is clearly beyond the power of the Municipality.

The Statute which gives Municipalities power to license, regulate and govern "master plumbers," limits the power by a definition of "master plumber" which confines the power to master plumbers who have a regular place of business in the Municipality. The statute does not purport to carry the power to the extent of permitting a Municipality to impose licenses and regulations upon master plumbers who have not a regular place of business in the Municipality.

In our opinion, the by-law is invalid and would be quashed by the Courts.

Section 285 of the Municipal Act provides that any "ratepayer" of another Municipality who is injuriously affected by the by-law, may apply to squash the by-law. It is therefore available for any member of your association who is a ratepayer injuriously affected by the by-law to apply to the Courts to squash the same upon giving the usual security for the costs of the application.

MEETS JOURNEYMEN

Feb. 27th/22. Met a representative of the Journeymen, in reference to a recommendation which they were forwarding to the City Council in reference to taking the bar off the licensing of journeymen plumbers in the Township of York, giving them the privilege, under a special fee to apply their trade in the City of Toronto and the Township of York to recognize our journeymen under similar conditions. We advised that they withhold the recommendation until they were able to find out if the journeymen plumbers, in the Township of York would be a party to it and until that was done we could not see that they would get very far with the recommendation as it would have to be unanimous from our view of looking at it.

H. MAHONEY

Guelph, Ont. Former official of the Ontario Society D.S. & H.E., who took a leading part in the discussions at this year's convention in Hamilton.

RE PLUMBING BY-LAWS FOR THE PROVINCE OF ONTARIO

The validity of certain by-laws with respect to plumbing has been questioned and the following remarks are offered not as a legal opinion, but for the purpose of illuminating the situation as far as may be possible.

Certain plumbing regulations by virtue of certain clauses in Schedule B, of the Public Health Act are in force in every municipality as provided by Section 115 of the Public Health Act, except in so far as they be amended and only when such amendment has been approved by the Provincial Board of Health.

Re Plumbing By-Laws

In addition to the by-law with respect to the manner of installing sanitary equipment there rests with each municipality as provided by Chapter 192 of the revised statutes of Ontario, Section 420, the right to pass by-laws; first by councils of urban municipalities having a population of less than 100,000 and by the Board of Commissioners of Police in cities having a population of not less than 100,000, by-laws for (Section 4) "licensing, regulating and governing plumbers, master plumbers and journeymen plumbers:" (Section 4a) "for the purpose of this paragraph "master plumber" shall mean a person who is skilled in the planning, superintending and installation of plumbing, is familiar with the laws, rules and regulations governing the same, has a regular place of business in the municipality and who himself or by journeymen plumbers in his employ performs plumbing work:" These by-laws have to do, not, I take it, with the plumbing installation itself, but with the conditions as to experience, examination, regular place of business and the like of master plumbers and journeymen plumbers, who may wish to carry on their respective trades within a municipality.

The municipalities, I take it, may pass by-laws with reference to this matter without any sanction of the Provincial Board of Health. In othe words the sanction of the Provincial Board of Health of a by-law is only of those sections which could be construed as pertaining to the section of Schedule B. dealing with the installation, equipment, and inspection of sanitary conveniences or plumbing.

Advantage to Householders

As has been pointed out in the proposed regulations governing plumbing passed by the Provincial Board of Health, on May 6th, 1918, it is to the general advantage of householders and home builders throughout the province that licenses be only granted to plumbers, conditional upon the applicant passing satisfactory examination as to his fitness from the point of view of protecting the public.

The work called for by the present activity experienced by the plumbing trade in rural parts and in the smaller urban centres without organized water supplies and sewerage systems, should according to a strict interpretation of the statutes, be carried on in accordance with Schedule B. of the Public Health Act. In practice, however, the tendency is for competing firms to tender largely upon a basis, either, of conforming with the proposed regulations or upon work complying with the regulations in force in the municipality where a tendering form carries on business.

The situation presents this difficulty that the householder usually ignorant of the various requirements of this and all the regulations is unable to determine which is the better tender to accept; the tenders not being strictly comparable since they are not upon the same type of installation.

Must Have Uniformity

Efforts to obtain uniformity in plumbing regulations, have been made in many States of the American Union and the proposed Provincial Regulations were a step to obtain uniformity in Ontario. Uniformity naturally must be based upon the establishment of certain minimum requirements which may be met and elaborated upon, to the extent that the pocket-book and taste of the builder suggests. Nevertheless there should be a strict compliance with a minimum requirement.

I think it may be said that where work is undertaken by reputable firms there is a compliance with the minimum requirement as provided for in the regulations as approved May 6th, 1918. A good deal of work, however, continues to be installed, especially in municipalities where licensing is not supervised, by persons whose standing in the profession—to put it politely—is possibly not of the highest. Where the work is undertaken by craftsmen of this type, the installation cannot be said to comply with any regulations, partly owing to the fact that the craftsman is not aware of he minimum requiremens of good practice, and partly because of his desire to simplify the installation to a point, where he can get the job at a price.

Before the situation can be corrected and in order that the public mind be disabused of the impression that plumbing regulations especially favour the plumber, a good deal of active education must be carried on

throughout the province. The people must be educated; first in the necessity of certain safeguards to prevent the deterioration of equipment, such as back-venting, and they must too be educated to appreciate the advantage of different models and styles of equipment, which the supply houses have been able to furnish after lengthy experience in the art of manufacture.

It is reasonable to suppose the householder would take as much pleasure in the furnishing of his bathroom, laundry, and kitchen as the ordinary housewife takes in the conveniences supplied for carrying on her activities.

Who Shall Conduct Campaign?

As to who should carry on the campaign, it appears to me that the Municipal Inspectors, together with the supply houses should be responsible for a great deal of it, through word of mouth and by attractive advertising. The advertising should not only present a cut of the fixture, but should also indicate through the printed word the particular merit of the style.

Ontario is already recognized as possessing possibly the most attractive urban development in respect to housing that can be shown on this continent, and there is every reason to suppose that in the future she may also, hope to lead as well in the attractiveness of sanitary conveniences and in their multiplicity.

Where By-Laws are in Effect

It has been definitely ascertained that plumbing by-laws, approved by the Provincial Board of Health are in effect in the following cities and towns of Ontario.

City of London.
Town of Forest.
City of Ottawa.
City of Port Arthur.
City of Fort William.
Village of Elmira.
City of Guelph.

The fact that more of the municipalities do not appear upon this list is, not necessarily evidence to the fact that the existing by-laws are not valid.

The suggestion, however, is advanced that it might be advantageous if all the municipalities not listed and having plumbing by-laws would forward them to the Provincial Board with the request that they be approved as amendments to Schedule B. of the Public Health Act.

Plumbing Regulations and the Police

The authority for the regulation of plumbing is derived from the general police power of the municipality. According to this power the people of the municipality, acting through their legislators, have the right to protect themselves against acts of individuals which may injure the public health, safety, morals or the like. This general police power is, moreover, delegated to cities and towns. Police power is, in fact, one of the inherent powers of government, and is curbed only by what is known as "due process of law."

In order to justify the application of the police power to plumbing regulation, it is necessary to show that health, safety or morals is concerned. While these relations are usually considered to hold, the courts having consistently upheld as being constitutional the laws regulating plumbing, and while no one to-day questions the applicability of the police power, it must be admitted that in recent years there have been changes in scientific thought as to the definite relation between plumbing and health. As a matter of fact, no one to-day questions the application of the police power to plumbing regulation, for although the disease relation has been weakened, the police power itself has been expanded to take in matters of comfort and welfare.

Abuses Under the Plumbing Law

Certain abuses appear to have crept in under this law; for example, there is nothing in the law which protects the well-meaning and financially responsible plumber who maintains an adequate shop in competition with an unscrupulous and financialy irresponsible plumber without equipment, who succeeds in getting a license, and who, because he has no overhead charges to pay, can often underbid the regular master plumber. Before the law was passed plumbers were engaged on the basis of financial responsibility and personal reputation and acquaintance; now the public has come to assume that all licensed plumbers

G. FRANKLAND

For some years secretary of the Ontario Society D.S. & H.E., whose resignation, proferred in connection with his annual report to the convention in Hamilton, was left to the consideration of the directors of the association.

are presumably competent—that is, the public has come to depend upon the system of registration of plumbers and inspection of work.

Effect of Changed Business Conditions

This changed attitude is not due entirely to the law, but to changed business and social conditions, to larger cities, and to more wholesale methods of doing plumbing work, in which the individual tends to be lost sight of. It is probably not possible to return to the old individualistic conditions; hence the laws regulating plumbing should be adequate.

The present tendency is towards the elimination of the master plumber who maintains a well-equipped shop. The use of manufactured materials is giving the major profits to the manufacturers and dealers, while modern methods of installation, together with the plumbing laws and regulations, are raising the status of the journeymen. The public, meantime, is gradually losing the benefits which come from dealing with reputable and experienced master plumbers whose judgment in installing plumbing ought naturally to simplify the installation and lessen the possibilities of damage to the house by improper location. Well-equipped plumbing shops are of benefit to the community as a basis for repair and emergency work.

A fact which should be recognized by the public is that the plumbing laws, while they may result in eliminating incompetent persons from the craft, are no guarantee of business reliability, and can never be made so. The methods employed by the large corporations in marketing their products, namely, by means of mail-order houses, department stores and show rooms in cities (where no goods are sold direct to the public) also tend towards the submersion of the master plumber.

Enforcement of Rules and Regulations

The enforcement of the law involves three steps,—first, the issue of permits; second, the inspection of the work; and third, penalties for violations.

The permits are regulated locally, and practice varies in different cities and towns. Usually, written specifications are required, signed by owner or a licensed master plumber. This specification is merely a request for permission to do work at a certain place, but in many cases the specification must be accompanied by a sketch or written description of the work to be done.

There are two points of view in regard to the inspection of plumbing. One opinion is that if plumbers are properly licensed, and therefore presumably competent, honest and financially responsible, there is need of no inspection beyond that of seeing that special local requirements are complied with. The other opinion is that, in view of the facts that the personal relations between owner and plumber are not now as close as they once were, business responsibility is not assured by the possession of a license and that plumbing materials themselves need inspection, the burden of securing good work clearly rests upon the inspection authority. This brings to the front the question of the inspectors, their appointment, their competence, their opportunity to inspect, and the tests which should be applied during and after construction.

Plumbing Inspectors

Plumbing inspectors qualify under rules, the appointments are made by the local boards of health, through the Municipal Council.

An inspector must be a practical plumber, who for five years next preceding his appointment was acquiring practical experience either as master or journeyman, this being in addition to the time required for learning the business, a total of ten years. Compensation is fixed by the appointing power, subject to the approval of the council or selectmen. When an annual salary is established an inspector is not allowed to engage in or work at the business of plumbing. Provision can be made for two or more towns to unite and form one inspection district. This would follow in only a few instances.

The duty of the plumbing inspectors is to inspect all plumbing for which permits have been granted, which is in process of construction, alteration or repair, within their respective cities and towns, and to report to the board of health all violations of any law, ordinance, by-law, rule or regulaytion relative to plumbing. No inspector is allowed to inspect his own work; hence in places where inspectors are not permanently employed provision can be made for appointment of additional inspector to meet this situation.

Approval of the plumbing work is given by the plumbing inspector.

Non-Compliance With the Law

If the plumbing work is approved by the plumbing inspector, well and good. If the inspector does not approve the work he reports the case to his superior authority, namely, the local board of health, as the case may be. Notice of disapproval is sent to the licensed master plumber and after a second inspection a second notice is sent to the owner. Failure to make the plumbing work comply with the law results in having the matter turned over to the law department for action. The remedy is a proceeding in court. This process is troublesome and expensive and the matter is usually delayed and often dropped. Meanwhile the plumbing is used, and this fact itself may be advanced as an argument that the work is satisfactory. In other words, as an

(Continued on next page.)

Many Mechanics Starting Businesses

Lack of Work Has Compelled Many Operators to Lay Off Mechanics Who Have Entered Business for Themselves—Trade Extension Should Show Good Results When Conditions Stabilize

Report of T. J. MINNES, Vice-President Canadian Society D. S. & H. E.

THE REPORT of T. J. Minnes as vice-president representing the Ontario Society on the Board of the Canadian Society D. S. & H. E., was as follows:—

"Building during the past year has been curtailed for reasons of economy and house building has been impeded largely because prices have been abnormal. This condition has placed our business in a slump and prospects for the immediate future are not any too bright. Operators have, due to unavoidable circumstances, been forced to lay off mechanics many of whom have entered into business themselves. This has had a more or less demoralizing effect on the industry. Under these circumstances it seems a loss of time and energy to try to teach such individuals the aims of our association, and this applies equally well to the Trade Extension movement.

"I am satisfied that money and effort expended in the greater part of the last year would have been absolutely wasted had Trade Extension been organized a year ago. My confidence is as strong as ever in trade extension and the work done on it will show good results when conditions stabilize.

"The Canadian Society does not function as it should do and it would serve a better purpose if it were composed of executive members from the provincial societies. I cannot see where the last convention of the Canadian Society warranted the expense involved."

WANT UNIFORM REGULATIONS

(Continued from previous page.)

exercise of the police power, the law controlling the installation of plumbing, in some places is practically inert. Well-meaning plumbers and builders conform to the regulations, and as a means of establishing standards and securing uniformity the plumbing laws are a benefit. This is the normal situation, yet to a considerable extent the laws fail to give that security against violations of the regulations which the people have a right to expect, and which they innocently believe they are getting.

The difficulty appears to be that the penalty for violation of the regulation is one that cannot be physically put into effect. As long as it is physically possible to use a plumbing system which does not conform to the regulations, it is likely to be done in defiance of law, the chance being taken that court procedure, for one reason or another, will not be brought to an issue.

Physical Control

There are two ways in which physical control might be secured—first, by refusing a permit to use the sewers until the plumbing system has been approved; and second, by refusing to allow the water supply to be used, except for test purposes, until the plumbing system has received approval. The first penalty is one already found in some local regulations. It is seldom lived up to, however, because as a rule the house drain is laid early in the construction work, there is usually no shut-off valve on the house drain, and if the water is turned on it is absolutely necessary that the plumbing system be made use of. In some cases there may be no sewer to connect with, and the sewer prohibition would thus become ineffective. Refusal to turn on the water before the drainage system was satisfactory would appear to be as reasonable as the refusal of the gas companies to turn on the gas until inspection has shown the gas piping to be in satisfactory condition.

Still another penalty would be to prohibit the occupancy of the house until the plumbing had passed the necessary inspection. In the case of minor defects this would probably not be enforced, as it might be regarded as being too much of an encroachment on private rights, and thereby [illegible] court proceedings. Unless plumbing regulations are to be regarded as mere standards of procedure, some means for their enforcement, other than that of tedious and uncertain court proceedings, should be devised.

Practical Limitations of Plumbing Inspection Under Present Conditions

In considering the value of plumbing inspections certain practical conditions must be kept in mind.

In the first place, the materials used in plumbing work have undergone a change during the last twenty-five years. Lead (which gave its name to the trade) is used less than formerly; soldered joints have largely given way to screwed joints; manufactured products, including various fittings, are now purchased and merely assembled on the job; less dexterity is now required than heretofore, but good judgment is as much in demand as ever.

Some of the furnished supplies are standardized as to size and quality, but these are largely trade standards, and many articles, especially fittings, are not standardized. The local inspector can have but a limited control over the quality of the materials installed. There is need for a wider standardization of such supplies, but this cannot come about through municipal action, as the products are often made by non-resident companies which sell the goods in many municipalities. It must come about either by Federal action, by concerted action by the government, or by concerted action of the trade, the latter being preferable.

Hence the work of the inspector is largely that of seeing that the layout of the plumbing conforms to the rules and regulations, and that the piping system comprising the soil pipes, vent pipes, water pipes, traps, etc., is tight against water or air pressure. In Toronto final tests of the finished work are made because the joint between the water-closet fixture and the soil pipe is one of the most vulnerable points of the whole system. Regulations require a final test, but in practice it is seldom applied in a satisfactory manner.

Sanitary Inspection of Plumbing Already in Use—Laws Relating to Gas Piping

Local boards of health have authority to inspect buildings on complaint or because of the supposed existence of a nuisance, and are sometimes charged with the duty of inspecting tenement houses and other buildings. Such inspections commonly include plumbing, fixtures, house drains, gas pipes, rain conductors, water supply pipes, privy vaults, etc.

This work is quite as important as that of original inspection. Old plumbing in need of repair or filthy through neglect which results in unhygienic conditions. The local boards of health have ample powers to abate conditions which are serious enough to affect the health, morals or safety of the occupants of the house or building; no permits are required for plumbers to repair leaks nor, in some cases, to replace leaky fixtures, whether the leak is of water or sewer air. Cheap materials and poor workmanship may hasten bad conditions, and plumbing which legally will pass the original inspection may contain three elements of early deterioration.

Such laws relating to gas piping, rules and regulations as exist relative to these matters are found in the Ontario Proposed Provincial Regulations.

The control of plumbing in Ontario may he said to consist of five parts—licensing, regular place of business, regulations, permits and inspections. In all the cities and in many towns which have adopted plumbing regulations, master plumbers and journeymen must be examined for qualifications and licensed in order to establish their rights to do plumbing work. This requirement is in line with compulsory education, and is intended to be a guarantee against ignorance and lack of skill. Regulation consists of setting up minimum requirements for the design, standards of materials, and workmanship of plumbing. In some towns they think there are no regulations whatever, and in these towns anybody can work at the business of plumbing. Permits to do specific plumbing jobs where regulations are in force are granted to master plumbers and in some places to the owner, but in these towns of Ontario without regulations no permits are required but they must work within Schedule "B" of the Ontario Health Act. Inspection, which is carried on under the direction of the local board of health is intended to give assurance that the work has been done properly and in accordance with the regulations—a guarantee against dishonesty, carelessness, flaws in materials, and accidents. Licenses, permits, regulations and inspections invariably go together, a town adopting all or none.

(Signed) JOHN WRIGHT

PLUMBERS' AND STEAMFITTERS' UNION REFUSES 75 CENTS AN HOUR

Ottawa, Ont.:—An offer of 75 cents per hour, which is five cents per hour under last year's schedule, which was put forward by the master plumbers was rejected by the representatives of the plumbers' and steamfitters' union. Last year the men received 80 cents per hour and this year have been offered 75 cents per hour, for the wage agreement of 1922-23.

ADVOCATE APPRENTICES BE INDENTURED

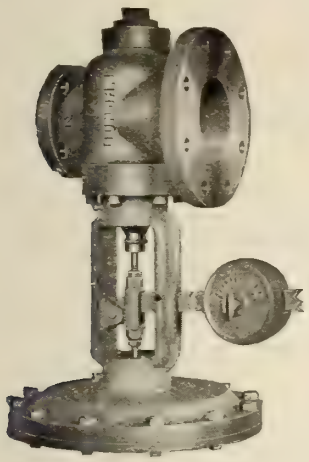
New Goods of Interest to the Plumbing Trade

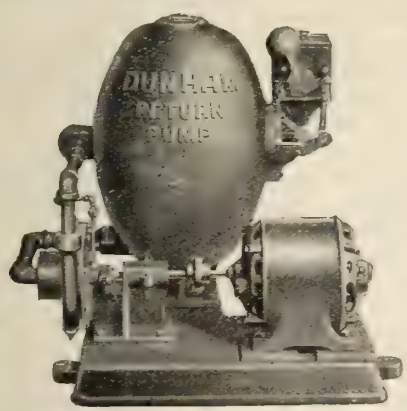
IMPROVED DUNHAM PRODUCTS

The C. A. Dunham Co., Toronto, have recently given special attention to their improved type of automatic electric-driven condensation pump units, and reducing pressure valves. The makers point out that both of these lines replace



goods previously imported into Canada.

The type of Dunham return pump, illustrated herewith, is designed to automatically pump condensate from heating systems or process work, back to boiler, heater, hot well, or other storage. The unit is provided with float switch control, for stopping and start-



ing the motor, as the water empties from or accumulates in the receiver.

The Dunham line of valves is applicable to a wide range of circumstances in reducing the pressures of steam, air, and water. It is claimed that they will reduce initial pressure to the desired low pressure in one step.

COMPLETE PUMPING SYSTEM

White and Henderson of Sudbury have just completed the installation of a pumping system for the water supply for the town of Sturgeon Falls.

IMPROVED STEEL BATH

The development of a new idea in steel baths is claimed by the Steel Trough & Machine Co., of Tweed, Ont., who have recently been granted a patent for a steel bath which is equipped with pressed steel removable legs, and with a roll rim around the top. The manufacturers claim that this has the effect of making an ordinary steel bath appear more like a porcelain product. The producers state that they are now making deliveries of these new style baths.

TUB SHOWER FAUCET

The Mueller tub shower faucet is a device which the makers claim combines the advantages of the usual cock for a bath tub, with the special shower equipment. It is made by the H. Mueller Mfg. Co., of Sarnia, Ont., and by simply pressing or pulling upon the knob of the faucet, water is available for either tub or shower as desired. This equipment is claimed to be specially adaptable for shampooing purposes. Each faucet has five feet of hose permanently attached to the bath cock, and a spray head. A bracket attachment provides a ready means of keeping both hose and spray out of the tub and yet readily available when required. The manufacturers point out that this combination can be substituted for any other type of bath equipment without difficulty, as it is made to fit standard bath tubs. The knob, or switch cock, is arranged to control the flow of water through the spout of spray attachment.

ARMSTRONG HOLDER

The Armstrong Mfg. Co., Bridgeport, Conn., has recently placed on the market two sizes of holders which have been designed for use in making both right and left hand pipe nipples. The one holder known as No. 20 is suitable for nipples from ¼ to 1 inch in size, while the other holder known as their No. 30 is for nipples ranging in size from 1 to 2 inches.

TRIPLICATE TORCHLIGHT

An electric torch light which is equipped with three bulbs has been recently introduced on the markets by the Franco Electric Corp., of Brooklyn, N. Y. In addition to the three lamps, other features of this device include a special reflector for throwing a single concentrated beam of light, a lens ring with nickel finish, and a contact box which enables a continuous light from the three bulbs or an intermittent flash, as desired. Spring lamp sockets hold the reflector in position. Colored lamps may also be inserted.

ELECTRIC GLUE POTS

Electrically-heated glue pots, in two types, jacketless and water jacketed, are being placed on the market by Londers, Frary & Clark, of New Britain, Con-

necticut, U. S. A. The former type is for continuous use, and is made from one-piece cast aluminum with permanently attached wiping bar.

ELECTRIC SOLDERING IRON

Landers, Frary & Clark, New Britain, Connecticut, are placing on the market a new electric soldering iron and glue pot. For the former it is claimed that owing to the heating unit being securely clamped to the copper, the iron is most efficient and longer life is assured to the element. This, together with the special non-corrosive material used, makes it very easy to replace the copper tip when worn. A hatchet tip for attaching to the side of the shank can be furnished, thus insuring the original contact when a new tip is required. It is supplied in a heavy nickel finish, and furnished with a six-foot heater cord and lamp socket attachment plug.

The bale is so constructed that the handle cannot fall on the side where the brush drippings are removed. It is claimed that the efficiency of the operator is greatly increased, and burnt or spoiled glue is practically unknown when made electrically.

The water-jacketed type is for using glue at intervals, the contents being always kept at the same even temperature and consistency. The outer vessel is of heavy cast iron, black japanned finish, while the inner vessel is of seamless aluminum with permanently attached wiping bar. Equipped with "Universal" Safety Plug Fuse. Both pots furnished with six-foot heater-cord and lamp socket plug.

R. H. Cunningham and Co. of Walkerville Ont., have secured premises at 351 Glebe St., London, and will equip a plant for the manufacture of electrical furnaces.

Questions and Answers Regarding Plumbing and Heating Practice

WAWAWEE AND ANDREWS SYSTEMS

Editor Sanitary Engineer:

Will you please advise me what is the quality of the Wawawee system of water and steam heating as compared with the Andrews system or other good systems.

(Signed) W. L. MILLER,
Magnetawan, Ont.

Answer.—We know nothing of the Wawawee system. We never heard about it and we have run across some queer ones in our time. We will make some enquiries.

It is a long time since we have heard anything of the Andrews system. They sold direct to house owners, and sent along a chart, so that every man could be "his own steamfitter."

Their boiler was a steel tubular type —very efficient as a heater—but we do not believe that it could last very long with the low temperature of a hot-water system.

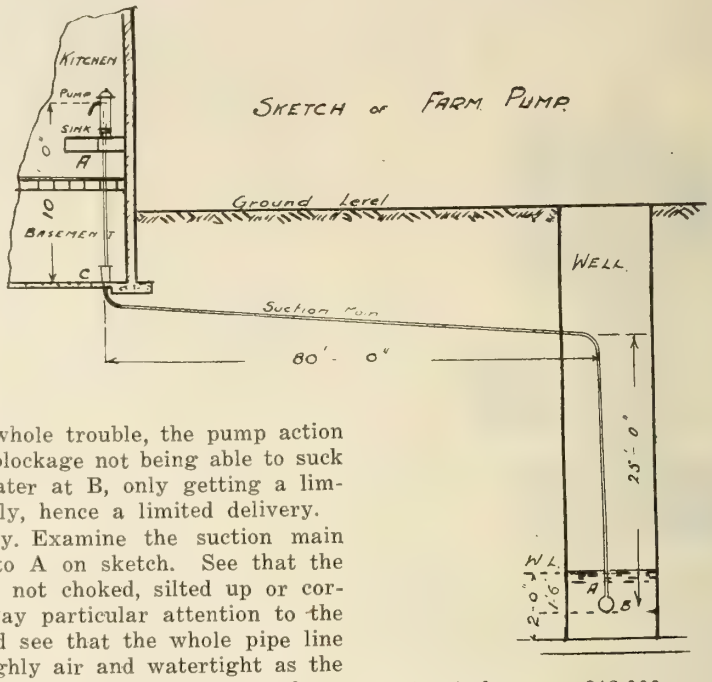
Of course the Andrews people may have a different policy now, and a different boiler, and you might get further advice by writing to Minneapolis, the home of the Andrews Company.

DEFECTIVE PLUMBING ON FARM

Re McCarthy Enquiry, Bridgewater, N. S.

The sketch of defective plumbing outfit on farm (produced) shows a long length of suction main, with two right angle bends and a high lift which is not the most ideal condition for an efficient pumping system, but as the kitchen and well are already constructed, the arrangement would be too expensive to alter. The correspondent states he has used three different kinds of pumps (not mentioned) without success, so would judge if same are of a reliable manufacture and erected properly the cause of the trouble is not connected with the pump but in the long length and arrangement of the suction main.

Firstly. As the water only comes in bucket fulls at certain periods I would examine the intake B, in sketch and make sure that it is sufficiently deep enough under the low water level of the well, and if there are hole perforations, see that the action of the water has not corroded and stopped up the pipe, examine B thoroughly and make sure water is obtaining a free access to pipes and not blocked up by sand, silt or corrosion, from the particulars this looks like the whole trouble, the pump action through blockage not being able to suck in the water at B, only getting a limited supply, hence a limited delivery.



Secondly. Examine the suction main from A to A on sketch. See that the pipes are not choked, silted up or corroded. Pay particular attention to the joints and see that the whole pipe line is thoroughly air and watertight as the suction pipe of all pumps must have clear bore and perfectly airtight or you'll get inefficient results.

Provide easy bends and have your suction pipe as direct and short as possible, eliminating friction as much as possible, at the same time overhaul your valve connection at C, instal new washers if worn and have valve working properly, making pipe line and connection properly air and water tight from A to A on sketch.

WESTERN ONTARIO NEWS

Grant Fox, Olinda, Ont., wants prices on heating and plumbing for new $4,000 bungalow.

R. J. Robertson, R. R. 1, Orton, Ont., will receive tenders until April 22 for new school, hot-air heating.

Tenders will be received until April 22 by F. Littlejohns, Highgate, Ont., for drainage work costing $5,000.

Ernest Noble, Ruthven, Ont., wants prices on hot-air heating, plumbing and electrical work for new $7,000 residence.

Noble and Rich of London, Ont., have been awarded contract for plumbing and hot water heating for new office building.

William Skelly, 242 King St., has been awarded contract for heating and plumbing for new $5,000 residence for Percy Ashton.

Noble and Rich, London, Ont., have been awarded plumbing and heating contract for new $12,000 residence for P. B. Fetterly.

G. S. Smyth, Caledonia, Ont., wants prices on heating, plumbing and electrical work in connection with new $5,000 residence.

E. F. Earl, Milton, Ont., has been awarded plumbing and heating contract in connection with addition to the Children's Shelter, costing $6,000.

Lawrence Williams, Acton, Ont., is preparing plans for new $4,000 residence and wants prices on heating, plumbing and electrical work.

J. M. Small, Arthur, Ont., is preparing plans for new residence to cost $4,500. Prices wanted on heating, plumbing and electrical equipment.

William Barber, Everton, Ont., is preparing plans for new $5,000 residence and is interested in prices of heating, plumbing and electrical equipment.

F. C. Taylor, Gorrie, Ont., wants heating, plumbing and electrical work in prices on heating, plumbing and electrical work for new $4,500 residence.

Dr. W. F. Babb, Waterloo St., London, will have plans prepared for new residence to cost $20,000. Hot water heating, plumbing and electrical work.

In connection with improvements to the waterworks system, John McHattie, secretary Water Board, will receive tenders until May 1 for new reservoir and new motor-driven pumps. Estimated cost $42,000.

Patterns for Segmental Ships Cowl

Written for Sanitary Engineer by O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Mo.

RESPONDING to the enquiry of Mr. Milton Moore, for patterns of a ship's cowl, will say there are about three or four ways of making cowls.

The four piece segmental cowl such as we show here is called the English Cowl. Another similar design made in six pieces is often called the American Cowl. And then we have those made in gores. This latter kind, anybody who can layout a taper joint of pipe off center, ought to be able to lay one of these out.

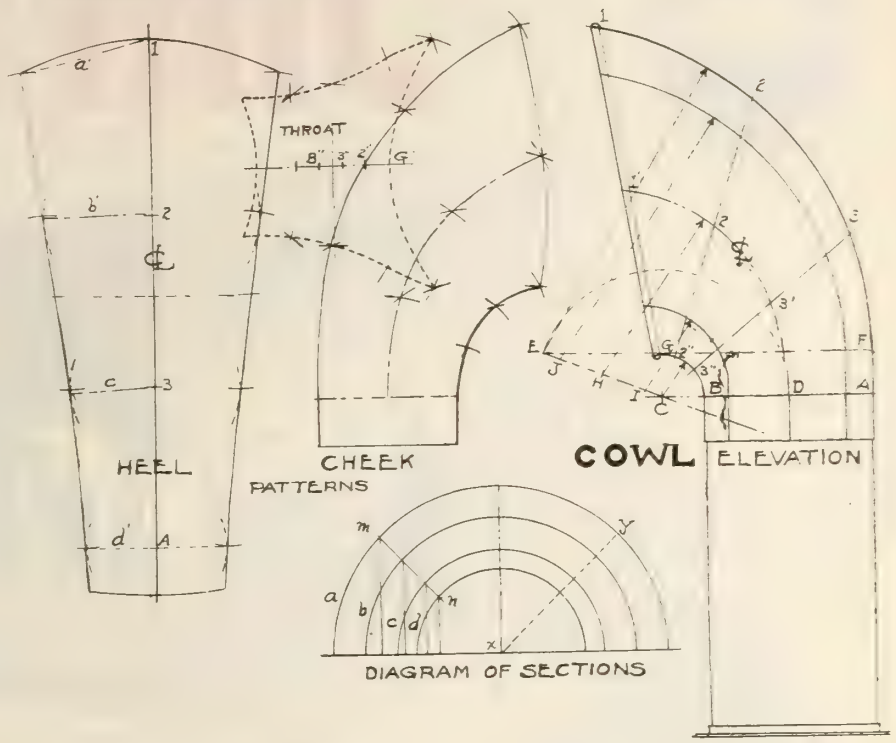
Segmental cowls are harder to lay out, because they form double curved surfaces, and this again, permits a person to only lay the patterns out approximately accurate. Owing to the double curved shape, part of the metal must be either stretched or shrunk, and in either case this is a factor governed by the ability of the workman.

But to design our cowl, first draw the diameter line A-B, and use 1/4 of it as the throat radius B-C. With this strike the throat line and then draw a horizontal line tangent to it as E-F through G. Now use C-D as radius, and strike the arc D-E. Point E will be the center for describing the heel line 1-F of cowl.

By drawing the pitch line E-C, and bisecting it, we obtain point H which enables us to describe the center line 1'-D of elevation. The seam lines are set on 45 degree lines using semi-circles for sections, and then the points in the mouth line and base line are established—the points I and J are located by a series of trials. From these points the seam lines are described as shown.

Next divide the heel line 1-A in any number of equal spaces, and draw lines to C. Now using 1'; 2'; 3'; D as centers; pick the half diameters, and with them describe the diagram of sections from center X. Line m-n is the heel seam line, while x-y is the throat seam line. The vertical lines from m-n represent half diameters from points in the seam line.

If the method we show here for deriving the patterns is carefully followed out; the patterns will be developed to as near their required shape as is possible to develop them. To set out the heel pattern; pick the girth from heel of elevation, and set it on a line as 1-A. Then spanning dividers to take in the girth curve along lines a-b c-d along arc, arcs are described in pattern as radius a'-b'-c'-d' shows. If the curvature at the top and bottom is desired—then a girth line must be developed and starting with the center horizontal line—we step off our lengths both ways, and that gives us the curve at top and bottom. But this latter is not necessary, since some trimming is always required after hammering into shape.



The throat piece is developed in a similar way as is shown by the dotted position. The cheek pattern is a little more difficult in that we work from the center line in a triangulating fashion, developing true lengths from the differences in half diameter lines in diagram. But in general the exact outline of cheek in side elevation between seam lines can be used. To this 1 1/2 to 2 inches of metal is allowed all round, and this allows for the metal to make up the double curvature, and also for trimming purposes after hammering into shape.

Templates are worked out giving the true shape of each piece, and these have rivet holes marked off exactly right. So when the various parts are formed up to snugly fit over the template; the holes are marked and edges are marked for trimming. This hammering process can only be learned by actual experience, and there is no amount of reading or writing that can inspire this knack in a workman.

HAVE LARGE HEATING CONTRACT

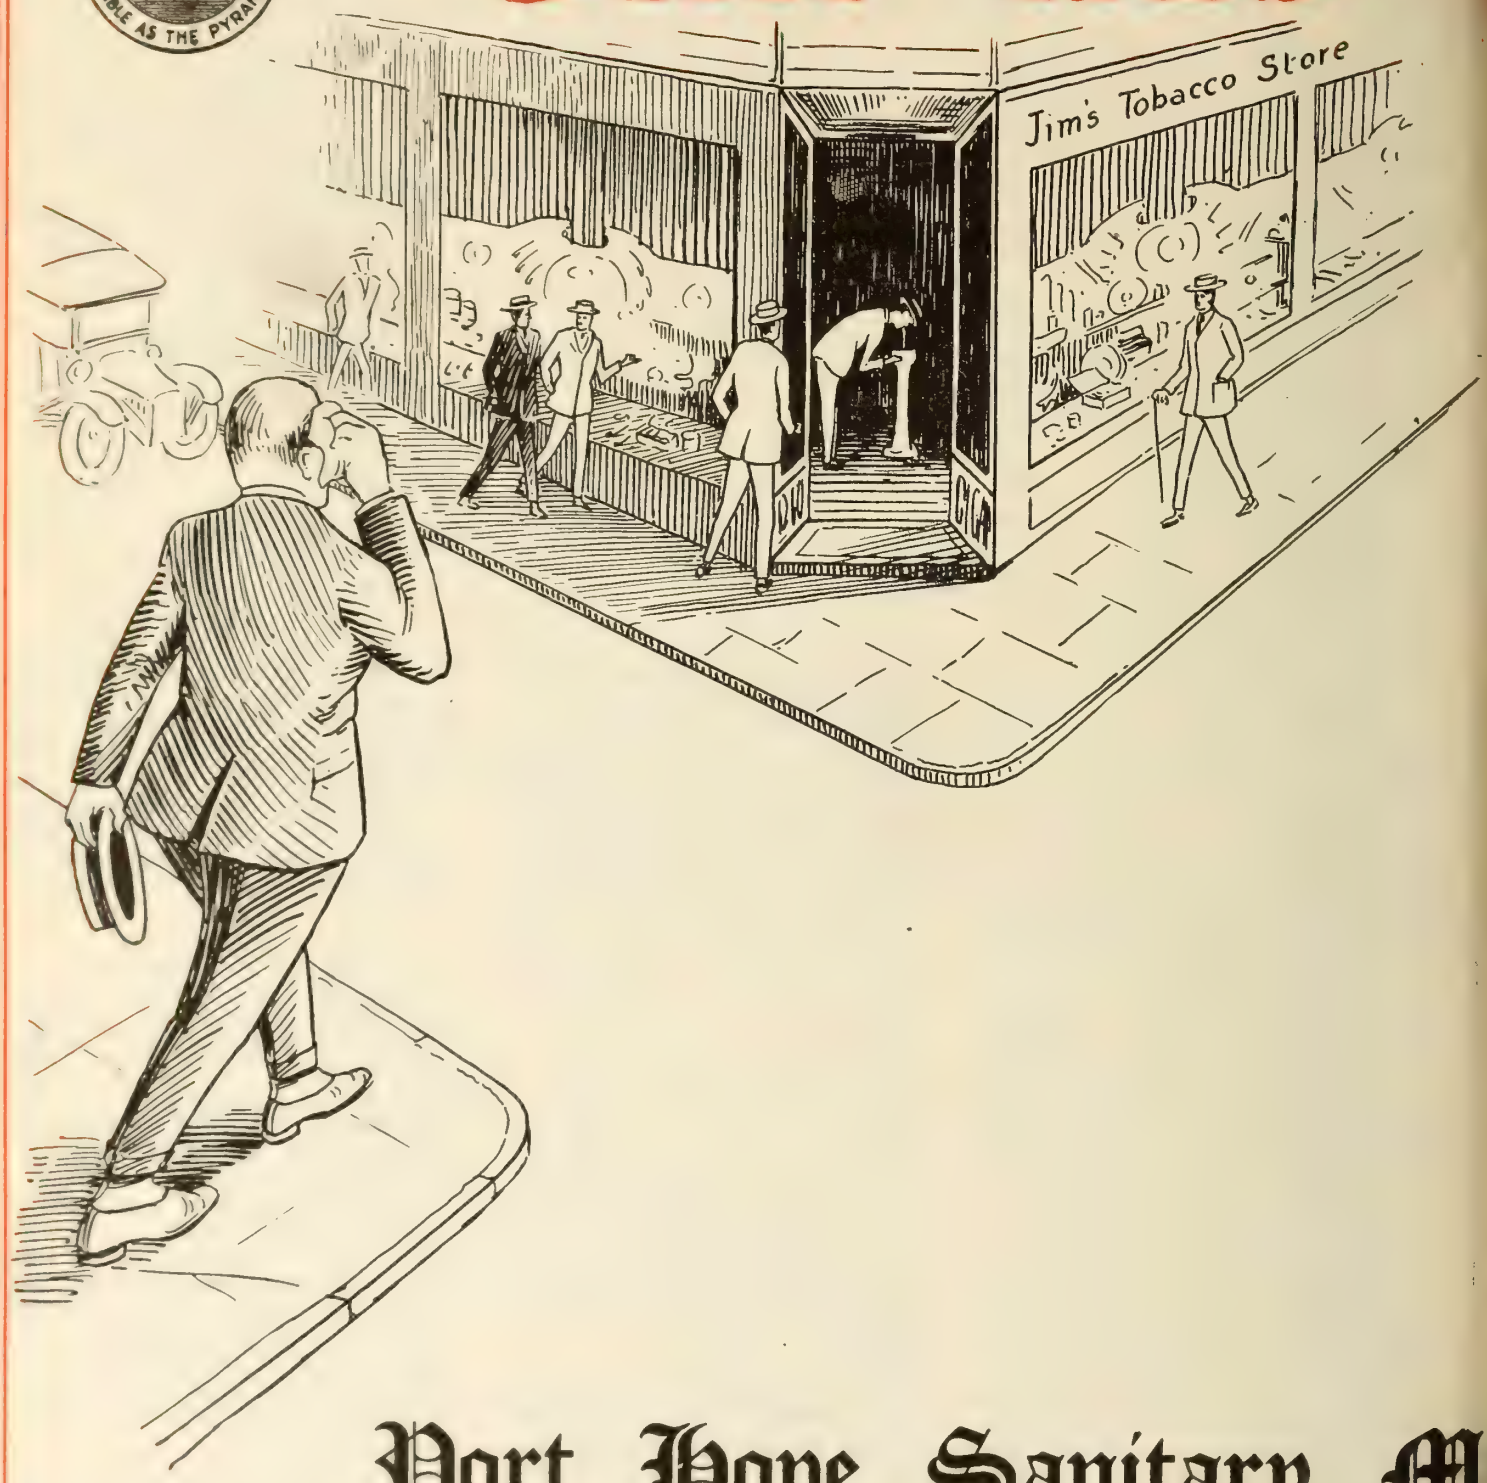
Kitchener, Ont.:—Battler & Freiburger have been awarded plumbing contract for installations in the new additions to the Suddaby School. This work will cost $30,000 this tender being much lower than the nearest competitor. This firm has a number of big jobs to its credit, having installed the steam plant for power and heating in the Ames Holden Rubber Factory, the heating system at the new power house at Kitchener and Waterloo hospital. This firm have been installing a number of water systems in the rural district, particularly those with electric pumps, and an endeavor is being made to educate local prospects to the value of installing such a system when building.

INJUNCTION UNOBTAINABLE

Port Credit, Ont.:—Opponents of the waterworks are stated to have been advised that it would be useless to apply for an injunction. The municipal authorities have been apprised that the order of the Ontario Board of Health gives the Council full authority to proceed. The Councillors had been informed that they could have issued debentures for the plant without a vote of the ratepayers had they so desired, as the law only called for a two-thirds vote when a service was called for by the Provincial Health Department. The Council, both last year and this is on record unanimously for the earliest possible construction of the plant.

Eggett & Co., London, Ont., have been awarded plumbing and heating contracts for new $8,000 residence being erected by John Putherbough, 1006 Wellington St. Owner plans erection of two other dwellings of similar cost and will want prices on all heating and plumbing equipment.

Jim has



Port Hope Sanitary Ma

Head
TOR

ne Right Idea

THERE'S a tobacconist (we'll call him Jim) operating a real live store down in South-Western Ontario.

Jim's always willing to entertain any new idea that looks as if it would bring him business, so when his local plumber suggested that he instal a drinking fountain for his store for public use, Jim saw at once that the idea was good and put in his order forthwith.

He had it placed near the door, where it could be seen by passers by and pretty soon Jim's store began to swarm with thirsty citizens. Hundreds of people would drop in for a drink—of water—every day and before leaving a lot of them would discover that they needed tobacco, cigarettes, cigars, matches or some other of the several lines that Jim had attractively displayed.

Now here's the point—right in your district there are dozens of retail stores—every one a prospective customer for a drinking fountain—every one of 'em Jims when it comes to taking up an idea that's going to mean increased business.

The hot weather's coming—Get after this easy business now.

Enforce the Regulations

EVERY day sees the need for the employment of certain of the regulations which were provided for in the suggested plumbing by-laws drawn up for enforcement throughout the province of Ontario and which have been pigeon-holed by the present government. It has been stated by those who are closely in touch with the situation that the reason the farmers' government in Ontario has delayed action in enforcing this splendid set of plumbing regulations is because of the fact that plumbing conditions in the rural districts are such as to necessitate considerable repair and renewal under the suggested regulations and the farmer as a class has not been sufficiently educated to the value of modern sanitary equipment to appreciate the necessity of such regulations.

No doubt the sanitary and heating operators of this country have themselves to blame to some extent for this condition, as there has been a great lack of educational effort put forth in the rural districts, but the fact remains that the expense involved in such legislation is not desired by farmers and under the present government it will be hard to bring these by-laws into effect. True they have been enforced in some centers throughout the province by local action, but steps should be taken having for its object the early enforcement of the regulations as a provincial measure, for only then will improved sanitary conditions be achieved and those in the rural districts provided with the modern requirements which necessity demands.

* * * *

Need of Organization

THERE ARE many important problems before the sanitary and heating operators to-day, as indicated by the great variety of topics brought up for the all too short discussion which took place at the convention of the Ontario Society in Hamilton. To make a satisfactory solution of these problems requires the best brains which can be applied to them, and the most representative opinion which can be secured. To bring about this condition calls for organization on a scale not hitherto accomplished in Canada. As a result of this lack of cohesion there is a tendency to split among the provincial organizations where such exist, whereas they should be combining to make the representative body, the Canadian Society, an organization which can carry great weight. The question of the constitution of that organization is one which can very well be left to debate but some plan can be contrived whereby the Canadian Society, whether a convention body merely composed of representatives of the provincial plumbing and such organizations, speaks with a voice which will be heeded as representative of the sanitary and heating industry of this country.

This cohesion must also be evident in the local organizations for each is but a link in the big chain, and the chain is no stronger than its weakest link. The days of petty jealousies among members of these organizations must be forgotten and all pull together for the common cause. The trouble which exists between sanitary engineers of York Township and of the City of Toronto over a "resident" rule which the former are enforcing as result of this measure being incorporated in the police regulations of the City of Toronto, is an example of the difficulties which can be smoothed out by an organization fully representative and working in absolute harmony. To achieve this end local organizations should be encouraged where the required number of operators are present and these organizations should be part of the chain comprising provincial and national organizations so that the operators of the country speak with one voice.

* * * *

Inter-Dependence

A RECENT development of the process of readjustment emphasizes the interdependence of all branches of our social and business interests. This is of particular importance in indicating the true relation of the agricultural and industrial phases of our economic system. For a great many years the farmer did not trust the business man and this lack of confidence was also felt by some business men when farmers became an important influence in the political life of the country. Developments coincident with the period of readjustment have, however, shown more clearly the true relation of these factions than might otherwise have been the case and benefit should result.

The farmer has seen that co-operation with the business farmer has recently been in dire circumstances due to the big about a satisfactory solution of his difficulties, and the business man has seen the bad effects of neglecting to look after the interests of the agricultural sections. The Canadian farmer has recently been in dire crcumstances due to the big decline in value of agricultural products and the closing of certain markets by the application of tariff protection. Recently this situation has improved and the farmer is to-day in better position to procure his requirements. As a class, the agriculturist has learned something of his interdependence with other interests. Prosperity will be aided largely in the future by a sympathetic understanding between both these groups, and in this the rural hardware merchant can play an important part, not only in helping to improve general conditions but in discouraging the tendency in agricultural districts toward the establishment of distributing agencies which are not conducive to the best business interests of the country as a whole.

The Building Situation

IN MOST sections of Canada house building is becoming very active and it should not be long before much of the shortage of accommodation which has existed for some years, is relieved. An official of the works department in Toronto stated to Sanitary Engineer this week that an average of thirty-five water installations a day were being handled in the city at present, in connection with new residences only. The past few months have seen a considerable fall in prices of building materials, and while wages have not declined to a marked degree, agreements have now been consummated with practically all classes of workers and wages will at least be stable for some time. On this basis much deferred construction is being proceeded with as far as houses are concerned.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

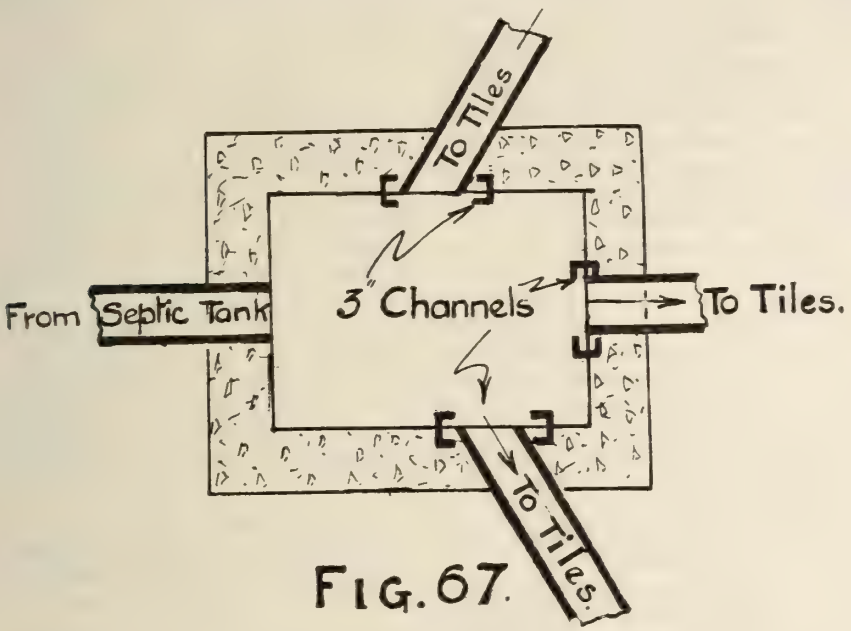

FIG. 67.

FIGS. 67, 68 show a three-way distributing chamber built of concrete and having channel irons built in the wall protecting each main supply pipe. An iron plate slides in between these channels and prevents the sewage discharging down any pipe unless so desired.

It is not the intention, in this article, to treat extensively the many different kinds of artificial filters as most private installations are installed in the country where land is plentiful and cheap and therefore there is no necessity to resort to artificial filtration, but in some isolated cases filter beds have been installed for larger institutions in order to confine the disposal of the sewage to one location in a small compact area and again where the land is totally unfit for sewage filtration.

The work on all artificial filter beds differs fundamentally from the tank action as the process of oxidization of the offensive matters present in a tank effluent must be rendered permanently imputrescible and inoffensive by conversion into harmless salts.

The same as in ordinary land treatment the supply of oxygen from the air is the only practicable source of purification and the mere fact of bringing the two into contact with each other does not signify purification or final purification of sewage would be easily accomplished: they must be held in a state of intimate admixture for a certain time in the presence of certain bacteria which, under certain conditions and facilities, exist.

The certain conditions and facilities mentioned above are provided by passing the sewage evenly through a mass of irregular solid matter such as coke, clinkers, etc., which contain air in the interstices and which support resting and breeding places for the bacterial germs and are practically and economically accomplished in the various kinds of artificial filter beds.

The chief objects to be aimed at in designing a successful filter bed are the application of sewage evenly with the thinnest possible film over the germ-coated filtering media, in the presence of abundant air and making the distance the liquid has to travel as great as possible.

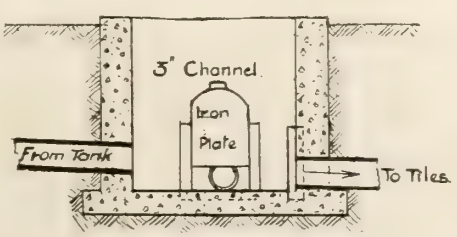

FIG. 68.

TENDERS WANTED

Thos. Janes, 111 High St., London, wants prices on hot air heating, plumbing and electrical work for two new residences to cost $8,000.

William Knapp, 885 Adelaide St., London, wants prices on heating, plumbing and electrical work for new $3,500 residence.

William Smith, Leamington, Ont., wants prices on heating, plumbing and electrical work for new $20,000 business block.

T. L. Patridge was awarded contract for plumbing and heating for $7,000 duplex residence at London, Ont., for James Sandford.

Frank Dunn, 78 Stanley St., London, is erecting new $4,500 residence and wants prices on heating, plumbing and electrical work.

T. Lesson, secretary of the school board, Springfield, Ont., wants prices on steam heating, plumbing and electrical work for new $45,000 school.

Dr. Dewar, secretary of the school board at Melbourne, Ont., wants prices on hot air heating, plumbing and electrical work for new $20,000 school.

Frank Snell, 9 Elmwood Ave., London, Ont., wants prices on hot air heating, plumbing and electrical work for new $3,000 residence.

J. D. Fisher, R. R. 1, Stratford, Ont., will receive tenders until April 10 for the construction of tile drains in the Tp. of North Easthope.

R. Cross, Sparta Road, Union, Ont., is preparing plans for new $4,000 residence and wants prices on heating and plumbing.

C. Seward, East Branch, Wallaceburg P. O., wants prices on heating, plumbing and electrical equipment for new $4,200 residence.

Dr. C. L. Huffman, Forest, Ont., wants prices on heating, plumbing and electrical equipment for new $5,000 dwelling for which plans are being prepared.

The Wright Teale Co., London, was awarded contract for plumbing in connection with alterations to store of J. A. Nash.

Henry Gorman, 370 Oxford St., London, Ont., wants prices on hot air heating, plumbing and electrical work for new $4,500 residence.

W. W. McRae, Petrolea, Ont., is preparing plans for new $5,000 bungalow and wants prices on hot air heating, plumbing and electrical work.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

McAlindon & McCormick, of Kirkland Lake, Ont., have discontinued their plumbing and heating business.

PERSONAL

G. W. Henderson, factory superintendent of Geo. W. Reed & Co., and K. Barwick, assistant, will open business for themselves under the firm name of Henderson & Barwick Co., sheet metal works. Upon severing their connections with the above firm a presentation was made by fellow employees.

OBITUARY

Mr. Frederick Parkin, a well-known stationary engineer of Toronto passed away recently at his residence 43 Brookmount Road, Toronto. Mr. Parkin was born at Wexford, Ont., in 1866, but most of his life was passed in Toronto. He was for many years engineer at the Consumers Gas Company. He was a member of the Orient Lodge, A. F. & A. M., and Wilton Lodge I. O. O. F. Mr. Parkin is survived by his widow, and two sons, one of whom is assistant professor of mechanical engineering at Toronto University, the other one being at home. He also left a brother Manuel of the civic works department, Toronto.

The death occurred at St. Johns, Que., at his home, of William Campbell, president of the Dominion Sanitary Pottery Company. Mr. Campbell had been ill five days with pneumonia. He was well-known in St. Johns and in Montreal, having been for fifty years connected with the pottery trade. He was born in Glasgow, 87 years ago, came to Canada 50 years ago, and settled in St. Johns as a pottery expert for the Duncan and Alexander Macdonald Pottery Company, with which firm he remained for many years. Later he entered business for himself in the firm of Campbell and Pervis. He was later connected with the Canadian Trenton Pottery Co., and was several years ago made president of the Dominion Sanitary Pottery Co.

PLUMBERS AND SUPPLY HOUSE MEN SPEAK AT BUILDERS CONVENTION

Optimism regarding the outlook for the building industry in Toronto during the present season featured a dinner held by the Builders' Exchange Section of the Board of Trade. The affair was featured by addresses from President Fred Armstrong, of the Port Hope Sanitary Manufacturing Company, and George Clapperton, of the firm of Bennett and Wright.

Mr. Armstrong dwelt particularly with the outlook in building for the present year. He voiced belief that the small boom which was now developing would have the effect before long of restoring confidence and convincing the general public that the industry had reached levels of stability.

Mr. Clapperton spoke of the work the Kiwanis Club was doing for the boys of the city, and urged the contractors to take on as apprentices as many boys as they could. In this way, he pointed out, they would be performing the double duty of helping to relieve the vexed problem created by the shortage of good mechanics in the building industry, and also of giving employment to many boys.

ST. CATHARINES PLUMBERS ON STRIKE

St. Catharines, Ont.—Union plumbers of the city are on strike as a result of a request by their employers to accept a decrease in wages. The plumbers were asked to take a cut from 90 to 75 cents an hour. The master plumbers say that they will pay 75 cents an hour and no more, and intimated that they were considering the operation of open shops.

HAMILTON FIRMS REPORT INCREASED BUSINESS

The Dominion Sheet Metal Corporation, Limited, of Hamilton, has resumed full operation. For the past eight weeks the plant has only been operating from fifty to sixty per cent of its capacity. Increased business from principal Canadian points is said to warrant increased production. Orders are said to have been coming in from all parts of the country and from as far West as Vancouver. An encouraging feature is the amount of export business that is being handled. This is coming from European countries as well as from Great Britain.

SEWAGE SYSTEM WILL BE COSTLY

Hamilton's sewage disposal plant is to be a costly proposition. That much is clear, despite the refusal of experts to make any comments as to the probable cost of a local plant. But rough estimates place the expenditure for a local system at from $2,000,000 to $3,000,000.

City Engineer Gray admitted that some such outlay would in all probability be required, but this would, of course, take care of the city's needs until it has grown to two or three times its present size. At the present time it is estimated that there is a water flow of about 13,000,000 gallons a day. Added to this is about 7,000,000 gallons for storm emergencies and additions, and about 2,000,000 more gallons for seepage. This would bring the total to about 20,000,000 or 22,000,000 gallons of sewage to be treated daily.

Experts place the cost of disposal at from $35,000 to $50,000 per million gallons of sewage, so that taking the present requirements, and multiplying by two or three for the city's growth the estimate of between $2,000,000 and $3,000,000 is reached.

It will depend on what type of plant is decided upon for Hamilton what the cost will be, and it will be some time before that is definitely decided.

SECURE TWO CONTRACTS

Stratford.—Messrs. Dufton and Saunders have been awarded the plumbing, heating and sheet metal work contracts for two houses, one on Grant street, for Mr. Polger, and the other on William street, for Mr. Burt.

ADVOCATES CHANGES IN WATER SYSTEM

Provincial Sanitary Engineer Dallyn inspected the filtration basins of the Weston water system and recommended a slight re-arrangement in the alum treatment, as a move towards making the water supply adequate for many years at a small expense. According to Mayor R. J. Flynn, the opinions of several engineers were obtained before resort was made to the Provincial Health Department, some even recommending the installation of a fourth filter. The source of water supply is the Humber River.

DOES NOT APPLY TO JOURNEYMEN

A deputation from the journeymen plumbers waited on York Township Council to enquire if the new bylaw recently passed, prohibiting city residents doing work in the township, applied to them. They were informed that it did not apply.

CONSTRUCT RELIEF SEWERS

Toronto City Council has decided to apply for legislation to authorize an issue of debentures for relief sewers, relaying outfall pipe at main sewage disposal plant, water main extensions, shelter and refreshment building in High Park, and heating of live stock arena, amounting to a total of $2,000,000. Two items on the list were struck off, as authority has already been secured—200,000,000 gallons reservoir at the Island, and intake repairs, at a total cost of $950,000.

$1,250,000 FOR COMPLETION OF MONTREAL AQUEDUCT

In order that the aqueduct and new pumping station be put into operation at the end of the current year, the executive committee of the city council are submitting a report to the city council recommending the voting of the sum of $1,250,000. This expenditure is for the purpose, among other things, of connecting the new pumping station with the water distribution system. The money will also be available for the building of a large filtered water basin, and the construction of an emergency intake from the aqueduct to the pumping station. This latter will be a 9 foot steel pipe, lined with concrete, about 300 feet long. Its purpose will be for emergency use if anything goes wrong with the filtration plant. Hydraulic control apparatus, a new structure for the distribution and inter-connection of water mains, and seeding the banks of the canal to prevent slushing in are included among the requested improvements.

OIL HEATING PLANT IN RAILWAY STATION

A complete new system of heating has been installed in the North Bay station of the C. N. R. instead of the usual coal burning method, the buildings have now the very latest in this line in the form of air controlled oil burners. J. J. Powers of Toronto, the inventor and manufacturer of the system, personally supervised operations.

In the large hole, which was dug some time ago, in front of the station, was placed a 12,000 gallon tank which contains the supply of oil and can be filled in one hour and fifty minutes. A small engine, operated by electricity, with a fan belt attachment for supplying air, is used to conduct the oil and air to the furnace. Here are three burners, working on slides, which can be used individually or collectively. The nozzles of the burners are fitted with small oil cups upon which the oil is deposited. The air coming in around the cups causes them to revolve with great rapidity and shoots the flames clear across the fire box, underneath the boiler. The heat of the fire, it is claimed, never fluctuates, and can be regulated to any desired degree.

Stricter Supervision of Plumbing

Must Have Water Test on Piping After June 1 in New Buildings — Unlicensed Plumbers Cause Trouble

MONTREAL.—Notice came from city authorities, the sanitation department, that stricter supervision of plumbing work will be insisted on in future to ensure better workmanship, as a safeguard to public health. Plumbers are reminded of a by-law which provides that plumbing work shall not be used unless it has been tested in the presence of the sanitary engineer or his representative, with the water test, or if this is not practicable, some other method of testing which is considered reliable. Further notice is to the effect that from June 1st next no installations in new buildings, and no new stacks in existing buildings, will be accepted unless a water test is applied on the piping before the installation of fixtures. A second test also may be insisted on after the installation of fixtures if the Health Department so desires.

Licensing is also brought to attention, and master plumbers are reminded of the by-law that provides that all plumbers must be licensed, and no master plumber shall employ a journeyman who is not licensed by the city, and also holder of a certificate from the Board Examiners of Plumbers.

A Step In The Right Direction

With the above notification coming from the Montreal city hall, it is felt that the local craft are now one step nearer their goal. While it may sound as a note of warning, the legitimate master plumber or journeyman will look upon it as a partial remedy to the existing evil. Undoubtedly there is reason for such, coming from the city authorities, the fault, however, for the most part, is not to be found in the ranks of recognized engineers, but amongst the class that for some time past the local Master Plumbers Association have endeavored to bring to the attention of those in authority at the city hall, the plumber who is not licensed, who has no place of business, but still may be found daily employed throughout the city. While perhaps not in all cases is the work of legitimate plumbers perfect, or beyond reproach, it may be safely stated that much of the unsatisfactory workmanship is done by hands other than those of men who have the interests of the trade at heart.

Letters To The Editor

COMPANY CHANGES NAME

Editor, Sanitary Engineer,
Toronto.

We notice in your issue of March 15th under the heading "Business Changes" the following item: "Westmount Plumbing Co. has dissolved." We beg to inform you that the company has not been dissolved, but only changed name in order to cover a new line of work in which we have now indulged. No changes whatsoever have been made in the partnership or managership of the company.

Westmount Plumbing & Roofing Co.
Per E. Gauthier,
Manager
Westmount, Que.

JOURNEYMEN NOT AFFECTED

Editor, Sanitary Engineer,
Toronto.

At the regular meeting of this body held on April 5th, 1922, the item which was printed in the March 15th issue regarding a reduction in wages for Montreal Plumbers was taken up. We will state that this body is in no way a party of the mentioned negotiations, and would further state that the members of the above body are receiving a higher rate of wages than is mentioned.

Signed
John N. Currier
Rec. Secretary
Local No. 144
Plumbers & Steamfitters
417 Ontario St. East
Montreal.

* * * *

Editor, Sanitary Engineer,
Toronto.

Building prospects for Mitchell and district seem to be in first class condition. Have supplied tenders for eleven or twelve new dwellings, but none of them are let to date. The high school board will build a new High School here, this year or early next year. They have not come to a decision yet. We have been awarded the contracts for the hot water heating of Mr. C. J. Larkworthey's business block, and hot water heating in Mr. Fred Wassman's residence both in Mitchell.

A. Sachs & Sons.

PLUMBING BY-LAW SHELVED

The proposed plumbing by-law which was recently given its first reading by Scarboro Township Council, was shelved until next November, owing to the determined opposition of the Ratepayers' Associations.

PETERBORO SAVED $25,000 IN NEW FILTRATION PLANT

Peterboro, Ont.—A statement of the cost of the new filtration plant furnished by the Utilities Commission shows that $25,000 has been saved in its construction, an unusual occurrence in municipal work in this city. Of the $350,000 appropriated by the people, only $325,000 has been spent. In laying the pipe lines themselves the Commission saved over $10,000.

The plant is now in full operation and the condition of the water is much improved.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

NUMEROUS price developments are again recorded on the current plumbing and steam-fitting markets, the principal changes being in a downward direction. Reduced quotations are noted on lead products, the list prices of lead pipe and waste being lowered fifty cents, while a similar recession is recorded on traps and bends through revised discounts. Other declines have appeared on certain brands of welding compound, practically all styles of hammers, and the No. 2 combination vise. Some minor revisions in scrap materials are also reported from eastern market centres.

With the apparent stiffening in quotations on steel products generally, there has recently developed a firmer undertone in many sanitary and heating materials. Wrought piping, eavestrough and conductor pipe, are noticeable in this respect. The corrugated sheet market also shows some improvement, which is attributed to the stronger tendency in flat galvanized centres. Boiler tubes are still quoted on a more or less nominal basis, while a seasonable volume of trade is recorded in radiators and boilers. An active movement has been reported in soil pipe and fittings, with buying of range boilers remaining of moderate proportions. Enameled ware and closet outfits also come in the category of supplies which are now experiencing an improved demand through the reflection of activity in construction circles, a movement which is expected to develop in various other materials during the ensuing season.

MONTREAL MARKETS

MONTREAL, April 13—Revisions in prices on lead products offer one of the features in plumbing and steam-fitting supply markets. List prices on both lead pipe and waste are reduced, while the discount on traps and bends is changed, and lead sheets, in all weights, are also one-half cent per lb. lower. Waste material prices are revised, both higher and lower quotations appearing on these markets. Practically all kinds of hammers have new lower prices, the reduction being 12½ per cent. No. 2 combination vise is now quoted at $3.10.

There is now a firmer tone in many lines of iron and steel products, this condition being particularly noticeable on such products as sheets and bars. Wrought pipe has also become firmer in tone, while other commodities such as corrugated sheets, eavestrough and conductor pipe, and boiler tubes, have developed a tendency to stiffen. Trade in general continues to improve, and the progress in building construction is slowly reflecting on many required supplies. Buying is still curtailed in ingot metals, but with slightly more interest evident on the part of those interested.

GENERAL REDUCTION IN LEAD PRODUCT PRICES

Montreal.

With the exception of solders and lead wool, all lines of lead products show a reduction in price. List prices on pipe and waste are reduced 50 cents per 100 lbs., discount remaining at 10 per cent. Traps and bends are now quoted at less 17½ per cent, former discount being 10 per cent. Lead sheets, in all weights, are ½ cent per lb. lower.

It will be remembered that recent revisions were made on zinc sheets and solders, and products listed in foregoing paragraph have up until the present remained unchanged. The present reduction, therefore, brings all lines to lower levels in sympathy with metals in primary markets where an easier tendency has been displayed.

Other virgin metals are slightly steadier, and it is felt that the finished products will be on a more stable basis, now that revisions have been made. Following are revised quotations;

LEAD AND ZINC PRODUCTS—

Lead pipe, per 100 lbs.	12 00
Lead waste, per 100 lbs.	13 00
Note—Lead pipe is subject to a discount of 10%	
Lead traps and bends	17½% off.
Lead wool, lb.	
Lead sheets, 2½ lbs.	0 10
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 09¾
D., 4 to 8 lbs., sq. ft.	0 09
Cut sheets ½c lb. extra and cut sheets to	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.	0 21½
Do., wire, lb.	0 33½
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

ANOTHER DECLINE IN HAMMER PRICES

Montreal

A reduction of 12½ per cent. is announced on practically all kinds of hammers, including nail hammers, machinists', blacksmiths', rivetting, sledges and mauls.

NO. 2 COMBINATION VISE REDUCED TO $3.10 EACH

Montreal

The No. 2 combination vise has a new lower price and is now quoted at $3.10 each.

CORRUGATED SHEETS ON IMPROVED BASIS

Montreal.

A somewhat firmer tone exists in the corrugated sheet market owing to the improvement noted in flat galvanized sheets. While this is not yet of sufficient extent to directly reflect on corrugated sheets, according to a local dealer, it may offset the easier tendency displayed in recent weeks owing to certain distributors offering a price concession, especially on the heavier gauges. Future developments in the galvanized sheet markets therefore, will be watched closely by those interested. Following are present list prices and discounts:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

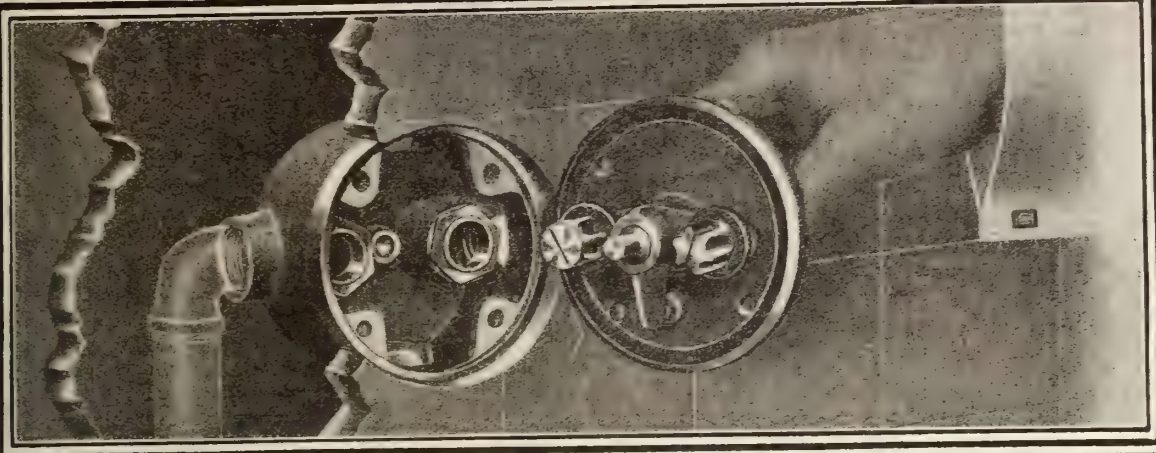
Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

REVISIONS RECORDED IN SCRAP PRICES

Montreal.

Quotations on certain lines of waste materials are now revised, both higher and lower prices featuring the market. Rubber shoes are quoted slightly less, and wrought iron is reduced from $10.00 to $9.00 per gross ton. The light brass

(Continued on page 32)



Niedecken Mixer for Shower Baths

The most satisfactory and economical device made for shower baths. All working parts readily accessible and easily replaced if necessary.

Operates on compression principle—mixes hot with cold water in conjunction with an absolutely dependable device to prevent scalding.

The Niedecken Mixer is immediate in action, thoroughly efficient, absolutely dependable, and gives perfect control under all conditions.

Write for detailed description and prices.

MONTREAL MARKETS

(Continued from page 30)

price is increased to 3½ cts. per lb., and boiler plate is 50 cts. per ton more. There is little or no change in the tone of the market, these price changes being announced by local dealers, based on stocks on hand for the most part. Quietness still prevails, although there is a little brighter outlook owing to the improvement in the steel industry. The opening of better weather should also assist in this direction. Following are revised quotations, which are purely nominal, and for large quantities:

SCRAP—

Automobile Tires	0 50
Rubber Shoes	0 02¾
Yellow brass	0 05
Red brass	0 08¼
Light brass	0 03½
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 08
Heavy copper	0 10
Wrought iron, R. Rd., No. 1 per gr. ton	9 00
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 55
Heavy melting steel	6 50 to 7 00
No. 2 busheling	3 00
Boiler plate	7 00
No. 1 machinery cast	20 00

STRONGER TONE EVIDENT IN WROUGHT PIPE

Montreal.

List No. 54 remains the selling basis for wrought iron and steel piping. As in many other iron and steel products, wrought pipe is somewhat firmer in tone than it has been for many months past. The open weather has improved the movement considerably, this also assisting toward a stronger situation. Following is list No. 54:

Price List No. 54. December 22, 1921

Standard Buttweld Pipe S/C

Per 100 feet.

IMPROVEMENT IN STEEL MORE PRONOUNCED

Montreal.

The firmer undertone recently displayed in iron and steel products generally is more pronounced this week. Stiffening of prices at primary centres becomes more general, this movement being continually encouraged by necessary increased production. One local distributor stated to Sanitary Engineer that he would not be surprised if a general price revision was quoted within the next few weeks. Apart from the improvement at the mills, consuming demand continues to improve, and sales have increased appreciably. It is now considered that the present healthier state of the market is more than a temporary condition, it is felt that the industry is permanently on the road to recovery. Present prices are the following:

IRON & STEEL—

Common bar iron, 100 lbs.	2 65
Refined iron	4 15
Iron finished machinery steel	2 70
Mild steel	2 65
Single reeled machinery steel	4 75
Band steel	2 65
Spring steel	4 25
Sleighshoe steel	2 65
Tire steel	2 85
Toe calk steel	3 55
Harrow tooth steel	2 80
Mining tooth steel, per lb.	0 21½
Black Diamond tool and cast steel	0 21½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

SLIGHT SLACKENING IN EAVESTROUGH MOVEMENT

Montreal

While trade in eavestrough and conductor pipe has shown a gradual improvement through recent weeks, a slight slackening in the movement has been noted in the past week or so. This however, is only considered temporary, and dealers anticipate an active season in the following spring and summer months. The firmer tone in galvanized sheets is being watched with interest by manufacturers, and although a stiffening of prices in the sheet market would take some time to reflect on these products, a continuance of strength in sheets, assisted by a more active market would firm the situation considerably for the active season later on. Unchanged prices and discounts are the following:

EAVESTROUGH—

O.G. Round and Half-round, per 100 ft., 8 in., $16.90; 10 in., $18.70; 12 in., $22.20; 15 in., $29.80; 18 in., $37.80.

O.G. Square bead, per 100 ft.: 8 in., $15.90; 10 in., $17.70; 12 in., $21.20; 15 in., $28.80; 6 in., $36.80.

Discount 70|10 per cent.

Conductor Pipe, Round. Plain and Corrugated, per 100 ft.: 2 in., $18.40; 3 in., $23.30; 4 in., $29.60; 5 in., $40.00; 6 in., $49.00.

Discount 70|10 per cent.

CONDUCTOR ELBOWS—

Plain or corrugated, price per doz.

2 in., $5.25; 3 in., $6.00; 4 in., $10.50; 5 in., $24.00; 6 in., $29.00.

Discount 60 per cent.

MORE OPTIMISM WITH BOILER TUBE DEALERS

Montreal

Distributors of iron and steel products also anticipate an improvement in boiler tubes, and are somewhat more optimistic in predicting the future trend in the following months. Tubes have shown a somewhat irregular movement in the earlier months this year, but on the whole only a moderate trade has been in evidence. Quotations are nominally unchanged, and whether the firmer tone in other products will reflect on boiler tubes is at present problematical, but it is pointed out that quotations have generally remained on a higher basis than almost all other lines. Present prices are as follows:

BOILER TUBES—	Seamless	Lapweld
1 inch	24 70	.....
1¼ inch	24 50	.....
1½ inch	24 00	.....
1¾ inch	25 00	.....
2 inch	24 50	20 50
2¼ inch	27 75	23 50
2½ inch	32 50	24 50
3 inch	40 00	30 50
3½ inch	52 50	34 75
4 inch	65 00	44 00

PIPE FITTINGS REMAIN AT FORMER DISCOUNTS

Montreal.

There is little variation in pipe fittings, quotations remaining at former discounts and current business continuing in fair proportions with a slight improvement noted as the season advances. With more activity in construction work to follow, a better movement of pipe fittings is looked for. Following are unchanged prices and discounts:

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30
Flange unions	30
Malleable unions	47
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	60
Do., long	65
Do., 4½ to 8" close and short	50
Do., long	55
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods —	Blk.	Galv.
Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

SEASONABLE DEMAND FOR RADIATORS AND BOILERS

Montreal.

Trade in radiators and boilers is described as seasonable by manufacturers and distributors, earlier construction requiring a moderate amount of these products. With quite active building program in the ensuing months, the movement of heating systems should improve considerably, and a satisfactory season is anticipated. Quotations on both radiators and boilers remain at unchanged discounts as follows:

Radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60. Discount, 59% for hot water and 60% for steam.

Wall Radiators—5 ft., $1.15; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56%.

Boilers.—Round hot water boilers, low base only (high base discontinued) sizes from 0 to 10, 64 per cent. off list.

Square or sectional hot water or steam boilers, 15-in., 20 per cent.

For Ontario Government trimmings add 5 per cent.

Square or sectional water boilers, 19-in to 36-in. 20 per cent. off list.

Square or sectional steam boilers, 19-in. to 36-in., 20 per cent. Ontario Govt. trimmings, 10 per cent.

Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings, 25 per cent.

All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

ACTIVITY CONTINUES IN SHEET MARKETS

Montreal.

Improvement in sheets and the firmer tone at primary centres has advanc-

MONTREAL MARKETS

(Continued from Page 32)

ed to the stage where higher prices have appeared in southern markets. The industry in general continues to make satisfactory progress with reports of capacity production in cer ain quarters.

For imported products from England it is reported that this market is also firmer. In the case of English galvanized sheets, the opening of direct navigation to Montreal is expected in the next few weeks, and shipments of fresh supplies will arrive.

With these conditions prevailing in both American and English markets, this example will probably be followed by domestic producers. Following are present quotations

BLACK SHEETS—

10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80

ONLY MODERATE TRADE IN RANGE BOILERS

Montreal

Although the current trade in range boilers is somewhat improved over the past quiet weeks, there is said to be room for much improvement. Buying continues for small quantities only, and notwithstanding reports of contemplated building in the following months showing that boilers, as well as other products used in construction work, will be in better demand, dealers are apparently willing to take care of immediate requirements only. The condition of the local market shows little change, and both the newer list prices with discount, and older net prices are quoted. Following are list prices and prevailing discounts;

RANGE BOILERS:—

5	Gallon	$13.50
12	"	14.00
18	"	15.00
25	"	16.00

192	"	210.00

Discounts, Standard weight, 50 per cent.
Extra Heavy, 40 per cent.

ACTIVE MOVEMENT OF SOIL PIPE AND FITTINGS

Montreal

The movement of soil pipe is described by local distributors as gradually improving as the season advances. With reports of a fairly active building program during the remaining spring and summer months, continued activity is looked for in this product. Quotations on both pipe and fittings remain unchanged, and while certain dealers predicted some weeks ago that increased business after the winter season might have a tendency to stiffen prices, this has not yet developed. Local prices are considered comparatively low, especially with levels existing in other western domestic markets, but on the other hand, competition in this respect must be met. Prevailing discounts are as follows:

SOIL PIPE—

2 and 3 inch	47½%
4 inch	50%
5 and 6 inch	47½%

Fittings—

2 to 6 inch	50-10%

BUILDING PROGRESS REFLECTS ON ENAMELED WARE

Montreal.

Present demand for enameled ware is somewhat improved, and a satisfactory increase in sales is noted so far this month over March. As the season advances, building construction calls for supplies, and a fairly active season is anticipated. Encouragement is lent through the amount of dwelling house construction planned for during the summer months. Prices remain nominally unchanged at 33-1/3 per cent. off list prices.

Sinks, roll rim—			
18 x 30			$23 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 50	$ 7 40	$ 7 30

17x19 in. Roll rim, F241 or P4345			12 60

Less 33 1-3 per cent.

STEADY PRICE LEVELS ON COTTON WASTES

Montreal.

With current business in cotton wastes reported as fairly good, there is little or no change in the undertone of the market. Raw cotton markets are somewhat steadier than in the earlier part of the year, and waste dealers anticipate little further change during the coming weeks. Prices remain unchanged at the following levels:

COTTON WASTE—Cream polishing, 18c. per lb. White—XXX extra, 16c.; XX grand, 15c. XLCR, 14c.; X Empire, 13c.; X press, 11½c.

Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.

Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.

Dominion Wipers—White cotton, 20c; colored cotton, 14c.

IMPROVED ACTIVITY IN CLOSET OUTFITS

Montreal

A slightly improved buying movement is recorded in closet combinations, although according to local distributors, there is still room for increased trade. Construction work is progressing in an encouraging way, and buildings commenced around the present time will not require such lines as closet outfits until a later date, but this offers encouragement to dealers for business during the later months. Current quotations are nominally unchanged as follows:

CLOSET OUTFITS—

Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china, or enamel-enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	11 50
Do., add for siphon jet bowl	7 00
Do., for ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	10 00
Do., Richelieu bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china or eled iron tank, with fittings, flush elbow and supplies less seat	18 50

LITTLE BETTER TONE IN INGOT METALS

Montreal.

The slightly better tone in the ingot metal markets, continues, and several lines have shown a certain amount of firmness. It cannot be said that this has been followed by any great volume of buying locally, but the improvement shows signs of greater confidence.

TIN.—This metal showed a sharp advance in the early part of the week, but it is considered doubtful whether the improvement will hold. The local market, however, is firm and stocks are rather light pending further arrivals upon the opening of navigation. The market locally is firm at 35½ cents.

COPPER.—Copper is strong both in London and New York, without any marked change in the situation. It is not likely that the situation will change materially until stocks are lessened. Locally the market is quiet at 16¾ cents for electro and 16½ cents for casting.

SPELTER.—This metal has been quite strong at East St. Louis. Locally spelter is firmer in sympathy at 7½ cents.

ALUMINUM.—This metal fails to make any impression either on the local or outside markets. Quotations remain unchanged at 24 cents.

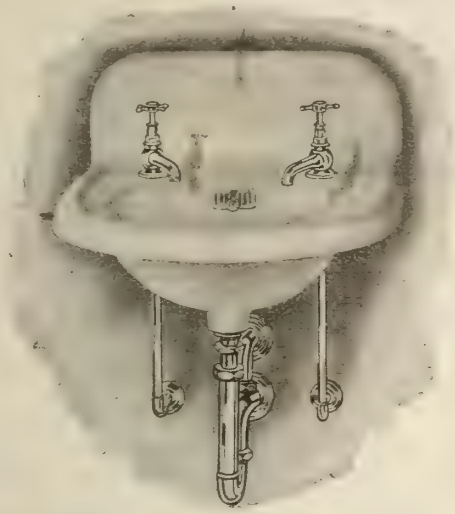
LEAD.—This is the strongest metal on the list, and the price in the south

(Continued on Page 36)

BEAVER BRAND
Porcelain Enamel Ware

The beauty and attractiveness that lead to the Beaver Brand popularity are attained by methods of manufacture that add materially at the same time to the durability and finish of this handsome ware.

"Shamrock" Porcelain Enameled Bath



One Piece Porcelain Enamel Lavatory

The "Beaver" Porcelain Enameled, One-Piece Lavatory is illustrated to the left. It has D-shaped basin, patent overflow and shell soap dish on concealed brackets. MONTREAL MARKETS

(Continued from Page 34)

has advanced about ½ cent per lb. during the past few weeks. The London market is also very firm. The local trend is now based on English lead, and with navigation soon opening direct to Montreal, the price is nautrally influenced accordingly. Local quotations firmer at 7 cents.

ANTIMONY.—There is no particular change in the price of antimony, but the market is steady with a little more activity. Local prices are unchanged at 6½ cents for Chinese and 7½ for high grade English.

TORONTO MARKETS

TORONTO, April 13—The price tendency in the sanitary and heating markets is still in a downward direction, several reductions again having been announced. One of the feature changes is noted on lead pipe and waste, a decline of fifty cents being recorded in the list prices, while traps and bends are also lowered through revised discounts. Other products on easier price levels include, certain brands of welding compound, and practically all styles of hammers. The recent stiffening of prices in the steel industry has resulted in a firmer market tone appearing on many finished products, such as wrought piping, sheets and plates, corrugated iron, eavestrough and conductor pipe. There is generally reported a brisk demand for bathroom fixtures, with enameled ware experiencing a better call, chiefly through the activity now apparent in seasonal construction work. While moderate reports still govern many plumbing and steam-fitting supplies, improvement is generally looked for during the ensuing months.

REDUCTIONS ON NICKEL PLATED BATH SUPPLIES

Toronto.

Some revisions have been announced on iron pipe nickel-plated bath supplies, the ⅜ inch now being quoted at $1.80 per pair, and the ½ inch size at $2.00 per pair.

LOWER QUOTATIONS ON WELDING COMPOUND

Toronto

Quotations on welding compound have been reduced, these changes affecting certain makes.

ANOTHER DECLINE IN HAMMER PRICES

Toronto.

Another downward revision in prices on nail hammers and machinists hammers has been announced by the manufacturers of these products. The extent of the decline is 12½ per cent., and the same reduction is noted on other handled hammers including carpenters', farriers', tinners', rivetters' and blacksmiths' hammers.

HIGHER PRICES APPEAR ON WOOD SCREWS

Toronto.

An advance has been announced in quotations on wood screws. The discounts have been revised all through the list, the change resulting in an increase of approximately ten per cent.

BRISK DEMAND FOR BATHROOM FIXTURES

Toronto

Wholesalers report that the large number of new homes being erected has created a better demand for bathroom fixtures of various kinds. One merchant stated to Sanitary Engineer that the volume offering in this direction is very pleasing, as well as providing leads for the sale of other seasonal needs. Some minor price adjustments have recently been made in some of these products, and dealers therefore look for a brisk movement during the current season.

REDUCED PRICES ON LEAD PIPE AND TRAPS

Toronto.

A downward revision has been announced in quotations on lead pipe, lead waste pipe and lead traps and bends. The list price on lead pipe is lowered one half cent per lb., with a similar reduction on waste. The discount on traps and bends is revised to 17½ per cent., where formerly this was quoted at ten per cent. These changes place lead products on a general lower basis in anticipation for an improved demand during the ensuing spring and summer months. The price levels on solder and zinc sheets remain at the recent revisions. It is noted, however, that zinc sheets have been quoted at a slight recession in southern primary markets, but quotations on the domestic centres remain unchanged, and are generally at the following levels:

LEAD AND ZINC GOODS—		
Lead pipe, list, per lb.		0 12
Lead, waste pipe, list, per lb.		0 13
Do., over 8 in., list, per lb.		0 14
Lead pipe is subject to a discount of 10 per cent.		
Lead traps and bends		17½ per cent.
Lead sheets, 4 to 6lbs., sq. ft. in rolls, lb.		0.09
Cut sheets, ½c to ¾c lb. extra and cut sheets to size, 1c lb. extra.		
Solder wire, per lb.		0 30
Do., commercial, lb.		0 22½
Do., strictly, lb.		0 21
Do., guaranteed, lb.		0 24
Do., wiping, lb.		0 21
Zinc sheets, per lb.	0 09	0 10

BETTER DEMAND FOR ENAMELED PRODUCTS

Toronto.

The outlook for the present season as regards enameled ware is described as encouraging. The volume of business is confidently expected to regis er a marked increase over that of last season, according to expressions from manufacturing circles. The prevailing demand records some improvement, this also being attributed to construction activity. The proportion of dwelling houses being erected, reflects a comparative call for these products. Following are current prices and discounts:

ENAMELLED WARE—			
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.			**51 40**
Do., 5½ ft.			**57 10**
Lavatories—			
17x10" Apron F139 or P4045			**15 80**
18x24" Apron F154 or P3845 or P3847			**23 60**
18x21" Apron F169 or P4205			**17 60**
18 x 21" Roll Rim, F197, F199 or P4655-6			**15 40**
17 x 19" Roll Rim, F241 or P4345			**12 60**
Sinks, Roll Rim, 16x24 in.			**18 10**
Do., 18 x 30 in.			**23 00**
Do., 20 x 30 in.			**24 70**
Sinks, Flat Rim—	**3 only**	**2 only**	**1 only**
16 x 24	**$7 60**	**$7 70**	**$7 80**
18 x 30	**8 50**	**8 60**	**8 70**
20 x 30	**9 70**	**9 80**	**9 90**
Above prices list, less 33 1-3 per cent.			
All steel enamel baths, 4 and 4½ ft.			**$14 00**
Do., 5 ft.			**15 00**
Do., 5½ ft.			**16 75**
These quotations are net.			

SEASONAL ACTIVITY IN RADIATORS AND BOILERS

Toronto

A seasonal volume of trade is recorded in radiators and boilers, earlier construction requiring a fair amount of these products. Compared with last season, the prevailing movement is described as giving much satisfaction, although heating systems in the smaller type of dwellings now being erected, are not extensive. Discounts on these goods re main at the revision effective at the commencement of the year. Prevailing quotations follow:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

WROUGHT PIPE SHOWS GAIN IN STRENGTH

Toronto.

A stronger tone is now evident in wrought piping, this tendency being a reflection of the stiffening in quotations on steel products generally. The demand for steel pipe has also increased slightly, both on the domestic and primary markets. Prices in the south are described as firm, and this tendency is more or less expected to spread, based upon recent developments in basic materials. For the present, List No. 54, continues to govern domestic quotations.

GRADUAL IMPROVEMENT RECORDED IN TROUGH

Toronto.

The current movement in eavestrough is considered fair, with brisker trade generally looked for during the follow-

(Continued on Page 38)

A Million Dollars

Spring Breezes and Spring—Air—Sunshine—Green Grass—Flowers—Building Booming—Business picking up all around—Oh Boy! Who wouldn't feel like a million dollars?

Just about now you'll be needing some of the things we sell:

Cone top tank bulbs,
Bibb washers,
Fuller repairs,
Ball cock repairs,
Syphon valve washers,
Bibb screws and nuts,
Sink, bath and basin gaskets,
Boiler repair plugs,
Reseaters and reamers,
Cutter wheels and tool repairs of all kinds,
Furnace repairs,
Wrenches,
Pipe cutters,
Vises,
Shell drills,
Hack saws and blades,
Flexible pipe hangers,
Closet bolts and screws,
Spud wrenches,
Bending springs,
Bumpers,
Stoppers,
Rubber and fibre union washers,
Anti-splashers,
Floor and ceiling plates.

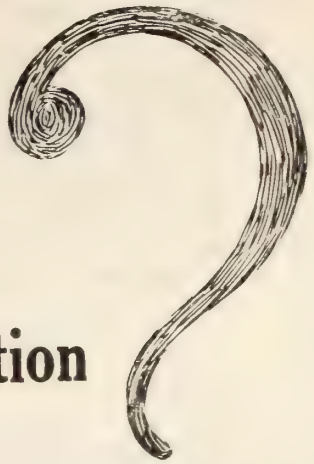
And while you're sorting up, how about: **"Hercules" drain pipe solvent, "Sanilav" closet cleaner, "Porcela" enamel cleaner, C. & H. pipe joint cement, "Hotstream" gas and kerosene water heaters, "Lion" quick action tank couplings, "Ubel" semi-rotary (wing) pumps.** Well, there are a hundred and one other things that we have that you need.

And C. & H. Specialties are guaranteed to give satisfaction—Send us your next order.

W. H. Cunningham & Hill Ltd.

269 West Richmond St., Toronto

Handling Steam Condensation



When you find a gravity return heating system—with one section sluggish in action and no circulation, what do you do to correct it?

How do you balance up unequal return pressures?

If you have to drain a heating section which is below the boiler, how do you do it?

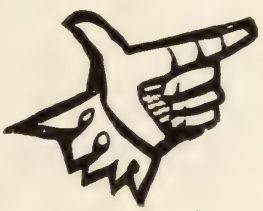
If your lines are "air-bound" how do you relieve them?

If you find the heating returns running to waste—does it pay to catch them and return them to the boiler?

Have you ever removed "dumping" traps because they wouldn't dump?

Have you ever seen a "return trap" which would not return?

Have you ever got into trouble through installing a troublesome return trap?



We have eliminated the "dumping return trap" with its failures and troubles.

We show you how to avoid trouble when you want to put in a direct return system.

You get all the advantages of a direct return system without a possibility of failure or a chance of trouble when you use our condensation appliances.

Ask us for particulars. Condensation is our strong point.

TORONTO MARKETS

(Continued from page 36)

ing months. The stiffening of prices on primary steel markets, has resulted in a slightly firmer undertone in these products also. As is the case with materials required in construction work, seasonal activity in this respect is generally looked for. Quotations at present remain at the following levels:

TROUGH (EAVE)—

O. G. Square Bead and half round. Size in girth: Per 100 ft.

8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50

Less 70 and 10 per cent.

PIPE (CONDUCTOR)—

Plain, round or corrugated.

	Per 100 ft. in 10 ft. lengths.
2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	22 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00

Less 70-10 per cent.

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

BETTER MOVEMENT IN FITTINGS TRADE

Toronto.

Distributors state that business in pipe fittings is coming along in fair proportion for this time of the year, with a gradual improvement having been recorded as the season advances. Building activity is expected to reflect an increase in this movement during the ensuing months. Little variation has been recorded in quotations, discounts and prices remaining at the recently revised levels, which follow:

PIPE FITTINGS—	Per cent.
Cast iron fittings	30
Plugs, cast iron	30
Do., solid	30
Do., countersink	30
Bushings, malle.	32
Do., cast	32
Unions, ¼ in. to 2 in.	47
Do., ⅜ in., 2¼ to 4 in.	47
Flanged unions, std.	30
Flanged fittings	30
Dart unions, blk., ¼ to 2 in.	33½
Do., ⅛ in., 2¼ to 4 in.	23
Do., galvd., add to black	30
Nipples, blk., and galvd. ⅛ to 4 in. close and short	60
Do., 4½ in. and larger	50
Do., ⅛ in. to 4 in.	65
Do., 4½ in. and larger	55
Do., running thread	40
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—

Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

FIRMER UNDERTONE IN CORRUGATED PRICES

Toronto

A somewhat firmer tone is recently evident in the corrugated sheet market, this development being attributed to the improvement noted among flat galvanized sheets. The stiffening of prices on steel products generally, has been a factor calculated to produce a firmer undertone in corrugated. Both manufacturers and distributors report better activity, especially in the lighter gauges, while quotations remain unchanged at the following nominal list prices and discounts, with some special concessions reported offered on certain heavier sizes:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c. per square extra.

TRADE STILL QUIET IN RANGE BOILERS

Toronto.

A moderate degree of trade is recorded in range boilers, with buying in somewhat meagre quantities for immediate requirements only, being the policy generally adhered to by purchasers. A better demand for these products is hoped for, especially with the apparent activity in construction work. The following list prices and discounts are generally in effect although the previous net quotations are reported in certain quarters:

RANGE BOILERS

Size.	List Price.
5-gallon	$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 50 per cent.
Extra heavy, 40 per cent.

UNCHANGED DISCOUNTS ON COMPRESSION GOODS

Toronto

Little variation has been recorded on compression goods since the recently revised discounts on certain lines went into effect. The current movement of these products is generally described as fair, with plenty of room for improvement. The feeling is evident that more activity should be noted during the ensuing months, as these lines are expected to reflect to a certain extent the general increase in building. Following are prevailing discounts:

VALVES—

	Per cent.
Compression work, standard	45
Fuller work, standard	30
Bath cocks, compression	38
Do., Fuller	25
Flatway stop and wastecocks, stand'd.	54
Roundway stop and waste cocks, std.	46
Brass steam cocks, standard	43
Globe, angle and check valves, std.	25
Mueller globe, angle and check	25
Mueller composition disc steam valves	33
J. M. T. valves, screwed	20|10
J. M. T. gate valves, screwed	25|10
J. M. T. gate valves, screwed	25|10
Jenkins gate or straightway, screwed	25|10
Jenkins globe, screwed	19|10
Radiator valves, standard	58
Do., removable disc	58
Emco, J. D., rad. valves, screwed	33
Emco swing check, ⅜" and ½"	40
Do., Do., other sizes	33
Webber gate valves, screwed	33
Emco globe valves, std.	25
Emco globe valves, J.D., screwed	33

Basin cocks—

No. 0 and 1 Fuller pattern	30
Quick opening No. 3633	50
No. 3623, plain or index handle	34

BOILER TUBE PRICES STILL NOMINAL

Toronto.

Distributors state that although current business is coming along in fairly satisfactory volume for this time of the year, yet the boiler tube market has not attained the stabilization hoped for. Prices are still entirely nominal, being made according to the individual order and on the length and sizes required. Each specification is generally being treated on its merits, and local dealers claim that competition from various outside points, has kept quotations in a more or less unsettled condition. Following is an average list representing approximate levels in effect locally:

BOILER TUBES—

	Seamless	Lapweld
1 inch	21 00	.....
1-¼ inch	21 50	.....
1-½ inch	22 00	.....
1-¾ inch	23 00	.....
2 inch	22 00	17 00
2-¼ inch	26 00	18 00
2-½ inch	30 00	20 00
3 inch	34 00	25 00
3-¼ inch	43 00	27 00
	47 00	28 00
3-½ inch	47 00	28 00
4 inch	58 00	35 50

PRICE SHADING ALMOST GONE FROM BAR STEEL

Toronto.

The firmer situation recently noted in bar and steel products generally, has now reached the stage where some price stiffening has developed into higher quotation levels at certain primary quarters. Whether this condition will be reflected in the domestic markets is uncertain, as yet, but one distributor stated to Sanitary Engineer that providing these southern quotations become generally adopted by producers, the upward trend may then be noted on the local market in the near future.

Price shading is practically gone from the domestic centres, and every week records a slightly increased demand. This condition is of course, expected at this season, while building and general construction work is on the increase. Prices remain unchanged at the following levels:

IRON AND STEEL

Mild steel bars, base	2 75
Mild steel bands, 3 16 in. base	3 25
Bar iron, base	2 75
Angle iron, base	2 85
Horseshoe iron	3 60
Tire steel	3 00
Spring steel	6 00
Crucible cast sheet steel	30 00
Mining drill steel	18 50
Cast tool steel, medium	18 00
Cast tool steel, high grade	31 00
Sleigh shoe steel	2 85
Norway iron	12 50
Toe caulk iron	4 00
Hoop steel	3 75

MAY BE TURNING POINT IN SHEET MARKETS

Toronto.

While the recent increased price levels on galvanized sheets, announced by certain independent mills in the south, still remains the principal factor in the sheet industry, this condition is ascribed as the possible turning point for steel producers. It is pointed out in one quarter that such a situation is made possible by the termination of contracts for sheets, and the trend to advanced levels on fresh bookings. Whether this

(Continued from page 38)

lead will be generally followed by American mills remains to be seen, but it recalls the fact that prices are at least stiffening at the prevailing levels. All the barometers by which the steel industry in general is gauged now reveal a generally improved condition, while the sheet business during the closing days of March, recorded a momentum for the opening of the second quarter to emulate. A more satisfactory tone is evident, as the progress looked for earlier in the year, is now developing. Following are current prices

BLUE ANNEALED—		
10 gauge, base	3 50	4 25
12 gauge	3 55	4 30
14 gauge	3 60	4 35
16 gauge	3 65	4 40
BLACK—		
18-20 gauge	4 05	4 80
22-24 gauge	4 10	4 85
26 gauge	4 15	4 90
28 gauge	4 25	5 00

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—	Queen's Head.	Fleur-de-lis.
28 gauge	7 50	7 00
26 gauge	7 25	6 75
24 gauge	6 85	6 35
22 gauge	6 40	5 90
18 and 20 gauge	6 25	5 75
Premier and Apollo—		
10¾ oz.	5 75	6 50
U. S. 28, base	5 35	6 10
U. S. 26	5 05	5 80
22 and 24	4 90	5 65
18 and 20	4 75	5 50
16	4 60	5 35
12 and 14	4 45	5 20

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing

BUILDING REFLECTED IN CLOSET DEMAND

Toronto

Closet outfits, combinations and fixtures also come in the category of trose building supplies which register an improved demand at this season. The increase in this respect is generally looked for to continue as the season progresses. Prevailing quotations are nominally unchanged, with the following levels generally governing small purchases, but with some slight concessions being recorded for half-dozen lots or

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	27 75
Do., with post hinge seat	28 40
[illegible] mahogany post hinge seat and cover	30 25
[illegible] with oak post hinge seat and cover	30 75
[illegible] with mahogany post hinge seat and cover	31 00
Do., white Vitro or Pussyfoot, with mahogany post hinge seat and cover	30 75
Do., white Vitro or Pussyfot, with mahogany post hinge seat and cover	31 00
Do., enamelled iron tank with oak post hinge seat and cover	30 75
[illegible] with mahogany post hinge seat and cover	31 00
Additions or reductions to above	
Add for reverse trap bowl	1 25
Add for syphon jet bowl	7 00
For ¾ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 80
CLOSET BOWLS—	
Washdown bowl, less spud	10 00
Reversible trap bowl, less spud	11 25

CLOSET SEATS—	
Oak post hinge seat and cover	4 00
Oak wood strip seat and cover	3 25
Mahogany finish post hinge seat and cover	4 25

COPPER AGAIN WEAKENS ON PRODUCTION NOTICE

Toronto.

The weakening of copper is the feature of the current ingot markets, this situation having developed upon the announcement of certain producers to resume operations. The current demand for metals in general continues quiet, and the present situation shows little variation. Some metals, such as antimony and lead, are slightly firmer, the improvement, however slight, being a welcome spot in a sea of general depression.

COPPER.—Another recession has occurred in the primary copper markets both as regards interest and prices. This condition has been accentuated by the announcement of copper producers deciding to resume operations, this having an unsettling effect. The demand continues light, and recent offerings are freer, with dullness and weakness the principal noticeable factors on both the primary and domestic markets. Local quotations remain at 16½ cents.

TIN.—Confidence in this market has not increased to any appreciable extent, but prices on the primary centres are described as steady. Stocks are still ample however, and increasing supplies have tended to keep business quiet. The price of 34 cents continues to be the average local quotation.

WINNIPEG MARKETS

WINNIPEG, April 13—Current price developments in sanitary and heating materials include lower quotations on sheet copper, Canada plates, and wrought nipples. The reduction in nipples is recorded through revised discounts, but no similar change has been announced on couplings or wrought piping. Other plumbing and steam-fitting markets have remained fairly steady in price, with the recent seasonable weather conditions contributing towards improvement, not only in the prevailing volume of business, but also in regard to the prospects for future trade activity.

REVISED DISCOUNTS ON WROUGHT NIPPLES

Winnipeg.

Through a change made in discounts on wrought iron nipples, the net prices are now on a lower scale. Following are the revised discounts:

NIPPLES—

Close and short—Up to 4 in., 50 and 10 per cent. off.; 4½ in. and larger, 40 and 10 per cent off.

Long—4 in., and smaller, 55 and 10 per cent. off.; 4½ in. and larger, 45 and 10 per cent. off.

EASIER PRICES APPEAR ON SHEET COPPER

Winnipeg.

Prices have dropped recently on sheet copper. This is not surprising as the virgin metal has been slightly easier in tone. Following are the revised prices:

Planished Copper 56c. per lb.

Tinned copper 50c. per lb .

LOWER PRICES NOTED ON CANADIAN PLATE

Winnipeg.

Small reductions continue to feature the local sheet markets, and a slight reduction is now recorded on Canada Plates. Following are the revised quotations:

CANADA PLATE—

18x21, $6.75 per box.; 18x24, $6.75 per box.; 20x28, $6.75 per box.

FAIR TRADE RECORDED IN COTTON WASTE

Winnipeg.

There is no change in the cotton waste market, raw cotton now being fairly steady, following the decline some weeks ago. Trade is fair in volume for this season, and prices remain at the last revision.

WASTE, COTTON—

Cream polishing, 22c. per lb. White XXX Extra 18½c. per lb.; XX Grand 17½ per lb.; XLCR, 16½c.; X Empire 15c.; X Press, 14½c.

Colored—Fancy 15½c.; Lion 14c.; Standard 12½c.; Popular J 11c.; Keen 9½c. per lb.

SATISFACTORY DEMAND FOR RANGE BOILERS

Winnipeg.

The range boiler situation is practically unchanged, with the current demand described as being fair. Compared with this time last year business in this line is very satisfactory. Prices are unchanged. Following are the prevailing quotations:

RANGE BOILERS—

30 gal. $9.60 ea.; 35 gal. $13.25 ea.; 40 gal. $16.25 ea.; 52 gal. $23.45; 66 gal., $33.15; 82 gal. $40.60; 100 gal. $62.50 ea.; 120 gal., $75.00.

BUILDING ACTIVITY PROVIDES BETTER SOIL PIPE TRADE

Winnipeg.

Sales of soil pipe have been exceptionally light up to this time, but as the weather is now getting more suitable, coupled with the promise of an extensive building program, it is expected that trade in this line will be good. For the present there is no price change to record. Following are the prevailing discounts:

SOIL PIPE—

2 and 3 in., 20 per cent. off; 4 inches, 30 per cent. off.; 5 and 6 inches 25 per cent off.; 8 inches 10 per cent adv.

Fittings—2 and 3 inches, 40 per cent. off; 4, 5 and 6 in., 45 per cent.

No Need for Wet Cellars!

Just now there are splendid opportunities for you in selling the **Morrison Automatic Cellar Drainer.** This is the season when you can, by featuring this line, make a distinct appeal to your customers that will mean good business for you.

A wet cellar is a detriment to health. It is a detriment to business for wet cellars or basements are very destructive to stock.

Have you a **Morrison Cellar Drainer** in your own cellar?

It is easily installed, entirely automatic, and cannot get out of order. Will keep a cellar dry the year round.

It will pay you to investigate the sure and perfect working qualities of the **Morrison Automatic Cellar Drainer** either for your own or your customers' use.

Dealers are right now making splendid profits selling them. Write for complete information.

ANTHES

name "Anthes" every piece

Every member of the trade knows that there are just two kinds of soil pipe—good and bad. Good soil pipe is an investment—bad a liability.

Good soil pipe will maintain your reputation—bad will lose it for you.

"Anthes" soil pipe has always measured up to the highest possible standard. The name "Anthes" on soil pipe and fittings is what the Sterling mark is to silver. We are determined to keep it so.

Thousands of miles of soil pipe will be laid this year. Make your share of it permanent and efficient by specifying "Anthes."

Splitting Hairs and Splitting Profits

Many men there are who like an argument, but when it gets to "hair-splitting" they begin to lose interest.

An argument is a good mental stimulant and a friendly argument promotes good-feeling until the "hair-splitting" stage is reached, and then bad-feeling begins to show itself, personalities enter, and the **"argument"** is lost.

So it is with business. Friendly competition on a broad, sound basis engenders good-feeling so long as you and your competitor are getting a fair profit. But just as soon as competition reaches the undercutting stage, and profits are split and re-split, then you have the lost argument all over again; bad-feeling — personalities—and the **"profit"** is lost. In the first instance your pride is hurt, in the second your pocket.

Don't nurse a grievance—have it out with the other fellow—it will be better for you and better for the trade. But—Don't split hairs!

L. L. Anthes.

Let Us Quit This Sentimental Twaddle!

Canadian employers have been bitterly scored, time and again, for crimes of which they have not been guilty, says Dr. C. K. Clarke in his article entitled

"Occupational Wanderers"

which appears in the April 15 MACLEAN'S. In this article Dr. Clarke shatters one myth about the average factory girl. Many so-called reformers have insisted that factory conditions and low wages are at the bottom of the economic and moral catastrophes which wreak havoc with certain types of working girls, and a great deal of sentimental twaddle has been talked about conditions which are purely imaginary.

After long study of the question Dr. Clarke has come to the conclusion that "the majority of the misfits are earning far more than they are worth," and "the best of Canadian factories are an inspiration and it is doubtful if either psychiatry or psychology can contribute much in making suggestions of value." Many boys and girls, men and women, who are not overly bright mentally, are enabled by proper care to overcome their handicap and find a niche which enables them to play a useful role in factory life.

Dr. Clarke brings out some startling facts in this article, which will be of interest to every employer of labor in Canada, as well as to all thinking men and women who are interested in the welfare of working men and working girls.

BRASS GOODS

What Is PERFECTO Quality?

CANADIAN plumbers and PerfectO Brass Goods are old friends and true. Because the quality of PerfectO Brass Goods is rigidly maintained.

"Quality" is not simply used for the sake of effect. It has a certain definite meaning—that is:—

First, PerfectO Brass Goods are made in Canada by **expert** workmen—with the most painstaking care—because an imperfect article cannot pass the inspectors.

They are made from the finest materials — the most serviceable red brass obtainable.

They are not skimped. There are no cheese-paring methods employed in the PerfectO plant. Every article gets all the metal and workmanship that it needs.

They are **standard.** That's a big feature from the plumber's standpoint. Made up of **standardized parts,** PerfectO Brass Goods save untold time and inconvenience.

They incorporate many exclusive PerfectO improvements which make for greater efficiency and longer life.

They are backed by the absolute PerfectO "Two-to-One" Guarantee—the fairest proposition ever offered Canadian plumbers.

Give YOUR Customers The Best

THE Sanitary Engineer who installs our Empire Closet Combinations will have the satisfaction of knowing that he is supplying his customer with an article that has been tried and tested in long years of service.

This fixture is made of best quality materials. The tank is of rich golden oak—the real golden oak, not an imitation. The trimmings are nickel plated and are made of the best red metal.

It works smoothly and the construction throughout ensures lasting, satisfactory service.

Every fixture is thoroughly tested before leaving the factory.

"Its swift, silent flow, won't let anyone know."

Just a few of the long list of Hi-grade Products of the Canadian Brass Company Limited.

Each one a superior article, embodying the many special built-for-service features in this line of Plumbers' Supplies.

They uphold the reputation of their makers and in turn the reputation of the man who installs them.

Made in their entirety in Galt, Ontario, and stocked, ready for shipment, in Galt and Toronto.

CANADIAN BRASS CO. LIMITED QUALITY SERVICE

Drinking Fountains

White, Clean, Vitreous, Sanitary

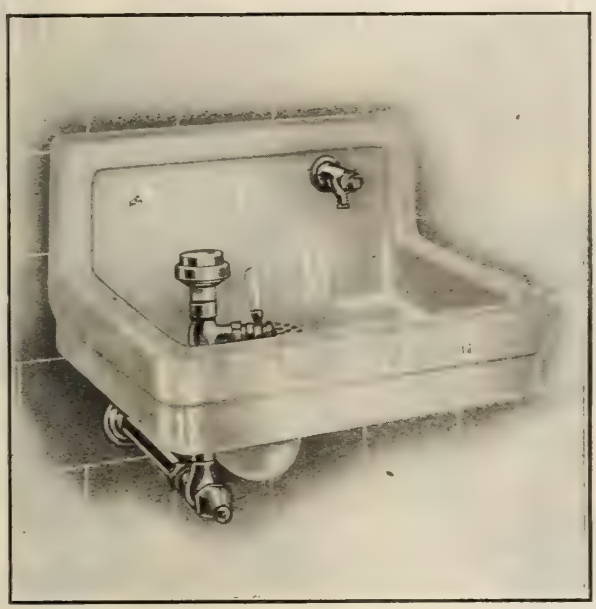

Plate 901

Dirt and germs will not readily cling to its smooth hard surface so that with a minimum of effort its original glistening whiteness will be retained after years of use.

The fittings illustrated are only suggestive. A variety of good sanitary bubblers are obtainable which will readily fit either of the patterns shown.

The moderate price at which these very desirable fixtures are furnished by us should ensure their installation in every public building.

The lustrous white clean surface of a Canadian Vitreous Drinking Fountain suggests the cool refreshing draught which can with safety be taken therefrom.

Canadian Vitreous China is the most thoroughly sanitary material of which a Drinking Fountain can be made. It is all clay, the same white, dense, substantial, strong, vitreous body through and through, with a beautiful hard, lustrous, live-white glaze surface, which cannot chip, crack, rust, discolor or deteriorate.

Close Your Sales With A JEWEL

The most important things that appeal to your clients in connection with a furnace is the length of service it gives and the all-round satisfaction they receive in regard to heating requirements.

When heating their houses every one of your customers desires a furnace that can keep the house comfortably warm for sitting to read, or even sufficiently hot to raise flowers—in other words to make the home always comfortable.

The Jewel can satisfy all these requirements—it leads the pipeless furnace field.

Constructed of the best selected material and built by skilled workmen.

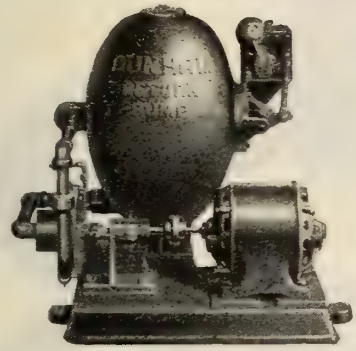
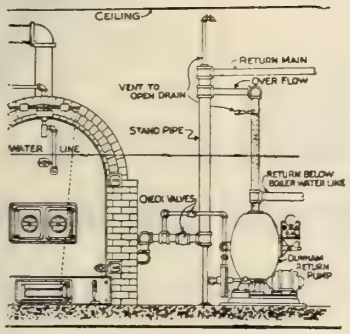
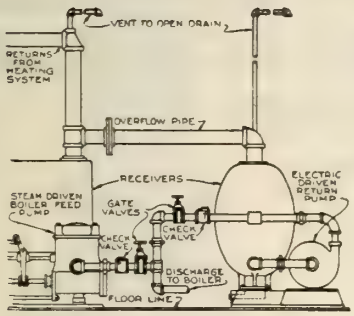
HANDLING CONDENSATE

Dunham Return Pump







It very often happens that the return piping from a heating system has to return to boiler **very near** or below the waterline of the boiler. Such installations require some positive mechanical means for returning the condensate to the boiler and which also permits free venting of air from the radiators.

The Dunham Return Pump, which is an automatic electric driven centrifugal pump, **stopped** and **started** from a float switch, completely fills the requirements.

It is a rugged, efficient unit, thoroughly tested at factory before shipment and is shipped completely assembled ready for installation.

The former waste of condensate from heating systems where returns are below the boiler waterline can be entirely eliminated now by use of the Dunham Return Pump.

The dissatisfaction from the use of low pressure steam pumps for night service is well known, as well as the waste of condensate and water-logging of the heating system during the night period.

The application of the Dunham Return Pump, as shown alongside, eliminates such troubles. The condensate from the heating system is automatically returned to the boiler as it accumulates, resulting in improved heating and saving in fuel as well.

Built in various sizes for pressures up to 40 pounds boiler pressure and capacity to handle 30,000 square feet of direct radiation, or more.

Complete data on request.

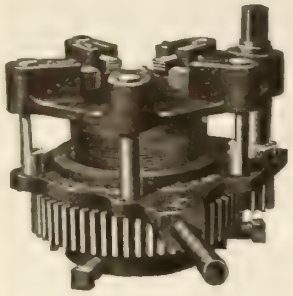
Pipe Threading Tools

Work Easily, Smoothly, Rapidly and Accurately

Cost no more than the imitations and after being in use one month will have paid for the tool.



No. 2 Toledo Geared Threading Tool
Capacity 2½" to 4"

FIVE GOOD REASONS WHY.

First: These tools thread pipe with less labor than others.
Second: They are so simple in construction that it is easier to do work right than to do it wrong.
Third: Their simplicity makes them light in weight and easy to handle.
Fourth: They are compact, hence can be used in close quarters.
Fifth: They thread all pipe from ⅛ to 12-inch inclusive.
Standardize these tools in your shop and you can't go wrong.

"Plumbers Lack Adequate Organization"

Prominent Master Plumber of Quebec in Discussing Alleged Lack of Protection by Supply Firms in Merchandising of Plumbing Equipment Lays Difficulty at Foot of Poor Organization—Maritime Plumber Charges Unfair Methods Employed by Local Supply Firms

EDITOR'S NOTE:—Further details are given herewith on the question of protection of master plumbers by supply firms in order to enable the former to successfully operate showrooms. A number of articles have appeared in recent issues and this article outlines something further of the situation in Quebec Province and in the Maritime Provinces. The Editor welcomes further advice on the subject from any part of Canada and writer's names will be withheld from publication if desired. This is one of the most important topics brought before the sanitary and heating industry in Canada for some time. What is your solution of the difficulty?

THAT the sanitary and heating industry of Canada is suffering a considerable obstacle to business in so far as little encouragement is offered for the adoption of up-to-date merchandising facilities, was one of the predominant notes sounded at the recent convention of the Ontario Society, D. S. & H. E., and also at other conventions of sanitary and heating engineers. In connection with this subject the question of conducting showrooms is important. On this point Sanitary Engineer has had much to say in recent issues and further evidence is being produced with the idea of showing exactly where the operators in this industry stand in regard to merchandising facilities.

Following up exposures made in recent issues of Sanitary Engineer by a prominent master plumber of Quebec, a request was made through the author of those exposures that other master plumbers of that province should also outline their experiences in connection with showrooms. Our informant advises that "although other master plumbers complain about the same trouble they do not care to write about it, rather believing in the principle of 'let George do it,' and I am trying to help George in this matter."

Holding Conference

Sanitary Engineer is advised that a number of representative plumbers of Quebec have been in conference on the subject of insufficient protection of showrooms from supply houses, and their recommendation will be shortly outlined. Concerning recent articles on this subject in Sanitary Engineer, the Quebec master plumber in question states, "I have read very carefully your March 1 issue and I noted particularly the article headed "Sell to anyone." That gentleman says, "the master plumbers were said to be responsible to the extent that they have no organization strong enough to deal with the situation, and certainly not fully representative of the trade as a whole. No concerted action has been taken by them toward correcting present evils."

"This statement to my mind is absolutely true. There stands all the evil and I think I know something about trade associations. After having studied our association, looking over the past and after attending several conventions I am convinced that unless it is reorganized on new lines and led by an energetic and progressive president, we cannot expect any help from this source."

Maritime Plumber Speaks

Removing the sphere of interest from Quebec to the Maritimes, there is again evident some complaint due to lack of protection for master plumbers by supply houses. In this connection Sanitary Engineer is advised by Fred Uncles, plumbing and heating contractor of Newcastle, N. B., as follows:—"I have read several articles in your paper re wholesale houses selling plumbing supplies to consumers. I have known numerous cases of this kind right in our own town and county and do consider that drastic steps should be taken to put a stop to this kind of business. I know of one concern in St. John that does this kind of business and have gone so far as to send men out to do the work. Only yesterday I had a man come to my store and ask me for a price on a plumbing system, stating that he did not want the fixtures included as he could buy them at the same price as I could. Our conversation at this stage changed into heated argument. Now there are four wholesale houses in the provinces of Nova Scotia and New Brunswick whom the trade buy from. Two of these concerns I have never known to do this kind of business, the third I have absolute proof of them selling plumbing supplies to the consumer and also doing the work. The fourth concern has done this same thing but since they have been put on the jobbing list I have not heard tell of them doing it."

Supply Firms Reply

Sanitary Engineer has been in touch with the four supply firms mentioned by this master plumber. One of them advises "we have always made it a practice NOT to sell to the consumer and while in some cases we have quoted the consumer we have always protected the master plumbers."

The second supply firm which was not charged with selling direct to consumers advises "we have had a varied experience in the plumbing business practically from every standpoint and while we appreciate the remarks of the master plumber whose communication you have, which refers to ourselves on this point, at the same time the greatest trouble in our opinion with the plumbing situation to-day is not so much with the manufacturers and jobbers but with the master plumbers themselves, and until they arrive at a position where they have confidence in themselves and their fellow master plumb-

(Continued on Page 12)

Questions and Answers Regarding Plumbing and Heating Practice

IN answer to an inquiry re cesspool for three bathrooms and eight sinks, to be made in water-logged ground we would suggest that a septic tank be installed in preference to an ordinary cesspool, this being cheaper to construct and giving better results especially in water-logged ground as same would not require to be carried to such a depth. The required capacity can be obtained by increasing the length and width with only sufficient depth being allowed in the tank to arrest and store the precipitated solid matter, in order to prevent continuously having to clean out the tank.

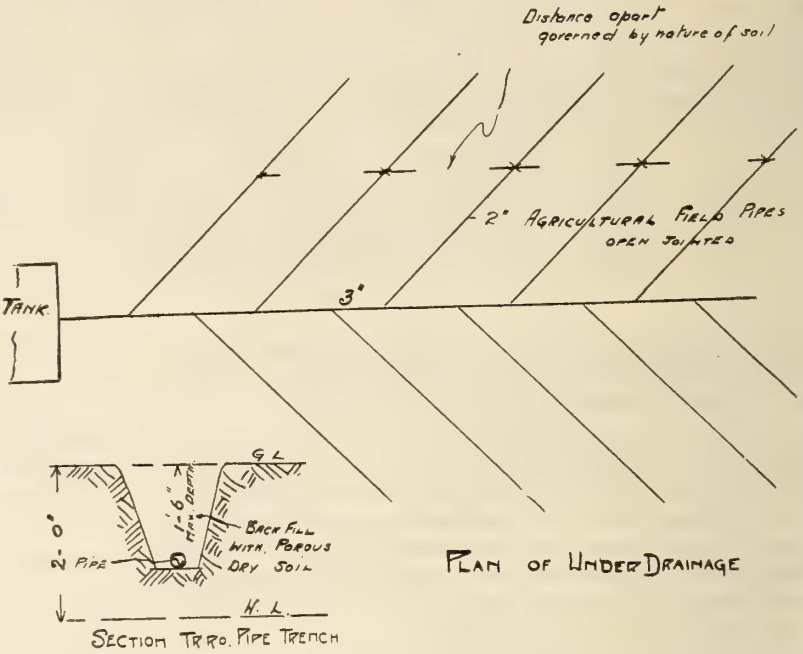
The system adopted by the correspondent of constructing same out of logs was bound to be a failure and fill up quickly as water will always find its own level, so unless the cesspool is constructed of waterproof material the water will always stand at the same level in the tank as in the adjacent ground, which would be two feet from the surface in this case. If the correspondent wants to install a cesspool, would suggest using a concrete floor and walls, mixture of super cement, 9" x 12" thick; or construct in a rich concrete mixture 1, 2, 3, and provide for some waterproofing material to make same absolutely watertight.

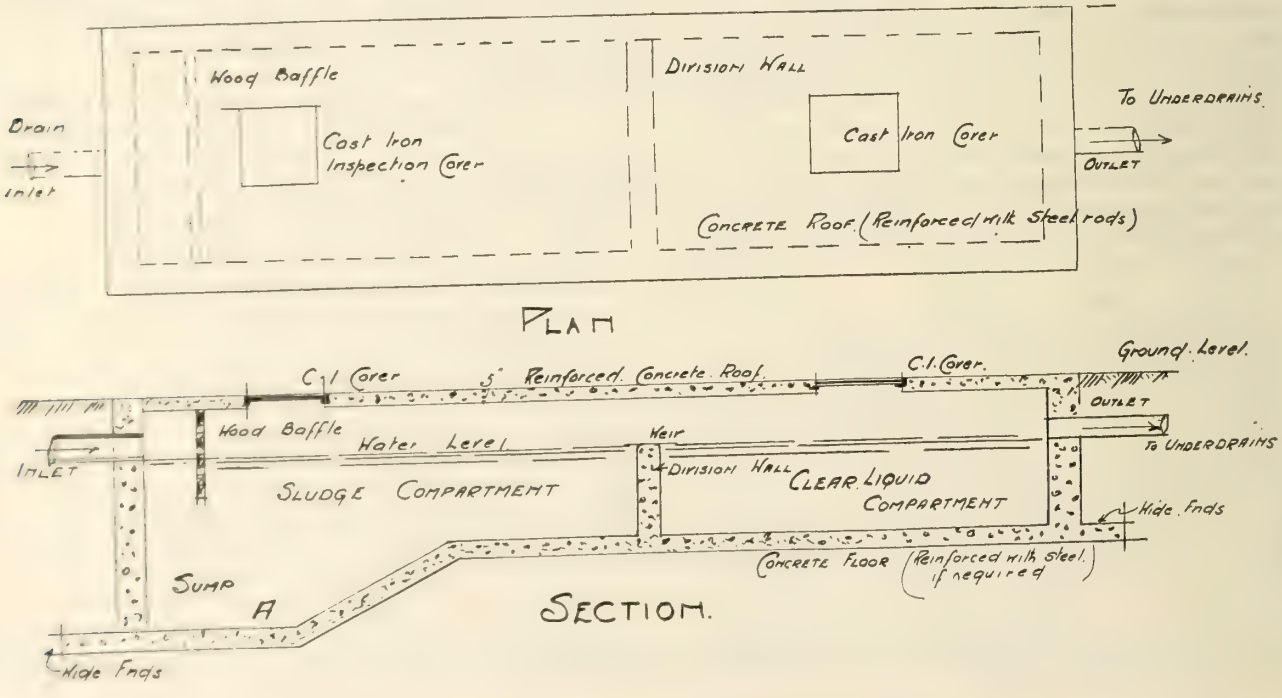
The accompanying sketch clearly shows the design of septic tank we would suggest being installed from the data at hand.

The area excavated for the tank should be kept dry by installing a hand pump in the sump marked A on accompanying sketch and continuously pumped until the concrete is well laid and beyond the action of the water. Sheeting may have to be installed around the excavated area to prevent the water gaining free access to the hole unless the pump is of sufficient capacity to keep the excavation dry.

The concrete 1, 2, 3, mixture with waterproofing material should be mixed in a fairly dry state and well tamped to make a consolidated non-porous floor and walls impervious to moisture and thoroughly watertight.

Owing to the number of gallons the tank is required to hold not being stated the sizes cannot be given and not knowing the exact nature of the ground the thickness and general design of the tank cannot be furnished.





RANGE BOILER CONNECTIONS

Question.—Will you let me know the best method to adopt in connecting range boilers as per sketches. In sketch No. 1 the information I require is as to how you would connect the hot water supply from these two boilers which would be on the same floor to bath room, lavatories, etc., in the house. Also the best method of connecting range and jacket heater with boilers. What I want to do is to connect the boilers so that should the kitchen range be going and the jacket heater out, or vice versa, cold water would not be drawn through the boiler not heated.

In connection with sketch No. 2 would you tell me how to connect 66 gal. boiler in basement which is already connected with laundry heater, to kitchen range above as my client does not want the range boiler in the kitchen but wants it to remain in the basement.

"Subscriber," British Columbia.

Answer.—Referring to subscriber's sketch No. 1:

We believe that the piping could be arranged to the best advantage by making the hot water connection of range-boiler and water-front just as shown on the drawing, and, then, making the connection of the jacket heater and its boiler by a direct connection to the hot water pipe as shown by the dotted lines.

The connection "B" should be made by means of an elbow. The elbow should be set so that the connection of hot water fixture-pipe and range boiler be taken out below the tee "A," which is to serve as a connection for the boiler at the jacket heater.

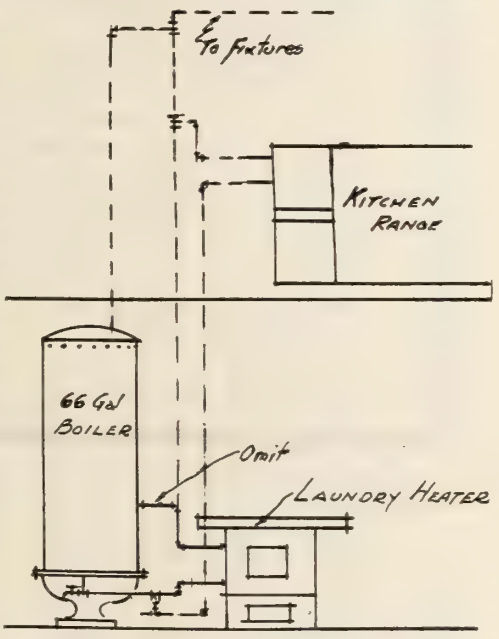
It is not advisable to put shut-off valves anywhere in the line of piping, because valves when so placed become a source of danger when left closed by a careless attendant.

If the system is installed along the lines here suggested there should be circulation through the heated tank only. Of course, at times, when the draw-off of hot water is not very great, during such times as the fire is continued for some length of time, some circulation will take place in the cold tank, but it will not be at any considerable extent.

Referring to sketch No. 2:

The hot water pipe from the laundry heater should be continued right up to, and as far as possible above, the water-front in the kitchen range. At the highest point in this said pipe there should be a branch to some fixture so that steam—which may at times form in this loop— will have a vent outlet. If there is city water pressure in connection with this system, there is not likely to be much air or steam forming so that the water circulation will be blocked. However if the water pressure is not very great, great care must be exercised by the fitter so that he may be sure that no air or steam pockets will occur at points where difficulty may be experienced in the venting of same.

The dotted lines on the drawing indicate, in a general way, how these connections should be made.



SUBSCRIBER'S SKETCH #2.

437 PLUMBING DEFECTS DISCOVERED

Hamilton, Ont.—A draft of a proposed by-law, respecting gas stoves and ranges, has been submitted by Sanitary Inspector Thornley. The board of health was unanimous in its approval of the bill, and H. Barr was instructed to refer the proposed by-law to City Solicitor Waddell, K.C., for his consideration.

The by-law affected is No. 1,366, which will be amended by inserting sections respecting ventilation regulations. It states in part that all gas stoves must be provided with metal pipes, and if the medical officer so recommended, metal hoods must be installed.

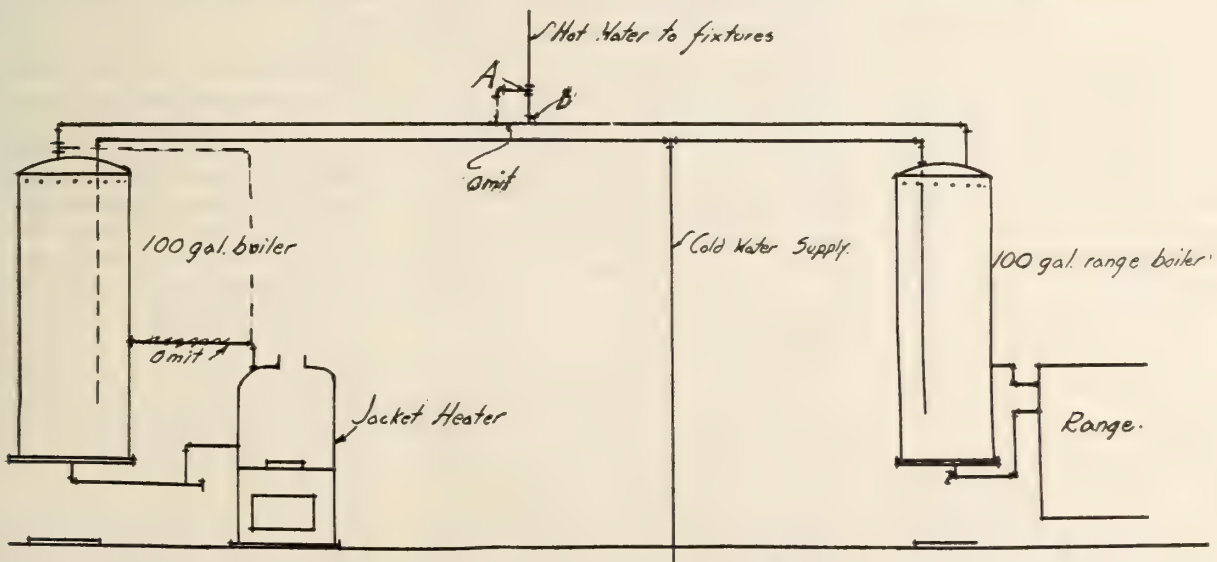
The use of rubber pipes to carry off fumes is prohibited under the proposed enactment.

Sanitary Inspector Thornley reported a total of 99 observations for the past month with regard to chimneys. He also reported on artisan dwellings now nearing completion. The inspector reported 48 inspections of boiler rooms in various plants.

A total of 987 dwellings were inspected by the sanitary inspectors. There were 1,029 yards and alleys inspected; 437 plumbing defects discovered, and other nuisances or defects totaling 1,398, were dealt with.

OUTLAY OF $90,000 FOR MONTREAL SEWERS

The program of sewer construction in Montreal will soon commence, the Executive Committee of the City Council being about to let the contracts for a number of the local streets. The lowest tenders received require an outlay of about $90,000.



SUBSCRIBER'S SKETCH #1.

Improves Harmony Among Operators

Sanitary and Heating Engineers of Port Arthur, Ont., Combine With Signed Notice of Wage Standards and Suggest Customers Check Materials and Time Charged—Raises Appreciation of the Trade Among Citizens

A SOMEWHAT novel plan has been worked out by sanitary and heating engineers in Port Arthur, Ont., which tends to settle questions of labor disputes among operators and also tends to raise the appreciation of citizens for their local sanitary and heating engineers.

Elsewhere on this page is reproduced the ad recently used by all the operators of Port Arthur and bearing the signature of each firm, dealing with a reduction in rates of wages on labor for plumbing and heating repair work. This ad points out that customers should wherever possible check materials and time charged by mechanics before leaving the work. It points out that traveling time to and from work is charged at regular rates and repairs are cash.

Discussing this matter with Sanitary Engineer, J. W. Barnes, Lakehead Engineering Company, Port Arthur, stated in regard to the notice which was placed in the papers:—

This will speak for itself. We have found that this is the most successful thing that we have ever done in our association in Port Arthur. We tried this matter three years ago and we have found that it eliminates all disputes in connection with our labor charges, and we also find that it is looked upon by the average citizen as good business. In fact I believe it has been instrumental in raising the sanitary and heating business in our town to a much higher level than it was previously, as it shows the average public that we are willing to give service, but we want that service to bring in a fair remuneration which will allow us to keep it up to a high standard.

"I have noted in your paper considerable discussion on labor charges, overhead expense, etc., and I take this method of showing the different members of the craft who read your paper, how we treat the jobbing and repair end of our business. The charges may appear high to lots of men who do not take the time to go in and thoroughly figure out what their labor on jobbing and repair work actually costs them. We estimate our overhead on labor at 30 per cent. and I think when you take into consideration the amount of lost time that has to be accounted for, that our estimate is on a low basis at that.

"We advertised this in the local paper for three days. We have cards printed 10 x 14, and these cards are tacked up in very conspicuous places in our shop so the public can see at a glance what our labor charges really are without asking any questions."

NOTICE!

Reduction in Rates on Labor for Plumbing and Heating Repair Work

SCHEDULE OF PRICES for repair or day work charged by the following licensed plumbers and steamfitters of Port Arthur, effective March 1st, 1922:

Skilled Mechanic, Plumber or Steamfitter, per hour.....	$1.50
Helper, per hour	1.00
Apprentice, first, second or third year, per hour.....	.50

Patrons are requested, whenever possible, to check materials and time charged by mechanics, before leaving the work. Repairs are cash, and, if mechanic asks for payment, please understand that he is acting on instructions. Travelling time to and from the work will be charged at regular rate per hour.

NOVEL DEPARTURE

Continued from page 9

ers we cannot see where their position generally will be improved."

Advice from the third supply firm which was charged with selling direct to consumers, is as follows, "We protect the plumber in all instances. We also wish to advise that we do no installation work of any kind, and furthermore, if the plumbing contractor who advised you installed any of our goods on a contract he is certainly entitled to a commission and will recieve same on application to us provided of course such material was supplied by this firm. Our books carry the accounts of practically all the sanitary engineers in the maritime provinces, all of whom we believe it is our duty to protect in the interest of and for the welfare of the trade in general."

Protect Plumbers' Interests

The fourth supply firm advises, "We have always been very careful to protect the interests of the master plumbers, believing that it was not only right but to our own interests to do so. We maintain a showroom for the benefit of such of them as are not in a position to have one of their own and encourage them to bring their customers to our store. There are certain people who having dealt with this company for years prefer to buy this material from us direct, in which case we make a sufficient difference in the price which we charge them and our wholesale prices, to allow the master plumbers a nice margin and credit the difference to his account. We are pleased to say that this method has worked out entirely satisfactorily in our case and we have yet to hear of any complaint from the master plumbers."

UNBREAKABLE GLASS INVENTED

A Bohemian firm of glass manufacturers asserts it has invented unbreakable glass, which can also be used for cooking. Such assertions have been made to some extent in the past, a French factory turning out toughened glass about 50 years ago, which could be thrown from a height without smashing. Its reputed performance was, however, not trustworthy and occasionally it would fly into powder, for no apparent reason. The inventors of the new glass declare that not only is it unbreakable, but that tumblers of it can be placed on red-hot stoves, wood can be lighted in them and they do not crack.

Plans for a new six room school at Hensall, Ont., are being prepared by Architect W. G. Murray, Dominion Savings Building, London. Prices wanted on heating and plumbing.

Heating and Ventilating

Combination Heating Systems

An Important Series of Articles Dealing With Many Interesting Phrases of Latest Developments in the Field of Heating Practice

(Written exclusively for Sanitary Engineer by NORMAN A. KEARNS)

(Continued from March 1st Issue.)

IN continuance of the policy of presenting more than one possible system of warm air piping we are now showing with the accompanying sketch a lay-out somewhat different to that with which most of our readers are familiar. This system is known as the "Aspirating Type."

It is not because we recommend this system that it is shown. Later on we expect to describe a larger house wherein a system similar to this has been installed, and the reader will then note when certain principles followed in a system of this kind may be well applied where a different style of installation is to be made.

When a system such as this is to be installed in a residence or other type of building, all doors and windows of the house should be "weatherstripped," so that air leakage will be reduced to a minimum. The main idea of the originators of this system seems to have been the heating of the house without perceptible air currents. Therefore, it is essential that every means be taken to prevent outer air entering the building save by way of the cold air inlets.

The sketch is not to be considered as a detailed working drawing of an aspirating system of heating, nor as an indication of the only way in which such a plant may be installed. It is simply a sketch illustrating the main ideas followed in the installation of work of this class.

The basement piping is shown by dotted, and dot and dash lines on the ground floor plan. The circle in the centre of the plan indicates the position of the furnace in the basement. Upon reference to the sketch the reader will note that the setting of pipes, registers and faces is in no way similar to that of any warm-air system of heating heretofore illustrated in this series of articles.

In all of the former articles we showed the warm-air registers set very close to the furnace: in this system the warm-air registers are shown set some distance from the furnace and against the cold outer walls.

At "A" and "A" on the drawing, cold-air intakes are shown. These intakes are set so that cold out-door air may be admitted through either of the two openings which are set at opposite ends of the building. The duplicate arrangement is made so that varying directions of the outer air currents will have little, or no, effect on the proper working of the system. The cold air inlet should be fitted with covers or protected by a hood, so that no snow or rain may be driven into the inlet by the wind. These inlets should also be fitted with bird-proof screens and back-draft check dampers, such as those illustrated in former articles in this series.

The cold-air ducts may be built as tunnels set under the basement floor, or they may be erected in the form of metal trunks on the basement ceiling.

If the duct be of metal, and run on the basement ceiling, it will be necessary to cover that duct with some heat-insulating material, so that the bare, and cold metal surface will not chill the basement, or the floor above.

The area of each cold-air duct should be almost equivalent to the total area of all of the warm-air ducts.

Return Air

The drawing does not show any provision for the return of air from within the house to the furnace. This can be arranged for by the setting of return faces under the rear window of the dining-room, and under the front window of the parlor.

The return-air faces should be fitted with valves. These valves must be so arranged that the act of opening the return-air passage will close that of the cold-air inlet. This detail was shown by one of the drawings which was used to illustrate a former article in the Sanitary Engineer.

Furnace

The furnace used will be one of the regular approved portable types, fitted with a tin lined galvanized iron casing, a water-pan, and the usual run of firing and cleaning tools.

Warm-Air Pipes

The warm-air pipes connect the bonnet of the casing with the various registers and wall stacks shown. And, in so far as it is possible to do so, the warm-air pipes are run on the "trunk" system, so that one pipe may feed more than one register or stack. In this connection it should be noted that the pipes B and C feed a register and a wall stack.

The register in the hall is set in the floor, so that it may be used as a foot-warmer.

Wall Stacks

The wall stacks are not run between the studs. There is hardly enough room for the large stacks required in this system. So we run the stacks up the face of the walls, cover them with asbestos, and then finally case them in with wood or plaster pilasters.

That side of a stack which is exposed to the cold wall must be well insulated, otherwise the cooling effect of the cold wall may be sufficent to prevent an upward flow of warm air.

Vent Stack

The vent stack is set nearly on the center of the plan.

Through the vent stack there runs a smoke-pipe of cast iron, or vitafied tile. It is because of the short life of steel smoke-pipes when installed under the conditions which here obtain that makes

---

GOOD RESULTS FROM $150 SPENT MONTHLY ON ADVERTISING

Speaking recently of the value of advertising in his business, C. R. Paddon, one of the members of the firm of Paddon Co. Ltd., Windsor, Ont., plumbing, heating and sheet metal workers, stated, "We fully believe that it is our continual advertising in the daily paper that has been keeping us going where most of the others plumbers have been quiet. Although we cannot trace many direct results of large jobs to our advertising there has been considerable smaller work come to us.

"Our advertising has been averaging us nearly one hundred and fifty dollars per month but we feel that by backing up what we say, by doing good work and endeavoring to please the public, we are gradually building up a good substantial business. We have kept ten plumbers and steamfitters going all winter, five of the plumbers being kept almost continually on smaller jobs and repair work. Besides these men we have kept going five helpers and one digger, also a tinshop engaging seven men."

necessary the use of cast-iron or vitrified tile smoke pipes.

It will be noted that a separate flue (R) is shown on the drawing. This flue is for the kitchen range. It will not be necessary to provide this separate smoke flue if a tight-fitting check damper is placed in each of the smoke pipes. Care must be taken to see that the damper in either of the cold smoke pipes be closed, otherwise the cold air which will enter the smoke flue by way of the unused range or furnace will check the draft on that flue which may be under way.

Vent Openings

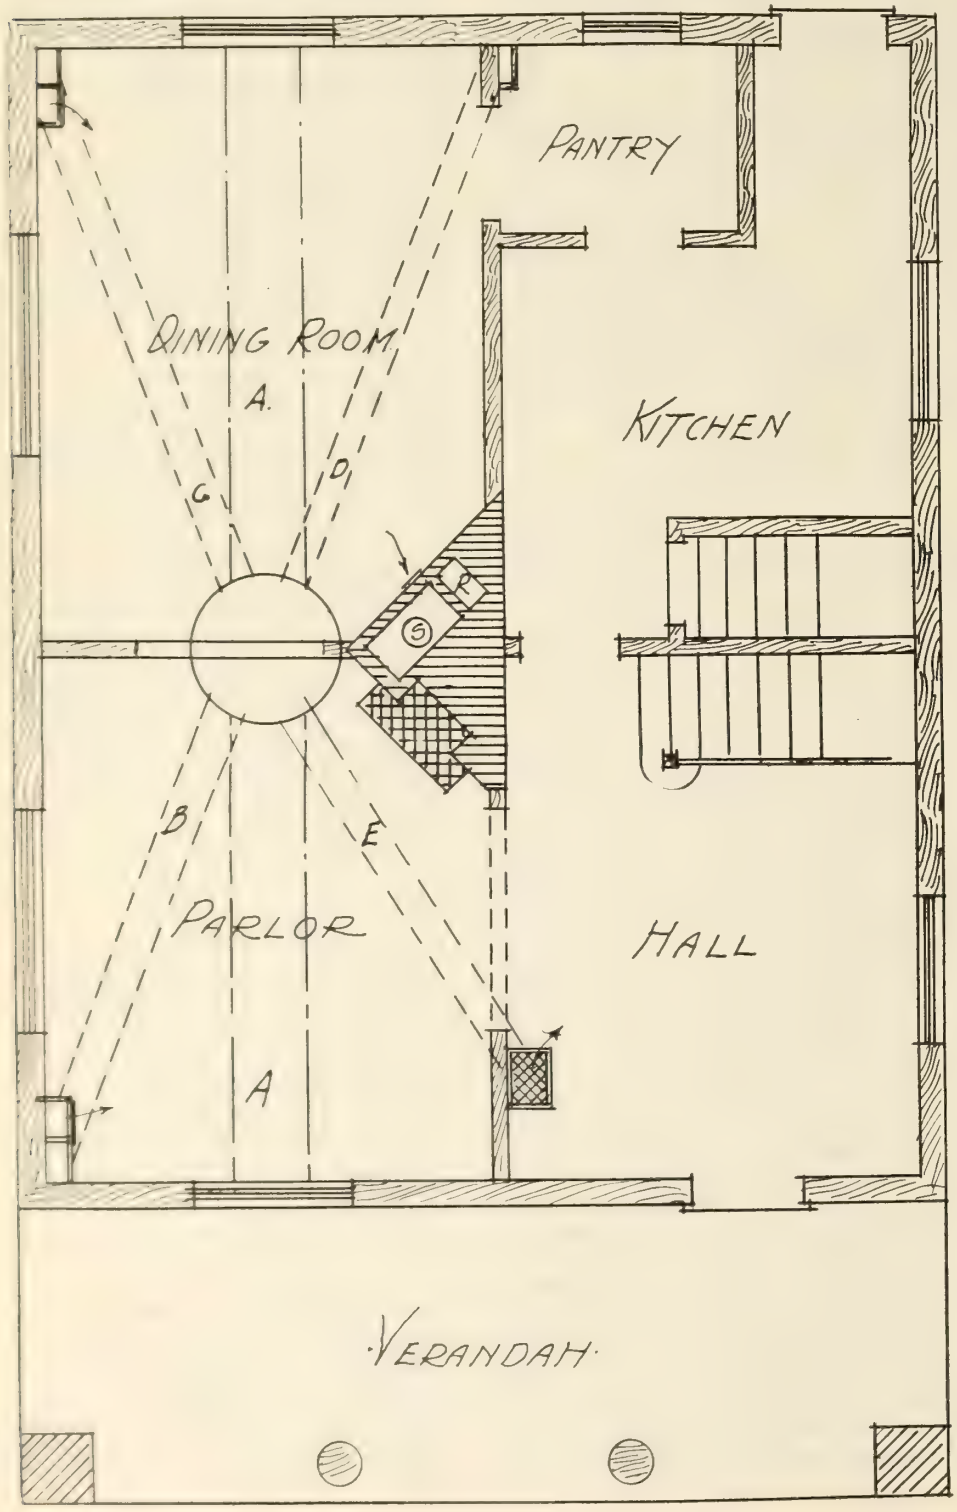
The only vent opening showing on the ground floor plan is the one in the dining room.

The vent for the kitchen will be by way of a hood which is to be placed over the kitchen range. The hood and vent flue are to be connected by means of a pipe, fitted with a tight check-damper. The purpose of the damper is to close off the kitchen vent when conditions might be such as would induce a back-draft. A condition of this kind might exist during such times as when the fire might not be burning in the range.

The fireplace in the parlor will act as an effective vent for this room.

No vent face is shown for the hall. A vent face here would be useless, because of the stair-well, which under ordinary conditions acts as a vent shaft. Air will pass up this stair-well and enter the vent shaft by way of the vent faces found in each of the upper rooms.

All vent faces should be fitted with valves, so that when the return-air-faces are opened the vent-faces may be closed. It is necessary that this provision be made, as it is utterly impossible to work the return-air and vent systems at the same time.



JOURNEYMEN WANT BY-LAW

North Bay, Ont.—Charging that by-law 320 regulating the sanitary conditions of buildings in the town, although in existence for six years, has been flagrantly and repeatedly ignored, representatives of the United Plumbers and Steamfitters' Union Association of North Bay appeared before the local council and presented a strongly worded communication protesting against these conditions. Assurance was given that the by-law will be enforced. The Ass'n. was represented at the meeting by W. Giggs and James Bailey. In their communication the journeymen plumbers outlined the by-law calling for the licensing of plumbers who do any plumbing work in the city, for the sanction of the local engineer on all local works, for the proper venting of plumbing, for the inspection by a competent inspector of all installations, the water or smoke testing of installations, concerning the non-installation of water pipes so as to be drained by gravitation to the stop and waste cock, and pointed out that much work now installed in no way complies with these requirements, thereby facilitating the spread of diseases.

CITY'S POSITION IS UNIQUE, HE SAYS

Hamilton, Ont.:—After a brief survey of local topographical conditions, H. P. Eddy, American consulting sanitary engineer, characterized Hamilton's drainage system as unique. That Hamilton had four distinct and isolated sewage disposal plants rather surprised him and he remarked that he knew of only one American city that had nearly so many, i.e., Atlanta, Ga., which has three disposal plants.

Although he did not feel in a position, until after the inspection of the plants, etc., to say whether he would favor a more centralized system of drainage for Hamilton, he expressed the opinion that a single, centralized sewage disposal system for the city might perhaps be less costly than the present plan of isolated plants.

What impressed Mr. Eddy as unique about Hamilton's system was the manner of its development. The bay front, with its many deep inlets, and the mountain, which backed the city, helped to make Hamilton's drainage problem quite complicated, and, Mr. Eddy thought, its solution would require much serious thought.

Patterns For Y Branch.

Written for Sanitary Engineer, by O. W. KOTHE, Principal St. Louis Technical Institute, St. Louis, Missouri.

TRADESMEN who follow the piping field meet with a multitude of irregular fittings.

In this case our branch is rectangle on the bottom and round at the top of bases, while it is flat on one side.

It can be arranged for a two way branch or a three way branch by merely adding another side branch similar to the one shown.

We first draw the elevation, making the base, and the diameters R and S to suit measurements.

Draw the half sections R and S and square lines to the base lines. Draw the lines from R to the corner B, and then build the lines from S to the miter A-11 as shown.

After this develop the half plan, making the half rectangle 3-C-B'-3' to suit measurements.

Strike section R' and develop the oval section S'.

From points in R' draw lines to the corners C and B'.

Then from each point in miter line of elevation as A-5-7-9-11 drop lines to intersect similar plan lines.

This enables drawing the miter line in plan and joining the lines fom S' to it.

To develop the true section through miter pick the spaces as A-5-7-9-11 from elevation miter line and set at 3-11 on the run of M.

Drop lines and from each point in miter line of plan bring over lines to intersect ones of similar number.

This permits drawing the section M and N, which is the developed girth for developing the patterns.

The true lengths must now be developed. Observe branch S has several altitudinal heights.

So, from each point, as 1-2-3-4, 6-8-10 bring over horizontal lines to cross H-Y line.

In the same way bring over the lines from each rise in miter line as A-5-7-7-9-11.

With dividers pick the plan lines as C-1-2-3-4, also B-1-2'-3'-4', etc., and set from H-T.

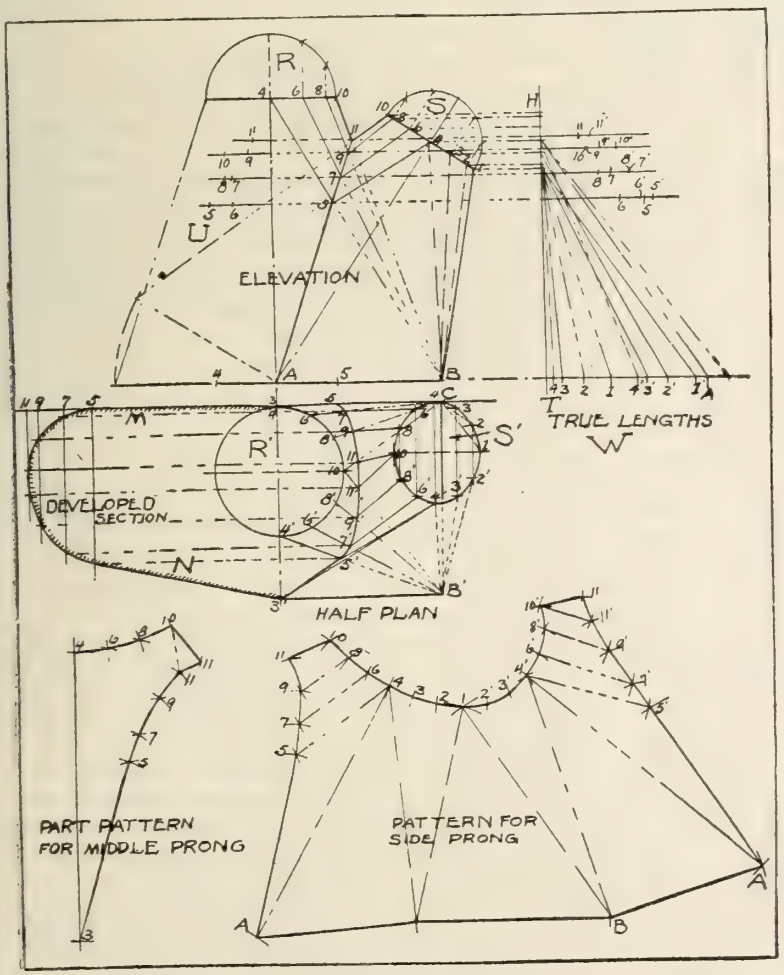
Then from these points draw lines to the altitudinal line which give the true lengths.

The throat true lengths are developed in a similar way, and the true lengths for middle prong are set off the same as any ordinary fitting of this kind. These are shown at diagram U.

The patterns are set out by picking the girths for round bases from R or S, and the miter cut from M or N.

Each side is set out separately as each set of lines is different.

In fact, the plan lines and true length lines must be carefully watched so they are transferred into pattern exactly as they appear in plan. Laps must be allowed extra.



Patterns for Y Branch.

MUCH HAMILTON SEWAGE ENTERING BAY UNTREATED

Hamilton, Ont.,—Mr. Proctor, of James, Proctor & Redfern, who conferred with the committee on sewage, has already made an inspection of the city's disposal plants. He gave a short statement as to the various undertakings successfully carried on by his firm, showing that they had been associated with many Ontario municipalities in carrying on engineering work of every description.

The "four disposal plants here each represent the best of the period in which it was constructed," Mr. Proctor said.

The west end plant seemed to be the best, but all were very much overloaded, carrying much more sewage than they were designed for. It was likely that some of the plants would do good work if repaired and the overload of sewage removed from them.

"The big thing which struck me is that you are spending a whale of an amount of money for a very poor result," Mr. Proctor said.

In some of the plants, the sewage was simply sweeping through into the bay without receiving any effectual treatment. The first thing to be ascertained in connection with designing a new system was whether or not all sewage could be brought to one central plant. If this could not be done, it would be necessary to construct several plants in various parts of the city. The present plants should be carefully inspected with a view to seeing whether they could be restored to good working order.

The cost of sewage disposal equipment ranged from $35,000 to $50,000 per million gallons capacity.

Many American engineers had had much experience in sewage disposal work, Mr. Proctor stated, yet there were Canadian engineers who were perfectly capable of handling the work.

TENDERS WANTED

Tenders for hot water heating at fire hall in Toronto will be received by the mayor up until May 9.

Novel Departure In Trade Agreements

THESE are times when much discussion is centering around the question of trade agreements, and matters pertaining to the relation of workers to employers. Various attempts have been made to alter agreements in connection with the various trades interested in the building industry in Canada, and such movements have also been recently initiated in other countries. In this connection it is interesting to note that a consent decree has been entered in the United States court to end the alleged vicious practices in building operations. The decree is proclaimed as a new bill of rights for the home builder, the manufacturer and the business man. It is said to bring independence to the employer and to the builder and prohibits labor unions from restricting the amount of work to be done by an individual. The conference which decided upon this agreement was the culmination of an investigation of the building trades and housing situation which resulted in the indictment and conviction of large numbers of manufacturers and dealers in building materials many of whom paid large fines and some of whom are now serving jail sentences. As a result of this conference the executive heads of the union have signed and executed a consent to the entry of a court decree affecting the entire national organization and all its local unions. The decree directs that it be published by labor organizations and read to all local unions and be incorporated as part of the constitution of the international union.

The decree lays down and adopts four basic principles providing first that there is to be no limit to the productive capacity of the individual workman within the working day or any other given time. Secondly there is to be no limit upon the right of employers to purchase his materials wherever and whenever and from whomever he may choose whether those materials be union made or otherwise. Thirdly there is to be no favoritism shown by organized labor toward employers or trade associations or contractors' associations and no discriminations are to be indulged in against the independent employer who may not be a member of such an association. Fourth the labor organization is not to be used or permit itself to be used by material men or contracors or subcontractors as an instrument for the collection of debts or enforcement of the payment of alleged claims.

The decree affects the international organization of bricklayers, masons and plasterers, and the provisions of the consent decree as outlined will be incorporated in the constitution of the union. This is a somewhat radical departure in connection with relations between union members and employers, and its effect will be watched with interest by all those interested in the building industry in Canada.

Tax Collection Cost Heavy

THE MANIA for frills in connection with taxation seems to be keeping up judging by the information as outlined in detail elsewhere in this issue concerning the increasing of a travelling salesman's income by the amount of one dollar per day for every day which he is away from home and for which his firm is paying his expenses. Officials of the Inland Revenue Department hold that a salesman who has his expenses paid really has an advantage over the salesman who works on a commission basis paying his own expenses, or the city worker who pays his own expenses at home. It is held that the average salesman spends several dollars a day in expenses and that the dollar per day added to his income by the Inland Revenue Department is really a very conservative margin.

The principle of this tax is one which might be much extended in application. If the underlying idea is that a man who receives expense money is really receiving "moneys in lieu of living allowance" as it has been described, then officials of firms who do considerable travelling and have their expenses paid, but who do not come into the category of commercial travellers, should also be included. It might also be extended to salesmen of many retail hardware firms throughout the country who regularly send out men through the surrounding district to stir up prospective business.

Taking up these various points with officials of the department, Sanitary Engineer was advised that if these men made regular trips which in a year would represent a fairly large number of days, then they should add this amount to their income for every day they were out.

Radio-Telephony

THE WORLD is passing through an age of transition and all the wonders which nature and the genius of man can contrive have not yet been discovered. Proof of this is found in the satisfactory results which have recently crowned the efforts of inventors in connection with radio-telephony. For some years it has been possible to send a telegraphic code by wireless, but it is only a recent development that enables the transmission of the human voice, music, etc., by wireless, and this accomplishment bespeaks considerable change in future methods of communication and possibly of entertainment.

For some time amateur radio-telephone sets have been sold in Canada and the United States and it is estimated that to-day there are in use some 200,000 sets in the U. S. and about the same proportion to population in Canada. A number of electrical goods manufacturers provide sending apparatus at various points to transmit concerts, lectures, etc., for the benefit of these amateurs, and many pleasant evenings are spent by these operators and their families in listening to entertainment provided many miles distant. Some public concerts have recently been held in Toronto at which the wonders of radio-telephony have been demonstrated by providing, through an amplifier, various musical numbers being played several miles away and transmitted by wireless.

There is little doubt but that in the near future radio sets will come into very wide use in Canada. Several builders of apartment houses and private homes have indicated that their plans provide for the installation of such equipment. Sales of radio sets through stores in Canada have been many and are increasing, particularly for receiver sets.

Problems in Sewerage and Drainage

A Number of Interesting Problems Have Confronted the Extension of Sewerage and Drainage Systems in the Township of York—How These Problems Have Been Dealt With in the Largest Township in Canada

By H. HUGHES, Chief Sanitary Inspector York Township

THE TERM sanitation may be applied to cover all the works that can be made to contribute to the amenities of the people in connection with public health, and be broad enough to include sidewalks, sewerage disposal, sewerage, comfort stations, baths and other public utilities.

York township is probably one of the largest, if not the largest township in the Dominion. It has an area of about eight square miles. The southern portion of the township borders on the City of Toronto on the north side and on the west side, and has a frontier of about 14 miles. The suburban area adjoining the city measures about 12 square miles and is divided into water sections, "A," "B," "C" for the purpose of waterworks construction.

The magnitude of the district may be appreciated when it is stated that there are about 189½ miles of roadways in the above sections, making a total of about 376.8 miles of roads in the whole township. The roads therefore, in the suburban area are just one half the mileage of roads in the whole township, but it had roughly only one-seventh of the total area.

The northerly portion of the township is entirely rural. The growth of the population in the township of York, which for the most part is in the southern portion of it, has been great. During the years 1910 to 1921, it has grown as follows:

1910	11,561
1911	13,734
1912	216,224
1913	18,632
1914	24,340
1915	28,870
1916	32,105
1918	34,278
1919	37,772
1920	44,323
1921	50,856

The increase from 1910 to 1921 was over 340 per cent. despite the fact that several areas in the township were annexed by the City of Toronto.

Water Measured by Bulk Meters

The township council about seven years ago, applied to the City of Toronto for water supply, which was not granted at first. They applied for powers to the legislature. The results of the two appeals were unsuccessful but finally in the third appeal they were granted the necessary powers. Water taken from the City of Toronto is all measured by bulk meters at the different boundaries.

The laying of water mains was started in 1917, since when, 95 miles of mains have been laid, the sizes ranging from six to 24 inches in diameter. These were laid by the engineering department of the township of York, subject to the inspection of the city. The total number of consumers is about 25,000. About 7,000 connections of the services have been placed by the water dept. at the cost of the applicant, whilst the lead services from the street line to the buildings are laid by licensed plumbers who obtain a permit, to which reference will be made later on.

The mileage of paved roads in the township of York is comparatively small owing to the fact that only a small number of streets are sewered, and consequently no pavements can be laid until the sewers have been constructed. Total miles of paved road are 70. The mileage of sidewalks is 77. There are at the present time about 15 miles of sewers in the southern portion of the township. These connect to the city, for which a payment is made on the basis of about 23 cents per foot frontage. This figure is not a fixed one, but represents the bulk of them.

One of the great problems of the York township is its sewerage. It may be stated that the geographical position and topographical features of this locality are such that the logical outfalls for sewage effluent and storm water is in the bay. The natural slope of the land outside of a radius of five miles of the city limits is towards Toronto, excepting on the west side of the Humber. Pumping, of course, could be resorted to, but the cost of operation will thereby be increased, and it is therefore desirable to avoid pumping where possible, unless there are special reasons for the same.

Outfalls Located Near City Limits

Since sewers are ordinarily operated by gravitation, the outfalls in this locality are near or in the city limits, as the district becomes more densely populated, the problem of maintaining a satisfactory standard of sanitation, not only of the city and its environments but also of preserving the quality of the water supply, will become increasingly important. The need for sewerage in the outskirts of the city is a pressing one. Scarboro could discharge sewage or effluent into the bay, but by doing so, it would be necessary to locate the outfall so as to safeguard its own water supply on one hand, and the contemplated city's new source on the other. The township of York has no direct outlet to the lake, excepting at Swansea. The Don and Humber rivers, of course, are available. Leaside district discharges its effluent into the Don river and Weston into the Humber. Mimico and New Toronto effluent is discharged into the bay. The western portion of Etobicoke will some day discharge sewage effluent into the Humber river, and the western portion together with the township of Toronto and the village of Port Credit will discharge into the bay.

It would appear that the construction of several independent sewerage schemes and sewage treatment plants by several different authorities would be inadvisable, having regard to the expansion of the city and would be the antithesis of the city and regional planning.

City Refuses Further Extensions

Inasmuch as the City of Toronto has, from time to time, annexed portions of the township, it has at the same time.

AN INTERESTING POINT CONCERNING INCOME TAX

On receipt of a recent enquiry from a master plumber raising an interesting point in connection with the tax where stock in trade is sold at a discount by a firm ceasing to do business, Sanitary Engineer has secured the following ruling from R. Breadner, Commissioner of Taxation, Ottawa:

> **"You are advised that any firm ceasing to carry on business and selling its stock-in-trade to a purchaser at a discount, in so far as the discount results in a profit or loss to the vendor, it in no way affects the purchaser. The goods purchased are carried into the books to the purchaser at cost value, or the price paid therefor and at the close of the fiscal period the net result from the sale of the goods in relation to their cost, together with overhead expenses, is the profit in respect of which Income Tax is levied.**
>
> **"If the vendor realizes a profit upon the sale of the stock-in-trade although sold in bulk form, it is nevertheless liable to Income Tax if the profits be in excess of the statutory exemption."**
>
> **(Signed) R. Breadner,**
> **Commissioner of Taxation.**

closed the natural outlets of the township toward the lake. Applications have been made by the township of York to the City of Toronto for sewer outlets into the city system, so as to enable the township to construct sewers. A few of these were granted, but latterly they, the city authorities, have taken the attitude of refusing any further extensions. An application was made to the Ontario Railway Board for authority to connect to the city sewers, but that board adopted the city's recommendation that a comprehensive sewer scheme should be prepared by the township engineers. This work was taken in hand and a preliminary scheme submitted to the city. The township council appealed to the railway board, and this time the city advised them that provisions should be made for storm water sewer. This was done, but the city apparently found itself in a position of not being able to assist the township. The engineers, were therefore instructed by the township council to see what could be done in the way of preparing an independent scheme, which work is now in hand.

The natural slope of the country is either southeast or southwest and the difficulty in designing a scheme in these districts lies in the fact that the sewer will have to discharge in a different direction. When a scheme is designed it is proposed to submit the same, when ready, to the ratepayers to have their approval. It may be stated that negotiations with the City of Toronto have extended to over seven years. An application was made to the Ontario Government last year for powers to construct sewers in defined areas, but it was thrown out, and a similar application is being made this year, in the hope that it will go through.

About two-thirds of the 55,000 population of York township have public water supply, but less than one third are provided with sewers.

While the introduction of a public water supply always increases materially the quantity of sewerage requiring disposal in a city or town, it by no means follows that the introduction of a sewerage system is essential at once, upon the introduction of a public water supply. The need of sewerage in a populous district, varies with geological conditions and a good part of Rork township, where the porosity of the soil is satisfactory has been able to maintain satisfactory sanitary conditions, without sewerage.

Conditions Vary

There are some thickly settled portions of the township, however, in which it is nearly impossible to maintain proper sanitary conditions, at the present time, owing to lack of sewers. At best, it is usually necessary to clean out cesspools and septic tanks, at more or less frequent intervals, a process in itself involving a very considerable nuisance. It also often happens, but owing to an impervious soil, or to the saturation of the ground by the increasing quantity of sewage discharged into the cesspools or tanks in a growing community such as York township, in the spring time and at times of heavy rains at the other seasons of the year, sewage overflows from cesspools to the nearest water course, with the result that conditions are created which are likely to be injurious to health. Conditions are consequently very objectionable in the more densely populated portions of the township, which happens to be an impervious sub-soil, and it is impracticable to attempt to obtain relief by the enforcement of health regulations, until a proper sewerage scheme is first provided.

The plumbing inspection is partly in the same lines as in the City of Toronto, but I believe our duties are more varied. The following is short summary of what we have to do in respect to plumbing:—

1 Plumbers' licenses issued on the recommendation of the Plumbing Dept.

2 Registry kept of all plumbers.

3 Inspect all plumbing and drainage plans.

4 Grant plumbing permits, also permits for sewer connections.

5 Inspect all water fittings, and all sanitary work, in general, to take all necessary steps to replace condemned material, or work in order, and to charge cost against estate.

6 Recording of all inspections. Register and file same way.

7 Charge all fees in connection with plumbing and drainage.

8 Any defects in the consumer's water system is referred from the accountant's department to plumbing department for report.

9 Since March 1, 1922, the plumbing department acts in conjunction with the health board.

In all cases we recommend a syphon trush in preference to the continuous flow or seepage. But so far our by-law does not compel a syphon and in practice we find the following quantities for weeping tiles quite satisfactory, if laid 18 to 20 inches below grade:

In sandy or loose soil for the average six roomed house, 90 to 100 feet of three inch weeping tile. That is about 15 feet to a person.

In clay or heavy soil 40 foot per person, said tile laid on a six inch clinker bed under and over.

I would also like to draw attention to the advisability of licensing drainmen. We have insisted on drainmen taking out permits for all their jobs, and recently insisted in the plumbing work by-law that a clean-out be placed on each stack, so that the plumbing work may be tested apart from the drain work, and the drain work apart from the plumbing work, so that the plumber in future be not responsible for any drains unless laid by him.

Promising Outlook for Building Activities

Hope for Active Season Justified by Total for First Quarter. Residential Class of Building Prominent

WITH weather conditions now more favorable to outside construction, work is reported as showing progress. Figures for the first quarter have been compiled and show that $32,575,900 worth of fresh work has been undertaken in Canada up until the end of March. From an actual value standpoint these figures show a slight falling off from last year, but with the reduction in the prices of materials, which have been effected in the interval, they represent a larger volume of actual construction than a year ago. In point of number, too, nearly 50 per cent. more projects are represented than for the corresponding estimate in 1921. It has been felt for some time that both the country and the industry require more numerous undertakings, distributed over a wider area, and it is encouraging that the industry has been able to show development in this direction.

Dwelling Houses Predominate

The season is now far enough advanced to make it possible to gauge activity in the coming months with more accuracy, and from present reports the industry will devote a good amount of its time in the construction of dwelling houses. A scrutiny of the type of building being done, shows that residences account for approximately 35 per cent. of the above figures. Building of the larger class is more backward than last season, and it is here that the decrease in money value occurs. However, latest records reveal an improvement in this department. Industrial construction has been light up to the present, but prospects are brightening, and in several basic industries which have reported an entire absence of expansion for many months, it is found that contracts have now been let or plans called for on important work.

Labor Will Assist

While there is only a slight reduction in labor costs from one year ago, it is felt that the position of labor this Spring will also assist in a more extensive building programme. It now appears that most of last year's schedules will be renewed, but it is generally considered more gratifying to see contractors and workmen coming to terms early in the season, without the long protracted haggling which has held up operations at a critical period in previous years.

Sewage Disposal for Small Communities

A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

Filter beds may be classified under two headings namely "Contact Beds" and "Percolating or Trickling Filters." The Contact Bed is generally constructed as shown in Figs. 69 and 70 which illustrate the plan and layout of three small sand filters and cross-section showing the arrangement of the filtering media and system of underdrainage and distribution. The three beds are controlled by a central distributing chamber from which the main pipes supplying the distributing pipes are connected. The depth of the bed varies from 4 to 6 feet and the filtering media should be graded from fine on top to coarse gravel at the bottom surrounding the underdrains. The sand acts as a strainer and collects all the fine suspended matter in solution and should be constantly replaced or rewashed, otherwise the capacity of the bed will decrease owing to the clogging up of the filtering material. The coarse gravel or broken stone acts as the purifier and is the home of the bacterial life. The filtering material must be sufficiently porous so as to permit percolation and ample artificial underdrainage should be provided so as to allow the sewage, after purification, to be rapidly drained off.

In calculating the size of artificial filtration beds it is the general practice to provide for 45 square feet for each person, or one cubic yard of filtering material for every 50 gallons of sewage.

In this class of Contact Bed provision must always be made for resting the filter from time to time as no contact filter can work continuously and produce good results without this rest, so that the filtration area should always be divided into 3 to 5 beds. Filter beds can be constructed cheaply out of the ground by sloping back the excavated sides. The filter bottom must be of some impervious hard soil and the underdrains laid as shown on Figs. 69 and 70.

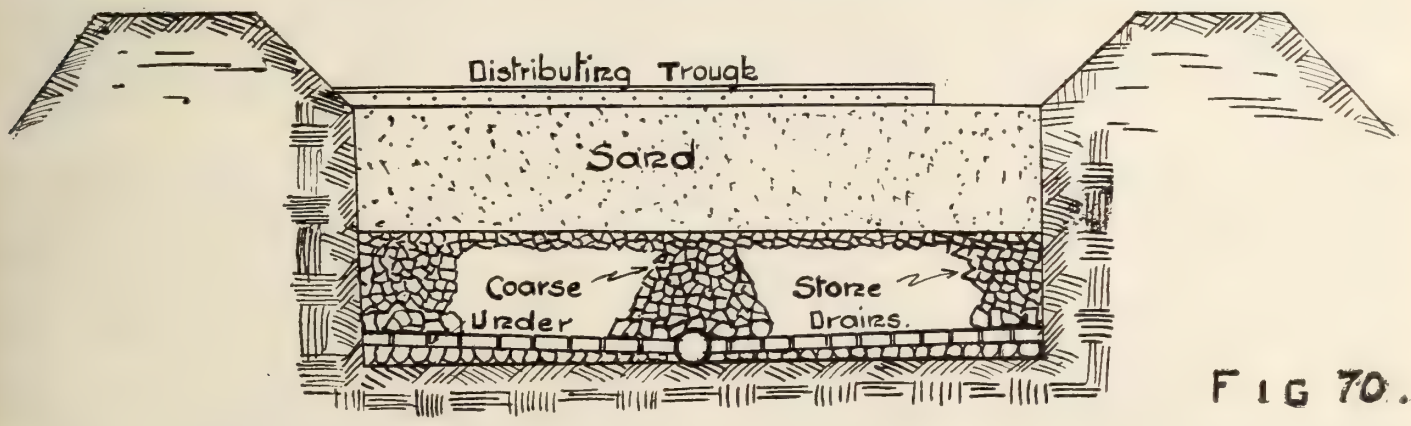

FIG 70.

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

MOVES TO NEW LOCATION

Stratford, Ont.—Angus McDonald will move his plumbing business to new premises shortly, the Dominion Specialty Co. having purchased the building in which he was formerly located.

OBITUARY

John Jamieson, aged 55, a lifelong resident of Kingston, Ont., and who has conducted a plumbing business here for some years, is dead.

WILL CALL TENDERS

R. E. C. Kent, chairman of the board of management of the Kingston General hospital, states that tenders will be called for in the course of a month for the new isolation building.

OAKVILLE INSTALS PUMPING EQUIPMENT

Oakville, Ont.—The Oakville Town Council decided to go ahead with the installation of an auxiliary pumping plant at an estimated cost of $32,000. The plant will be operated by gasoline engines and will supply street and house lighting and water for fire protection and use in the home if the residents exercise reasonable care in consumption.

WESTERN ONTARIO NOTES

J. Scott, 56 Grand Ave., London, wants prices on hot air heating, plumbing and electrical work for new $5,000 residence.

Noble & Rich of London, Ont., have been awarded contract for heating and plumbing for new $10,000 residence for Charles Clark.

F. W. Clarke, 15 Hume St., London, Ont., wants prices on hot air heating, plumbing and electrical work for new $6,000 residence.

J. C. Waide, 1010 Adelaide St., London, Ont., wants prices on hot air heating, plumbing and electrical work for new $5,500 residence.

Butler Woollen Mill Co., Strathroy, Ont., are preparing plans for new mills to cost $25,000 and will be interested in heating, plumbing and electrical equipment.

Plans are being prepared by architect W. G. Murray, Dominion Savings Building, London, Ont., for new $8,000 residence for C. Aberhardt, Seaforth, Ont. Prices wanted on hot-air heating, plumbing and electrical equipment.

DEMANDS IMPROVEMENT OF WATER SUPPLY SYSTEM

Goderich, Ont.—At the instance of the Provincial Board of Health, Sheriff Reynolds has served on the civic authorities a formal order demanding the improvement of the town's water supply system. This is the latest move in a quiet contest which has been going on between the municipality and the Provincial body for some months.

NIGHT SCHOOL FOR PLUMBERS

The Montreal Builders' Exchange has learned from the authorities of the Technical School that plans have been made to start a night course in plumbing next September. The principal suggests that a committee of plumbers be formed to confer with the authorities of the school as to the formation of such classes, so that the course may be purely along practical lines. It is hoped by local plumbers that the plan will meet with success from the standpoint of both attendance and interest taken, as well as beneficial results to all those participating.

IS SEEKING EMPLOYMENT

A plumber has written to Sanitary Engineer concerning opportunities for employment. He is of French nationality and states that he has in the past been slightly handicapped since living in Canada through an imperfect knowledge of the English language. However, he states the difficulty is now overcome and he states that he feels convinced that he can meet the requirements of a master plumber at any job from wiping any kind of joint to computing radiation for a building of medium size. If unable to obtain a position as journeyman he would go as a helper in a city or country town. He can supply references as to knowledge of the trade. Any letters concerning this matter will be passed to the applicant if addressed to The Editor of Sanitary Engineer, 143 University Ave., Toronto and marked (re applicant for position).

POOR PLUMBING IN WOODSTOCK

Woodstock, Ont.—The idea of having proper inspection of the plumbing in the city has again come up for some discussion. The Board was of the opinion that if the members of the council really understood the board's attitude in the matter they would come to view the matter in its proper light. It was pointed out that there was a considerable amount of bad plumbing done in Woodstock, which might have been avoided had there been proper inspection at the time it was done. While the board did not favor the creation of a high salaried position for a plumbing inspector, it believed that some action should be taken which would be a protection to landlords who themselves were unable to say whether the plumbing was being properly installed in their residences, etc. In connection with the discussion of the plumbing question the fact was stressed that often the trouble lay in faulty sewer construction.

SECURED CONTRACT THROUGH SANITARY ENGINEER

A. Sachs and Sons, sanitary and heating engineers, Mitchell, Ont., have been successful in closing the contracts for electric wiring, heating, plumbing and sheet metal work for Dr. L. Moffat's $7,000 summer residence at Varna, having got in touch with this work through Sanitary Engineer. This firm also have contracts for remodeling heating and and plumbing in Royal Hotel, Mitchell.

WILL REPAIR WATERWORKS SYSTEM

Chatham, Ont.—More time worn discussion in connection with whether Chatham will have a good water supply or still retain its "chlorine cocktails" was indulged in by the members of the Water Board at their regular meeting, finally resulting in the superintendent being empowered to secure tenders for the suggested improvements to the present plant as outlined by the Povincial Board of Health.

A diagram of the proposed alterations was submitted by Engineer Dallyn of the Provincial Board with an estimated cost of eight thousand dollars as compared with that of five thousand formerly given.

City Engineer Fuller stated that he was in favor of these alterations, but that he would not care to guarantee safe chlorination as a result of them, but that he thought they would materially assist in securing good water.

Chairman W. H. Westman strongly objected to spending any more money on the old water works.

After a continued discussion of the matter it was finally decided to secure tenders for the suggested alterations.

WESTERN ONTARIO NEWS

Arthur Wright, Glencoe, Ont., wants prices on hot air heating, plumbing and electrical work for new $3,800 residence.

Trustees of S. S. No. 6, Goldstone, Ont., Ralph Close, secretary, want prices on hot air heating for new $10,000 school.

James Ferguson, Forest, Ont., wants prices on hot air heating, plumbing and electrical work for new $4,000 residence.

John A. Brownlee has returned after spending several months in the South and is considerably improved in health.

Frank Rheaume, of St. Joachim, Ont., has taken a position as clerk in the Reid Hardware store at Comber, Ont.

R. Garner, 567 Oxford St., London, Ont., wants prices on hot air heating, plumbing and electric work for new $3,800 residence.

H. W. Sutherland, Embro, Ont., wants prices on heating, plumbing and electrical equipment for new $5,000 residence for which plans are being prepared.

Dr. George McNeil, 245 Queen's Avenue, London, wants prices on hot water connection with remodelling of building.

Dr. Bean, 228 Wharncliffe Road, London, wants prices on hot-air heating, plumbing and electrical work for new $7,000 residence.

Tenders will be called about June 1, for new $50,000 residence at London, Ont. for John E. Smallman, Elmwood Avenue. Watt & Blackwell architects. Prices wanted on steam heating, plumbing and electrical equipment.

L. G. Bridgeman, Bank of Commerce London, Ont., is preparing plans for $12,000 residence for I. Taylor, 765 Wellington St. Prices wanted on hot water heating, plumbing and electrical equipment.

Plans are being prepared by Architects Watt & Blackwell, Bank of Toronto, London, Ont., for $25,000 building for Geo. A. Logan to be used as residence and undertaking parlours. Prices wanted on hot air heating, plumbing and elecrtical equipment.

Architect W. G. Murray, Dominion Savings Building, London, is preparing plans for a new bath house for the London Health Resorts Co. Prices wanted on steam heating, turkish bath equipment, lavatories and general plumbing and electrical work. Estimated cost $60,000.

CANADIAN MATERIALS FORCE DOWN PRICES IN ENGLAND

The arrival of housebuilding necessaries from Canada, particularly pipes, has helped to produce a palpable fall in the cost of housebuilding here in England. The Ministry of Health is making contracts in the neighborhood of £400 for houses which used to cost £1,400. The trade rings here have visibly collapsed. There are also large savings in the cost of housebuilding through the importation of tiles from Marseilles, France.

Tinsmiths' Status is Still Indefinite

Judgment Just Rendered in Favor of Retailers in Government Case Against a Job Printer Would Seem to Make Clear Cut Status for Tinsmiths—Expect Early Ruling on This Point

By Ottawa representative of Sanitary Engineer

OTTAWA, Ont.—The retail trade as a whole, including hardware merchants and tinsmiths, are at present at sea as regards the operation of the sales tax and the government's proposals in that direction, so an outline of the situation is timely. When the present Sales Tax Act was placed on the statute books of the Dominion Parliament, it clearly was not intended that a sales tax should be collected from retail merchants. During the carrying out of the operations of the Act by the Department of Customs and Excise the officials of the department, however, included a number of retail merchants in it and called upon them to pay a sales tax as manufacturers.

The principal ones included hardware merchants, tinsmiths, electrical dealers and contractors, etc.

Objection was made by the Retail Merchants' Association of Canada to the action of the department and in order to test the validity of the Act a suit was taken by the Government against Messrs. Pedrick and Palen, merchant tailors, Ottawa. The case came before the Exchequer Court and Judge Audette gave judgment in favor of the retailers. Following this judgment the Act was amended by adding a clause which excluded all those retail merchants who made goods to the order of their customers.

Retailers Again Win

Another suit, however, was instituted by the Government against P. Karson, confectioner, Ottawa, and Judge Gunn of Ottawa rendered judgment in favor of the retailer. A further case was taken against Mr. Karson in the Exchequer court and judgment was rendered in favor of the Government. The amount in dispute was about $200 and the court costs were $409, not including the solicitors' costs on both sides. An appeal was taken by the Association against this judgment just recently to the Supreme Court, but the court having the right to decide whether to go on with the case or not if it is less than $500, decided not to take it up, important and all as the issue was.

While the above cases were proceeding, another case was taken by the Government against Messrs. Aunger and Robertson, Limited, job printers in Saskatoon, Saskatchewan, who are also members of the Retail Merchants' Association. This was a case wherein the Government claimed that a job printer who printed articles for stock or for sale in his retail store was subject to a sales tax. The Retail Merchants' Association who defended the case, contended that they had no right to pay a sales tax, and the judge decided in the retailer's favor. This judgment has just been rendered.

Little Excuse for Taxing Tinsmiths

In rendering this decision, Judge McLeod said: "On the facts agreed on in this case by counsel, and they appear to me sufficient for the purpose in question, I am of the opinion, following the judgment of the King vs. Pedrick and Palen, that the defendants are not liable; and the only doubt I have in mind was caused by the fact that in the Regulations the nature of the business carried on by the defendants, namely that of job printers, is given as an illustration of the status of manufacturers. It appears to me, however, from the judgment to which I have referred that the defendants cannot be said with any degree of real accuracy to be manufacturers within the meaning of the Act."

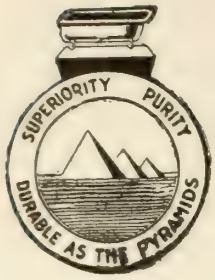
This being the view taken in regard to job printers, there does not seem to be the least excuse for the Government calling upon tinsmiths to pay the manufacturers' tax, as they are in exactly the same position as the job printers.

Owing to the uncertainty of some of the clauses of the Act, merchants in general are hopeful that it will be amended during the present session of parliament so as to avoid any further litigation or uncertainty. Retail merchants as a class do not object to pay any portion of their fair share of taxation; in fact they pay the largest share of any class in every municipality, and all taxes that are paid to the Government by manufacturers or importers are passed on to the retail trade and in fifty per cent. of their purchases and sales they are unable to collect it but are forced to absorb it in their overhead expenses. They say their chief desire is to see that all systems of taxation are levied equitably.

SUIT AGAINST SMITH'S FALLS BY PROVINCIAL HEALTH BOARD

Smith's Falls, Ont.—An important question was before the police court when the Provincial Board of Health sued the town for a penalty of $100 a day since May, 1920, for failure to obey an order to instal a filtration plant.

W. McCue, town solicitor, argued that there was no evidence showing a resolution of the Provincial Board or that any authority had been given for the order. He also stated that the Council, which had been deliberating the best way to secure pure water, were going to have alternative plans prepared for submission to the Board.



Ever Build

OF COURSE you do. Every man with red blood coursing through his veins builds air castles, has pipe dreams, day dreams or whatever you like to call them, in which he is the central figure. Where is the Sanitary Engineer who has never settled down after a substantial meal in a comfortable arm chair, lit his pipe and indulged in a quiet smoke during which his imagination conjures up all sorts of novel schemes for going after business.

Port Hope

Vancouver Office:

Factor
PORT HOPE,

Air Castles?

At such times nothing seems impossible. No sale is so difficult that his ingenuity does not find some way to surmount it—no argument can be brought forward that he cannot overcome.

Psychologists tell us that this is our real self showing itself, that we can by persistent and intelligent effort accomplish these things in actual practice.

In every district, thousands of dollars worth of work is waiting for the man who will win it by intelligent and aggressive sales methods.

And that's where the Port Hope Advertising service will be found of wonderful assistance. Well planned attractive booklets, circulars, blotters and advertising cuts for use in your local papers will all help to bring the prospect for plumbing fixtures to your door or prepare the way for your personal call. We have had all these prepared for your use. Will you use them?

"Tout Passe"

(Everything Changes)

THE FRENCH have a proverb which begins "*Tout passe*" (Everything changes). This contains the germ of an idea which should be good medicine for the business man who is inclined at the present time when trade is quiet to rest on his oars and delay making preparations for the busy period until that period actually arrives.

Everything in this world is continually changing. Some philosophers even tell us that there is no present; there is only the past and the future; the past is gone and to-morrow, even the next hour, the next minute, are in the future. And in the future only one thing is certain, that is, change.

So conservative is human nature that the great majority instinctively assume that whatever conditions exist at the moment must continue to exist for some time to come. The direct contrary is, of course, the case. The philosopher knows that whatever else may happen one thing is certain, viz., whatever is, is not going to continue.

Why is it that only the few can make money in stock exchange speculation? Because the ordinary man waits until prosperous times appear to him to have become established and to have become a permanent institution before he buys. And in most cases he then finds he has bought at the top of the market. On the other hand, when things are at their lowest and he could buy with a prospect or almost a certainty of profit, everything appears to him black and he cannot see any likelihood of change. The shrewd operator, however, knows that when things look at their worst it is time for them to mend. This is the time he chooses for buying and when everything is booming is the time he picks for selling.

We may not be on the eve of a big boom, but one thing is certain, things are not going to remain as they are for long.

Now is the time when shrewd and far-seeing men are preparing for prosperous times. They are making preparations so that opportunity may not take them unawares. They see that now is the time to cultivate trade and make their products known so that when the tide of prosperity is on the flow they may be in a position to take advantage of it and reap the benefit of their foresight.

If anyone tells you we are in for several years of business depression, take heart and be assured that this is a sign we must be nearing better times.

In the spring of 1918 many well-informed men predicted three further years of war. The war ended that autumn.

In 1920 many business men spoke of three or four more years of prosperity. The prosperity wave was even then on its ebb.

These men like the great majority did not realize that everything changes. Are you going to place yourselves among their number, or are you going to rank among the minority and bear in mind the proverb—*Tout passe?*

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

CURRENT price changes on plumbing and steam-fitting materials centre around the revision in discounts recorded on bath compression cocks and brass steam cocks. These products now appear with easier quotations and similar changes have been announced on both square and hexagon head cap screws and set screws. Nickel and nickel specialties now reflect lower prices. Little variation in price is apparent on other primary sanitary and heating supply markets, the general developments being confined to the trend of improvement recorded in the movement of different products at this season. However, Eastern distributing centres now report a slight upward revision in soil pipe discounts, this change now placing quotations on these products nearer to a uniform basis. The strength recently apparent in the steel industry, is being more or less reflected in the market tone on numerous finished steel products, and indications of higher quotations are developing on domestic quarters. Scrap materials record a slightly firmer tone, while increased interest in such metals as spelter, tin, and antimony, has improved certain ingot markets. The effect of the steel situation on specific products, is apparent in the firmer tone on corrugated sheets, eavestrough, conductor pipe, wrought piping, and similar lines. The warmer weather has induced the shipment of seasonal goods, while general activity is now indicated in the improved reports from many sections of the trade.

MONTREAL MARKETS

MONTREAL, April 29.—Price developments are again recorded on the current markets for plumbing and steam-fitting supplies, and lower quotations on compression bath cocks and brass steam cocks provide an outstanding change. Bath cocks are now quoted less 41 per cent., while steam cocks have a new discount of 50 per cent. off. Through a revision in discounts, both cap and set screws have new lower prices. A change in the opposite direction is noted on certain sizes of soil pipe, when 2, 3, 5 and 6 inch pipe are slightly advanced in price. The 4 inch pipe and all sizes of fittings remain at former discounts. The stiffening tendency in prices on many lines of iron and steel products is still apparent, although there is no change in any of the quotations. A general improvement both in demand and consumption continues a feature of the industry, while the coal strike has assumed greater importance in the matter of strengthening the price situation. Trade in general is making further progress, and lines pertaining to the building industry are becoming more active.

LITTLE BETTER FEELING IN SCRAP MARKETS

Montreal.

Local dealers in scrap metals and other waste materials state that a slightly better feeling now exists in the market, and an improvement in lines of iron and steel is noted. Although this betterment is only of a very moderate nature up to the present it is taken as a hopeful sign after the past quiet months. The opening of export trade is now stated to be the factor that must be looked to for any marked improvement in the scrap situation. If European countries can enter the market this season to a greater extent than has been possible in the last few years, scrap will again become active after the long drawn out period of quietness. Although the effect of the coal strike on the steel industry may have a tendency to stiffen prices, on certain lines of scrap, there is no indication of any firmness from this factor up to the present, and following are nominal quotations:

SCRAP—	
Automobile Tires	0 50
Rubber Shoes	0 02¾
Yellow brass	0 05
Red brass	0 08¼
Light brass	0 03½
Scrap zinc	0 03
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 08
Heavy copper	0 10
Wrought iron, R. Rd., No. 1 per gr. ton	9 00
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 50
Heavy melting steel	6 50 to 7 00
No. 2 busheling	3 00
Boiler plate	7 00
No. 1 machinery cast	20 00

BATH AND STEAM COCKS HAVE REVISED DISCOUNTS

Montreal.

Revisions are again made in the discounts on certain lines of compression goods, and lower prices now appear on compression bath cocks and brass steam cocks. The discount on the former is changed from 38 per cent. to 41 per cent., and standard steam cocks are now quoted at 50 off, the former discount being 43 per cent. Distributors of these products state that current trade is gradually improving, and is apparently following the trend of building activities. New construction is evident from week to week, and as this advances, the more extensive use of valves, bibbs, and other compression works, will be necessary. Following are present discounts, with the revision on the above two lines noted:

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	43%
Bath cocks, quick opening	41%
Bath cocks, compression	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, st'nd'rd	46%
Brass steam cocks, standard	50%
Radiator valves, standard	58%
Do., removable discs	58%
Globe, angle and check valves, standard	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing check	19%
Jenkins gate or straightway	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	33%
N.P. "P" and "S" traps	40%

CAP AND SET SCREWS REDUCED IN PRICE

Montreal.

Through a revision in discounts, square and hexagon head cap screws and set screws show a reduction in prices. The former are quoted less 55 per cent., while set screws will now sell at less 60 per cent.

(Continued on page 26)

MONTREAL MARKETS

(Continued from page 25)

SLIGHT ADVANCE IN SOME SIZES OF SOIL PIPE

Montreal.

Discounts on 2, 3, 5 and 6-inch soil pipe are changed from 47½ per cent. to 45 per cent. The best selling size, 4-inch, and pipe fittings are unchanged at former levels. This slight advance on certain sizes is being quoted by most jobbers, although there are a few who are maintaining former lower quotations.

For some time past current quotations on these products have been considered low. The last reduction, made some time ago, was claimed to be necessary because of outside competition, and market conditions did not warrant easier prices at that time. Business in these lines gradually improves with the trend of activity in building circles, and a fairly active season is expected to follow. Revised discounts are the following:

SOIL PIPE—	
2 and 3 inch	45%
4 inch	50%
5 and 6 inch	45%
Fittings—	
2 to 6 inch	50-10%

EAVESTROUGH TRADE AGAIN MORE ACTIVE

Montreal

Current business in eavestrough, conductor pipe and sundry lines is again described by manufacturers and distributors as improved. The improvement of these products has been more or less spasmodic during the earlier spring, and in recent weeks trade was reported as somewhat duller than in weeks previous. With conditions, such as low dealer stocks and favorable weather, a continued improvement is looked for in the ensuing weeks. Quotations are unchanged, and following are list prices and discounts:

EAVESTROUGH—
in., $16.90; 10 in., $18.70; 12 in., $22.20; 15 in., $29.80; 18 in., $37.80.

O.G. Square bead, per 100 ft.: 8 in., $15.90; 10 in., $17.70; 12 in., $21.20; 15 in., $28.80; 6 in., $36.80.

Discount 70|10 per cent.

Conductor Pipe, Round. Plain and Corrugated, per 100 ft.: 2 in., $18.40; 3 in., $23.80; 4 in., $29.60; 5 in., $40.00; 6 in., $49.00.

Discount 70|10 per cent.

CONDUCTOR ELBOWS—
Plain or corrugated, price per doz.
2 in., $5.25; 3 in., $6.00; 4 in., $10.50; 5 in., $24.00; 6 in., $29.00.

Discount 60 per cent.

METALS REFLECT FIRMER TONE IN LEAD PRODUCTS

Montreal.

Manufacturers of lead and zinc products state that business in these products is slowly developing along satisfactory lines, and each week shows a slightly better movement. Building activity is now reflecting on many of these lines, especially those more extensively used by plumbers in new building installations. The tone of the market is described as somewhat firmer since the revision of a few weeks ago. Since that date lead on primary markets has been reported stronger, while tin has made extensive advances in recent weeks. Insofar as solders are concerned, copper seems a little backward but the markets on the whole are much improved. Unchanged quotations are as follows:

LEAD AND ZINC PRODUCTS—	
Lead pipe, per 100 lbs.	12 00
Lead waste, per 100 lbs.	13 00
Note—Lead pipe is subject to a discount of 10%	
Lead traps and bends	17½% off.
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 09¾
D., 4 to 8 lbs., sq. ft.	0 09
Cut sheets, ¼c. lb. extra and cut sheets to size, ¾c. lb. extra.	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.	0 21½
Do., wire, lb.	0 33½
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

PIPE FITTING TRADE GRADUALLY IMPROVES

Montreal.

With quotations remaining at former discounts, trade in pipe fittings is said to be gradually improving. Orders are mostly for small quantities still, but are quite numerous, bringing the average volume to fair proportions. Unchanged prices and discounts are the following:

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30
Flange unions	30
Malleable unions	47
Dart unions, black	33
Do., galvanized	13
Nipples, ⅛ to 4" close and short	60
Do., long	65
Do., 4½ to 8" close and short	50
Do., long	55
Couplings, 4" and under	30
Do., 4½" and larger	10

Pound Goods —	Blk.	Galv.
Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

ACTIVITY IN RANGE BOILERS ANTICIPATED

Montreal

Current business in range boilers is described by manufacturers and distributors as progressing along more satisfactory lines, a gradual improvement now being noted with the advancing season. With an active building program for the ensuing months, especially of the dwelling house type, sales of this product should continue to show increased volume, and a more optimistic outlook is forecast. Dealing with quotations on range boilers, one local dealer stated that there was practically no change from conditions which existed some months ago, and both list prices with discount and net prices are being quoted. Between the two, however, there is little variation, and this factor is not as disturbing as it was earlier in the year.

RANGE BOILERS:—	
5 Gallon	$13.50
12 "	14.00
18 "	15.00
25 "	16.00
30 "	17.50
35 "	20.50
40 "	22.75
52 "	38.00
66 "	60.75
82 "	74.00
100 "	103.00
120 "	117.00
144 "	164.00
168 "	187.00
192 "	210.00

Discounts, Standard weight, 50 per cent.
Extra Heavy, 40 per cent.

FIRMER UNDERTONE IN WROUGHT PIPE PRICES

Montreal.

Local manufacturers of wrought iron and steel piping describe the present tone of the market as somewhat firmer, although the strength is not yet of such a marked nature as is evident in many other lines of steel products. In other words they state that there is no present indication of a revision in prices, and the market is fairly steady with list No. 54 the selling basis. Current business is now making favorable progress, sales showing a gradual increase as the weeks pass.

Price List No. 54. December 22, 1921.

STEADY TONE IN COTTON WASTE PRICES

Montreal

A steady tone continues in the cotton waste markets, raw cotton showing little change in recent weeks. Current business is reported as fairly good, and following are unchanged local quotations:

COTTON WASTE--Cream polishing, 18c. per lb. White—XXX extra, 16c.; XX grand, 15c., XLCR, 14c.; X Empire, 13c.; X press, 11½c.

Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.

Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.

Dominion Wipers—White cotton, 20c; colored cotton, 14c.

SHEET MARKET STILL DESCRIBED AS FIRM

Montreal.

There is no change in local sheet quotations, although the market in most lines continues firm, and according to certain distributors, who have predicted advance prices, developments in the near future would not be surprising as the situation has lost none of its recent strength. The coal strike, with delayed deliveries and lower stocks resulting, is now looked upon as the factor to produce any movement in an upward direction, as strength resulting from a more active demand is said to be not sufficient up to the present to increase prices. Insofar as the English market is concerned, local importers claim that higher price levels, recently announced there, would undoubtedly have a stiffening effect on

prices here when navigation enters this port in a more extensive way. Unchanged nominal price levels are as follows:

BLACK SHEETS—		
10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05
26-gauge	4 60	5 20
22-24 gauge	4 65	5 25
28 gauge	4 75	5 35
GALVANIZED SHEETS—		
10¾ ounce	6 65	7 10
28 gauge	6 25	6 70
26 gauge	5 95	6 35

CORRUGATED SHEETS HAVE FIRMER UNDERTONE

Montreal.

Little or no change has developed in the market for corrugated sheets in the past two weeks. The demand is still on the road to improvement, and the later spring and summer months should bring a fairly active movement in these lines, according to local distributors. With the stiffening of prices in the flat sheets, and other steel products, the undertone of corrugated sheets continues on a firm basis. For the present, however, following are list prices at discount:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

COAL STRIKE AFFECTS STEEL SITUATION

Montreal.

The steel situation is now a matter of great interest amongst local manufacturers and distributors. The market is described as decidedly firm, and although higher prices on bar iron and steel were thought likely before this date by some dealers, there is no change in the local quotations up to the present. These same informants, however, are still firm in their idea, and state that apart from a stronger tendency because of a better demand, the coal strike will gradually have a more direct bearing on the situation.

It is pointed out by others that mills in some instances have not been hampered and advices are to the effect that production will not be disturbed for some weeks yet. It is admitted, however, that warehouses are carrying heavier stocks than formerly in anticipation of the possibility of future delays in deliveries. In the meantime prices continue to stiffen at primary centres with demand losing none of its recent improvement. Following are unchanged local quotations:

IRON & STEEL—	
Common bar iron, 100 lbs.	2 65
Refined iron	4 15
Iron finished machinery steel	2 70
Mild steel	2 65
Single reeled machinery steel	4 75
Band steel	2 65
Spring steel	4 25
Sleighshoe steel	2 65
Tire steel	2 85
Toe calk steel	3 55
Harrow tooth steel	2 80
Mining tooth steel, per lb.	0 21½
Black Diamond tool and cast steel	0 21½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.

Band steel in scroll bundles, 50c per 100 lbs. extra.

ENAMELED WARE SALES RECORD IMPROVEMENT

Montreal

The predicted improvement in the various lines of enameled ware is now being felt to a degree, the movement having improved in the past two weeks. Building construction is showing favorable progress, thus demanding greater supplies of these products. Current discount of 33-1/3 per cent. generally governs purchases, and the price situation is said to be a little more settled than formerly. List prices and discount are as follows:

Sinks, roll rim—			
18 x 30			$23 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 50	$ 7 40	$ 7 30
18 x 30	8 70	8 60	8 50
20 x 30	9 90	9 80	9 70
Bath tubs, roll rim, 4, 4½, 5 feet, 24 to 30 in. wide			51 40
Bath tubs, 5½ feet			57 10
Lavatories—			
17x19 in. Apron F139 or P4045			15 30
18x24 in. Apron F154 or P3845 or P3847			23 60
18x21 in. Apron F169 or P4205			17 60
17x19 in. Roll rim, F241 or P4345			12 60

Less 33 1-3 per cent.

STRENGTH IN LEAD FEATURES METALS

Montreal.

The tone of the metal markets is described as generally satisfactory, the two metals showing most strength being lead and zinc. While the advance in price has not as yet been followed by any marked increase in consumption locally, this will probably follow in due course.

TIN.—This has been somewhat irregular in London, but remains above the £150 mark. Opinions differ somewhat as to this metal, but stocks are no doubt gradually being lessened and while it is not thought likely that there will be any immediate advance to any extent, it should ultimately work to higher levels. Locally supply is none too ample with the market firm at 35 cents.

COPPER.—New York is rather quiet but the feeling is fairly good, and there seems no pressure to sell. Producers are firm in their ideas of about 13 cents delivered. London shows little change, and there is no immediate sign of any particular change in either direction. The market locally is slightly firmer at 17 cents, for electro and 16½ cents for casting.

SPELTER.—This metal continues to advance, and the position seems quite sound. East St. Louis is well over the 5 cent mark for spot, and futures command a premium. The London market is also quite firm and supplies available are evidently not large. Local market is firm at 17¾ cents.

LEAD.—Lead continues to show strength, and the American market has now advanced almost one cent per lb. in about six weeks. The trust prices are again advanced this week. London is also firm, and metal has been exported from London to the U. S. A. showing scarcity of spot metal on this side. Locally this metal is quoted higher at 7 cents.

ANTIMONY.—Antimony is quiet with little changes in prices, although outside markets indicate that there is a little gain being made. Quotations remain at 6½ cents for Chinese, and 7½ cents for high grade English.

ALUMINUM.—The movement of this metal is still slow, and little or no change is reported in the market. It is still quoted at 24 cents locally.

DEMAND FOR CLOSETS ALSO SLIGHTLY IMPROVED

Montreal

Closet outfits, combinations and fixtures are also reported as on the road to improvement with the progress made in building. Quotations are nominally unchanged, and the following prices are quoted for small purchases, with a slight concession given for fair sized orders:

Developments in this market are attracting more attention at this season, in view of increased activity in these products now generally anticipated. Primary conditions are described as decidedly improved over last year, and with a freer movement being recorded throughout the trade generally, distributors view future prospects with more optimism.

CLOSET OUTFITS—	
Closet, standard outfit	27 50
Do., with post hinge seat	28 50
Do., white vitro, vitreous china, or enamel enameled iron, with wash-down bowl and oak or mahogany post hinge seat	30 50
Do., reversible trap bowl, less spud	11 50
Do., add for siphon jet bowl	7 00
Do., for ¾ in. valve on supply pipe	1 50
Deduct for supply pipe	0 80
Do., deduct for floor flange	0 60
Do., wash-down bowl, less spud	10 50
Do., reversible trap bowl, less spud	12 75
Do., siphon jet bowl, less spud	19 00
Do., Richelieu bowl	9 00
Do., extra for spud	0 60
Do., oak, or oak-vitro tank, with fittings, less seat	14 25
Do., wood strip seat and cover	3 55
Do., post hinge seat and cover	4 25
Do., add for bar hinge	No extra
Do., white vitro, vitreous china or cled iron tank, with fittings, flush elbow and supplies less seat	18 50

TORONTO MARKETS

TORONTO, April 29.—Current price changes in sanitary and heating materials centre around the revision in discounts on bath compression cocks and brass steam cocks. These products are on easier price levels, and similar lower quotations have been recorded on nickel and nickel specialties, also on both square and hexagon head cap screws and set screws. There is reported marked activity in tin plate circles, with more inquiry now coming to hand for copper and brass products. Soil pipe discounts are recently brought nearer a uniform basis, while the tone of lead on primary centres has been reflected in the improved condition of the finished products with these lines more active. Further strength is added in the sheet markets, and advanced price levels are looked for in the near future in certain quarters. The coal strike is described as affecting primary steel centres to a greater extent than was originally calculated. Current shipments of radiators and boilers are slower than expected, but much potential business is apparent. Keen competition remains the dominant factor in boiler tubes. There has been an improvement in the movement of enameled ware products, with a similar condition applying to closet outfits and fixtures, due to the reflection of seasonal building activity. A quiet tone still prevails in asbestos products, with wrought piping recording a gain in strength.

PRICES SLIGHTLY HIGHER ON CAULKING COTTON

Toronto.

A slight advance in quotations is noted on caulking cotton, this product now being priced at twenty-nine cents per lb.

REVISED DISCOUNTS ON BATH AND STEAM COCKS

Toronto

Some additional revisions in discounts on certain brass compression goods now appear on the local market. These changes particularly affect bath compression cocks, the quotation having been changed from 38 to 41 per cent. off, while a similar reduction is noted on the standard brass steam cocks, discount now being 50 per cent., compared with the former figure of 43.

Current trade in these products is described as fair, and improvement in this direction is generally hoped for, due to the reflection of activity in building circles. Following are prevailing quotations on these products:

VALVES—

	Per cent.
Compression work, standard	45
Fuller work, standard	30
Bath cocks, compression	41
Do., Fuller	25
Flatway stop and wastecocks, stand'd..	54
Roundway stop and waste cocks, std...	46
Brass steam cocks, standard	50
Globe, angle and check valves, std.	25
Mueller globe, angle and check	25
Mueller composition disc steam valves..	33
J. M. T. valves, screwed	20|10
J. M. T. gate valves, screwed	25|10
J. M. T. gate valves, screwed	25|10
Jenkins gate or straightway, screwed	25|10
Jenkins globe, screwed	19|10
Renfrew valves, standard	58
Do., removable disc	58
Emco J. D. rad valves, screwed	33
Emco swing check, ⅜" and ½"	40
Do., Do., other sizes	33
Webber gate valves, screwed	33
Emco gate valves, std.	25
Emco globe valves, J.D., screwed	33

Basin cocks—

No. 0 and 1 Fuller pattern	30
Quick opening No. 3622	50
No. 3622, plain or index handle	34

REVISED DISCOUNTS ON SET AND CAP SCREWS

Toronto.

Revised lower price levels are now evident on both square and hexagon head cap screws and also set screws, through revised discounts. Set screws are now 60 per cent. off, and cap screws 55 per cent.

MARKED ACTIVITY IN TIN PLATE CIRCLES

Toronto

A remarkable degree of activity is noted in tin plate production circles, recent reports from the southern mills indicating that the tonnage has not been equalled since June, 1920. Demand is also recorded as satisfactory, with the domestic trade registering improvement since the recent reduction in prices. It is stated that Canada has been taking a considerable share of Welsh tin plate. One order included 250 boxes. In connection with the Welsh tin plate industry, it is noted that workers associated with the steel trade in South Wales have lately agreed to a marked decline in wages. Following are local tin plate quotations:

	Per box
PLATES, CANADA—	
Dull, 60 sheets	5 30
Ordinary, 52 sheets	5 25
PLATES, COKE TIN—	
IC, 20 x 28, 112 sheets	12 50
IX, 20 x 28, 112 sheets	16 00
IX, 20 x 28, 56 sheets	8 50
PLATES, CHARCOAL TIN—	
IX, 20 x 28, 112 sheets	10 00
IXX%, 20 x 28, 56 sheets	12 00
PLATES, TERNE—	
10 x 14 x 20, 112 sheets	11 50

MORE INQUIRY FOR BRASS AND COPPER PRODUCTS

Toronto.

While no further change has been reported in copper and brass products, such as sheets, rods and tubing, yet the easier tone in primary metal markets, has recently been reflected by reductions in these markets. If quotations on ingot copper had continued to sag, some additional changes were looked for in prices on the semi-finished products. It is noticed, however, that these are now substantially lower, and with the copper market again steadier, the duration of future movements is difficult to determine. Manufacturers and distributors recently report a larger volume of inquiry, indicating potential business in the future. Following are therefore the unchanged average local quotations:

BRASS—	
Sheets base, per lb.	0 21
Rods, base, per lb.	0 19
Tubing, base, per lb.	0 23
COPPER —	
Rods, base, per lb.	0 27
Soft sheets, plain, 1 oz. and heavier, lb.	0 28
Do., plain tinned, 16 oz. and heavier, per lb.	0 35
Do., polished and tinned, 16 oz. and heavier, lb.	0 40
Tubing	0 27

PIPE FITTINGS TRADE ON GRADUAL INCREASE

Toronto.

Current activity in the pipe fittings trade is generally regarded as on the increase, a gradual improvement in this direction having been recorded. This is chiefly attributed to the seasonal movement looked for at this time of the year, combined with a reflection of the increased call for pipe fittings required in construction work. With brisk activity in the building trade continuing throughout the summer months, a fairly satisfactory season for these products is looked for. Following are unchanged discounts on these lines:

PIPE FITTINGS—	Per cent.
Cast iron fittings	30
Plugs, cast iron	30
Oo., solid	30
Do., countersink	30
Bushings, malle.	32
Do., cast	32
Unions, ¼ in. to 2 in.	47
Do., ⅛ in., 2¼ to 4 in.	47
Flanged unions, std.	50
Flanged fittings	30
Dart unions, blk., ¼ to 2 in.	33½
Do., ⅛ in., 2¼ to 4 in.	23
Do., galvd., add to black	30
Nipples, blk., and galvd. ⅛ to 4 in. close and short	60
Do., 4½ in. and larger	50
Do., long, ⅛ in. to 4 in.	65
Do., 4½ in. and larger	55
Do., running thread	40
Couplings, 4 in. and under	30
Do., 4½ in. and larger	10

MALLEABLE FITTINGS—		
Class A	0 54	0 67
Class B	0 20	0 28
Class C	0 13	0 20

BRISK SEASONAL TRADE IN PORTLAND CEMENT

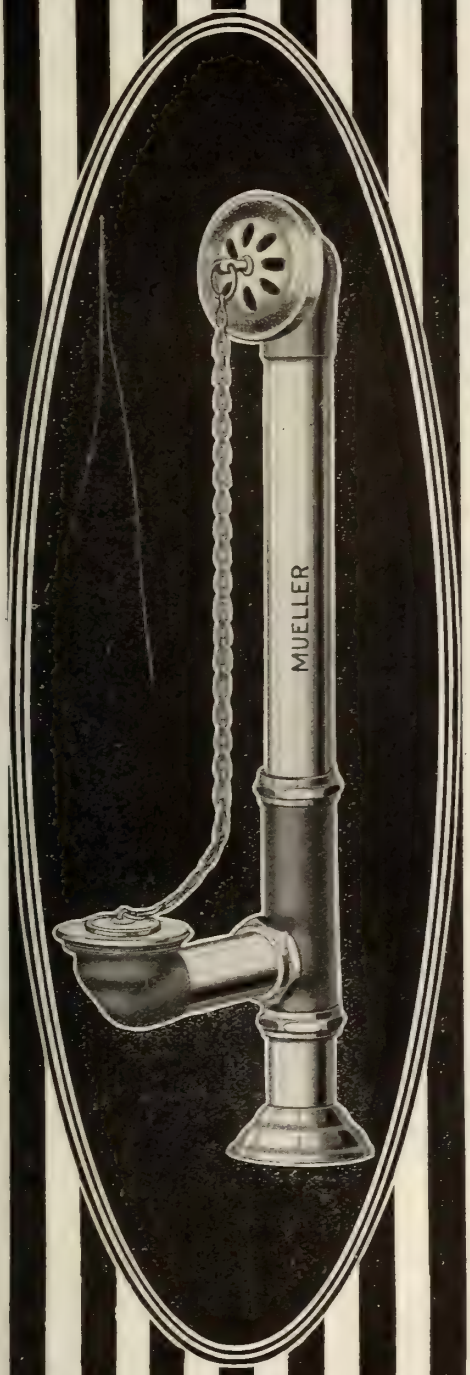
Toronto.

With the increased activity noted in construction circles, the current demand for cement has registered a corresponding improvement. Production of Portland cement is also described as on a larger ratio, with this season of the year recording brisk trade in all phases of the industry. Prices are reported steady, with the following levels still in effect:

CEMENT —	Toronto.
Car load lots.	
Per barrel, delivered	3 70
Less car lots .	
Per barrel, f.o.b. yard	4 30
Per barrel, delivered	4 50

Single bags, $1.15 each; 4 bags to barrel.
Extre charge of $1.50 per load on less than 24 bag lots.
Rebate of 20 cents for empty sacks.

(Contnued on page 30)



MUELLER

1½ inch Waste and Overflow A-2435

This MUELLER connection, because of several late improvements in construction, can be installed much quicker than any other make. The waste elbow and overflow are cast brass, overflow strainer is cast and the waste strainer is of heavy wrought brass.

Toronto By-law Requires 1½ inch Waterway

Toronto City By-law demands that 1½ in. waste and overflow be used, as being perfect in construction, capable of the best service and entirely satisfactory in every way.

Correct designs, the right raw materials and a fine precision in workmanship, make MUELLER Brass Goods stand every test and give dependable and enduring service.

Write for catalogue and prices. Mail orders given immediate attention.

TORONTO MARKETS

(Continued from page 28)

SOIL PIPE DISCOUNTS NEAR UNIFORM BASIS

Toronto.

Discounts on soil pipe and fittings between eastern and local distributing centres are now on a more uniform basis through the recent announcement from Montreal that a revision has been made on quotations covering 2, 3, 5, and 6-inch sizes. Little variation has been recorded locally, the movement of these products registering a satisfactory volume for this season of the year, with manufacturers and distributors keenly alive to the increased opportunities provided by the current building activity. Following are prevailing discounts:

SOIL PIPE—	
2 inch	40 per cent.
3 inch	40 per cent.
4 inch	40-5 per cent.
5 and 6 inch	40 per cent.
8 inch	net
FITTINGS—	
2 to 6 inch	50-5 per cent.
8 inch	net

FURTHER STRENGTH ADDED IN SHEET MARKETS

Toronto

The sheet market not only continues to reflect the firmer tone recorded during the recent weeks but distributors of these products now state that higher levels are practically looked for within the near future. Warehouses and consumers have had to book ahead due to the fact that the mill delivery changed with the advent of greater demand, and prompt shipments cannot be depended upon to supply immediate needs, as heretofore. While recent base quotations remain nominally unchanged, some higher price levels than $5.35 for galvanized, have already made their appearance locally. It is stated that sheet mills are particularly favored regarding stocks of coal, but heavier operation and the uncertainty as to the duration of the strike adds further strength to the sheet markets generally. Following are prevailing average local price levels.

BLUE ANNEALED—		
10 gauge, base	3 50	4 25
12 gauge	3 55	4 30
14 gauge	3 60	4 35
16 gauge	3 65	4 40
BLACK—		
18-20 gauge	4 05	4 80
22-24 gauge	4 10	4 85
26 gauge	4 15	4 90
28 gauge	4 25	5 00

Charge of 25c. per 100 lbs., is made for less than case lots. An extra 10c per 100 lbs. is also charged on sheets 26 in. wide.

GALVANIZED—	Queen's Head.	Fleur-de-lis.
28 gauge	7 50	7 00
26 gauge	7 25	6 75
24 gauge	6 85	6 35
22 gauge	6 40	5 90
18 and 20 gauge	6 25.	5 75
Premier and Apollo—		
10¾ oz.	5 75	6 50
U. S. 28, base	5 35	6 10
U. S. 26	5 05	5 80
	4 90	5 65
22 and 24	4 75	5 50
18 and 20	4 60	5 35
16	4 45	5 20
12 and 14		

An extra is now charged on galvanized sheets, 10¾ oz. and 28 ga., when shipped out in sheets 3 feet wide. The extra charged over prices shown above is 20 cents per 100 pounds. Other gauges show no change for different widths.

An extra 40 cents per 100 lbs., is charged for Keystone and Premier brands copper-bearing

COAL STRIKE AFFECTING PRIMARY STEEL CENTRES

Toronto.

The local bar iron and steel market continues very firm, with prices generally unchanged, although the elimination of shading at southern mill centres has practically introduced higher price levels through the adherence to nominal quotations. Whether this move will be accentuated in the near future owing to recent coal strike developments and the manner in which these events affect the steel industry, is a problem receiving close attention. The general opinion is that coke, rather than coal, is the issue at the moment. The coal strike at the union mines is of comparatively small importance as consumers laid in stocks. Other large consumers, however, dependent upon coal and coke from the non-union mine districts, failed to stock to the same extent, as little labor trouble was looked for. As the non-union strkes proved greater than was anticipated, some blast furnaces have had to restrict operations. This affects the supply of crude steel and it is stated that the continuance of these strikes would introduce the possibility of interruptions in mill operations. The activity among steel centres, remains practically the same as the earlier portion of the month, while prices continue to stiffen. Locally prices are considered as considerably firmer, with $2.75 being more than a nominal base price.

IRON AND STEEL	
Mild steel bars, base	2 75
Mild steel bands, 3 16 in. base	3 25
Bar iron, base	2 75
Angle iron, base	2 85
Horseshoe iron	3 60
Tire steel	3 00
Spring steel	6 00
Crucible cast sheet steel	30 00
Toe caulk iron	4 00
Hoop steel	3 75
Norway iron	12 50

LOWER PRICES ON NICKEL AND NICKEL SPECIALTIES

Toronto.

The International Nickel Co. has announced a new price list on nickel, monel metal and nickel specialties, showing a marked reduction from previous quotations. Nickel shot, ingots and electrolytic are reduced five cents per pound and hot rolled rods ten cents per pound. Cold drawn rods are twelve cents per pound lower.

POTENTIAL BUSINESS IN RADIATOR AND BOILERS

Toronto.

Manufacturers and distributors of radiators and boilers describe the current market as a little quieter than expected insofar as the actual movement of these products is concerned, although the large proportion of inquiries indicates potential business in the offing. This is expected to materialize during the ensuing months, and reach a satisfactory volume of activity during the present season. Quotations are unchanged locally, the undertone being steady in view of recent stiffening throughout the steel industry in general now being more or less reflected in the trend on finished steel products. Following are prevailing list and discounts:

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

BOILERS—

Water:

Round 64 per cent. off list. Square 15 per cent. off list.

Steam:

Round, 28 per cent. off list; square, 15 per cent. off list.

KEEN COMPETITION IN TUBE BUSINESS

Toronto.

The evidence of keen competition between the various distributors of boiler tubes still remains on the local market. In certain quarters, the current volume of business is described as satisfactory compared with last year, while the outlook has been slightly firmer, especially since the stronger tendency in steel lines generally. Smaller sizes of boiler tubes are reported in better demand for repair work, but the liquidation of stocks in general is dependent upon improved all-round activity. Following are average nominal price levels recorded locally:

BOILER TUBES—	Seamless	Lapweld
1 inch	21 00	.....
1-¼ inch	21 50	.....
1-½ inch	22 00	.....
1-¾ inch	23 00	.....
2 inch	22 00	17 00
2-¼ inch	26 00	18 00
2-½ inch	30 00	20 00
3 inch	34 00	25 00
3-¼ inch	43 00	27 00
3-½ inch	47 00	28 00
4 inch	58 00	35 50

SEASONAL ACTIVITY IN CORRUGATED SHEETS

Toronto

The corrugated sheet market is described as much firmer, in keeping with the improvement in the flat sheet markets. Some increase in activity has also been recorded, the movement of these products usually becoming brisker at this season of the year. The improvement in recent weather conditions has contributed to this result, coupled with the demand from building circles and the lighter gauges are described as registering a fair volume of activity. Following is the unchanged nominal list and discount:

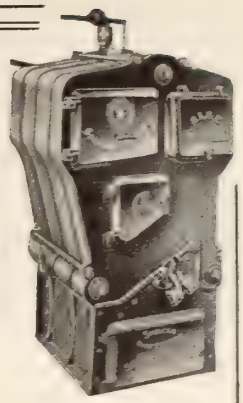
CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c. per square extra.

(Continued on page 32)

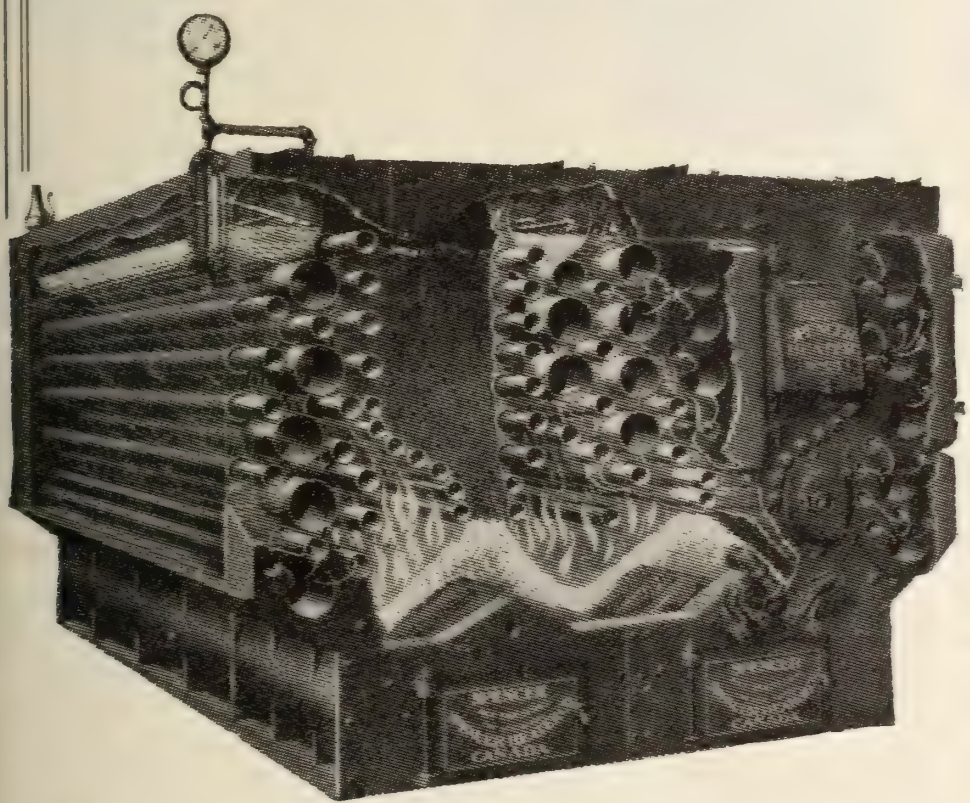
Install the "Spencer" Self Feeding Boiler and Make Sure of Constant Service



Hot Water—10 sizes, 600 to 3,600 sq. ft.

In the number of buildings you will be asked to install heaters, each one will likely be of different styles and sizes and require a certain type of heater.

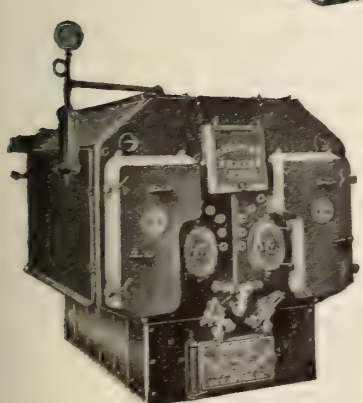
You need not worry about filling such demands as any one of our Spencer heaters will satisfy the particular desire.



Feeds uniformly only as fast as coal is consumed giving exact control. In the coldest weather the Spencer heaters maintain temperatures 48 hours without attention.

The magazine holds a 24-hour supply. Any kind of coal may be used (hard or soft), coke, fuel oil or gas.

By its ability to burn buckwheat coal and hard coal screenings, the Spencer costs less to operate than any other heater on the market.



Steam—27 sizes, 375 to 10,000 sq. ft.

Further particulars furnished on request

IMPROVED MOVEMENT OF ENAMELED PRODUCTS

Toronto

Enameled ware products are reported to be registering an improved movement, this being attributed to the seasonal demand for buildings of a smaller nature now under construction. There has been some rumors on the local market that manufacturers of these goods were contemplating the introduction of slightly higher prices, but in view of pending betterment in general trade conditions, the report has not been generally credited. Little fundamental change has been recorded in the primary markets and following are the prevailing list prices:

TORONTO MARKETS

ENAMELLED WARE—

Enamelled Iron Baths, 3" roll rim, 4 ft.,

NOTE BETTER DEMAND FOR CLOSET OUTFITS

Toronto.

Like other enameled products, closet outfits and fixtures have recently recorded a better demand. This is also attributed to seasonal activity in building, many homes and smaller erections having reached the stage where the installation of sanitary fixtures, creates some improvement in the current situation. Distributors look for a continuation in this direction during the ensuing months. Little change as regards prices is noted, the nominal list on the standard outfits, being subject to keen competition. Following are current quotations:

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	27 75
Do., with post hinge seat	28 40
Do., mahogany Vitro or Pussyfoot, with mahogany post hinge seat and cover	30 25
Do., vitreous china, with oak post hinge seat and cover	30 75
Do., vitreous china, with mahogany post hinge seat and cover	31 00
Do., white Vitro or Pussyfoot, with maoak post hinge seat and cover	30 75
Do., white Vitro or Pussyfot, with mahogany post hinge, seat and cover	31 00
Do., enamelled iron tank with oak post hinge seat and cover	30 75
Do., enamelled iron tank with mahogany post hinge seat and cover	31 00
Additions or reductions to above	
Add for reverse trap bowl	1 25
Add for syphon jet bowl	7 00
For ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 80
CLOSET BOWLS—	
Washdown bowl, less spud	10 00
Reversible trap bowl, less spud	11 25
Syphon jet bowl, less spud	17 00
"Buckeye" bowl	10 50
CLOSET TANKS, low down	
Oak, Vitro or Pussyfoot tank with fittings, less seat	13 10
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 25
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	18 00
CLOSET SEATS—	
Oak post hinge seat and cover	4 00
Oak wood strip seat and cover	3 25
Mahogany finish post hinge seat and cover	4 25

RANGE BOILERS ONLY IN MODERATE ACTIVITY

Toronto

Range boilers continue to show a moderate movement, with little change having been recorded in this market. The list prices and discounts are being generally adopted, although in some cases, it is reported that adherence to net quotations has been the rule. The final price, however, is comparatively the same, and the uniform introduction of the recent list is generally looked for. Strenuous competition prevails, and buying is described as still according to current requirements. Following are list prices and discounts:

RANGE BOILERS—

Size.	List Price.
5-gallon	$13 50
12 to 15 gallon	14 00
18-gallon	15 00
25-gallon	16 50
30-gallon	17 50
35-gallon	20 50
40-gallon	22 75
52-gallon	38 00
66-gallon	60 75
82-gallon	74 00
100-gallon	103 00
120-gallon	117 00
144-gallon	164 00
168-gallon	187 00
192-gallon	210 00

Discounts, Standard weight, 50 per cent.
Extra heavy, 40 per cent.

BRISKER TRADE IN TROUGH AND PIPE

Toronto.

The season for eavestrough and conductor pipe is now on hand, and these products have already registered an improved movement, due to early construction activities. Prices have remained fairly steady, with brisk seasonal trade being generally looked for with the arrival of warmer weather. Current prices follow:

TROUGH EAVE—

O. G. Square Bead and half round. Size in girth:	Per 100 ft.
8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50

Less 70 and 10 per cent.

PIPE (CONDUCTOR)—

Plain, round or corrugated.	Per 100 ft. in 10 ft. lengths.
2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	22 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00

Less 70-10 per cent.

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

QUIET TONE PREVAILS IN ASBESTOS MARKET

Toronto

The asbestos market is still described as quiet, with current trade in moderate proportions. Lack of commercial construction on an extensive scale is reported as having a retarding effect on the movement of these products. While brisk activity is generally noted in house building, the smaller erections do not provide an extensive field for the introduction of asbestos. However, a slight improvement is looked for as the season advances. Following are unchanged discounts:

ASBESTOS PRODUCTS—

Pipe Covering—

Air cell, 4 ply	55 per cent. off list.
Air cell, 3 ply	60 per cent. off list.
Air cell, 2 ply	65 per cent. off standard list.
Boiler Covering	$1.90 per bag.
Asbestos Sheathing	$8.00 per 100 lbs.

STEADY MARKET NOTED IN COTTON WASTES

Toronto

Little variation is recorded in the market on cotton wastes, the current tone generally being described as quiet, but steady. Quotations remain unchanged, with the raw cotton centres fluctuating more or less. On the whole, the situation is stated to be fairly satisfactory as compared with last season. Following are unchanged prices:

COTTON WASTES—

Cream, polishing	0 18
White, XXX	0 18
XX	0 16
X	0 15
XC	0 14

Lion	0 12
Standard	0 10½
Popular	0 09
Keen	0 07½

Above lines subject to trade discount for quantity.

LEAD FIRMER WITH PRODUCTS MORE ACTIVE

Toronto.

Lead and zinc products are remaining at the recently revised price levels, with seasonal activity noted as regards the current movement of these lines. It is also noticeable that lead on the primary metal markets is the strongest group at present, some improvement in demand and increased consumer interest having added considerable strength to the undertone. Solder quotations are unchanged, with copper having been slightly steadier during recent weeks. Following are prevailing price levels on the local market:

LEAD AND ZINC GOODS—

Lead pipe, list, per lb.		0 12
Lead, waste pipe, list, per lb.		0 13
Do., over 8 in., list, per lb.		0 14
Lead pipe is subject to a discount of 10 per cent.		
Lead traps and bends		17½ per cent.
Lead sheets, 4 to 6lbs., sq. ft. in rolls, lb.		0.09

TORONTO MARKETS

(Continued from page 32)

SCRAP MATERIALS ARE STILL REPORTED QUIET

Toronto.

The demand for scrap materials is still described as poor, with cast iron grades being purchased in minor amounts. The scrap rubber business is extremely quiet, and prices have sagged still lower. It is noticed however, that foundries are now more active, and with the expectations that steel mills will shortly increase operations improvement in the near future is looked for. In respect to red and yellow metals, the declines recently apparent in virgin copper have affected the purchasing in this division of the market. While dealers are reported to be carrying fairly heavy stocks, quotations remain unchanged. Following are the usual averages of dealers' buying prices, large quantities.

SCRAP MATERIALS—

Scrap Iron		
Gross Tons —		
Heavy melting steel (Hamilton)	11 50	$12 00
Borings and turnings	2 00	3 00
Rerolling rails	10 50	11 50
Scrap pipe	6 00	7 00
No. 1 railroad wrought	10 25	11 25
Steel turnings (Hamilton)	6 50	7 50
Agricultural malleable	10 00	11 00
Railroad malleable	11 00	12 00
Net tons —		
No. 1 cast	15 75	16 75
Stove plate	11 50	12 00
Grate bars	10 50	11 00
Standard car wheels	14 50	15 00
Scrap Metals.		
Heavy copper and wire	10 50	11 00

Scrap Rubber.		
Boots and shoes	2 25	2 50
Lumbermen's rubber boots	1 50	1 75
Auto tires	0 50	0 60
Solid tires	0 75	1 25

LEAD REMAINS FIRMEST METAL IN GROUP

Toronto

Lead, antimony, and aluminum, in the order named, provide the features of an otherwise quiet ingot metal market. Lead as previously noted, remains the firmest of the group, with increased activity recorded. More interest has been noted in antimony, and while current trading is a little quieter than last week, prices have continued steady. Some increased business in aluminum has been responsible for new life being displayed in this metal, but few marked developments have been recorded. Copper conditions, the tin markets, are also described as moderate.

COPPER.—Current business in copper on the domestic markets continues of rather narrow proportions, while reports from primary sources indicate that export trade is also more or less moderate. Copper consumers are stated to be operating more actively, and the general tone of the metal is fundamentally unchanged. Local prices remain at 16½ cents.

TIN.—This metal has remained quiet on both domestic and primary markets. There has been a little more activity in London, with some increase in prices, but these changes have not affected the general situation. The quotation of 34 cents covers the average local trading.

LEAD.—As recently noted, lead is the firmest metal of this group, and prices on southern centres have been described as on the increase. Business in lead has also improved, and the undertone of the market is firm. Domestic quotations are much steadier at $6.50.

SPELTER.—Prices on spelter tended to ease a little on primary markets at the commencement of the week, to be followed later by a slight increase in activity which served to steady the general tone. More inquiries are reported for this metal. Domestic quotations remain unchanged at $6.75.

ANTIMONY.—The firmer tendency recently noted in antimony is being generally maintained, although recent trading has been quiet, the market remains steady. A continuance of the gain in strength would tend toward slightly higher levels. Meanwhile, the local prices continue around 6 and 7 cents.

ALUMINUM.—Increased business in aluminum is reported from southern centres, with prices exhibiting a firmer trend. Locally, the general situation in this metal is practically unchanged, with quotations hovering between 26½ and 27 cents.

WINNIPEG MARKETS

WINNIPEG, April 29.—Several important price developments feature the current plumbing and steam-fitting supply markets, easier quotations having been announced on such products as soil pipe and fittings, galvanized range boilers, and lead pipe, lead waste and bends. A firmer tendency is noted in wrought piping, this being a reflection of the general stiffening in the steel industry recently evident. The sheet market is described as unquestionably firm, although no price changes have been recorded. The advent of seasonal weather conditions, coupled with ambitious building programs, has developed a more optimistic viewpoint throughout the trade, and brisker activity is generally looked for during ensuing months. Enameled products, pipe fittings and brass compression goods, show recent improvement in this direction.

NEW DISCOUNTS ON SOIL PIPE AND FITTINGS

Winnipeg.

Through a revision in discounts soil pipe and fittings are now quoted lower.

Sales of these products are dependent for the greater part on building construction and although business has been seasonably light during the early months of the year, it is expected that increased activity will soon develop, as a fairly extensive building program is anticipated as soon as the weather records seasonal improvement. Following are the revised discounts:

SOIL PIPE—	
2 and 3 in.	27½% off
4 in.	37½% off.
5 and 6 in.	32½% off
8 inch	10% adv.
SOIL PIPE FITTINGS—	
2 and 3 inch.	47½% off
4, 5 and 6 inch	50% off
8 inch	10% adv.

REVISED QUOTATIONS ON LEAD PIPE AND WASTE

Winnipeg.

A decline has been announced in quotations on lead pipe and lead waste and bends. These changes place lead products on a lower basis in anticipation for an improved demand during the summer months. Following are the revised quotations:

Lead pipe	$11.61 per 100 lbs.
Lead waste	12.51 per 100 lbs.
Lead bends	12½% off list.

LOWER PRICES APPEAR ON RANGE BOILERS

Winnipeg.

Quotations on galvanized range boilers have now been reduced. This change places these products on an easier basis, with the approach of the active building season when a better demand is naturally looked for. Present stocks are said to be in fair shape. Following are the revised prices:

RANGE BOILERS—	
30 gal., each	9 60
35 gal., each	12 50
40 gal., each	13 75
52 gal., each	22 60
66 gal., each	35 00
82 gal., each	42 50
100 gal., each	60 00
120 gal., each	65 00

FIRM TENDENCY IN GALVANIZED SHEETS

Winnipeg.

The market continues to reflect a decidedly firm tendency, which has been evident since the stiffening in the steel industry recently recorded. Some higher quotations have been announced in southern production centres, but whether these changes will spread to domestic markets, is stated as depending upon the general adoption of the new levels, together with the current demand for sheets and plates experienced during the ensuing weeks.

Following are the unchanged prevailing prices:

	Per 100 lbs.
BLACK SHEETS—	
10 ga.	$5 35
12 ga.	5 40
14 ga.	5 45
16 ga.	5 50
18 and 20 ga.	5 90
22 and 24 ga.	6 00
28 ga.	6 40
GALVANIZED SHEETS—	
16 ga.	$ 6 45
18 ga.	6 50
20 ga.	6 60
22 and 24 ga.	6 75
26 ga.	6 90
28 ga.	7 50
10¾ oz.	7 90

Time—

There was a time when some bosses would argue that their men were against using labor-saving tools and certain specialties because they cut down their time, but that argument is seldom met with to-day. The present day sanitary engineer and present day mechanic realize that efficiency counts and that "time saved is money earned."

"C. & H." time and money-saving specialties are fast becoming known to the Canadian trade. If you have not yet become acquainted with our line—it's time you did.

Take "C. & H." flat wire bending springs for instance. These wonderful springs make lead work a real pleasure. We've yet to find the man who would part with a C. & H. spring after having once used it. They will last a lifetime.

Other C. & H. specialties that are fast winning favor with the trade are:

C. & H. Flexible Hack Saw Blades.
C. & H. Combination Shell Drills.
C. & H. Boiler Repair (Tap) Plugs.
C. & H. Knife Blade Cutter Wheels.
C. & H. Pipe Joint Cement.
C. & H. Cone Top Tank Bulbs.
C. & H. Pipe Reamers (Spiral).

We are Canadian distributors and carry complete stocks of:

"Ubel" Semi-Rotary Pumps.
"Hotstream" Gas and Kerosene Water Heaters.
"Hercules" Drain Pipe Solvent.
"Sanilav" Closet Cleaner.
"Porcela" Enamel Cleaner.
"Lion" Quick Action Tank Couplings.
"B. & C." Floor and Ceiling Plates and Air Valves.

"C.&H." Specialties are guaranteed to give satisfaction. Write to-day for Stock List.

Long Fire Travel and Short Coal Bills

The less up chimney heat there is, the more boiler heat there is going to be.

"Up chimney" heat means coal waste.

In the illustration you will see that the Burnham Boiler fire travel is 3 times back and forth on **both sides** of the boiler.

This means that the bulk of the heat is out of the gases before they enter the flue.

The Everlasting Veneer Toilet Seat

Strong, Clean Hygienic

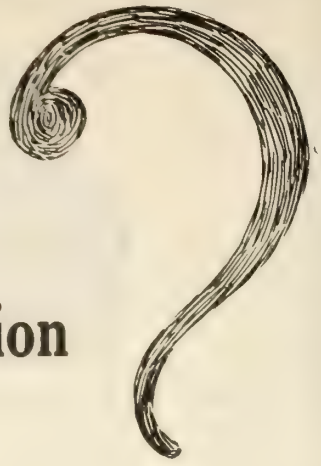
This reliable, dependable toilet seat is made of 7- and 9-ply, air-seasoned wood veneer, held together by our special wood cement. This cement is proof against heat, cold or dampness. The veneering is distributed according to the strain and wear required of the different parts. The Everlasting Seat will never crack, warp or split.

It is a splendid seat for use in cold, damp basements where closets must be installed. The Everlasting Toilet Seat will meet, and successfully resist these severe conditions of moisture, changing temperature, etc.

Canadian Veneering Company, Incorporated

Acton Vale Quebec

Handling Steam Condensation



When you find a gravity return heating system—with one section sluggish in action and no circulation, what do you do to correct it?

How do you balance up unequal return pressures?

If you have to drain a heating section which is below the boiler, how do you do it?

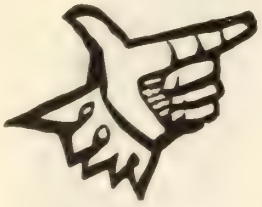
If your lines are "air-bound" how do you relieve them?

If you find the heating returns running to waste—does it pay to catch them and return them to the boiler?

Have you ever removed "dumping" traps because they wouldn't dump?

Have you ever seen a "return trap" which would not return?

Have you ever got into trouble through installing a troublesome return trap?



We have eliminated the "dumping return trap" with its failures and troubles.

We show you how to avoid trouble when you want to put in a direct return system.

You get all the advantages of a direct return system without a possibility of failure or a chance of trouble when you use our condensation appliances.

Ask us for particulars. Condensation is our strong point.

THE MARVEL

GAS WATER HEATER

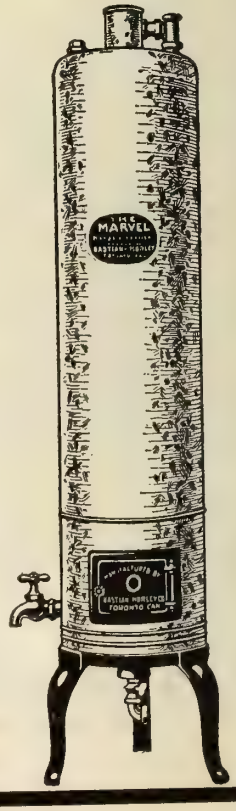
You Can Install It Anywhere

Boiler and Heater are combined into one unit in the MARVEL. It's so compact and simple you can instal it anywhere — with less trouble and in less time than old-style gas water heaters.

And it makes a better job—a job that your customers will tell their friends about.

No coils — lime-proof, free from rust and sediment. Silent and odorless. Saves gas! Can be connected with furnace or range in winter, if desired.

The "Marvel" costs no more than ordinary heaters. You get a good discount—handle the job in less time—give complete satisfaction. Write for full information and descriptive literature.



Bastian-Morley Limited
Makers of the Royal "Automatic" Gas Water Heater.

195 Victoria St., TORONTO

"PUSSYFOOT"

SILENT AS A PUSSY'S FOOT QUICK AS A CAT

SILENT - EFFICIENT - DURABLE
Because of these qualities and the fact that it **costs no more**, the Pussyfoot is easy to sell, and, once sold, is a monument to your discrimination.
If you are not displaying the Pussyfoot you are losing good business.

10,000 in 1921--20,000 in 1922

Think of it! "Pussyfoots" are breaking all sales records and at the present rate 20,000 or more will be sold this year.

But as we have said before—

There's a Reason

By its quiet efficiency and durability under every service and condition the "Pussyfoot" is daily demonstrating that **there is no better tank made.**

Insist on "Pussyfoot" from your Jobber.

STACK FACTS

From Tests Made by Various Gas Light Companies

The STACK will heat 5 gallons of water 3 minutes quicker than the average heater.

The STACK raises the temperature of 5 gallons of water 28 degrees higher in 10 minutes than the average heater.

The STACK will heat 3 gallons more in 10 minutes than the average heater.

The STACK shows 15% greater efficiency than the average heater.

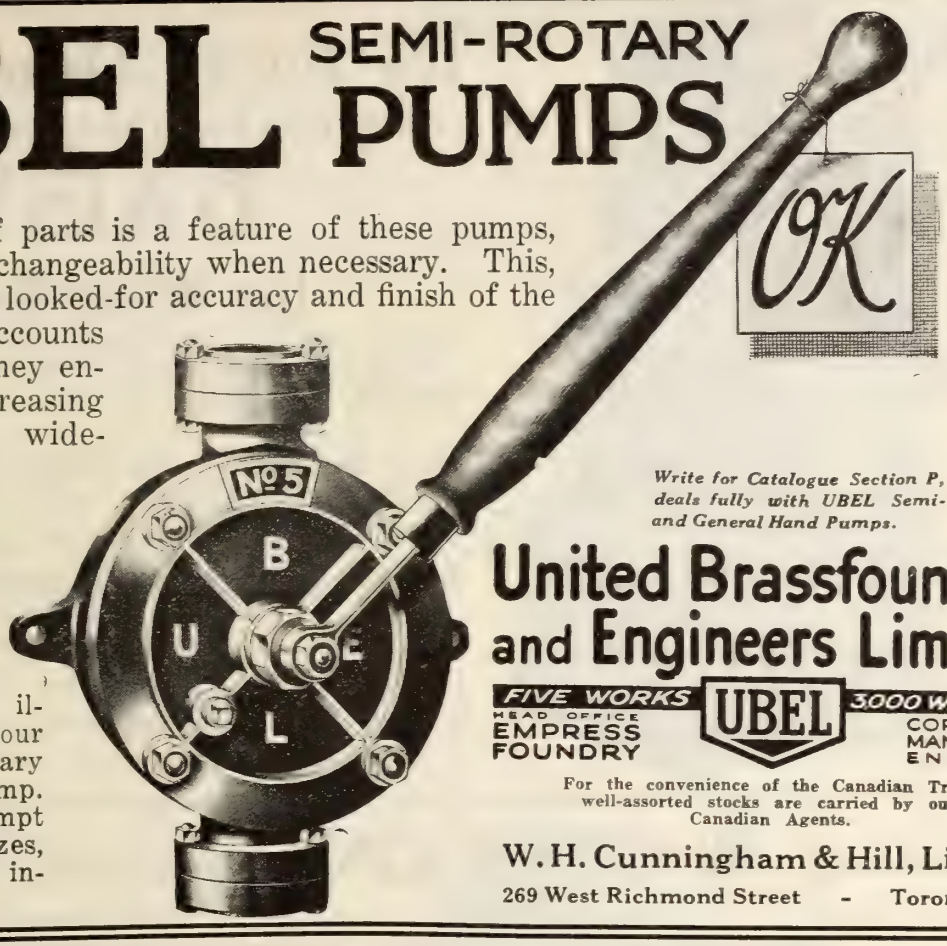
UBEL SEMI-ROTARY PUMPS

Standardization of parts is a feature of these pumps, guaranteeing interchangeability when necessary. This, combined with the looked-for accuracy and finish of the UBEL product, accounts for the fact that they enjoy an ever-increasing popularity and widespread demand.



The accompanying illustration shows our Fig. P 1 Semi-Rotary Double-Acting Pump. We can give prompt shipment of all sizes, from ½ in. to 3 in. inclusive.

Write for Catalogue Section P, which deals fully with UBEL Semi-Rotary and General Hand Pumps.

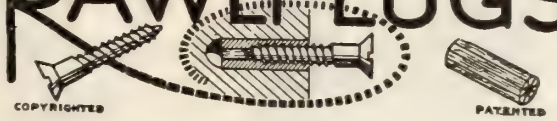
RAWLPLUGS



Enable Ordinary Screws to Hold In Any Material

The Rawlplug is a manufactured tube of fibre strands so cemented that when once in position it can never crumble or pulp and is impervious to decay through moisture or otherwise.

The Rawlplug expands as the screw is turned home. This results in a perfect grip by the Rawlplug in any material as its friction extends throughout its entire length and the Rawlplug thus forms an integral part of the surrounding material. The screw cuts a perfect thread inside the plug.

INVENTIONS LIMITED
Sole Agents for The Rawlplug Co. of Canada, 128 Bleury St., Montreal, Que.

WHAT DOES THE NAME PERFECTO REGISTERED STAND FOR?

THINK what it means to have a line of brass goods that you can *depend* upon—to know a name that *guarantees* the quality of every article that bears it. To see the name PerfectO on an article is all the protection a plumber needs—because every PerfectO article is definitely and absolutely *guaranteed* by the manufacturers. PerfectO stands for *Perfection*—and that, in turn, means *satisfaction*. PerfectO Brass Goods will save your time—your money—and your reputation. Buy by the name—PerfectO.

EMPIRE

"Emco"

Cast Iron Centrifugal Trap

When your customer asks for goods made in Canada the word Empire or "Emco" on each of our articles is his guarantee.

The engraving shows our new cast iron centrifugal trap. This trap has an adjustable nickel plated sink connection, and with its adjustable swinging elbow it is easily installed and makes a first class installation on sinks.

All Empire products are subjected to a rigid test before leaving the factory and are backed by our guarantee.

Sold by leading jobbers throughout Canada.

LONDON and TORONTO, CANADA

Cast Iron Centrifugal Trap A-1829

Drinking Fountains

White, Clean, Vitreous, Sanitary

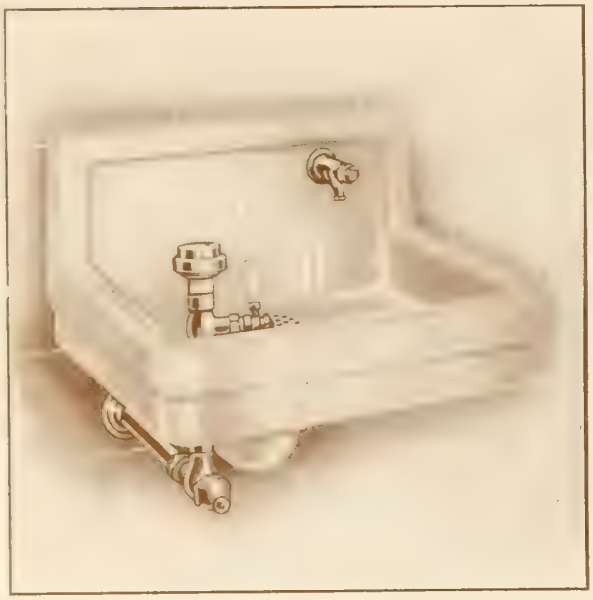

Plate 901

Dirt and germs will not readily cling to its smooth hard surface so that with a minimum of effort its original glistening whiteness will be retained after years of use.

The fittings illustrated are only suggestive. A variety of good sanitary bubblers are obtainable which will readily fit either of the patterns shown.

The moderate price at which these very desirable fixtures are furnished by us should ensure their installation in every public building.

The lustrous white clean surface of a Canadian Vitreous Drinking Fountain suggests the cool refreshing draught which can with safety be taken therefrom.

Canadian Vitreous China is the most thoroughly sanitary material of which a Drinking Fountain can be made. It is all clay, the same white, dense, substantial, strong, vitreous body through and through, with a beautiful hard, lustrous, live-white glaze surface, which cannot chip, crack, rust, discolor or deteriorate.

Kerr Valves

Give

Character to Work

They reflect credit on the man who specifies them, the man who installs them, and they give complete satisfaction to the men who use them.

Take the Kerr Gate Valve illustrated, for instance: It is well designed; strong and sturdily made; note the compact and narrow face to face dimensions; observe the accessibility of the stuffing box; the strong, generous flanges and the properly spaced bolting.

KERR VALVES ARE GOOD VALVES

Catalogue No. 5 on application.

The Kerr Engine Co., Limited

Valve Manufacturers - Walkerville, Canada

Why are the

VULCAN

Pure Air Furnaces Superior in Radiation?

because they give off a more satisfactory amount of heat in proportion than any other furnace, on account of the greater total area of radiation surface.

Easy to operate
Profitable to install
Strongly constructed of heavy metal

Huge Oaks from

ANTHES

ittle Acorns Grow

This is a fact that seems to be forgotten when tile pipe is used where soil pipe should be used.

Thousands upon thousands of dollars are spent needlessly each year by Canadian householders who have to pay the price of the contractor who put a few extra dollars in pocket by using tile pipe instead of soil pipe.

Every Sanitary Engineer knows what happens when the root of a tree, for instance, comes into contact with tile pipe.

The moral of course, is to "Use Soil Pipe Where Soil Pipe Should be Used." Show the public why it's a good investment to pay the slight extra cost of using soil pipe and make it a "lifetime" job.

See that the name of "Anthes" is on every piece. It's your guarantee of all that's best in Soil Pipe and fittings.

"Standard" PLUMBING FIXTURES

Better Bath Rooms Make Better Homes

Many new high class homes now under construction will contain ordinary, every day plumbing fixtures unless owners and builders are familiar with the better designs of fixtures that really add only a small percentage to the total cost of the plumbing equipment.

Show your customers how "Better Bathrooms" can add to the value of the house and to the comfort and convenience of the occupants, and you will have gone a long way towards securing a more lucrative contract.

Fix It With Rawlplugs

Rawlplugs resist and absorb vibrations and shocks due to the unusual composition of the plug.

There is no tendency to work loose from these causes.

Rawlplugs develop the full strength of the screw and the material. The screw will pull in two or the material will fail before the Rawlplug will come out.

Samples and price list on request.

Master Plumbers Ask for Higher Fee

Delegation from Montreal Master Plumbers' Association Requests That the License Fee of a Master Plumber be Increased from $5.00 to $200.00—Present Charge Does Not Ensure Competency, and Also Endangers Public Health

Editor's Note:—For a long time sanitary and heating engineers have been looking for some effective means to put an end to the fly-by-night type of operator who provides unfair competition and lowers the standard of workmanship of this industry. This is the despised type of operator who works from a basement and who does all sorts of handy-man jobs such as the sanitary engineer of to-day is trying to break away from. At present when so many journeymen and helpers are going into business for themselves due to the scarcity of work as employees this question becomes an important one. The action of the Montreal Master Plumbers' Association in asking a big increase in the license fee will probably have considerable effect on this situation.

A DELEGATION from the Montreal Master Plumbers' Association has waited on the Executive Committee of the City Council with a recommendation that the license fee of a master plumber in the city be increased from $5.00 to $200.00. The delegation made it quite clear that their mission was an endeavor to safeguard their reputation, and also protect the public from people who were now undertaking plumbing work of an inferior kind, and who undertook no responsibility in connection with their work, thus bringing the whole trade into disrepute. The by-law was pointed out which states that anybody can now get a master plumber's license on payment of a fee of $5.00 and the passing of a brief examination.

Danger to Public Health

The consequence was that many men who were journeymen plumbers in the employ of master plumbers, could secure a master plumbers' certificate and after their regular hours undertake jobs of installing plumbing and heating apparatus at cheap rates, and without a full knowledge of the requirements of the work. Having no place of business there was no redress against them, and they did not accept any responsibility for what they did. It was contended that this was a danger to the health and safety of the public, and that if the initial fee of examination was raised from $5.00 to $200.00, in order to secure a master plumber's certificate, and a renewal fee placed at $50.00 a year, it would be a safeguard to the public, and ensure that only responsible men with a place of business would establish themselves as master plumbers and accept responsibility for the work they undertook.

Not for Selfish Reasons

The secretary of the association, D. K. Trotter, introduced the delegation and emphasized that their request was not being made for selfish reasons, but in the interest of the public. H. Lavigueur, president of the association, outlined the attitude of the association, and declared that they had for years been seeking a remedy for the ever increasing irresponsible and sometimes unscrupulous workmen who were installing plumbing and heating systems in such a manner as to endanger the health and safety of the public. Journeymen working for master plumbers could get a master plumber's certificate and undertake a job and then return to their regular work as journeymen, their work often being shoddy and unsanitary.

That the request of the delegation would receive careful consideration was promised, the Executive Committee expressing pleasure that extra money would be coming to the city. However, it was pointed out that it would not be possible to make the amendment this year as the license fee was fixed in the by-law passed in December, and the city would have to get authority from Quebec Legislature to change the scale, and this could only go into effect the following May.

The delegation was headed by H. Lavigueur, president of the Master Plumbers' Association, and other members including Mayor James Ballantyne, of Montreal West, J. E. Walsh, T. Latourelle, D. A. Bethune, P. C. Ogilvie, W. R. J. Macaulay and A. Charrette. Two members of the executive committee, Ald. T. O'Connell and Ald. Turcotte, are past presidents of the association, and fully endorsed the attitude of their confreres in business.

Not After the Smaller Man

Mr. Lavigueur, when interviewed by Sanitary Engineer, stated that the mission of the delegation was another step taken by the association in the hope of improving local conditions, and the plumbing trade in general. Unfortunately in the city there was a certain amount of criticism in connection with the class of work sometimes brought to light, and this reflected on the association, and the legitimate master plumber who was in most cases not to blame. The city was growing, and with this came an increasing number of inefficient and careless workmen who were encouraged by the present law. He pointed out instances which he had personally encountered where his men had been called out on repair jobs to find the whole installation badly put in. Upon making enquiries, very often it was the work of some incapable journeyman, or even worse, someone not knowing the first requirements of such work. If the higher fee was made necessary it would allow more money for inspection work, as at present it is utterly impossible for the staff of inspectors to follow all work being done.

Propose One Association in the West

Plans Discussed for Inter-Provincial Association Grouping Four Western Provinces—Conditions Not Right for Trade Extension Bureau—Conference re Sub-contracting—Was Referred to Sanitary Engineer for Canadian Society Convention Report

ON SUBMITTING my third annual report, I must say I am again disappointed at the slow increase in membership. With what we have to offer, and with the district committees functioning as they were intended to when this form of organization was adopted, there is no reason why we should not swell our numbers. In numbers there is strength, and with a divided house it is hardly expected that we can obtain our just rights from the principal groups we have to deal with, namely the provincial and municipal authorities and the manufacturers and jobbers.

Immediately after the adjournment of the last convention, your committee together with Mr. Green of the Saskatchewan Association, met and discussed the aims and objects of our proposed Inter-Provincial Association, grouping the four western provinces, and submitted them to the two remaining organizations, namely the British Columbia and Manitoba, in our efforts to organize. We did not get a reply from Manitoba, and while British Columbia saw the necessity of such an organization, they did not see their way clear to join us. Since then we have been in communication with both these organizations and we still have hopes for an organization along these lines.

After getting all the data prepared for the publishing of a magazine, and submitting it to all the members and getting practically no support from them we felt that we could not afford the time ourselves to solicit advertising, so the matter was dropped.

Trade Extension

On receiving all the information from the National Trade Extension Bureau of the United States we came to the conclusion that this would be of little use to members on this side of the line. We then got into communication with Mr. Minnes of Brantford, who seemed to be the father of the Canadian movement, who told us that he had worked on this movement for two years and found there was not sufficient interest taken in it by the manufacturers and jobbers or the operative plumbers. He has contributions of approximately $5,000.00 but found this not sufficient to carry on the work at present, owing to trade conditions as they are to-day, and the matter of out of work journeymen aggravating conditions by starting in business for themselves. He has decided to let the matter drop for the present.

While talking to one of the wholesale representatives a short time ago the question came up as to why we were not living up to the Provincial Plumbing By-Law in the matter of material as provided for in that by-law. I think we should decide at this meeting if we are going to live up to it or not. While we did not get all we wanted, still I feel it is a stepping stone to something better. At the present time it appears our only hope for help is in the Provincial Health Department, as I think that the cause of the deplorable condition of our trade to-day can be laid at the door (in some of our cities) of our civic authorities. The Lethbridge members can be congratulated for having civic officials with sufficient backbone to protect the men doing business in their city. Before leaving this subject I wish to draw your attention to one branch of our craft that has received very little attention. I refer to the steam fitting trade. While I do not wish to create any cleavage between the two trades I think that steam fitting is of sufficient importance to receive some consideration at your hands. We have in Calgary a supposed protective for steam fitters, but up to the present it is only a farce. As I said before our only hope is with the provincial government.

R. J. PRIESTLY

Calgary, Alta., who was re-elected president of the Alberta Association of Sanitary and Heating Engineers at the last convention.

Your executive board has arranged a conference with the architects and builders re sub-contracting and I hope that the outcome of this conference will be brought to a satisfactory conclusion.

I am unable to lay before you a report (with the exception of the receipt of dues) from the Dominion Association. We have twice written for the proceedings of their last convention. Once we were referred to "Sanitary Engineer" and had no reply to our last letter.

I believe our relations with the wholesalers during the past year have been fairly satisfactory and I hope for a continuance of the good feeling.

Before I conclude I must again draw your attention to the need of enlarging our membership. Such a thing is of vital importance if we are to do more than exist, for as we stand now we seem to be doing nothing but floundering: so for the coming year let me urge upon each one of you to make a special effort to get a new member and not to leave it to the other fellow to do so.

In concluding, it is my very painful duty to record the sad loss we have sustained in the death last May of our late secretary Mr. E. P. Fletcher. He was ever a faithful and zealous worker in the interest of the plumbing trade. It is to his credit the present plumbing by-law and examinations in this city are due. I am sure our sympathy goes out to the widow and children from whom he is parted.

MASTER PLUMBERS ASK FOR HIGHER FEE

(Continued from page 11)

When asked if $200.00 would not be considered too high by a number of master plumbers, Mr. Lavigueur said he was sure this figure would be agreeable to all. In many large cities the fee was even higher than this, and if the new law called for $200.00 for the initial fee, with $50.00 a year for renewals, the remedy that would be forthcoming would be well worth the increase. "If we are going to bring the plumbing trade to its proper higher level, we must keep out the lower class of workmanship. Not the smaller man by any means, for there is room for all of us, but the one who cares little or nothing for his own reputation nor that of the trade. Any one who wishes to commence in business is surely anxious to start in a legitimate way, and will be willing to expend the extra money," concluded Mr. Lavigueur.

Alberta Ass'n. Withdraws From the Canadian Society D.S. & H.E. Due to Dissatisfaction

Annual Convention of Alberta Association of Sanitary and Heating Engineers Recommends No Action at Present On Canadian Trade Extension Bureau—Ask Plumbing and Heating Contracts be Made Separate from General Tenders

THE question of relations with the Canadian Society D. S. & H. E., the question of supporting Montreal master plumbers in their efforts to bring about improved relations with manufacturers and supply firms, methods of tendering to protect sanitary and heating engineers, were among the important topics discussed at the convention of the Alberta Ass'n. of Sanitary and Heating Engineers held in Oddfellows Hall, Calgary, Alta.

The meeting was called to order by President R. J. Priestly and an address of welcome was given to outside delegates by J. H. Hillier, President of the Calgary Association. Mr. Hillier took this opportunity to extend an invitation to all the delegates to attend a banquet to be held in the Board of Trade Rooms. C. R. Frost, Edmonton, responded to the address of welcome to the visiting delegates in a few well-chosen words.

The following special committees were appointed:

Press Committee: W. H. Kelcher, Edmonton, J. H. Hay, Calgary.

Credential Committee: H. C. Phelps, Calgary, G. L. Gothard, Wetaskiwin.

Correspondence Committee: J. Mckenzie, Edmonton, F. W. Flett, Cardston.

Auditing Committee: F. Hick, Lethbridge, H. Ferris, Edmonton, D. Campbell, Medicine Hat.

Officers Report Committee: J. Dignan, Drumheller, R. W. Snyder, Calgary, G. L. Gothard, Wetaskiwin.

Sergeant at Arms: R. W. Snyder, Calgary.

The secretary called the roll and read the minutes of the last annual meeting.

Moved by J. H. Hillier, seconded by J. B. Rogers, that minutes be adopted as read. Carried.

Moved by C. R. Frost, seconded by J. H. Hay, that G. W. Henderson assist the president and secretary in reading communications, etc. Carried.

Montreal Plumbers Ask Co-operation

The following correspondence was read:

From the Master Plumbers' Association of Montreal, asking the co-operation of this Association in having remedied the existing unsatisfactory conditions in relation to manufacturers and the plumbing trade.

From the Director of Technical Education with reference to the organization of courses of study for apprentices, etc., in the plumbing and heating trade at the Provincial Institute at Calgary.

From the Employers' Association, Winnipeg, re supplying members' names for the purpose of distributing trade magazines.

The letter from the Montreal Association was referred to committee for report.

The Committee appointed included R. MacQuarrie, Edmonton, J. Marr, Sr., Calgary, D. Campbell Medicine Hat.

Moved by W. H. Kelcher, seconded by C. R. Frost, that secretary be instructed to supply Employers' Association, Winnipeg, with the names of the members as requested.

At this time the report by President R. J. Priestly, Calgary, was received, also that of vice-president F. Hick of Lethbridge.

Secretary Makes Report

The report submitted and read by sec.-treas. H. C. Phelps, Calgary, was as follows:—Gentlemen:—I have much pleasure in submitting the following financial report of our association to date:

By cash received	$712.34
Cash paid out	460.19
Balance on hand	252.15

This shows a small improvement over last year's balance sheet, but if the members had sent in their dues as they were asked to do, my bank balance would have been much larger. Of course we generally manage to make a good showing at the last moment, but if the members would endeavor during the coming year to pay their dues more promptly, it would make the secretary's work easier, and the association would have the funds on hand to meet the necessary expenses which have to be paid promptly.

(Signed) Hubert C. Phelps, Sec.-treas.

Moved by G. W. Henderson, seconded by G. L. Gothard, that the president's report be received and handed to the Officers Report Committee, and that the president have power to add to this committee as many as he sees fit. Speaking to the motion, Mr. Henderson said there were some very strong points which should have serious consideration. The president then added the following names to the committee: H. Cole, Edmonton, L. Michael, Gleichen.

Executive Committee Report

Executive Committee's report presented by C. R. Frost as follows: Your Executive Committee met in Calgary the day previous to the opening of this convention. They had a conference with two members of the governing board of the Alberta Architects' Association, and the president of the Architects' Association, and three members of the builders' section of the board of trade. The question of sub-contracting was discussed at some length. We pointed out the difficulties and injustice suffered by our members in the hands of the general contractors. The architects and the builders to some extent saw the force of our argument. After much discussion the architects advised us that they would take this matter up at their meeting which was being held that evening, and advise us of their decision at a later date and we hope a further report will be made before the adjournment of this convention. We also beg leave to report we discussed the following questions and believe some action should be taken thereon at this convention.

(1) The question of loss of labor on account of defective materials.

(2) The reduction re present high cost in price of enamelware and heating goods.

(3) The Compensation Act—Letter 61.

(4) Wage Scale.

(5) Reduction of freight rates on all building materials.

(6) Housing scheme.

ELECTION OF OFFICERS

Officers elected by the Alberta Association Sanitary and Heating Engineers for 1922-23 are as follows:—

President—R. J. Priestly, Calgary (re-elected).

Vice-President—C. R. Frost, Edmonton.

Secretary - Treasurer — H. C. Phelps, Calgary.

Executive Officers — D. Campbell, Medicine Hat; G. W. Henderson, Calgary.

Chairmen of Committees:

Sanitary—Jas. Marr, Sr., Calgary.

Heating—F. H. Lepper, Calgary.

Legislative—W. H. Kelcher, Edmonton.

Apprenticeship—J. H. Hay, Calgary.

Essay — D. Campbell, Medicine Hat.

District Committees — W. Holberton, Lethbridge; G. F. Scott, Medicine Hat; J. Dignan, Drumheller; R. W. Snyder, Calgary; G. L. Gothard, Wetaskiwin; J. Carver, Edmonton; T. Robertson, Camrose.

(7) Re-affiliation as a body of this association with the Western Provincial Building Industries.

Sanitary Committee Report

The Sanitary Committee's report read by Jas. Marr, Sr., Calgary, was as follows: "In making this the third annual report for sanitary committee, nothing of serious import has transpired during the past year, not having anything further to report on the subject of cutting costs on installation as demonstrated at previous convention, further than to report progress. I have some idea of a new style of closet bowl for use in the proposed lowering of costs that may be to the advantage of the trade but not yet far enough advanced to submit at this time.

(Signed) Jas. Marr.

The Heating Committee report read by C. R. Frost, Edmonton, appears elsewhere.

Adjournment was made for lunch after reports of various districts were heard, as outlined in this issue.

After lunch an address by J. Bradshaw was followed by short addresses from the representatives of the different wholesale houses of Edmonton and Calgary on the value of co-operation, trade conditions, etc.

Moved by W. H. Kelcher, seconded by G. L. Gothard that a hearty vote of thanks be tendered to Mr. J. Bradshaw, Mr. J. H. Ross, and Mr. G. Hughes for the interesting addresses given to members, as outlined elsewhere in this issue.

Mr. Hillier announced that a bowling game was being held in the evening between the north and the south.

Friday Session

Report of Credential Committee was as follows: Mr. President: We find all members present qualified to remain. The morning session was then declared officially opened.

Report of Auditing Committee, Alberta Association of S & H Engineers.

The Auditing Committee have much pleasure in reporting that they have audited the books of the sec.-treas., and find same to be correct. We also wish to commend the association on its financial condition. After all expenses are paid we find cash on hand to be $238.55 with additional cash of over $100.00 being paid since.

We would suggest that members try and have their dues paid more promptly, also recommend that salary of sec.-treas. be $100 00 per year.

(Signed) Fred Hick, H. Ferries, D. Campbell.

Report of Correspondence Committee

(1) In reference to trade extension bureau; your committee would recommend that no action be taken at this time, and that the incoming officers keep in touch in the event of a Canadian Trade Extension Bureau being formed.

(2) Re the forming of an inter-provincial association: We would recommend that the president keep in touch with the presidents of the different provincial associations.

(3) In view of the unsatisfactory reply from the Dominion Association we would recommend that this association discontinue its membership with the Dominion body.

(Signed) J. A. McKenzie.

These recommendations were all carried.

Report of Officers Committee

We your committee beg to submit the following report:

Re president's report:—We recommend that the following clauses in the report be taken up for discussion under unfinished business, and the balance of the report be adopted.

(1) Inter-provincial association.

(2) Re provincial by-laws.

(3) Re conference with architects re sub-contracts.

(4) Re Dominion Association: Recommend it be dropped at present.

(5) Re membership; be brought up for discussion.

(6) We recommend a letter of sympathy be sent to Mrs. Fletcher and family from this association.

Re vice-president's report:—We recommend the adoption of this report.

Re report of committee on letter from Montreal Association:—Your committee recommends that the resolution be adopted.

Moved by C. R. Frost, seconded by Jas. Marr, Sr., that letters be sent to the manufacturers, also to the Montreal Association advising them of support.

Executive committee made further report that in future all plumbing and heating contracts where possible would be let separate from the general contract and where not possible, the plan used by the Provincial Public Works Department would be adopted.

Moved by R. MacQuarrie, seconded by R. W. Snyder, that the report be adopted.

Oppose Levies Imposed

Moved by G. W. Henderson, seconded by R. W. Snyder, that secretary be instructed to write the compensation board re their letter No. 61 and protesting the levies imposed upon us in order to protect other trades. Carried.

In the afternoon session consideration was given to the Executive Committee's report.

(1) Moved by C. R. Frost, seconded by G. L. Gothard, that this association in convention assembled instruct the secretary to send a letter to the Alberta wholesalers and the manufacturers of plumbing and heating materials protesting against the loss of labor due to defective materials. Carried.

(2) Moved by W. H. Kelcher, seconded by M. V. Anderson, that this association in convention assembled recommend that a letter be sent to the manufacturers of enamel ware in reference to the high cost of their product which makes up about two thirds of the cost of plumbing installations, also bringing to their attention the fact that our trade is being held up to the public also being responsible for holding up building because of continued high cost of materials entering into construction of same, and a letter along the same lines be sent to the manufacturers of heating goods. Carried.

(3) Compensation Act was dealt with in a previous motion.

Supply Firms and Apprenticeship Plans

Edmonton Conducts Classes in Theory and Practice of Plumbing—Supply Firms Provide Material for Instruction in Practical Work

Report of Apprenticeship Committee presented by JAS. CARVER to Alberta Association Convention of Sanitary and Heating Engineers

AS CHAIRMAN of the apprenticeship committee, I wish to report that I have sent communications to all the chairmen of the district committees, appointing them as members of the apprenticeship committee, as directed at the last convention, also advising them of the ways and means, that employers have decided to take in making the apprentices into first class craftsmen.

The Edmonton Society of Domestic and Heating Engineers are conducting classes in theory and practice of plumbing. The Edmonton plumbing wholesale houses are very pleased to give us their assistance by supplying material for the instruction of the practical part and I have much pleasure in saying that the apprentices are making good progress up to the present time. There is one thing very noticeable in these classes, and that is that you do not get the same apprentices as the previous year, which means you have got to start at the beginning of each season with the same work, which may be accounted for owing to conditions in the building trade. No doubt this will rectify itself in the future.

Local 488 of Edmonton is also beginning to get interested in this work, as quite a few of the journeymen have been attending the classes, which shows they are beginning to see the advantage of technical education.

Hoping that in the near future the school boards and the provincial government will be interested in this work.

(signed) Jas. Carver

Group picture of delegates to the convention recently held in Calgary, Alta., of the Alberta Provincial Association of Sanitary and Heating Engineers. R. J. Priestly, who was re-elected president, is sitting immediately behind the man seated on the ground, and H. C. Phelps, secretary-treasurer, is on Mr. Priestly's left.

(4) Wage scale:—Moved by W. H. Kelcher, seconded by H. Ferris. that wage scale be adopted as suggested by the Western Construction Industries at their recent meeting.

Moved an amendment by M. V. Anderson, seconded by G. L. Gothard, that the maximum wage throughout Alberta be 90 cents an hour. Carried.

Moved by E. J. Young, seconded by C. R. Frost, that we endeavor to have all trade agreements signed on or before the 31st of January and come into effect on May 1st. Carried.

(5) Moved by G. W. Henderson, seconded by G. L. Gothard that a letter be drawn up and forwarded to the proper authorities protesting against the high freight rates on all building materials and endeavor to get same reduced. Carried.

(1) Moved by F. H. Lepper, seconded by H. Ferris that clause 6 be dropped.

Moved an amendment by R. MacQuarrie, seconded by C. R. Frost that this matter be taken up by executive committee with Provincial Association of Building Industries when same is organized. Carried.

(7) Moved by G. W. Henderson, seconded by F. W. Flett; that the affiliation of this association with the Provincial Association of Building Industries, when organized be left in the hands of the executive committee. Carried.

Samples of Buttons

As instructed at previous convention the secretary laid before members samples of trade buttons. It was moved by J. H. Hillier, seconded by Geo. Henderson that executive committee be instructed to give the necessary information to Provincial Education Department as asked for in their letter re technical education.

Re consideration of the auditing committee report: they recommend that the $100.00 be reduced to $50.00 Moved by R. MacQuarrie, seconded by M. V. Anderson, that expenses of president, sec-treasurer, and officers of executive be paid while attending to business of Provincial Association. This does not mean that officers' time lost shall be included in expenses.

Moved by G. L. Gothard, seconded by W. Nichol, that in the event of the officers being removed from Calgary, that a trustee be appointed to look after price book and charge sheets.

W. H. Kelcher re-read the legislative committee's report and explained that provincial plumbing by-laws take precedence over plumbing by-laws already in existence in cities, towns and villages. Moved by R. MacQuarrie, seconded by D. Campbell, that the clause in legislative committee report re plumbing by-law be adopted. Re incorporation in legislative committee report: Moved by R. MacQuarrie, seconded by M. V. Anderson, that report be adopted. Moved by W. B. Trotter, seconded by H. Dean, that legislative committee be instructed to incorporate this association under the Benevolent Society's Act, provided the cost does not exceed $25.00.

Moved by W. B. Trotter, seconded by R. W. Snyder, that the members of this association adhere to provincial plumbing by-laws and where city regulations conflict with provincial regulations, local associations take necessary steps to insure uniformity. Carried.

An invitation was extended by the delegates from Edmonton and Medicine Hat to hold the next convention in their respective cities. After the vote was taken it was declared that next convention be held in Medicine Hat.

(Continued on page 19)

Steps to Increase Ass'n Membership

THE report submitted and read by vice-president F. Hick, Lethbridge, was as follows:

As vice-president of the association, I have much pleasure in submitting my report, although I have not had very much to do owing to the present conditions. On behalf of the Lethbridge association, we still are holding our own during the very trying times. We would like to see members of cities better protected from outside competition.

I would ask all members of the association to try during the coming year to get in touch with any members of the trade who are not associated with us and try to explain to them the benefit we are deriving and which they also could receive themselves. If we are ever to have a good strong association each and every one of us should work to that end.

Ever since the association has been in existence we have had bad times which has made things very discouraging and therefore we need the support more than ever.

Trusting all members will start this year with the determination to make the association a success and hoping you all will have a prosperous year, I beg to remain

(signed) Fred Hick, Vice-President.

Local Conditions Outlined in Reports

Reports from Chairmen of Various Local Committees Throughout Alberta Deal with Troubles Encountered and Progress Being Made in Organization—Value of Price Book and Other Services Offered

REPORTS of Chairmen of District Committees were received as follows:

CALGARY

"I have much pleasure in submitting the following report as chairman of the Calgary district.

No doubt most of you are familiar with the present trade conditions throughout the province. In order to try and improve these conditions the Calgary Association is only too willing to help or take up any matter that any member of this district considers of benefit to the trade. I am very pleased to report that the members of the Calgary Association are doing their best to uphold the standard in the plumbing and heating trades. Wishing all the members of this association a successful year.

(Signed), J. H. Hillier,
Chairman Calgary District Committee.

MEDICINE HAT

"I hereby attach my report for Medicine Hat district. Conditions as you are aware are very bad and prospects seem very poor for the coming year. In the Medicine Hat District we have one shop at Taber, one at Redcliffe, and six in Medicine Hat. We have four members belonging to our association namely; D. Campbell, E. L. Cope, C. L. Perkins, and Marsh and Scott.

We will endeavor to try and get these other fellows lined up and try and get them into the association, and trust that the 1922 chairman of the Medicine Hat district will be able to show on his report where these other shops have become members of the association.

(Signed) J. P. Marsh,
Chairman.

CAMROSE

"It has been a very difficult matter to get any of the shops in this district to take any active interest in the affairs of our association. I have written several letters to outside firms but I am sorry to report that I have not had any replies from them.

There are approximately 12 shops in this district, but I don't think that they get any jobs that amount to much, and in most cases the work is handled by men sent from the city.

I still endeavor to keep in touch with the shops in my district and should I have occasion to be in their territory I will call on them personally and see if I cannot interest them in the work of our association.

The following is a copy of a letter which I sent out to the plumbing shops in my district.

"Re the Alberta Association of Domestic, Sanitary and Heating Engineers. We are again desirous at this time to write you and ask that you give some serious thought towards joining the above association. As a member of this association for the past two years I can speak from experience and say without hesitation that you will never regret becoming a member; the fee is only $5.00 per annum, and the benefits derived cannot be estimated. The price book got up by the association, and kept up to date is a real money maker as well as a great time saver."

"The annual convention will take place shortly and you will be advised accordingly. If at all possible come to this convention, and you will not regret it; in the meantime if you are desirous of joining the association write H. C. Phelps sec.-treas. 930, 2nd Ave. N. W. Calgary. I might say that at the last convention it was decided to divide the province into districts and appoint a chairman for each district and to endeavor by this plan to get into better co-operation with each other, and secondly to help the work of getting together a local body that will help the association."

"Our district is bounded on the north by Tofield, on the south by Big Valley, on the east by the boundary, and on the west by Camrose. If you know any plumbers near you in business, ask them if they have received a copy of this letter; and with regard to yourself I would esteem it a personal favor, if you would write in reply giving your views. If you are already a member, write and give your views on the aims of the association and let us get in contact with each other for the betterment of the trade."

(Signed), Tom Robertson, Chairman.

NORTHERN DISTRICT

"There has been very little organizing done in the northern district during the past year outside of the city of Edmonton. We wrote several in the plumbing and heating business in outlying districts but received no answer from them.

Our organization in Edmonton is I am pleased to report in a fairly good condition; there being at present only four shops in the city that do not belong to our association; and two or three of these I think will come around after we get our agreement signed up with the union.

(Signed), R. MacQuarrie, Chairman.

Ask Change in Regulations re Licensing

Legislative Committee Asks Insertion of Clause In Regulations Outlining Composition of Board to Pass on Granting of Licenses to Master Plumbers —Report on Incorporation

Report Presented to Convention of Alberta Association Sanitary and Heating Engineers by W. H. KELCHER, Chairman Legislative Committee

THE Legislative Committee beg to report that we have taken up with Mr. Owens, Provincial Sanitary Inspector, the different items referred to us in connection with the provincial health regulations. Mr. Owens has revised throughout the health regulations and has made the alterations in the several clauses referred by us.

The clause which we asked to be inserted in the regulations regarding the licensing of master plumbers or domestic sanitary engineers is included in the new regulations as follows:

"A board to be appointed composed of one member of Masters Association, one member of International Plumbers Union and Mr. Owens, Sanitary Engineer, as chairman, who shall have charge of granting licenses to master plumbers or domestic sanitary engineers."

These new regulations cannot be finished until certain amendments to the Health Act are passed at the present sitting of the legislature. The whole of the revised regulations will be submitted to the cabinet after the close of the present session for their approval, after which same will be printed and distributed.

Your committee have been requested to report on the question of incorporation of the provincial association.

We find that incorporation can be obtained under the ordinance respecting benevolent and other societies, the cost of this incorporation being five dollars ($5.00). If incorporation is desired similar to that of the civil engineers it would be necessary to have a special act put through the legislature, the printing of which alone would cost one hundred dollars ($100.00) and the total cost would run between two hundred ($200.00) and three hundred dollars ($300,00). Should incorporation under the ordinance respecting benevolent and other societies be deemed advisable, your committee have in hand a copy of the ordinance and also a sample incorporation of another branch of trade which would be a guide for our association.

All the above is respectfully submitted for your consideration.

(signed) W. H. Kelcher,
Chairman Legislative Committee

Educating Public Re Heating Methods

Owners, Architects and Builders Look to Heating Engineers for Competent Advice on Heating Problems—Keeping Abreast of the Times—Service Means Heating and Heating Means Service —Heating Equipment is Only Half Bought Until it is Installed

Report to Alberta Association Sanitary and Heating Engineers of C. R. FROST, Chairman Heating Committee

IT HAS been my privilege to be chairman of your heating committee for the past year, and I would like at this time to offer some suggestions for your consideration, so that by mutual discussion we may all take back from this convention some material good. It is not my intention to enter into any discussion on the merits of any particular heating system, but rather to submit to you some suggestions of a general nature. We have all, I believe at the present time, with the high coal costs, a wonderful opportunity to educate the public to understand and appreciate modern heating methods, to guide their choice so that they may decide on the particular system best suited for their purpose, and the one that will be most economical in fuel.

Owners, architects and builders look to you for advice, and to be able to give this advice intelligently we must make ourselves familiar with the conditions of the particular building to be heated, as we all know that every prospective heating contract offers new problems to be solved. We must study the building to be heated, the location of the radiators so that they will be most efficient, the position and size of the boiler, as any system is to work satisfactorily must be properly balanced. The size, location and construction of the chimney is one of the points in a successful heating system that must be carefully considered. The fact is that the heating engineer is held responsible for both the design and construction of the heating system from start to finish, if from any cause it fails to heat the building. If you are not satisfied with the design of the plant that you are called upon to install it would be better not to accept the contract than to install a system that you know will not prove satisfactory as one unsatisfactory system does a man's business reputation more harm than a number of successful ones do good.

Giving Thought to Estimates

Some of us when called upon to make an estimate either of a new job or old do not give to it the thought that perhaps we should. We do not take the time to figure out the wants of the particular piece of work, the construction and the use of that particular building. Each job no matter how small should be laid out accurately, so that size of the boiler and radiation, location and size of the mains be figured out to make an intelligent estimate.

The heating engineer to be successful must understand the science of heating, he must keep abreast of the times by the study of good technical works and follow the problems and discussions in the trade papers. To say that a man has "served his time" in these days is not sufficient, he must keep abreast of the times by study. The experience and results of experiments of the world's best authorities on heating are available to us to-day at a very small cost, and we would do well to avail ourselves of this knowledge.

What we need to-day in the heating business are more "peptimists." The optimist is the man who thinks it can be done; the pessimist is a man who knows it can't be done; while the peptimist is the person who gets busy and does it.

If there is one business more than another which should be ruled by service it is the business of the heating engineer. Unless the installation of heating equipment serves the customer, the labor and material put into the job are so much dead loss. Every employer and employee should radiate service. It should be so prominent that the public will come to think of the heating engineer as a real benefit to the community in which he lives.

Service is a much overworked word. But it is the only word we can use, for it conveys a meaning we want everybody to understand.

Service means to serve, and to serve means to minister to; to fulfil a purpose; to do the work a thing is supposed to do.

Roll all the definitions of service into one little phrase and it will mean just this; the object of all heating. Let us say it again. Service means heating and heating means service.

From the day a boy enters the heating trade as an apprentice until he goes on his last trip, Service should be kept before him all the time. For without service, heating means nothing.

When you buy a sewing machine or a piano or a phonograph, you buy it and it is delivered, and that is the end of it. But when you buy heating equipment, it is only half bought until it is fully installed.

So, then, into the work of placing and fitting each piece of equipment is crowded the limit of service—a service that ministers to your comfort and well being throughout the years.

(signed) C. R. Frost, chairman.

Progress of Technical Education in Alberta

Special Technical Training for the Youth Has Three Functions—Various Methods by which Practical Work is Supplemented by Technical Training

Extracts From Address of J. H. ROSS, Principal, Provincial Institute of Technology and Art, before Alberta Association Sanitary and Heating Engineers

J. H. ROSS, Acting Principal of the Provincial Institute of Technology and Art gave an interesting address showing what the provincial government is doing in providing technical education. Some excerpts from this address are given as follows;—

"The School and other training for the youth has three main functions to perform:

(1) How to support himself and his dependents.

(2) His duty to the country that gives him his protection.

(3) His duty to his fellow citizen."

"Knowledge or skill may be acquired (1) by experience, (usually costly and lengthy), (2) by being told (reading, verbally) or (3) by being shown (watching some one do it). But the best method when dealing with students or apprentices is to: Tell them how to do it; show them how to do it; and then have them do it."

"There are several methods by which the practical work of the apprentice may be supplemented by technical training.

(1) Evening classes in large centres.
(2) Part time classes in large centres.
(3) Short courses.
(4) Correspondence courses.
(5) One or two years technical or vocational school work either preceding or during apprenticeship period."

"The work at the Provincial Institute is as practical as is possible to make it at the present time."

"No work is performed as an exercise only; all operations being part of some repair work on a machine, car, motor, etc., brought in for overhaul."

"Work at present is being carried on

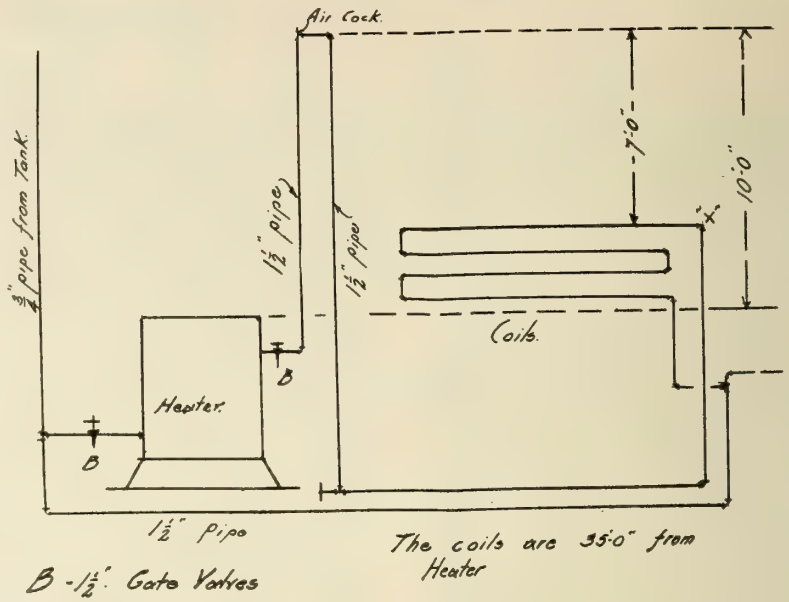
Questions and Answers Regarding Plumbing and Heating Practice

HEATING OF GARAGE

Question.—Enclosed is rough sketch of heating for garage. When job was first installed it heated satisfactorily but we experience trouble now in starting the system. When the furnace is started steam forms in the loop so fast that five minutes elapses before water passes the loop, consequently it retards heating of coils. Do you consider the loop high enough?

Posner Bros., Montreal.



Answer.—Upon examining your sketch we are led to believe that much of the trouble with respect to circulation is due to possible air-pockets in the piping system.

First:—It would be better to take the 1½ inch feed pipes out of the top of the heater, instead of from the side as shown. When the feed pipe is taken from the side—as indicated by your drawing—an air-pocket is left in the top of the heater.

Second:—If it is possible to do so, the loop should be carried higher than shown and vented by an automatic air vent, or vented above the supply tank.

Third:—An air vent should be placed at the point marked X on the drawing, and also at such other points where pipes start in a downward grade.

With such a lay-out as this will the heater work or not?

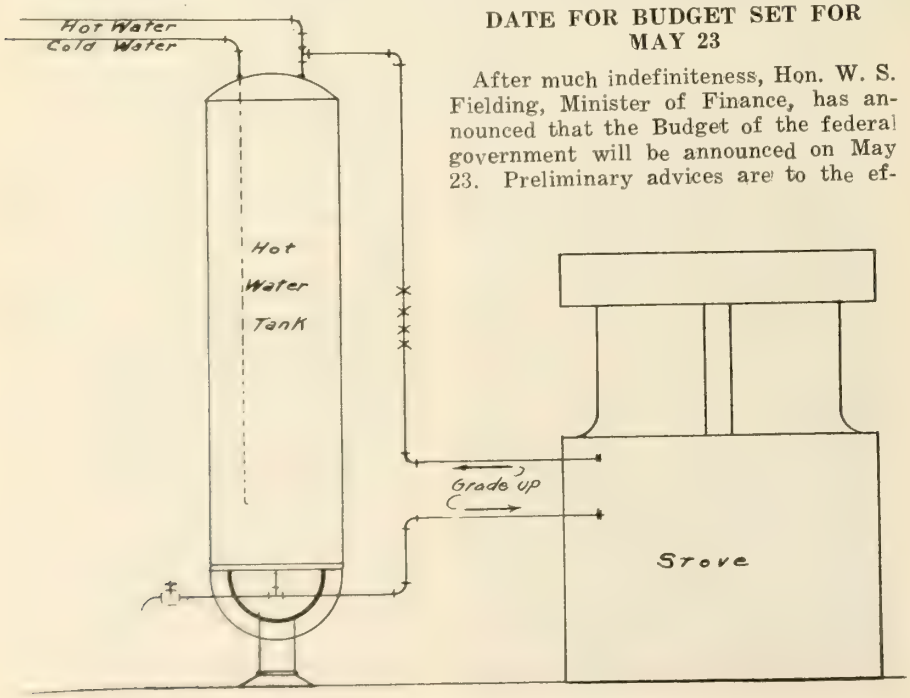
Answer:—There is no apparent reason why such a system as this will fail to work properly.

The arrangement of the piping is good and, in our opinion, is about as efficient as any that could be devised.

You will note that we have made a note of "grade up" at the water-back connections. We have done this because it is in poorly graded connections here that much of circulation troubles arises.

ELECTRIC HEATER

Question:—With a fire in stove below when electric heater is placed what will be the result?



DATE FOR BUDGET SET FOR MAY 23

After much indefiniteness, Hon. W. S. Fielding, Minister of Finance, has announced that the Budget of the federal government will be announced on May 23. Preliminary advices are to the effect that considerable change may be made in taxation and the tariff. These changes will be outlined fully in the next issue of Sanitary Engineer from the standpoint of the sanitary and heating trade and as many pumbers suffered much hardship and in some cases prosecution last year for not following out the instructions in detail, it will pay to study the matter fully as outlined in the next issue of Sanitary Engineer.

FOUNDER OF NATIONAL CASH REGISTER CO. DIES

John H. Patterson, founder and chairman of the board of directors of the National Cash Register Company, Dayton, Ohio, died suddenly aboard a train bound for Atlantic City, N. J.

John H. Patterson, organizer and founder of the National Cash Register Company, and ever since its establishment in 1884, its president and manager, was in his 78th year.

His lifelong interest in his home community and particularly his spectacular efforts in behalf of his neighbors during the awful Dayton flood of 10 years ago, brought additional fame to that which he won as a world-known business man.

H. Mathieu and Co. plumbers, Sherbrooke, Que., has dissolved.

Mr. N. G. McDonald, late town engineer of Oshawa, has accepted a position with Messrs. Gore, Nasmith and Gorrie, Toronto, and will take up his new duties at once.

Patterns for Forge Hood

By O. W. KOTHE, Principal, St. Louis Technical Institute, St. Louis, Missouri

RESPONDING to inquiry for a forge hood according to sketch; the enclosed layout will give the proper solution.

The first step is to design the elevation giving it the height from base to collar a, and then to set in the hood line a-b to the angle desired for giving the proper projection.

Next sketch in the curve b-c-e-f-6″. This is largely done at pleasure, or what you feel the curvature should be.

After this, describe the section A and divide in equal parts and drop lines to the collar line a.

Then describe the section B, to a radius to suit the radius at the back of the forge. In this case, we use center x, but in practice we establish this form from what the forge would measure to.

By continuing the hood line a-b to the base line as in point 14, we first consider this problem as a transition piece.

Now, since the majority of the base is cut away, we can use the same radius and set it in 14-y, and describe that quarter circle.

Observe this insures the hood having a full opening, and this method saves developing a plan and much other geometrical construction which will not give any better results.

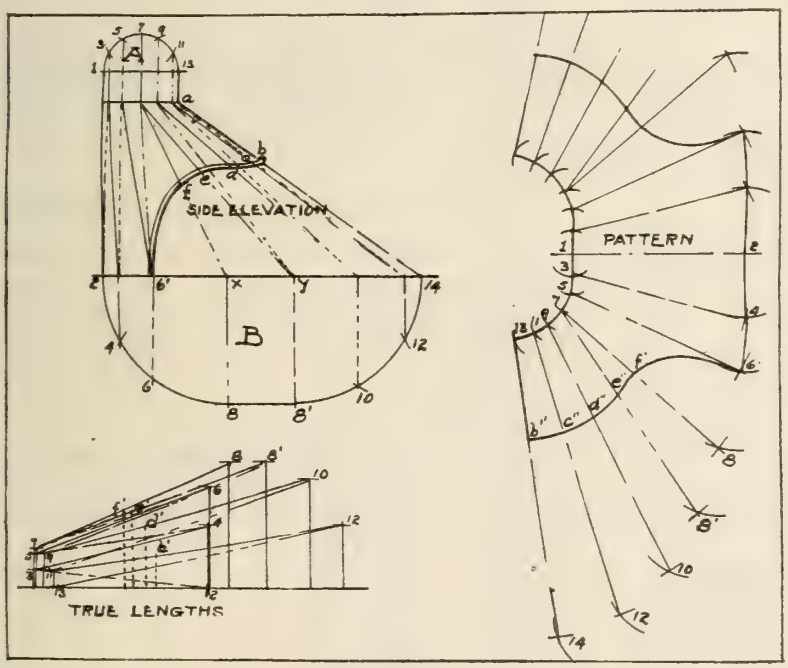
After section B is established and the points are set in, and lines are drawn in the triangular fashion in elevation, we are ready to develop the true lengths.

This is done by drawing a base line, and picking the elevation lines and setting them horizontally on this line always working from one point to another. Then at their ends we erect sectional lines equal to those in A-B. This enables drawing the slant lines in diagram and gives us the true lengths. The pattern for the entire transom piece can then be laid out using the girth spaces from A and B as numbered points show. This pattern is developed the same as any taper joint off center, or oblong to round off center.

Then when the outlines 1-2; 13-14 are established the connecting lines are drawn as shown. Now to cut in the curved shape for the hood you can pick these elevation lines as a-b from elevator and set them as 13-b″ in pattern. Next pick lines 12-c, 10-d, 8′-e; 8-f from elevation and set them on the horizontal line in diagram using base points 12-10-8′ and 8, which enables drawing the dotted lines as shown. Observe these dotted lines cut off the full lines 11-12; 9-10; 7-8′; 7-8 as in points c″-d″-e″-f″. Next the distances as 11-c″+9-d″; 7-e″; 7-f″ and set the min pattern as 11-c″; 9-d″; 7-e″; 7-f″.

This gives these points in pattern where the lower transition is to be cut away.

After this the curve is sketched in as shown. When the workman has made several of these hoods he can easily pick a-b from elevation and set in patterns as b″ and then sketch in free handed the remaining curve to point 6. Any curve would be suitable just as both sides are uniform. Edges for riveting and wiring must be allowed extra.



Patterns for Forge Hood.

ALBERTA ASSOCIATION WITHDRAWS

(Continued from page 15)

An address was given by G. Hughes, president of the western section of building construction which brought forth the following questions and answers:

Question: Re unemployment, has your association gone into the matter of housing scheme? Replied no.

Question: Will the uniform contract as being compiled by your association be applicable to sub-contractors? Replied he did not think so.

Question: Re organizations joining Western Building Industries; Can they or not.

PROGRESS OF TECHNICAL EDUCATION IN ALBERTA

(Continued from page 17)

in full day, part time, evening and correspondence courses by the institute."

"The members of the staff are all practical men."

"So with the Institute it will be as much service to you as you wish. If you take an interest in it and assist the work it in turn will aid you in turning out a more intelligent and better trained workman for the various industries of this province."

Question was asked Mr. Ross as to what full time and part time classes meant. Replied full time course is 8 months; part time instruction 2 or 3 days per week. Evening classes means after business hours at night.

Question: To what extent the government would assist school boards having technical school classes. Replied; in cities throughout the province, for instance Edmonton, government pays 40 to 60 per cent. or a maximum of $1,500 to any school board having evening classes; this amount with an equal amount from the school board brings the total up to $3,000.

Question: If the Department of Education would co-operate with us in having evening classes formed in the Technical school at Edmonton with suitable classes for the plumbing and heating trade. Replied; Yes, if a request were made to the Department of Education, they would recommend to any school board where a technical school existed that such classes be formed.

The patents and good-will of the "Jack Frost" Electric Refrigerating onto Laundry Machine Company, of business formerly carried on by the Torwhich the late John O'Neil was president, have been purchased by the "Jack Frost" Ice Machine Company, Limited, Toronto, with an authorized capital of $1,000,000.

May Stop An Old Plumbing Evil

MUCH OF THE disfavor which has been brought upon the sanitary and heating engineers by certain classes of people has been the direct result of the work of certain irresponsible operators who have been allowed to enter business under the name of plumbers or heating engineers because of the lax regulations and small license fee required. For a long time the disfavor and even ignominy which this class have brought upon the industry as a whole has been a sore spot to those who are endeavoring to raise the standards of this line of business. Attempts have been made to have more rigid by-laws passed in order that the usually inefficient work of such operators would bring them to light, but unfortunately plumbing regulations in many places are still inadequate and these men are allowed to ply their trade. This class of operator has been a distinct obstacle in the way of endeavors to set up high ideals and endeavors to educate to the real value of this work.

In this connection it is interesting to note the action which has been taken by the Montreal Master Plumbers' Association, as outlined elsewhere in this issue. This association has asked the city officials to raise the license fee from $5.00 to $200.00 with the hope that this would prove a sufficient obstacle to keep undesirable men from entering business. It would at least keep the "shoestring" variety out of it for it is likely many of those would have trouble raising the necessary sum for a license.

That the situation has become acute has been indicated by reports made at recent conventions which have shown that due to the scarcity of employment many journeymen and helpers are entering business on their own account. To such an extent has this been the case that any endeavors at trade extension work have been abolished in Canada until this situation is righted, it being realized that a preponderance of such operators who are little interested in raising the status of the industry would have little interest in such efforts.

The Montreal Master Plumbers in making this recommendation make it clear that the mission is one of protection for the public from incompetent men undertaking the installation of plumbing work which due to lax plumbing by-laws might be passed and yet be a real menace to public health. Many operators employed by master plumbers have passed the required examinations and secured licenses and undertake work after regular hours while still acting as employes. Such work is done in a rush and at cheap rates. Such practice places the employers in a very bad light and is not giving a fair deal to the one for whom the work is being done. It is time such practice was stopped and it will be interesting to see the result of this action.

A Startling Statement

FOR YEARS rural life has been looked upon as healthier than city life. With an abundance of fresh air, fresh food, quietness and plenty of outdoor activity it certainly should far exceed the average city life from the standpoint of encouraging health. But the facts show that those in the cities and larger towns are more healthy than those in the rural districts and the big reason lies at the door of advanced sanitary methods on the one hand compared with backward sanitary conditions on the other.

A Western Red Cross nurse has created somewhat of a sensation by declaring that country life is far from as healthy as is usually supposed. She points out that a large percentage of children and adults on farms have some physical defects. An inspection of 3,632 persons showed 2,317 to have physical defects, a large number underweight. The nurse in a review says:

"Too little attention is paid by the average farmer to the surroundings of the house, the disposition of sewage, the location of the well. Refuse is kept too near the house, bathtubs are coming in but are too scarce. Every farmer these days can have a modern bathroom and running water in the house but still thousands of wives carry the water from an outside well."

Every day various authorities are drawing attention to the great need for improved sanitary conditions on the farm and various organizations are at work to improve these conditions. What higher or more lofty ideal could form the basis of any business than the plumber has at his command in pushing the sale of sanitary farm equipment. Such a foundation of truth and necessity should inspire any man to big accomplishments. There is no reason why the farmer's wife should not have as comfortable a house as her sister in the city. She has been an influence in having the farmer buy automobiles, farm labor saving equipment for the workmen, and she should be cultivated to help in the buying of sanitary equipment for the farm home and other buildings.

* * * *

Heavy Burden on all Industries

EARLY indications from Ottawa are to the effect tnat by July there will be considerable reduction in freight rates, notably in Western Canada where a return to the Crow's Nest Pass agreement is expected. This agreement gave a neavy subsidy to the C. P. R. on condition that that line grant reductions in rates if the government helped largely in building a line through the Crow's Nest Pass. During the war this was held off and if parliament does not renew it rates will decline considerably it is said. This would affect plumbing and heating supplies, agricultural implements, etc.

This possible action brings up the whole question of freight rates and it is possible that some progress will be made before long in the revision of rates so as to encourage trade as much as possible. Just how this will be done with the railways already a heavy financial burden on the country is not now evident but the governmental body which is making a study of the railway situation may before long make some concrete recommendations. Certainly some steps are needed to help lift the burden of the agricultural industry of Western Canada due to heavy transportation costs. British Columbia wants freight rates on the mountain section that will make it possible for that province to compete with the eastern provinces in the supplying of the needs of the prairie provinces.

Sewage Disposal for Small Communities

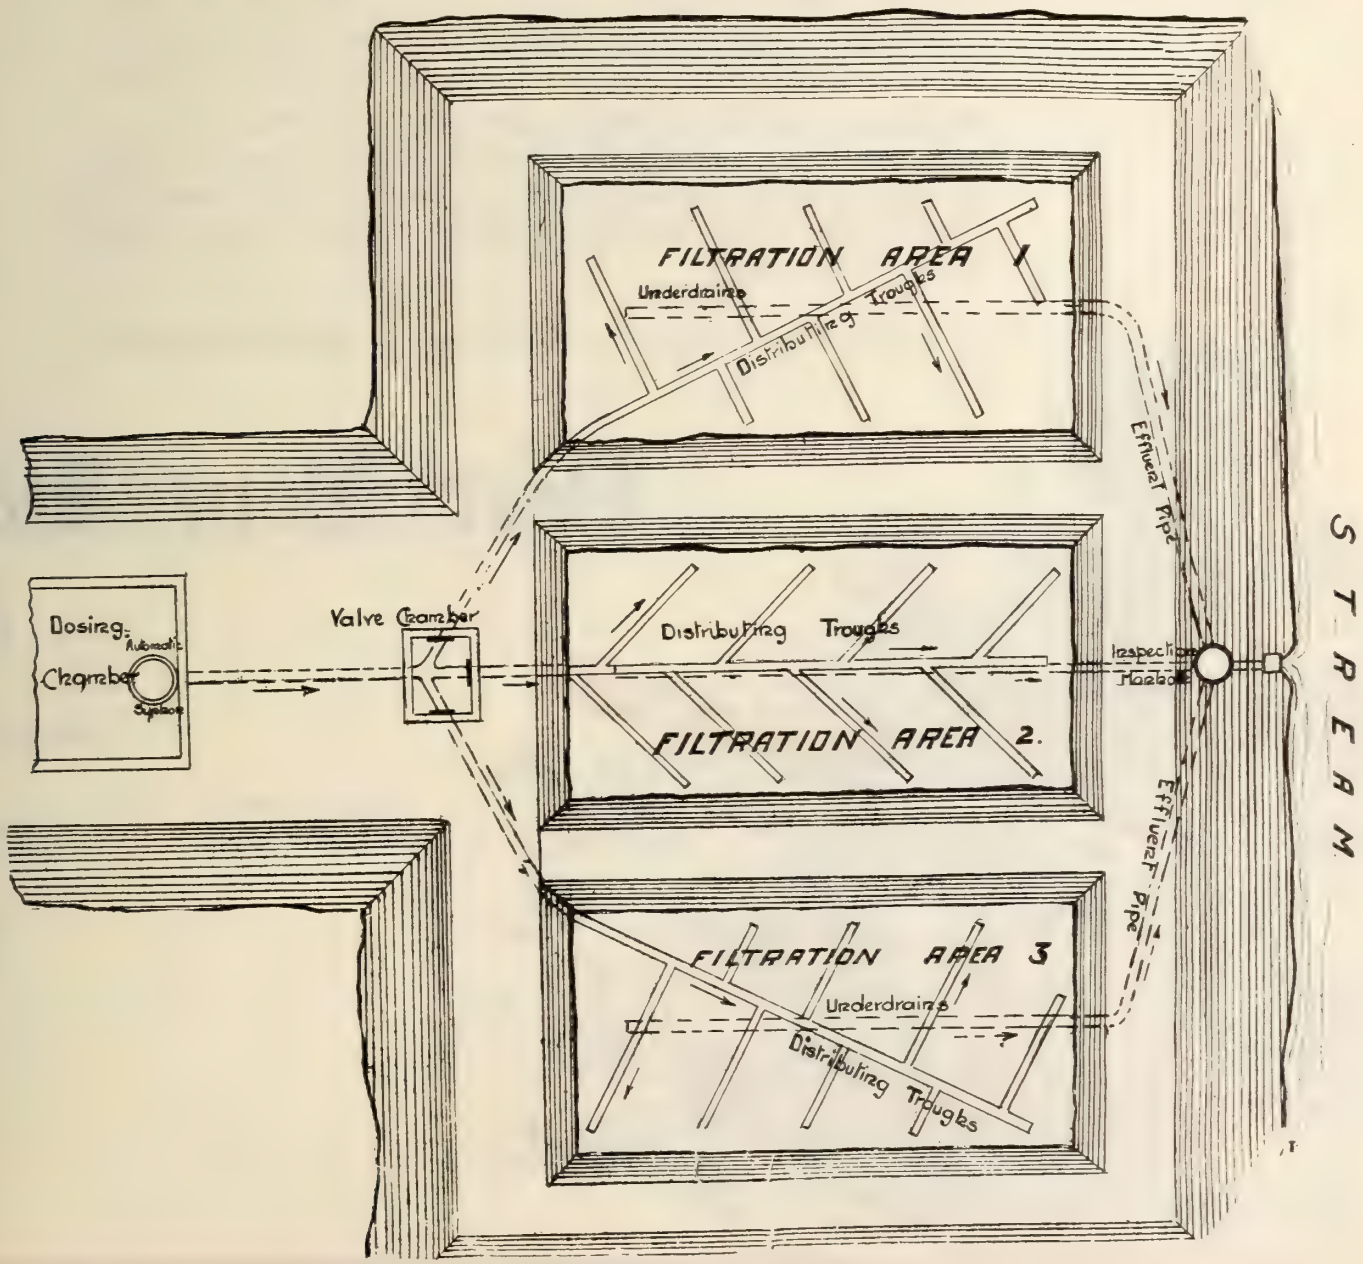
A Most Important Series of Articles, by Bernard E. T. Ellis, for Which "Sanitary Engineer" Has Secured the Exclusive Rights —Keep the Entire Series Where It May Be Referred To And Studied

(Continued from last issue)

IN CALCULATING the size of artificial filtration beds it is the general practice to provide for 45 square feet for each person, or one cubic yard of filtrating material for every 50 gallons of sewage.

In this class of contact bed provision must always be made for resting the filter from time to time as no contact filter can work continuously and produce good results without this rest, so that the filtration area should always be divided into 3 to 5 beds. Filter beds can be constructed cheaply out of the ground by sloping back the excavated sides. The filter bottom must be of some impervious hard soil and the underdrains laid as shown on Figs. 69 and 70. (see last issue). Fig 71 illustrates another way of arranging the contact beds for secondary filtration and the same principles already described apply in this case. The plan shows another system of distribution and a very simple and effective way of underdraining the beds.

(Fig. 71)



IN FR

THE ATTACK was on. First the artillery bombarded the enemy trenches with "messages" of all sorts and sizes. This went on for days until it was thought that the resistance of the enemy had been worn down to the lowest point, and all arguments in the shape of barbed wire entanglements, "pill boxes," trench parapets, etc., had been disposed of. Then came the personal visit when the infantry charged. The resistance this personal visit met with depended on the preliminary bombardment. If it had been vigorous and effective the attack was usually successful and the objective gained with the least possible loss of time. If, on the other hand, the preliminary work was insufficient, precious hours and lives were wasted.

So it is with the Battle for Business. If the Sanitary En-

News from Here and There

CONTRIBUTIONS OF NEWS GLADLY ACCEPTED

BUSINESS CHANGES

Montreal.—Whyte & Delaney, plumbers, have dissolved partnership.

John P. McTomney, plumbing and heating, Halifax, N. S., has sold out.

Newcastle N. B.—Daniel Donovan has taken over new premises and is installing complete stock of plumbing and electrical supplies.

NEW FIRMS

O. L. Dubeau has commenced business with a first class shop at Penetang, Ont.

Peterboro, Ont.—Wallace and Smith have opened a new plumbing and steam fitting shop at 372 Water St.

OBITUARY

George Carbeck, tinsmith and plumber of Dunnville, Ont., is dead.

FT. WILLIAM PLUMBERS SIGN AGREEMENT

The Master Plumbers of Fort William have signed a wage agreement effective May 1, with the journeymen plumbers. The rate has been set at ninety cents for an eight hour day.

PLUMBERS' BALL LEAGUE

The Toronto Plumbing and Heating Supplies baseball league are scheduled to commence the season's activities on Monday, May 15th. Last season the league was composed of teams representing the Dominion Radiator Co., James Morrison Brass Mfg., Co., the Grinnell Co., of Canada, Ltd., and the Domestic Sanitary and Heating Engineers. This year the Standard Sanitary Co., have entered a team in the league. Walter Boddington, of the James Morrison Co., is the new president of the organization. The schedule of games appeared in a recent issue.

WESTERN ONTARIO NEWS

William Lamarsh has opened a plumbing and tinsmithing shop at Cottam, Ont.

W. E. Watson, 8 St. George St., London, wants prices for hot air heating, plumbing and electrical work for new $6,500 residence.

Bull Bros., 363 Hamilton Road, London, have been awarded plumbing and heating contracts for new $4500 residence for A. Macniven.

Thos. Carter, 506 Piccadilly St., London, wants prices on hot air heating, plumbing and electrical work for new $5000 bungalow.

Archetict L. G. Bridgeman, Bank of Commerce, London, is calling for tenders for $10,000 bungalow for I. Taylor. Hot water heating, plumbing and electrical work.

In connection with waterworks improvement costing $42,000 at Petrolea, Ont. contract for new steel tank has been awarded to Horton Steel Co. of Bridgeburg. Work to proceed as soon as possible.

Plans are being prepared and tenders will be called shortly for new church for Baptist Congregation at Leamington, Ont. W. G. Murray, Dominion Savings Building, London, architect. Estimated cost $40,000. Prices wanted on hot air heating, plumbing and electrical work.

OTTAWA PLUMBERS' DISPUTE AMICABLY SETTLED

Ottawa.—An amicable settlement of what for the past two or three weeks bore the earmarks of a strike situation developing between the members of Local No. 71, Plumbers and Steamfitters' Union and the Master Plumbers' Association, was announced following a conference by representatives of both sides.

The conference which was private was held at the office of McKinley-Northwood, Rideau street, and was attended by representatives of the union headed by Charles Fever, and on behalf of the employers by J. F. McKinley.

Some weeks ago it was authoritatively stated that the Master Plumbers had offered a wage cut amounting to five cents per hour to the employees. This the employees rejected and negotiations for a time were broken off. Last year the members of the union received eighty cents an hour and this year the offer of 75 cents per hour has been made.

TENDERS FOR WATERWORKS SUPPLIES

Quebec.—At a meeting of the civic waterworks committee tenders were considered for the supplies required by the Department for the year. Practically the entire meeting was taken up by the consideration of the tenders. It was remarked that the prices quoted showed an average reduction of about 30 per cent. It is estimated that the total cost of the supplies will be in the vicinity of $50,000.

The contract for valves was awarded to Drummound, McCall & Co. at $9.85 $16.85 and $28.00; Cast Iron Pipes, to the Canada Iron & Foundry, 4-inch, $54.50, 6, 8 and 12-inch, $50.00; picks and shovels to the Martineau Company; lead pipes, to Mechanics Supply Co.; pig lead, to the firm of Crane Ltd.; clay pipes, to the Standard Clay Products; cast iron to Terreau & Racine.

TORONTO'S BUILDING PERMITS

All previous records for building permits issued by the Toronto City Architect's department, for any similar Spring period are reported surpassed during the last three months. The total value of buildings for which permits were issued during the month of April was over three and a half million dollars. This amount for April was only surpassed one other April in the city's history, that occasion being in 1914. In this connection it is pointed out that lack of commercial construction work will probably prevent the present year from establishing fresh records as regards the total value of building permits.

FOUNDER OF NATIONAL CASH REGISTER CO. DIES.

John H. Patterson, founder and chairman of the board of directors of the National Cash Register Company, Dayton, Ohio, died suddenly aboard a train bound for Atlantic City. N. J.

John H. Patterson, organizer and founder of the National Cash Register Company, and ever since its establishment in 1884, its president and manager, was in his 78th year.

His lifelong interest in his home community and particularly his spectacular efforts in behalf of his neighbors during the awful Dayton flood of 10 years ago, brought additional fame to that which he won as a world-known business man.

EDMONTON PLUMBERS ON STRIKE

Edmonton, Alta.—Union plumbers are out on strike, or what the men themselves prefer to term a "lock-out."

On the part of the master plumbers, there appears to be every indication that a firm attitude will be maintained.

It is stated that about twenty-five shops are affected by the present suspension of work. This would involve around sixty employees.

Negotiations between the master plumbers and the union have been going on for some months, but no agreement arrived at. The union has been asking that the scale of $1 per hour be continued, while the employers have held out for no more than 90 cents, which they claim is an increase on their original offer.

President Kelcher says that 90 cents an hour is paid in Winnipeg, in all the Saskatchewan cities and in Vancouver.

As the old agreement in Calgary does not expire until June 1, that city's new scale will not be known for some time.

Death of James Robertson

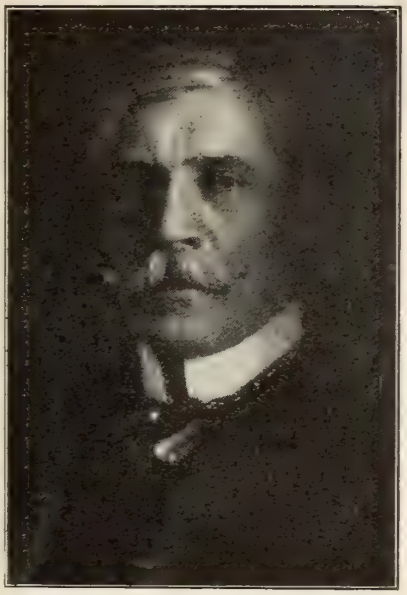
President of Thomas Robertson & Co., Montreal, Passes Away in Montreal

THE DEATH occurred in Montreal of James M. Robertson, president of Thomas Robertson & Co. He was actively engaged as the head of his firm until November last, when his health failed him, necessitating his confinement to his home on Dorchester St., from which he had never been able to leave until his death. Mr. Robertson was one of Montreal's most widely-known business men, and while of a conservative disposition, commanded the highest respect from his business associates both in the firm and outside through his exact methods in business dealings.

Mr. Robertson was born in Glasgow in 1855 and came to Canada with his parents in his early years. In 1871 he entered the firm established by his father, Thomas Robertson, and last year celebrated the 50th anniversary of this connection. Although starting as an office assistant, his ability was soon to be seen and after spending a few years as a salesman on the road, he was appointed managing director. Later he was elected vice-president under the presidency of the late James Reid Wilson. At the death of Mr. Wilson, eight years ago, Mr. Robertson assumed the presidency, the position he held at the time of his death.

When a young man he was actively interested in athletics, particularly in bicycling and snowshoeing, and in later years, golf. He was a member of the St. James, Beaconsfield Golf and Engineers' Club, also a member of the Montreal Board of Trade.

He is survived by five daughters and two sons, Mrs. Angus MacKay of Vancouver; Mrs. Thomas Caverhill, Mrs. Carleton Monk, Miss Kate and Miss Sybil Robertson, and Hilary Robertson all of Montreal, and Thomas Robertson of Ottawa. The funeral took place from his late residence on Dorchester St., West, to Mount Royal Cemetery on Wednesday, May 3rd.



LATE JAMES ROBERTSON

President of Thomas Robertson and Co., Montreal, whose death is announced.

FREDERICTON PLUMBERS ON STRIKE

Fredericton, N. B.—May Day brought its strike to Fredericton, the journeymen plumbers going on strike as a result of a dispute with their employers over wages. A new schedule of wages for all branches of the building trades went into effect under an agreement reached by the Building Contractors' Association of Fredericton and district, and the plumbers were the only journeymen who failed to turn up for work as a result.

Plumbers' wages have been 70 cents an hour and the employers set new figures effective on and after May 1st at 60 cents an hour; it is said that the journeymen had offered to work for 65 cents but the employers are under agreement not to make any compromise and declare there will be plenty of men available at 60 cents an hour.

One of the employers, who was busily engaged in completing a job his men had left unfinished, said that two years ago the rate of wages for journeymen was raised 40 per cent.—from 50 to 70 cents an hour; last year it was proposed to make a reduction but no change was made and this year the proposed reduction was just half of the raise that had been granted.

Tinsmiths, he pointed out, had come under the same rate of wages as the plumbers, which was unusual as tinsmiths are not usually paid as much as steamfitters, etc. but all were members of the Journeymen Plumbers' local union and all had quit work. Employers said that an agreement had also been reached to give the customers the benefit of the reduction and that the charges on jobbing would be reduced from $1 to 90 cents with the hope of making it 85 cents in the immediate future.

WATER SYSTEMS ON BOWLING GREENS ARE DESIRABLE

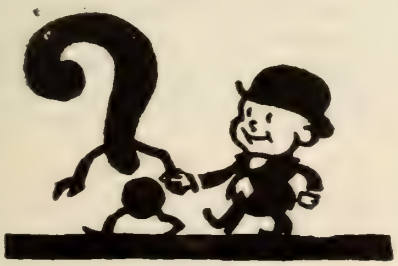
At the semi-annual meeting of the Rusholme Lawn Bowling Club, Toronto, special attention was called to the new overhead irrigation system that was installed on the green last Fall. The members saw the system in operation during the early evening and were unanimous in declaring that it represented the most valuable improvement that had ever been added to the club property. They are anticipating a wonderful green this season, as a result of the new system.

ERECT COMFORT STATION

Kitchener.—Work will be started by the city shortly on the comfort station and waiting room planned for in front of the new city hall. The sum of $800 has been provided in the estimates. It is expected the station will be completed before the end of the year.

John Tweddle of John Tweddle and Co., plumbers, Montreal, is dead.

Do You Know all the Possibilities for Business In Your District?



If you think you do you will be interested in the SALES STIMULATION NUMBER of SANITARY ENGINEER of June 1 for the purposes of checking up your ideas with those outlined in this issue. At any rate you will find a wealth of splendid ideas in this issue which you can apply in your business with stimulating result. It will be one of the biggest and best issues of Sanitary Engineer ever issued. Watch for it!

Hot Controversy Over Plumbing By-Law

Member of Local No. 71, United Association of Plumbers, Points Out That Changes in Suggested By-Law Will Protect Public Health at Less Cost —Alderman Makes Reply

OTTAWA.—A statement in reply to comments made on the city plumbing regulations by Ald. Nolan is made by Robert Mackie, a member of the United Association of Plumbers, local No. 71. He says that if Ald. Nolan will assist in calling a public meeting, he will arrange to have the best mechanics in the city present to discuss the plumbing regulations in the interests of a clean, healthy city.

"Members of local No. 71," says Mr. Mackie, "have no axe to grind in this matter. They want the health department free entirely from all kinds of red tape. This local has at all times been willing to co-operate with the health department and has formed committees repeatedly to go into this matter with a view to making the Capital a better and cleaner place to live in.

"Ald. Nolan states that the present by-law is ample to safeguard sanitation. Does he not know the effect condensation and gases have on black iron pipe, causing the air outlets to become blocked with sediment and rust? After a very short time it will cause the traps to break their seals allowing the poisonous sewer gases to enter the rooms where human beings have to spend a large part of their time.

No Increase in Cost

"The proposed change to galvanized iron pipe for venting will give the public the assurance of a proper sanitary system with little danger in the way of outlets becoming blocked. Ald. Nolan states that the proposed change would increase plumbing costs 50 per cent. This is all nonsense, and I challenge the alderman to prove it. All the best of our public buildings have galvanized iron pipe for back venting, and in a public school now being erected the plumber saved 18 fittings in one instance alone by loop venting instead of individual venting, ample proof, I am sure, of the general saving that will take place under the proposed changes."

Mr. Mackie says that he is a mechanic of 25 years' experience, and is merely endeavouring to assist the public to become familiar with the real state of affairs in regard to plumbing matters.

Replies to Plumbers' Union

Alderman P. J. Nolan, who is strongly opposing the plumbing by-law has replied to the letter of R. Mackie, of Plumbers' Union No. 71, which objected to the alderman's contention that plumbing costs will be increased approximately 50 per cent. by the passing of the by-law. Alderman Nolan draws attention to the fact that Mr. Mackie does not pretend to deny that recessed fittings will increase those costs by 400 per cent., nor does he deny that galvanized pipe will be more expensive than black iron. Alderman Nolan also states that the present plumbing by-law consists of 17 sections which increased the plumbing costs 33 per cent. while the new by-law consists of 120 sections. He says that he would like some of these plumbing experts to figure out this problem in arithmetic. If 17 sections increase the cost of plumbing 22 per cent. how much will 120 sections increase it?

Lower Wages for Montreal Plumbers

Agreement Reached Between Master Plumbers and Local Catholic Syndicate—Journeymen's Wages Five Cents Per Hour Lower Than Last Year

MONTREAL.—An agreement has been reached between the Master Plumbers' Association of Montreal and the Catholic Syndicate whereby wages for the coming year are lowered five cents per hour or approximately six and two-thirds per cent. This matter has been under discussion by both parties for some weeks past, and it is encouraging to note that the agreement reached is satisfactory to employer and employee.

Journeymen's wages last year were 75, 70 and 60 cents an hour, according to degree of skill. Under the new agreement they will be 70, 65 and 60 cents.

There is no closed shop provision. In place of this the "preferential shops" under which preference will be given to members of the union were available. Time and a half will be paid up to midnight and on Saturday afternoons, and double time for Sundays and certain specified holidays.

The rates offered by the master plumbers in the negotiations leading up to this agreement were 65 and 60 cents, so that the men feel justified in claiming a measure of success in their negotiations. The agreement further provides for the appointment of a joint board representing the union and the Masters' Association to deal with any disputes that may arise.

This is the first agreement to be signed governing working conditions and wages in the building trades locally this year.

LETTERS TO THE EDITOR

The following letter to the Editor of the Ottawa Citizen gives some interesting details regarding the Ottawa Plumbing By-Law.

Editor, Citizen: Having read the correspondence re new plumbing by-laws, and being a plumber of some 25 years' experience, if the following will help any, please publish it.

I learnt my trade in London, England, in the old way as an indentured apprentice. Throughout that city it is not allowable to use anything but lead soil and back vent pipes inside a building and when you consider the cost of lead as compared with either black, galvanized, or cast iron pipe, surely we in Ottawa should not kick at the cost, if our leading sanitary engineers and inspectors advise the use of galvanized iron. What is the use of having a lovely bath room, with spotless white fixtures, nickel taps and supply pipes, if the hidden work is not sanitary?

As a plumber (or as defined in the dictionary, a worker of lead), I maintain there is nothing to beat lead, and as lead work is considered the most skilful part of a plumber's trade, the plumbers of this city certainly cannot have an axe to grind when they advocate galvanized iron pipe and continuous venting, which system naturally does away with considerable lead work and joint wiping. I would advise Ald. Nolan not to look at the initial cost, but on the durability of the job, and granting galvanized iron and recess fittings may cost 50 per cent. more if the work lasts only twice as long it is certainly money saved. I am not advocating all lead pipe work, as I realize the cost here is very high, but personally I have taken out lead work over one hundred years old and found it as good as when installed. Yours for a more sanitary city.

FRANK LEE.

Ottawa.

HEALTHOMETER BATHROOM SCALE.

D. A. Sands, Yorkton, Sask.—Would you kindly give me the address of the Canadian agency for the manufacturers of the Healthometer bathroom scale.

Answer:—This scale is manufactured by the Continental Scale Works, Chicago, Ill. The distributing agents in Western Canada are the Chandler & Fisher Co., and the B. C. Stevens Co., both in Vancouver.

Messrs. Marsh & Scott, Medicine Hat, Alta.—Kindly advise where we can secure gas cocks.

Answer—Canadian Brass Co., Galt, Ont., Wallaceburg Brass & Iron Mfg. Co., Wallaceburg, Ont.

Market Conditions and Tendencies

STATEMENTS REGARDING SUPPLIES AND TREND OF PRICES

THE MARKETS AT A GLANCE

CURRENT changes in sanitary and heating markets are of a varied nature, both advances and recessions in price being recorded. Easier quotations are noted on asbestos products, such as pipe covering and sheathing, while plumbers' oakum and Desolvo pipe cleanser have also been lowered in price. The additional discounts now being quoted in many quarters on radiators and boilers attract specific attention to these markets, keen competition in these products having resulted in some unsettlement. Distributors state, however, that this is a temporary condition, with future confidence tending towards a further steadier revision. An advance has been registered in quotations on hoop steel and a similar change appears on practically all bar iron and steel items. Sheet products are also increased in price, this change applying to domestic and also English grades of galvanized sheets. Higher price levels have also been recorded on certain lines of scrap materials, including brass scrap, light and heavy copper, and heavy melting steel. Eastern centres record revised lists on boiler tubes and closet outfits and fixtures, the previous quotations on both these lines having been more or less nominal. The issuing of new quotations is expected to steady the general situation and restore confidence in the trade. A tentative announcement has been made to the effect that malleable fittings will most probably be quoted under a new list. The revised quotations in this connection are stated to be approximately four times the prevailing net prices, with a proportionate discount level of seventy and five per cent. Compression goods generally remain at the recently revised discounts, with brass steam cocks now being quoted at fifty off for sizes ½ to 2 inches, and forty-seven off for 2½ to 3 inches. The ingot metal trend has been slightly upward on lead and spelter, but these movements do not appear to have a permanent basis. However, more interest has resulted in a slight improvement in copper and antimony, with tin and aluminum again weaker. Brisker trade is noted in enameled ware, while a firmer trend is recorded in corrugated markets. Seasonal activity is evident in soil pipe and fittings, eavestrough, and conductor pipe.

MONTREAL MARKETS

MONTREAL, May 13.—Numerous price developments feature the markets in plumbing and steam-fitting supplies. Revisions, both upward and downward, are announced on important lines, and one of the chief changes is a revision in prices on various closet combinations. Practically all outfits show a price decline of varying extent, with lower prices also on tanks, bowls and closet seats. Another marked change is the advance in quotations on bar iron and steel. All lines, with the exception of band steel, are increased twenty-five cents per hundred pounds, the latter showing a further advance of thirty-five cents through a change in the differential. Queen's Head and Fleur-de-lis brands of English galvanized sheets are also twenty-five cents per hundred pounds higher on all gauges. Some unsettlement is recorded in radiators and boilers, additional discounts being quoted in various quarters. A firmer tone has also developed in the scrap markets, brass and copper scrap being increased in price, also zinc and heavy melting steel. Asbestos products now show an easier tendency, and sheathing, pipe and boiler coverings are quoted lower. Plumber's oakum is reduced fifty cents per hundred pounds, and boiler tubes have a new lower list of prices. A further revision is given on brass steam cocks, while Desolvo pipe cleaner is two dollars per case lower in price.

PLUMBERS' OAKUM IS REDUCED IN PRICE

Montreal.

A reduction of 50 cents per 100 lbs. has been made in plumbers' oakum, and this is now quoted at $6.50, or $3.25 per 50 pound bale.

REVISED QUOTATIONS ON CLOSET COMBINATIONS

Montreal.

Revised quotations are now announced on the various closet combinations, the easier list quotations appearing on practically all outfits. The standard low down outfit is now quoted at $25.00, a reduction of $2.50 from the nominal list. Other goods, such as tanks, bowls and seats are reduced in some instances. For some time past competition on these goods has been very keen, and only nominal quotations could be given as price concessions were offered by distributors for attractive orders. It is now felt that the present revision will assist to quite an extent this unsettlement. Following are revised quotations:

CLOSET COMBINATIONS—	each
Closet, standard low down outfit	$25 00
Do., post hinge seat	26 00
Do., oak vitro, back strip seat	27 75
Do., oak vitro, post hinge seat	28 40
Do., china tank and back strip seat	28 50
Do., china tank post hinge seat	29 50
Do., vitro white with post hinge seat	30 75
Reversible trap bowl, less spud	11 25
Wash down bowl, less spud	10 00
Rickelieu bowl	9 00
Siphon jet bowl	16 25
Extra for spud	0 60
Add for ⅜ in. valve on supply pipe	1 25
Add for bar hinge	No extra
Deduct for supply pipe	0 80
Deduct for floor hinge	0 60
Wood strip seat and cover	3 05
Post hinge seat and cover	4 25
Oak or oak vitro tank, with fittings, less seat	14 25
White vitro, vitreous china or enameled iron tank, with fittings, flush elbow and supplies, less seat	18 50

DESOLVO PIPE CLEANER REDUCED IN PRICE

Montreal.

A reduction is made in the price of Desolvo pipe cleaner, present quotations

being $10.00 per case of two dozen. Former quotation was $12.00 per case.

INCREASED PRICES ON ENGLISH GALVANIZED

Montreal.

Local sheet markets are now featured by advanced quotations on both Queen's Head and Fleur-de-lis brands of English galvanized sheets. All gauges show an increase of twenty-five cents per 100 lbs. With delayed deliveries from mills on this side, an active demand has developed for imported sheets, and shipments find a ready market immediately upon arrival. Local importers are in receipt this week of a call from other western markets to forward large tonnages, and with a continuation of this activity, fear of a shortage in the near future is expressed. Slightly higher quotations on other brands of galvanized, and black sheets, are appearing in different quarters, and it is felt that with the firmer tendency continuing in the market, a general revision will be announced on these in the near future. Prevailing price levels are as follows :

BLACK SHEETS—

10 gauge	4 00	4 50
12 gauge	4 10	4 60
14 gauge	4 40	4 70
16 gauge	4 50	4 80
18-20 gauge	4 55	5 05
26-gauge	4 60	5 20
22-24 gauge	4 65	5 25
28 gauge	4 75	5 35

GALVANIZED SHEETS—

10¾ ounce	6 65	7 10
28 gauge	6 25	6 70
26 gauge	5 95	6 35
22-24 gauge	5 80	6 10
20 gauge	5 65	5 95
18 gauge	5 65	5 85
16 gauge	5 50	5 80
14 gauge	5 35	5 75
12 gauge	5 20	5 75
10 gauge	5 10	5 75

English Standard—	Queen's Head.	Fleur-de-lis
28 gauge	7 25	7 00
26 gauge	7 00	6 75
24 gauge	6 40	6 35
22 gauge	6 05	5 90
18-20 gauge	5 35	5 75

NOTE—These prices are for full bundles; an extra charge of 25c to 35c per 100 lbs. is made for broken lots. Extra for sheets 4 ft. wide, 50 cents per 100 pounds. Extra for sheets 3 ft. wide, 28 ga. and 10¾ oz. 25 cents per 100 lbs.

CANADA PLATES—

Dull—	
18 x 24 x 52s	5 40
18 x 24 x 60s	5 50
18 x 24 x 75s	5 65

WELSH CANADA PLATES—

Dull—	
18 x 24 x 52s	7 25
18 x 24 x 60s	7 50

BRIGHT TIN PLATES—

14 x 20 IC, 112s	14 00
20 x 28 IX, 112s	16 00
20 x 28 IXXX, 56s	9 25
20 x 28 IXXX, 56s	10 00

TERNE PLATES—

20 x 28 IC, 112s	14 50

EASIER PRICES RECORDED ON ASBESTOS PRODUCTS

Montreal

An easier tendency is again evident in the market for asbestos products, pipe and boiler coverings and sheathing showing reduced quotations. Discounts on pipe coverings are increased approximately 5 per cent., boiler covering slightly reduced to $1.90 per bag, and sheathing is reduced from $8.00 to $7.75 per 100 lbs. Business in these products is stated to be somewhat improved in recent weeks, building operations now demanding supplies. Following are revised quotations:

ASBESTOS PRODUCTS—

	Off list prices
2 ply pipe covering	67½%
3 ply pipe covering	65%
4 ply pipe covering	60%
85% magnesia	45%
	Per bag
Boiler covering	1 90
	Per 100 lbs.
Asbestos sheathing	7 75

HIGHER PRICES QUOTED ON MANY LINES OF SCRAP

Montreal.

Many lines of scrap, particularly yellow and red metals, now have advanced quotations. There has been a slightly improved tone in these materials during recent weeks, with higher prices appearing on other outside markets, and the present revisions were not altogether unexpected. Brass scrap shows a price advance of one-half cent per lb., while zinc is increased one-quarter cent. Both light and heavy copper are also one-half cent per lb. higher. In ferrous metals, heavy melting steel is now quoted two dollars per ton in advance of former quotations.

Dealers state that the better feeling in the markets continues, and while the improvement has been very gradual, there is reason to believe heavier consumption will follow in the coming months. Apart from the betterment on domestic markets, an improved outlet to foreign markets seems probable. Following are revised quotations:

SCRAP—

Automobile Tires	0 50
Rubber Shoes	0 02¾
Yellow brass	0 05½
Red brass	0 08½
Light brass	0 04
Scrap zinc	0 03¼
Lead, heavy	0 04
Lead, tea	0 02
Light copper	0 08½
Heavy copper	0 10½
Wrought iron, R. Rd., No. 1 per gr. ton	9 00
Malleable scrap (ton)	8 00
Pipe scrap (ton)	6 50
Heavy smelting steel	8 50 to 9 00
No. 2 busheling	3 00
Boiler plate	7 00
No. 1 machinery cast	20 00

NEW QUOTATION GIVEN ON FURNACE SCOOPS

Montreal.

Quotations on furnace scoops for the coming season are now announced, these being now quoted at $9.00 list, with a discount of 37½ per cent.

EASIER PRICES RECORDED ON BOILER TUBES

Montreal.

Current quotations on the various sizes of boiler tubes are revised, a reduction in prices being announced. Price levels on these products for some time past have been nominal, and an average list representing approximate levels could only be given. While the present reduction is contrary to expectations on the market for steel products generally, it has been pointed out that tube prices have remained on a higher basis than other allied lines in the industry, and it was thought questionable whether the firmer tone would reflect on tube quotations. Distributors state that an easier tone has recently developed, governed by present stocks and only a moderat demand. This movement, assisted by outside competition, is said to be responsible for easier prices at this time. Only a moderate amount of activity is reported on tubes by local distributors, and following are revised quotations:

BOILER TUBES—	Seamless	Lapweld
20 x 28 I%X, 56s	9 25	
1 inch	18 50	.....
1¼ inch	20 25	.....
1½ inch	20 50	.....
1¾ inch	24 00	23 50
2 inch	22 00	19 00
2¼ inch	24 00	21 75
2½ inch	27 00	22 75
3 inch	32 00	28 50
3½ inch	39 00	33 25
4 inch	50 00	42 00

CORRUGATED SHEETS SHOW SEASONAL ACTIVITY

Montreal.

The movement of corrugated sheets is now described as fairly active, the past two weeks bringing a marked improvement in sales. The undertone of this market has firmed considerably since the strength became evident in the steel industry in general, and particularly in flat galvanized sheets. With the increased activity which should continue in the following months, and the firmer tone in basic materials, the market for corrugated is now on a fairly firm basis. Local quotations are unchanged at the following list prices and discounts:

CORRUGATED SHEETS—	Per 100 sq. ft.
No. 28 gauge	6 50
No. 26 gauge	7 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c a square extra.

BAR IRON QUOTATIONS INCREASED 25 CENTS

Montreal.

The stronger tone in the steel industry, and firmer prices in other outside markets, is now reflected locally when practically all lines of bar iron and steel are advanced in price twenty-five cents per hundred pounds. Common bar iron is now quoted at $2.90 base, with a corresponding increase all down the list with the exception of band steel. This shows a further advance in price of 35 cents on the base quotation.

Higher prices on these products at this time is not surprising as the stronger tendency in the market has been apparent for some weeks past and there is still a firm tone evident. Local producers and distributors state that the general better feeling continues in an encouraging way, and while steel consumption had only shown a moderate improvement up to the present, there is reason to believe that a gradual betterment in this direction will be in evidence during the ensuing months. Most recent reports from southern producing centres are to the effect that the industry is on a generally advanced scale of

prices, with certain progress made in overcoming the coal strike. This factor is still discussed by local dealers, and while the outlook is a little brighter for the immediate future, if prolonged it may have a direct bearing on the situation in the not far distant future. Revised local quotations are as follows:

IRON & STEEL—	
Common bar iron, 100 lbs.	2 90
Refined iron	4 40
Iron finished machinery steel	2 95
Mild steel	2 90
Single reeled machinery steel	5 00
Band steel	3 25
Spring steel	4 50
Sleighshoe steel	2 90
Tire steel	3 10
Toe calk steel	3 80
Harrow tooth steel	3 05
Mining tooth steel, per lb.	0 20½
Black Diamond tool and cast steel	0 20½

NOTE—Refined iron is approximately $1.50 per 100 lbs. over base, but fluctuates owing to unsettled market.
Band steel in scroll bundles, 50c per 100 lbs. extra.

ADDITIONAL DISCOUNTS QUOTED ON RADIATORS

Montreal.

A somewhat peculiar position has developed in the market for radiators and boilers. In view of the relative increased amount of business that was expected to materialize this season, it was generally thought that prices would remain more or less firm, as the demand in the earlier weeks of the season was stated to be up to anticipation. However, extra discounts are now being quoted in several quarters, in addition to the regular discounts given below. These amount to 7½ per cents on radiators and a new level of 10 per cent. on boilers. This situation is described by distributors as temporary, there having been no general announcement made in regard to this market change, although the extra discounts are more or less general. It is pointed out, however, that with the return of confidenece in the radiation market, a settlement is looked for in the near future. Following are nominal lists and discounts, without the additional quotations recorded above:

Radiator list prices are for 1, 2 ,3, 4 and 5-column radiators per square foot.
45 in. to 38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 12 in., $1.60. Discount 59 per cent. for hot water and 60 per cent. for steam.
Wall Radiators—5 ft., $1.25; 6 ft., $1.10; 7 ft., $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56%.
Boilers—Round hot water boilers, low base only (high base discontinued); sizes from 0 to 10, 64 per cent. off list.
Square or sectional hot water or steam boilers, 15-in., 20 per cent.
For Ontario Government trimmings add 5 per cent.
Square or sectional steam boilers, 19 in. to 36 in., 20 per cent.
Square or sectional water boilers, 19 in. to 36-in., 20 per cent. Ontario Govt. trimmings, 10 per cent. discount.
Round steam boilers, standard trimmings, 28 per cent. off. Ontario Government trimmings 25 per cent.
All prices f.o.b. Toronto, Montreal, Guelph, Hamilton, St. Catharines or Brantford.

LEAD PRODUCTS ACTIVE WITH PRICES STEADY

Montreal.

Lead and zinc products show no further changes in prices since the revision a few weeks ago, with trade reported as seasonably active. Metals in primary circles are still on an improved basis, a strong tendency being evident in lead, tin and copper. With this improvement, solder quotations are quite firm at present, the above metals being chief in the manufacture of this product. Unchanged price levels are as follows:

LEAD AND ZINC PRODUCTS—	
Lead pipe, per 100 lbs.	12 00
Lead waste, per 100 lbs.	13 00
Note—Lead pipe is subject to a discount of 10%.	
Lead traps and bends	17½% off.
Lead wool, lb.	0 13½
Lead sheets, 2½ lbs.	0 10
Lead sheets, 3 to 3½ lbs., sq. ft., lb.	0 09¾
D., 4 to 8 lbs., sq. ft.	0 09
Cut sheets, ¼c. lb. extra and cut sheets to size, ¾c. lb. extra.	
Solder, guaranteed, lb.	0 25½
Do., strictly, lb.	0 23½
Do., commercial, lb.	0 20½
Do., wiping, lb.	0 21½
Do., wire, lb.	0 33½
Zinc, sheets, casks	0 11
Do., broken lots	0 11½

FURTHER REVISION IN DISCOUNTS ON STEAM COCKS

Montreal.

There is a further revision recorded in the quotations on brass steam cocks, the larger sizes, from 2½ in. to 3 in., now being quoted at less 43 per cent. Other lines of compression goods remain at former discounts, with a moderate improvement noted in sales of the various lines. It is felt that building operations will have to advance to the stage of nearing completion before a reflection will be felt on these lines, and later summer is expected to bring a better movement. Following are present discounts:

Compression work, standard	45%
Fuller work, standard	30%
Quick opening compression bibbs	43%
Bath cocks, quick opening	41%
Bath cocks, compression	41%
Basin cocks, quick opening	46%
Flatway stop and waste cocks, standard	54%
Roundway stop and waste cocks, st'nd'rd	46%
Brass steam cocks, standard, ¼ in.	50%
Do., 2½ in. to 3 in.	43%
Radiator valves, standard	58%
Do., removable discs	58%
Globe, angle and check valves, standard	25%
Gate or straightway	25%
Emco globe valves	33%
Emco check valves	33%
Jenkins globe, angle, check and swing check	19%
Jenkins gate or straightway	25%
Jenkins iron body, globe and angle	15%
Jenkins iron body, gate	33%
N.P. "P" and "S" traps	40%

BUILDING NOW STIMULATES SOIL PIPE SALES

Montreal.

No further change is recorded in quotations on soil pipe and fittings since the recent reduction on certain sizes of pipe. Current trade in these products is described as showing a moderate improvement from week to week, and with more activity in building during the following months, a further increased movement is expected. Unchanged discounts are as follows:

SOIL PIPE—	
2 and 3 inch	45%
4 inch	50%
5 and 6 inch	45%
Fittings—	
2 to 6 inch	50-10%

LITTLE VARIATION IN COTTON WASTE MARKET

Montreal.

Current quotations on cotton wastes are unchanged, with the market described as steady with a fair volume of business showing. Raw cotton in primary markets continues to fluctuate slightly, but here too a much steadier situation has developed compared with earlier in the year. Following are unchanged quotations:

COTTON WASTE—Cream polishing, 18c. per lb.
White—XXX extra, 16c.; XX grand, 15c., XLCR, 14c.; X Empire, 13c.; X press, 11½c.
Colored—Fancy, 13½c; Lion, 12c; Popular, 9c; Keen, 7½c.
Wool Packing—Arrow, 25c; Axle, 22c; Anvil, 18c.
Dominion Wipers—White cotton, 20c; colored cotton, 14c.

IMPROVEMENT NOTED IN ENAMELWARE SALES

Montreal

A considerable improvement is reported in the sales of the various lines of enameled products. With building construction now well under way, supplies of this nature are being demanded. Although new lower quotations are now announced on closet combinations, there is said to be no indication of a contemplated change in the general discount on enameled ware, and 33-1/3 per cent. off is the prevailing quotation.

Sinks, roll rim—			
18 x 30			$23 00
Sinks, flat rim—	1 only	2 only	3 only
16 x 24	$ 7 60	$ 7 40	$ 7 30

17x19 in. Roll rim, F241 or P4345			12 60

LITTLE CHANGE RECORDED IN RANGE BOILERS

Montreal.

Although an improvement was anticipated in the movement of range boilers, manufacturers and distributors state that only a fair amount of business is in evidence as yet. It is pointed out, however, that building construction is still in an early stage for supplies of this nature, and further activity may develop in the later months. Little change is recorded in the market, a certain variation still appearing in quotations among the different supply houses. Following are list prices and discounts:

RANGE BOILERS:—		
5	Gallon	$13.50

Discounts, Standard weight, 50 per cent.
Extra Heavy, 40 per cent.

GRADUAL INCREASE IN PIPE FITTING TRADE

Montreal.

The movement of pipe fittings continues to show improvement, the usual activity at this season now commencing to be in evidence. With activity continuing throughout the summer months, a fairly active season in these lines is anticipated. Quotations on the various lines

are unchanged, and following are prevailing prices and discounts:

PIPE FITTINGS—	Per Cent.
Cast iron fittings	30
Bushings, cast	32
Bushings, malleable	32
Flanges	40
Plugs	30

Class B	0 20	0 28
Class C	0 13	0 20

REACTION IN TIN ON INGOT METAL MARKETS

Montreal

Tin has re-acted on the ingot metal markets, and is now reported somewhat easier. Other metals have been more or less marking time, with changes in prices ver yslight. All things considered, quotations are said to be holding fairly well in view of disappointment caused by developments at Genoa. There now seems a tendency on the part of business to free itself from the effects of political developments, and further improvement in this direction is hoped for.

TIN.—Tin has re-acted from £4 to £5 per ton in London, apparently caused chiefly by pressure to sell Banca tin. The American market has been fairly steady, but buyers are naturally not rushing to cover their requirements on a falling market. Local price is slightly easier at 34 cents.

COPPER.—Both London and New York markets show very little change, and there are no special features of interest. Prices remain firm, and futures command a distinct premium. The lowest price quoted on copper today is 13¼ cents, and there is not the same disposition to quote very far ahead. Local quotations remain at 17 cents, for electro, and 16½ cents for casting.

SPELTER.—East St. Louis is firm at $5.05, but the trend of prices here is said to be influenced by the possible duration of the coal strike. If exports can be made to Europe, which seems possible at present, the American market will in all probability advance. London continues firm. Local price 7¾ cents.

LEAD.—The American market has had a slight re-action, which is not surprising in view of the heavy buying during the past month. Spot lead, however, remains scarce in all markets, and the situation is apparently quite sound. London is reported firm and with little lead available from either Spain or Australia, there is no indication of a change in prices. Locally lead is steady at 6¾ cents.

ANTIMONY.—This metal is firmer, and demand continues fairly good. The local market is slightly higher, with Chinese quoted at 6¾ cents, high grade English at 7½ cents.

ALUMINUM.—Although a somewhat easier tendency has developed in aluminum, local quotations remain at 24 cents.

TORONTO MARKETS

TORONTO, May 13—A firmer trend in various sanitary and heating markets combined with upward price developments on such products as hoop steel and galvanized sheets, provides the chief elements in current reports on plumbing and steam-fitting materials. It is also announced that malleable fittings will be quoted under a new list, effective June 1. These revised quotations are stated to be approximately four times the prevailing net prices, with a proportionate discount level of seventy and five per cent. Prices are slightly lower on asbestos sheathing, while revised discount levels on brass steam cocks are, fifty off applying to sizes half to two inches, and 43 per cent. on sizes two and a half to three inches. The higher tendency in the sheet markets has been referred to in recent issues of Sanitary Engineer, and steel producers are now generally in a strong position with an active demand. The average price on galvanized is now $5.60, an increase of 25 cents. Quotations on other bar iron and steel items are exceptionally firm, and similar advances in the near future would not be surprising. A better volume of trade is recorded in the enameled ware, with distributors of these and similar products also experiencing improved activity in closet outfits and fixtures. Due to the upward trend in flat sheet prices, the relative position of corrugated is correspondingly strengthened. A similar development is evident in certain scrap materials, slightly higher quotations appearing on brass, zinc and heavy melting steel grades. The ingot metal trend is slightly upward on lead and spelter, but these movements do not yet appear to have a permanent basis. However, consumer interest has resulted in a marginal improvement in copper and antimony, with tin and aluminum again being weaker.

PRICES SLIGHTLY LOWER ON ASBESTOS SHEATHING

Toronto

Asbestos sheathing prices are on a revised level, the average quotation now being $7.70 per 100 lbs., a decline of thirty cents. The general tone of the asbestos market is described as a little more stable, with current business barely of a moderate nature. Improvement in this respect, however, is looked for as the season advances, manufacturers and distributors of asbestos products reporting a more encouraging volume of inquiries during recent weeks.

ASBESTOS PRODUCTS—

Pipe Covering—

Air cell, 4 ply	55 per cent. off list.
Air cell, 3 ply	60 per cent. off list.
Air cell, 2 ply	65 per cent. off standard list.
Boiler Covering	$1.90 per bag.
Asbestos Sheathing	$7.70 per 100 lbs.

PRICES ON HOOP STEEL REGISTER ADVANCE

Toronto

The effect of the coal strike in stiffening prices on the local steel market is more pronounced this week, quotations on hoop steel having been advanced 25 cents per 100 lbs. This brings the average level to $3.00. The bar iron and steel market is described as active and strong, with deliveries now falling back in some lines. It is pointed out that stronger fundamental conditions are now clearly influencing the course of buying in iron and steel, and while part of this is attributed to the coal strike, yet increase in the consuming demand has also been a factor. The feeling grows in southern quarters that the critical period of the coal strike is practically over, in that the industry as a whole has had sufficient time to adjust itself to the new conditions, and production has continued at a fairly high ratio of capacity, and orders continue to be filled with regularity in the face of an increasing demand.

IRON AND STEEL

Mild steel bars, base	2 75

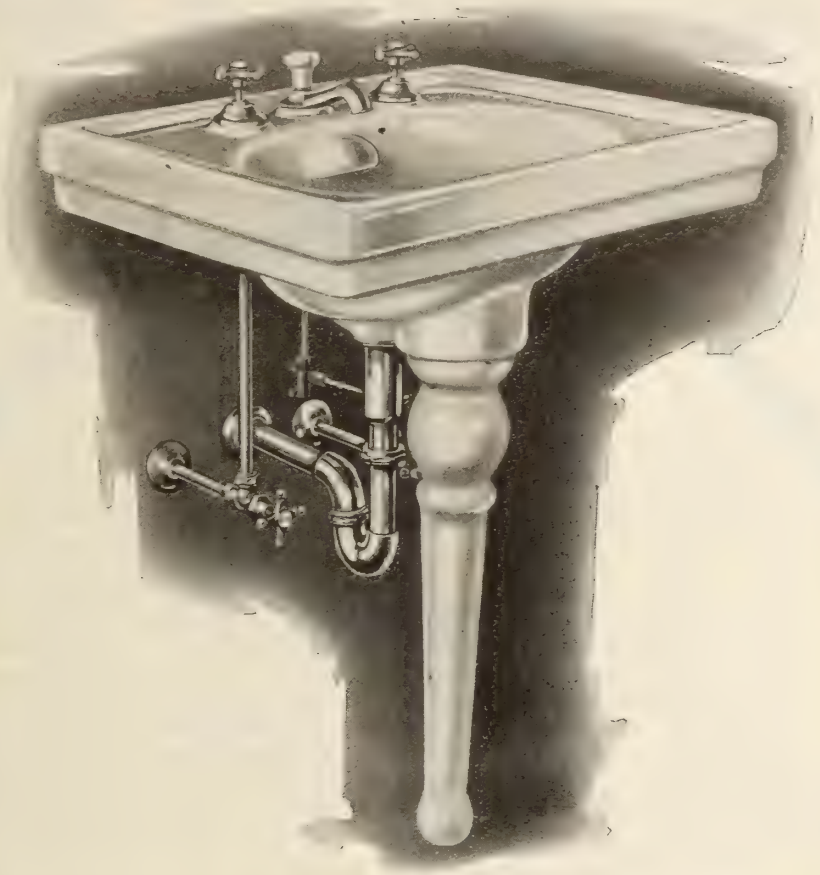
Norway iron	12 50
Sleigh shoe steel	2.85
Mining Drill steel	18.50
Cast tool steel, high grade	30.0
Do., do., Medium	18.00

HIGHER PRICES APPEAR ON GALVANIZED SHEETS

Toronto.

While the base quotation of $5.35 on galvanized sheets is still apparent in certain quarters on the local market, it is stated that this level only applies to larger orders, and the price of $5.60 base has now become generally adopted, due to the increased demand and tardy shipments of new supplies. This change reflects the trend of the steel market, as referred to in recent weeks, and also indicates the present firm position of the producers, which is directly opposite to governing conditions some three or four months ago. The change is considered

(Continued on page 32)



A NEW FEATURE

A-2150 *MUELLER* Combination Lavatory Supply with Pop-up-waste is so designed that the stems of the supply valves may be refitted with seat washers or repacked without disturbing the connection between the supply valve bodies and the lavatory, a feature peculiar to *MUELLER* patterns.

Five hundred of these were installed in the new addition to the King Edward Hotel, Toronto. This is only further evidence of the up-to-dateness of *MUELLER*-designed fittings.

This design has appealed to the Architect as well as to the Plumber by reason of its utility, beauty and elegance.

MALLEABLE FITTINGS TO BE QUOTED UNDER LIST

Toronto.

At a recent meeting representative of the plumbing and heating jobbers of Ontario and also Montreal, it was decided to adopt a new list on malleable fittings, effective June 1. Booklets covering this new list are being prepared, and it is understood that the basis will be approximately four times the prevailing net price, with proportionate discounts of 70 and 5 per cent. off. Quotations on these products, therefore, will be practically unchanged only the method of listing being varied. Current demand for pipe fittings is stated to be slightly improving, with no other developments having been announced. Following are prevailing quotations:

PIPE FITTINGS—	Per cent.
Cast iron fittings	30
Plugs, cast iron	30
Ells, solid	30
Do., countersink	30
Bushings, malle.	32
Do., cast	32
Unions, ⅛ in. to 2 in.	47
Do., ⅜ in., 2¼ to 4 in.	47
Flanged unions, std.	30
Flanged fittings	30
Dart unions, blk., ¼ to 2 in.	33⅓

Class B	0 29	0 28
Class C	0 13	0 20

BRISKER TRADE NOTED IN ENAMELED WARE

Toronto

Conditions in the enameled ware markets are stated to be much improved by distributors and manufacturers of these products. This recent development is more or less generally ascribed to the reflection of building activity, a factor which is now evident in almost every section of the country. Quotations, while remaining unchanged, are stated to be considerably firmer than were apparent during the earlier part of the season, this latter tendency being contingent upon the recent improvement in demand for enameled products generally. Distributors anticipate a much better season in these goods than was recorded last year, when construction work was more or less restricted owing to the inflated costs. It is pointed out that building costs have greatly decreased during the past two years, and all kinds of sanitary and heating materials are generally on a much lower scale. Following are current enameled ware quotations:

ENAMELLED WARE—	
Enamelled Iron Baths, 3" roll rim, 4 ft., 4 ft. 6 in., 5 ft.	51 40
Do., 5½ ft.	57 10
Lavatories—	
17x10" Apron F139 or P4045	15 30
18x24" Apron F154 or P3845 or P3847	23 60
18x21" Apron F169 or P4205	17 60
18x21" Roll Rim, F197, F199 or P4655-6	15 40
17x19" Roll Rim, F241 or P4345	12 60
Sinks, Roll Rim, 16x24 in.	18 10
Do., 18 x 30 in.	23 00
Do., 20 x 30 in.	24 70

Sinks, Flat Rim—	3 only	2 only	1 only
16x24	$7 60	$7 70	$7 80
18x30	8 50	8 60	8 70
20x30	9 70	9 80	9 90

Above prices, list, less 33 1-3 per cent.

All steel enamel baths, 4 and 4½ ft.	$14 00
Do., 5 ft.	15 00
Do. 5½ ft.	16 75

These quotations are net.

FIRMER TREND RECORDED IN CORRUGATED MARKETS

Toronto.

The recent decrease in the quotations on flat galvanized sheets, has reflected in the firmer tone now evident on corrugated sheets. These products are reported to be experiencing an improved demand, and conditions generally are on a much stronger basis than during the earlier months of the year, when prices on the heavier gauges were purely nominal. The advent of warmer weather has provided increased opportunities for structural activity, and distributors state that a uniform demand for corrugated throughout the ensuing season is generally anticipated. Following are the average levels prevailing on the local markets:

CORRUGATED SHEETS—	Per 100 Sq. Ft.
No. 28 gauge	$6 50
No. 26 gauge	7 00
No. 26, U. S. gauge	8 00
No. 24 gauge	9 00
No. 22 gauge	11 00
No. 20 gauge	12 50
No. 18 gauge	16 50

Less 10 per cent.

Lighter than 24 gauge and wider than 27 inches, 75c. per square extra.

REVISE QUOTATIONS ON CLOSET COMBINATIONS

Toronto.

Some revision has been announced locally in the various quotations on closet outfits, these generally reverting to the levels recorded earlier in the season. Distributors state that attempts to maintain uniform levels on the market for these products, have been more or less ineffective due to the shading of the nominal list for attractive orders in quantity. This condition was noted in a previous report, and was typical of the situation which has been generally apparent throughout the present season. However, the decision to revert to former quotations is looked upon as a step in the right direction and, it is stated, should have a settling effect on the local markets and serve to produce a greater degree of confidence throughout the trade in future. Following are prevailing prices:

CLOSET COMBINATIONS, low down	each
Closet, standard outfit, oak	26 00
Do., with post hinge seat	26 50
Do., mahogany Vitro or Pussyfoot with mahogany post hinge seat and cover	28 75
Do., vitreous china, with oak post hinge seat and cover	28 75
Do., vitreous china, with mahogany post hinge seat and cover	29 00
Do., white Vitro or Pussyfoot, with oak post hinge seat and cover	28 75
Do., white Vitro or Pussyfoot with mahogany post hinge, seat and cover	29 00
Do., enamelled iron tank with oak post hinge seat and cover	28 75
Do., enamelled iron tank with mahogany post hinge seat and cover	29 00
Additions or reductions to above	
Add for reverse trap bowl	0 75
Add for syphon jet bowl	7 00
For ⅜ in. valve on supply pipe	1 50
Deduct for supply pipe	0 70
Deduct for floor flange and bolts	0 60

CLOSET BOWLS—	
Washdown bowl less spud	10 00
Reversible trap bowl, less spud	11 25
Syphon jet bowl, less spud	17 00
"Richelieu" bowl	10 50
CLOSET TANKS, low down or Pussyfoot tank, with fittings, less seat	13 20
White Vitro or Pussyfoot tank with fittings, flush elbow and supply	15 65
Vitreous china tank with fittings, flush elbow and supply	18 00
Enamelled iron tank with fittings, flush elbow and supply	18 00
CLOSET SEATS—	
Oak post hinge seat and cover	4 15
Oak wood strip seat and cover	3 50
Mahogany finish post hinge seat and cover	4 35

CONDITIONS IN BOILER TUBES REMAIN QUIET

Toronto.

That distributors of boiler tubes have been out to secure the business even if each order taken involves a more or less direct loss of varying proportions, would be indicated by the shading in these products, which has been recorded, thus rendering the current list of prices merely nominal. However, it is stated that the majority of prevailing business is being

Guelph, Ontario, Canada

TORONTO MARKETS

(Continued from page 32)

transacted at the levels given below, some variation being evident according to the size and specifications of the individual order. The liquidation of stocks of tubes has been a factor which all distributors have had to reckon with during the past season, and the fact that the movement has mainly been confined to the smaller sizes for repair work, is described as a prime element in the situation. Stocks of larger-sized tubes are stated to have been particularly embarrassing, in view of the small demand experienced for these lines. The stiffening recently recorded throughout the steel industry has not yet affected boiler tubes in some quarters to the same extent as on other steel products, due to the ratio of stocks on hand which were secured when costs were high. However, with the brighter tone in steel production circles generally, some signs of improvement in the boiler tube market are looked for in the future, although it is admitted by certain distributors that another season may roll around before this can definitely be stated to have developed. Following is an average price list recorded locally:

BOILER TUBES—

	Seamless	Lapweld
1 inch	21 00	.....
1-¼ inch	21 50	.....
1-½ inch	22 00	.....
1-¾ inch	23 00	.....
2 inch	22 00	17 00
2-¼ inch	26 00	18 00
2-½ inch	30 00	20 00
3 inch	34 00	25 00
3-¼ inch	43 00	27 00
3-½ inch	47 00	28 00
4 inch	58 00	35 50

SOME EXTRA DISCOUNTS APPEAR ON RADIATORS

Toronto

A somewhat unexpected situation has now developed in radiators and boilers, extra discounts being quoted in various quarters on these products, in addition to the regular discounts off the list prices given below. This change has not been generally announced, but is stated to be the result of keen competition.

Distributors generally look upon these conditions as more or less temporary, believing a settlement to be imminent. However, the fact that the extra discounts are practically general, places quotations on radiators at an additional 7½ per cent. off and on boilers at 10 per cent., although the nominal list prices remain as shown herewith. In view of the improvement anticipated in radiation trade, coupled with more confidence regarding the future strength in these markets, the unsettlement referred to is described as unusual and of a transitory nature.

RADIATORS—

Revised radiator list prices are for 1, 2, 3, 4 and 5-column radiators per square foot.

38 in., $1; 32 in., $1.10; 30 in., $1.15; 26 in., $1.20; 23 in., $1.26; 22 in., $1.30; 20 in., $1.36; 18 in., $1.40; 16 in., $1.50; 14 in., $1.55; 13 in., $1.60.

Discount on 2, 3, 4 and 5-column standard sizes, 59 per cent. for water and 60 per cent. for steam.

Discount on 1-column standard size, and 2, 3, and 4-column hospital sizes 51 per cent. for water and 52 per cent. for steam.

Discounts on 1-column hospital size, water 33 per cent.; steam 34 per cent.

Wall radiators—5 ft. $1.15; 6 ft. $1.10; 7 ft. $1.05; 9 ft., $1.05; 12 ft., $1.05. Discount 56 per cent.

BOILERS—

Water:

Round 64 per cent. off list. Square 15 per cent. off list.

Steam:

Round, 28 per cent. off list; square, 15 per cent. off list.

FAIR SALE IN COPPER AND BRASS GOODS

Toronto

The recent improvement recorded in the movement of copper and brass products is stated to be fairly well maintained. Some slight fluctuations have been noted in quotations governing metal in the primary stage, but such minor changes have failed to reflect in prices on the finished products, such as sheets, rod and tubing. The following levels which have been in effect during the past few weeks generally govern the local market.

BRASS—	
Sheets base, per lb.	0 21
Rods, base, per lb.	0 19
Tubing, base, per lb.	0 23
COPPER —	
Rods, base, per lb.	0 27
Soft sheets, plain, 1 oz. and heavier, lb.	0 28
Do., plain tinned, 16 oz. and heavier, per lb.	0 35
Do., polished and tinned, 16 oz. and heavier, lb.	0 40
Tubing	0 27

WROUGHT PIPE SHOWS GAIN IN STRENGTH

Toronto

A stronger tone is now evident in wrought piping, this tendency being a reflection of the stiffening in quotations on steel products generally. The demand for steel pipe has also increased slightly, both on the domestic and primary markets. Prices in the south are described as firm, and this tendency is more or less expected to spread, based upon recent developments in basic materials. For the present, list No. 54, continues to govern domestic quotations.

FAIR BUSINESS RECORDED IN TROUGH AND PIPE

Toronto

"Considering the present season of the year," stated one manufacturer to Sanitary Engineer, "the current volume of trade in eavestrough and conductor pipe is described as fairly good." It was pointed out that the recent weather conditions had hardly been conducive to brisk activity in these products, but with the advent of warmer weather, coupled with prospects for renewed building endeavours on a more extensive scale than last season, a marked improvement in general conditions is looked for. Following are unchanged lists and discounts:

TROUGH EAVE—

O. G. Square Bead and half round. Size in girth: Per 100 ft.

8 in.	15 90
10 in.	17 70
12 in.	21 20
15 in.	28 80
18 in.	36 50

Less 70 and 10 per cent.

PIPE (CONDUCTOR)—

Plain, round or corrugated. Per 100 ft. in 10 ft. lengths.

2 in., in 10 ft. lengths, list	18 40
3 in., in 10 ft. lengths, list	22 30
4 in., in 10 ft. lengths, list	29 60
5 in., in 10 ft. lengths, list	40 00
6 in., in 10 ft. lengths	49 00

Less 70-10 per cent.

ELBOWS (CONDUCTOR)—

2 inch, list	5 25
3 inch, list	6 00
4 inch, list	10 50
5 inch, list	24 00
6 inch, list	29 00

Less 60 per cent.

COMPRESSION GOODS AT RECENTLY REVISED LEVELS

Toronto

Quotations on the various lines of compression goods remain at the recently revised levels, with just a moderate volume of trade reported. In these markets, however, a general improvement is looked for in the near future, consequent upon the prospects for increased building activity reflecting a better demand for these products. The undertone of the market has recorded very little variation, although the recent easier tone to certain primary metals, resulted in softer tendency in some finished products. It is noted, however, that virgin metals have somewhat recovered from this depression. Following are the average quotations on compression goods.

VALVES—

	Per cent.
Compression work, standard	45
Fuller work, standard	30
Bath cocks, compression	41
Do., Fuller	25
Flatway stop and wastecocks, stand'd.	54

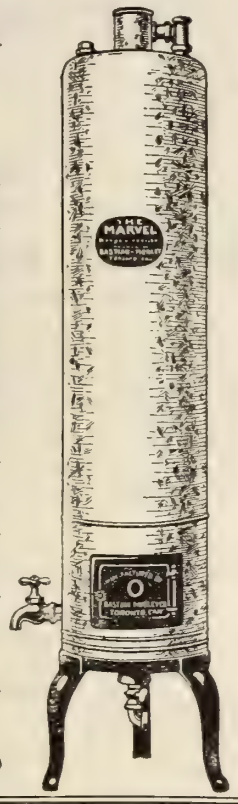
The

MARVEL

GAS WATER HEATER

You Can Install It Anywhere



Boiler and Heater are combined into one unit in the MARVEL. It's so compact and simple you can instal it anywhere — with less trouble and in less time than old-style gas water heaters.

And it makes a better job—a job that your customers will tell their friends about.

No coils — lime-proof free from rust and sediment. Silent and odorless. Saves gas! Can be connected with furnace or range in winter, if desired.

The "Marvel" costs no more than ordinary heaters. You get a good discount—handle the job in less time — give complete satisfaction. Write for full information and descriptive literature.

Veneer Toilet Seats

"EVERLASTING"

Even the severe conditions of damp, cold basements and cellars of schools, factories, or other public places, where closets are subjected to all kinds of abuse and mistreatment, will not warp, crack or split these wonderfully satisfactory toilet seats.

They are made of 7- and 9-ply, air-seasoned wood veneer, held together by our special wood cement. This cement is proof against heat, cold or dampness. The veneering is distributed according to the strain and wear required of the different parts.

TORONTO MARKETS

(Continued from page 34)

MAINTAIN BETTERMENT IN SCRAP MARKETS

Toronto

The slight improvement recently shown in the scrap material market has generally been maintained. Owing to the advance in the price of pig iron, the cast iron division has been a little more active. Scrap rubber is still very dull, however, but a few more copper sales are reported to have taken place. General business is still of a hand-to-mouth character, with practically no speculative buying being recorded. Following are the usual averages of dealers prices for fairly large quantities, showing a number of slight changes to higher levels:

SCRAP MATERIALS—

Scrap Iron		
Gross Tons —		
Heavy melting steel (Hamilton)	11 50	$12 00
Borings and turnings	2 00	3 00
Rerolling rails	10 50	11 50
Scrap pipe	6 00	7 00
No. 1 railroad wrought	10 25	11 25
Steel turnings (Hamilton)	7 00	7 50
Agricultural malleable	10 00	11 00
Railroad malleable	11 00	12 00
Net tons —		
No. 1 cast	18 00	19 00
Stove plate	12 00	13 00
Grate bars	11 00	12 00
Standard car wheels	15 00	15 50
Scrap Metals.		
Heavy copper and wire	10 25	11 25
Light copper	8 25	9 25
No. 1 composition	9 00	10 00
No. 1 comp. turnings	6 00	7 00
Light brass	3 00	3 50
Heavy yellow brass	5 00	6 00
Heavy lead	4 50	5 00
Tea lead	2 25	2 75
Scrap zinc	4 25	4 75
Scrap Rubber.		
Boots and shoes	2 25	2 50
Lumbermen's rubber boots	1 50	1 75
Auto tires	0 50	0 60
Solid tires	0 75	1 25

LEAD AND SPELTER NOW SLIGHTLY HIGHER

Toronto.

Some price developments have been recorded on the domestic ingot metal markets, these changes particularly affecting lead, spelter and aluminum. Lead and spelter, are slightly increased in price, thus reflecting the firmer trend noted in these metals during recent weeks. Aluminum, however, has reached new lower price levels on the local centre, recent transactions being recorded at several cents below the former averages. Antimony is also appearing with a firmer tone, this being attributed to unsettled conditions in China.

COPPER.—Copper prices on southern markets continue to receive considerable attention, but the actual strength of this metal is little altered, scrap copper remaining conspicuous, while prices still hover in the neighborhood of thirteen cents at New York. Locally, the quotation of 16½ cents continues to cover the domestic level:

TIN.—Fluctuations in tin prices have been extremely narrow, the variance in exchange practically covering any difference. On the whole, this market is generally described as quiet, but easier. Local prices are slightly lower, the level at 33½ cents being general.

LEAD.—Lead continues firm on both foreign and domestic markets, and local prices have increased to the level of $6.60, an increase of ten cents.

SPELTER.—Quotations on spelter are locally advanced to $6.85, an increase of ten cents from the previous level. This reflects the general improvement in this metal, which was pointed out in last week's report.

ANTIMONY—This market remains steady with the firmer tendency being maintained. A little uncertainty is expressed in some quarters owing to the unsettlement in China restricting future supplies from that direction. Up to the present, however, no material change has been recorded in domestic prices, the range generally being between 6 and 7 cents.

ALUMINUM.—While some increase in the average run of business in aluminum was reported, this proved to be only a temporary spurt and the tone has faded away. Prices have also reacted locally, recent transactions having been made at prices several cents below the previous levels. The average domestic quotation now hovers between 20 and 21 cents.

WINNIPEG MARKETS

WINNIPEG, May 13.—The seasonal improvement in current business conditions constitutes one of the feature elements in Western plumbing and steam-fitting circles. Many individual lines have reflected a firmer market tendency during the past few days, with activity in building now being felt in various quarters. Soil pipe and fittings and lead and zinc goods are included among lines at present recording a brisk movement, with many other sanitary and heating products also showing signs of improvement.

DISCOUNT REVISED ON COMPRESSION BATH COCKS

Winnipeg.

Through a slight change in discounts on certain lines of compression goods, prices are a trifle lower on compression bath cocks and brass steam cocks. Following are the present discounts with the revision on the above:

Compression work, standard	40% & 50%
Fuller Work, Standard	30%
Bath cocks, compression	41%
Bath cocks, quick opening	41%
Basin cocks, compression	30%
Basin cocks, quick opening	45%
Brass steam cocks	35%

TRADE NOW IMPROVING IN LEAD PRODUCTS

Winnipeg.

Manufacturers state that business in lead and zinc products is developing slowly, and is becoming more satisfactory, as each week shows a slightly better movement. Building is now beginning to be very active and is reflecting somewhat on many of these lines. The tone of the market is described as slightly firmer since the revision of a few weeks ago. Unchanged quotations are as follows:

Lead pipe	$11.61 per 100 lb.
Lead waste	12.51 per 100 lb.
Lead traps and bends	12½%
Lead sheets, in rolls	10¼c. lb.
Do., less	11c. lb.
Solder, ½ and ½case lots	26c. lb.
Do., less	27c. lb.
Do., wiping, cases	25c. lb.
Less than cases	25c. lb.
Zinc	13c. lb.

BETTER TRADE IN SOIL PIPE AND FITTINGS

Winnipeg.

Trade in soil pipe and fittings is stated by distributors of these products to be slightly improved since the recent revision in quotations. The increased activity in building circles is generally accountable for a moderate reflection in this brisker trade. Following are prevailing discounts:

SOIL PIPE—

2 and 3 in.	27½% off
4 in.	37½% off.
5 and 6 in.	32½% off
8 inch	10% adv.

SOIL PIPE FITTINGS—

2 and 3 inch.	47½% off
4, 5 and 6 inch	50% off
8 inch	10% adv.

BETTER TRADE EXPECTED IN WROUGHT PIPING

Winnipeg.

Current business in pipe is described as comparing very favorably with the volume of trade last year, while increasing sales have been generally reported during the last few weeks. With an improvement in basic market conditions, it is naturally expected that brisker trade will be recorded throughout the ensuing months. Following are unchanged price levels:

THE "ARISTOCRAT" IS THE PRINCE OF LAUNDRY TUBS

How Can I Increase my Plumbing Business?

Last year an Ontario plumber decided that the installation of sewage disposal systems was good profitable business to go after. He made a close study of the field, worked out his selling arguments and cleaned up several thousands of dollars.

He's going to tell subscribers of Sanitary Engineer how he did it.

That's only one of dozens of sales ideas that appear in Sanitary Engineer during the course of the year, every one of them tried and proven methods.

Sales ideas—How to cut down overhead—Heating problems—Sewage disposal problems —Practical ideas on Sheet Metal Working—Current News of the Canadian Trade—How the Other Fellow is Doing Business—Constructive Editorials—Market Reports—You get all this and more in Sanitary Engineer.

Your Plumbing Department needs Sanitary Engineer.

$2.00 will bring it for a year.

Saves Tearing Up the House and Lawns

Desolvo is the modern way. It gains goodwill for you by clearing clogged or frozen pipes easily, quickly, in a common-sense way. The old method of tearing up floors, lawns, shrubbery and flowerbeds until the point of trouble was reached, could not help but leave a feeling of resentment in the customers who were so served.

It saves you money and time on your job to serve customers quickly and agreeably by using Desolvo.

Choose The Right Tool

You can't expect a cheap, inefficient wrench to hold and turn rusted pipe or fittings. It's bound to slip or break.

WILLIAMS' STILLSON WRENCH is dependable; it is made for heavy duty. Drop-forged from special steel, carefully hardened and tempered, its sturdy strength is proof against the knocks and strains of hard service. The tough teeth retain their sharpness; they "bite" instantly, yet release readily.

For grip, power and endurance, choose Williams' Stillson. Wood and Steel Handle patterns — eight sizes, 6 to 48 inches. Made in Canada.

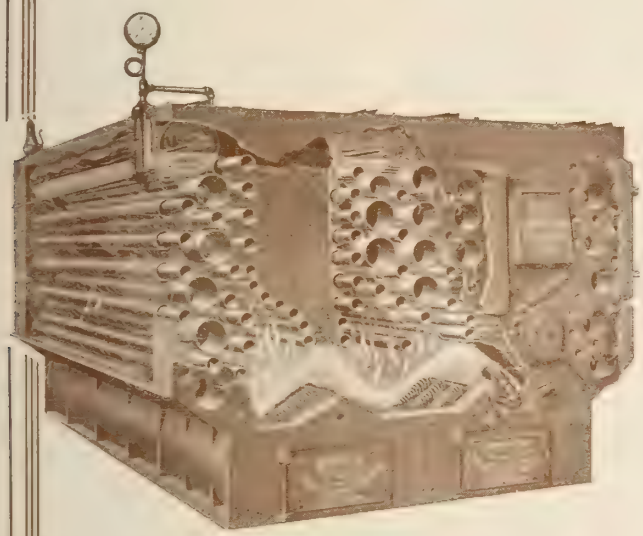
Sole Canadian Distributor:
BORDEN-CANADIAN CO., 109 Church St., Toronto

Steam—27 sizes, 375 to 10,000 sq. ft.

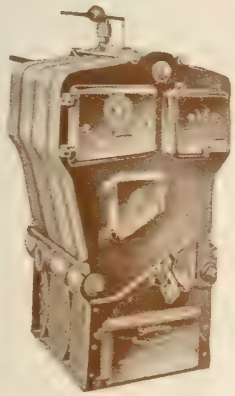
For Efficient Heating install a "Spencer" Heater



If you are desirous of installing a real efficient heater, either steam or hot water, for heating any type of building, choose the "Spencer."

Little attention is necessary and it is easy to run. A constant service is given and various kinds of coal can be burned (either hard or soft) coke, fuel oil or gas in a smokeless manner.

A 24-hour supply can be held in the magazine and it feeds uniformly and only as fast as coal is consumed, giving exact control.



Hot Water—10 sizes, 600 to 3,600 sq. ft.

In the coldest weather temperatures have been maintained 48 hours without attention.

We offer many sizes and a wide variety.

Further particulars will be furnished if you send us your name and address.

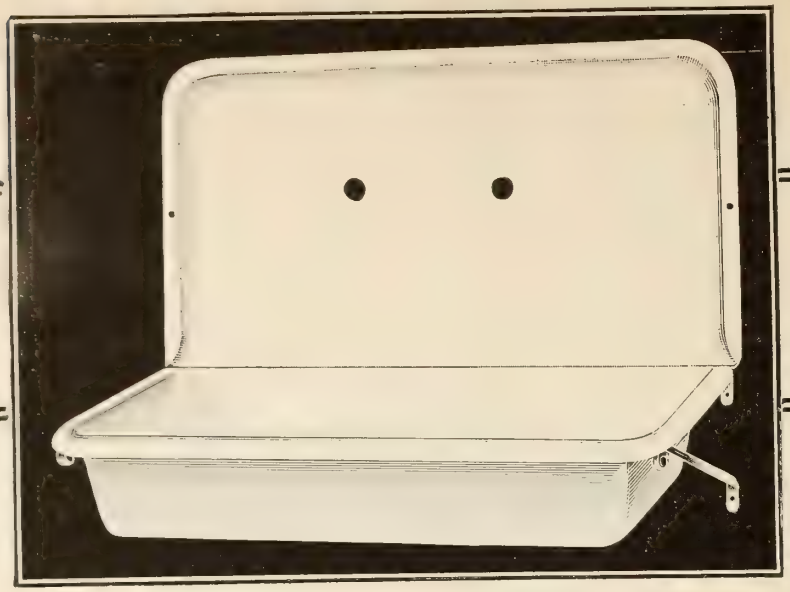
Vol. XVI. PUBLICATION OFFICE, TORONTO, JUNE 1, 1922 No. 11



A New Product with a Great Future

This new white enameled Roll Rim Sink fills a big gap in a big market. Such a sink has been needed for years. We introduce it now with the assurance that it is the perfect article—a product on which we have spent over seven years of study and hard work.

SMP *White Enameled* ROLL RIM SINKS

are almost **50 per cent.** cheaper in cost than other sinks! This saving amounts to a very big total where a man buys large quantities of sinks in a year. And it effects quite a saving for the individual householders too.

While immensely strong, an SMP Roll Rim Sink, packed complete for shipment, weighs only 58 lbs. Other sinks weigh from 120 to 150 lbs.! Think of the saving in freight and haulage.

They are made of 16-gauge rust-resisting Armco Iron with an everlasting covering of very special enamel—identical to that used on the finest ranges and kitchen table tops. The outside is given two coats of this super-enamel and the inside three coats. It is pure white, of course, and the surface is smooth as glass.

Each SMP Roll Rim Sink is packed separately, ready for the job, including nickel plated brass strainer, special adjustable brackets and couplings for iron and lead pipes. With each sink we supply connections for 1½ inch lead pipe and 1½ inch iron pipes.

The size of the sink is 18 inches by 30 inches, with a back 16 inches high, leaving openings for hot and cold water taps.

The introduction of this splendid, inexpensive sink is of great importance to hardware merchants, plumbers and supply houses. This line has a definitely big future and warrants your immediate interest.

QUALITY SERVICE

CANADIAN BRASS CO. LIMITED

NOT UNTIL YESTERDAY

did I ever stop to figure just how much business there is for me in this district if I only knew how to get after it.

There are Public Buildings, Railway Stations and Hotels all around me. In many of these I have noticed dirty broken Closet Seats, leaky Taps and the like, and NOT UNTIL YESTERDAY did I have the heart to go to headquarters and get the job of replacing them.

I need all the business I can lay hands on these days and that is why I went out to look for some to-day.

Well, I was over at the ..... Hotel and had a talk with the Manager. At first he wouldn't believe that he could have new equipment installed in the Lavatories and Washrooms at very moderate cost. I said, "I'll put a B.O.T. Self-Raising Seat on one of those Closets in the Public Lavatory and a B.O.T. Blanco White Seat on one of the Private Closets and I'll bet the price of the Seats that they will improve the appearance of these rooms at least fifty per cent." I could see that he was nibbling and finally he bit, saying: "I'll just take you up on that."

(Two hours later) Say, friends, you should have seen the look in the Manager's eyes when he spotted those B.O.T. Seats. "You win," said he. "Better replace them all, and if new Nickel Taps will make as big an improvement in the Washrooms, you may go over them at the same time."

I've been in the Plumbing and Heating Business for fourteen years now and NOT UNTIL YESTERDAY did I realize that there is all kinds of business for the fellow who goes out after it.

There are thousands of people who do not know that they could get a new Closet Seat without buying a new Outfit or that a new Tap can be installed in five minutes. My business turnover has doubled since I started going after the business and installing B.O.T. Closets and Canadian Brass Products. We must educate the public, it's our duty, and we will come out on the right side by doing so.

(Signed)
NEW-METHOD SANITARY ENGINEER.

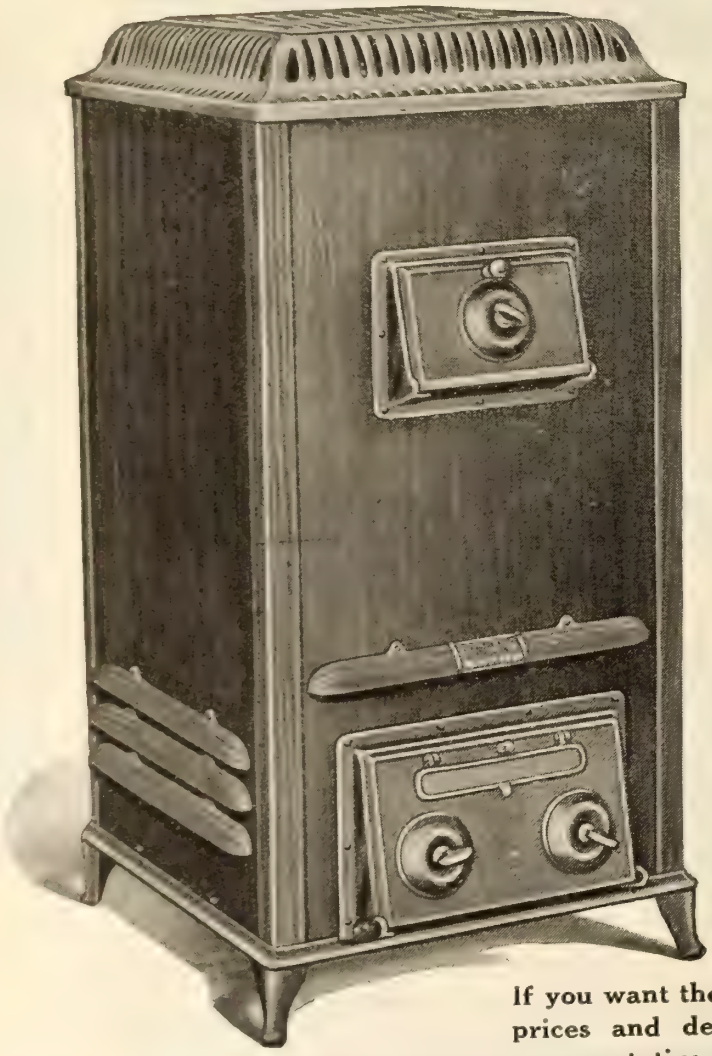
SOUVENIR SUPERHEATER

THE MOST MARVELLOUS ACHIEVEMENT OF STOVE BUILDING IN THE LAST FIFTY YEARS

LOOKS LIKE A MAHOGANY CABINET BUT IT'S A REAL FURNACE--CAN BE PLACED IN BEST ROOM



WHO'S GOING TO HANDLE IT IN YOUR TOWN— YOU OR YOUR COMPETITOR?

We are only going to appoint one agent in each town—so if you are to be the lucky dealer you should waste no time. The SOUVENIR SUPERHEATER is the only thing of its kind in Canada. It's entirely new—the latest system of heating—it sells itself and affords real good profit.

There's no doubt about the rushing business that's going to be done by the dealer who handles the new SOUVENIR SUPERHEATER. And remember, there will only be one agent in your town. Some dealer in your town is going to get the agency and that someone is going to make a lot of money, too.

If you order one of these heaters now and display it in your store you will develop many prospects that will result in sales next fall. And we'll help you get the orders.

We will mail attractive, descriptive folders to your customers with your name and address imprinted on them. We shall be advertising the SOUVENIR SUPERHEATER extensively too.

If you want the agency in your town write us at once for prices and descriptive circular or ask us to send a representative to see you.
